FRENCH LITERATURE. Of course the literary output practically stopped shortly after the declaration of war with Germany, on September 3. As early as March 22, in view of the critical situation, an understanding had been reached between the Ministry of National Defence and publishers that all reviews and newspapers would be reduced by one half, or discontinued. Two important commemorations had promised to give great impetus to literary production: the one-hundred and fiftieth anniversary of the French Revolution, and the tercentenary of the birth of the great playwright Jean Racine. The first, falling in the summer (14th July) was not so seriously interfered with; there was a revival of interest in the project of Romain Rolland launched at the opening of the century, to create a "Théâtre de la Révolution," (it was not very successful at the time). One of his plays was represented at the Théâtre Français, *Le jeu de l'amour et de la mort*; while the other national theatre, the Odéon, presented a play by Ponsard, dating back to 1866, *Le lion amoureux* which shows a reconciliation of the spirit of the Revolution represented by a young hero, and the old regime impersonated by a lady of the higher ranks who is won over to the new idea. But the Racine commemoration was considerably cut short; the date of the birth of the poet coming on December 21, only early celebrations were held; although some of them important at that. The Théâtre

Français took the lead in new interpretations and stagings of many of Racine's plays, particularly *Bajazet* and *Athalie*; the new national theatre, of the Palais Chaillot (replacing the old hall of the Trocadero) was inaugurated with scenes from *Esther* and from *Les Plaideurs*; the latter play was represented also, on another day, on the steps of the Palais de Justice—where Racine had actually situated some of his scenes. In the spring a pilgrimage of the élite of French letters went to Port-Royal, in the charming Vallée de Chevreuse where Racine was brought up. A solemn mass was celebrated at the church of Saint-Etienne-du-Mont where Racine is buried. But all plans for the production in the fall of plays in the open-air theaters in the south of France (Orange, Vienne, Nîmes) had to be cancelled; so was a projected film of the life of Racine (scenario by Mme. Faure-Frémier); and, of course, all the elaborate ceremonies visioned for November and December. Some commemorative exercises were held, however, in French circles in the United States.

Reference has been made already to the inauguration of the most modernly equipped Hall for Spectacles in Paris, called the Palais Chaillot, seating 2000, and replacing in the basement of the new Trocadero the venerable old hall that had to make room for the 1937 World Fair. Besides the Racine plays, the Palais Chaillot staged magnificently an Easter play, *Jésus de Nazareth*, by P. Demazy, the *Jeanne d'Arc et la vie des autres*, by R. Bruyez (see YEAR BOOK, 1938), and the *Jeanne au Bûcher*, by P. Claudel, music by Honegger.

Two former habitats of great writers were turned into memorial museums: the famous "Grenier," of the Brothers Goncourt, and La Béchellerie, of Anatole France, in Touraine. A great event was the sale of the manuscripts of Montesquieu (the Bibliothèque nationale buying the manuscript of *L'Esprit des Lois*), and of Anatole France. There were three Congresses for French literature during the year, (a) in Liège, at the time of a world's fair, (b) at Lyon, presided over by the former Premier Herriot, and (c) in New York at the French pavilion of the World's Fair.

Some of the most important "Prix littéraires," which were awarded before the outbreak of war, must be mentioned: "Grand Prix de littérature" (French Academy) to Jacques Boulenger, for his collective works—chiefly historical and literary; "Prix du roman" (French Academy) to the famous flier, Antoine de Saint-Exupéry, for *La terre des hommes*—which is hardly a novel, but rather beautiful descriptions of an aviator's experiences, something like Anne Lindbergh's books; "Prix de la Renaissance," to M. Guierre, a naval officer, for *Seul maître à bord*; "Prix de critique" to John Charpentier; "Prix Louis Barthou," to Jacques Chevalier for *Cadenas*, religious and philosophical essays; "Prix Virenque" of poetry to Jean Soulaïrol, *Prélude à l'amour* (spiritualism); "Prix Dramatique Eugène Brieux," to René Bruyez, for *Jeanne d'Arc et la vie des autres* (see YEAR BOOK, 1938).

Personalities. The death of Georges Goyau, secrétaire perpétuel of the French Academy, who had succeeded only a few months before to René Doumic; Received in the Academy: the famous advocate of return to royalism in France, Charles Maurras (June 8), and André Maurois (June 22); the reception of Jérôme Tharaud was postponed on account of the war. In the Goncourt

Academy, Sacha Guitry was elected against André Billy. The death was announced of Fernand Vandérem, a famous critic, of Jules Marsan, historian of literature, also of the famous actor, Pitoëff.

Poetry. An old poet of the Symbolist school, called Saint-Pol-Roux-le-magnifique, came out of his retreat to address an appeal to humanity to turn away from barbarism and go back to the teaching of Christ, *La supplique du Christ*. Jules Supervielle, today considered the leading French poet, offered a long poetic meditation on God and his creation, *Fable du monde* (a little book has just been devoted to the work of Supervielle, *poète de l'Univers*, by Chr. Sénéchal). Among other original productions in poetry one might mention Paul Eluard, the surrealist who, in *Donner à voir*, seems to recede from his rather extreme position of former years; Tristan Derème continues the series that won fame for him: *Les Poissons rouges*, *Les Escargots bleus*, *Les Tortues indigo*, *Le poème des griffons*, with another fantasy *L'Onagre orangé*. A newcomer in the field of poetry is the Belgian, Charles Plisnier, who won the Prix Goncourt in 1937 for *Faux Passeports*. In *Sacre* he utters words of despair, or rather of malediction at man's fate, somewhat in the note of Baudelaire. Much praise has been given to an *Introduction à la Poésie française*, by Thierry-Maulnier, a bird's eye view of the whole history of French poetry. An essay on *Situation de la poésie*, by Jacques and Raisse Maritain, sounds very cryptic to the uninitiated reader.

Theater. The number of plays appealing strongly to the public does not seem as large as usual, but one must remember that the year was cut short by the war. Paul Lévy's *Rien qu'un homme* has raised some curiosity, partly because some have tried to put a real name behind that of the hero, the Roman statesman Cincinnatus, the man who after serving gloriously his country retired to his estate where his countrymen found him behind his plough when they sought his return to active life. The attempt to write a play from the famous novel *Manon Lescaut*, by Madame Mauret—who had been so successful the year before with *Madame Capet* (Marie-Antoniette)—did not receive the same recognition.

Several plays present strange cases betraying possibly the unbalanced mentality of our age. Such is *Le Jardinier d'Isphaham*, by J. J. Bernard, of the "école du silence," i.e. where the silences of the character say more than the words they actually speak. In the play a woman whose life could be perfectly harmonious, lets herself be lead astray by a curious whim which causes a sort of collective misery for those with whom she comes in contact. Even more fantastic sounds the story told in *L'homme de nuit* by P. Demasy, a love at first sight crossed by another due to mere physical attraction. What about H. de Montherlant, the author of *Le Bestiaire*, who embroiders a play on the myth of *Psiphæ* offering her love to a bull? And what about Jean Giraudoux's *Ondine*, taking up the story of the German romanticist Lamotte-Fouqué and indulging in endless considerations of the mysteries of feminine love? And what again about Jean Sarment's *Sur les marches du palais*, in which a poetic soul is so exalted by love that he never enters the "palais de l'amour"?

Although one would rather like to do so, it is not possible to omit mention of depressing plays which abound in France ever since the Great War; the year 1939 yielded the usual crop, such

as Ch. de Peyret Chapuis's *Feu Monsieur Pic*, a "comédie rosse" as they were once called, such also as Sauvajon and Bost's, *L'amant de paille*, a family picture of unbalanced men and women who in our world (in which the strong survive) are of course lamentable victims. But the first prize goes to a woman, a young girl we are told, who succeeded in producing the most shocking play of the year, not only profoundly pessimistic, but just sordid; she is Marie-Louise Villiers, and the title of the play is *Les souris dansent*.

By way of contrast one can name fortunately witty plays like *Le nez de Cléopâtre* by Marchand et Crocikia, and *Le Nid* by Birabeau.

One of the most popular playwrights of today is Paul Raynal, who caused much discussion by his *A souffert sous Ponce-Pilate*, in which he tries to solve the psychological mystery of Judas, seeing in the traitor of Jesus a childish mind, easy victim of the Jews who persuaded him that he was saving his master while betraying him.

American plays are no longer a rarity on the French stage. Conspicuous in 1939 was *La Légion* (the First Legion) by Emmet Levery, which aroused considerable and rather flattering interest; while *Women* by Clare Boothe, was successful but considered an easy and somewhat cheap sort of satire although always welcome by popular audiences.

Some of the interesting "reprises" were *Cyrano de Bergerac* (Théâtre Français) fitting in with the warlike times we live in, and *La Pille Elisa* from the novel of the Goncourt and which had once served to launch the realistic stage. The *Mariage de Figaro* started a lively discussion among dramatic critics: Was Figaro a revolutionary character, or ought the famous "monologue" be considered as a light piece of wit.

The famous actor Jouvett published a provocative pamphlet *Réflexions sur le comédien*, emphasizing his two hobbies: that the audience is not supposed to *understand* a play in order to enjoy it, and that the atmosphere of the "salle" ought to be more intimate. Jouvett seems even to regret the time when there were "tabourets" on the stage to seat some of the audience.

Novel. Volumes XIV and XV of *Les Hommes de bonne volonté* by Jules Romains, *Prélude à Verdun*, and *Verdun* came out late in 1938 and were chiefly discussed in 1939. Critics seem to be unanimous in thinking that Romains has never been so powerful and that his description of the days of Verdun will remain one of the very best records. The heroic atmosphere of the most formidable episode of the war gives him an opportunity to apply his doctrine of "unanimism," to wit, that this heroism is collective and not individual, and represents the submission of the will of each individual soldier to the will of all. One knows that Romains never hesitates to bring in real characters, and here again the general opinion is that he has succeeded admirably; the figure of Pétain stands out particularly. Romains' novel is not ended yet, but Duhamel has given the last of his *Chronique des Paquier* (the 8th), and Montherlant also has given the fourth and last of his series begun with *Jeune fille*: in *La Lépreuse*, the celebrated writer after having married out of pity the woman who had pursued him, ran away to Africa and took a little black mistress who was a leper; he willingly infecting himself . . . to experience some new sensation and kill his boredom. But for these two "romans fleuves" that are stopped, one at least has begun. It comes from the pen of

Charles Plisnier, and is called *Meurtres*. In the first two volumes a peasant kills his wife who is suffering terribly of cancer and who has asked him the favor; he loves her and complies; he is acquitted, sent to an asylum, where he seems to get actually insane; freed, however, after a while he goes to Russia and becomes a bolshevik.

François Mauriac earns new laurels with *Chemins de mer*, a story where he does not retreat an inch from his terrible doctrine of the radical corruption of the human race. Except possibly one, all the members of the family whose story he tells are as mediocre as they are corrupted, and are on the road to perdition. There is disagreement whether the title refers to those people getting lost as in the sea, or whether it refers to the one acceptable character who tries to redeem himself by leaving France for Africa, sailing from Marseilles.

One of the strongest books of the year, although marked also by the atmosphere of profound pessimism, is called *Les Javanais*, by Jean Malaquais, a newcomer. He depicts a sort of colony of human wrecks, refugees from different countries who gather their misery in an isolated corner of France—a tragic picture indeed! Daniel Rops was awarded the coveted Prix Née for a novel *L'épée de feu*, almost as depressing as the preceding; the "flaming sword" is that of the angel who has expelled man from Eden and forbids him to re-enter. The same note is found again in Pierre Lescure, *Tête au vent*, a man who endeavors to solve a mysterious problem that haunts his life, does not succeed, and finally tries to forget in a disorderly life. Mme Simone's *Paradis terrestre* bears an ironical title. Fr. Bonjean announces the lamentable story of his book by the mere title, *Confidences d'une fille de nuit*. Guy Mazeline does not forget his earlier grim outlook on life in *L'amour de soi-même*. Here belongs too *La vie et le roman* by Pierre Lièvre whose premature death has just been announced.

Henry Bordeaux published his fiftieth novel, *Cendres chaudes*, a study of the problem of divorce; while Pierre Benoit adds to the long list of his novels, *Notre Dame de Tolosa*, in his usual vein, and Simenon offers another mystery tale, *Le cheval blanc*, to his former ones. Robert Brasillach claims originality in his novel *Sept couleurs*, a study of the age of adolescence. Roger Verceul writes one of his strongest sea novels in *Jean Villeurin*—many in reading it have remembered Loti's *Pêcheurs d'Islande*; the sharp contrast between the primitive accommodations of the fishermen at the time of Loti and the remarkable "modern improvements" that render the life of those men so different cannot fail to appear astounding. Peisson tells the sea-adventures of a young boy of eight who ran away from home, in *Le voyage d'Edgar*. Stories of country life are offered by Perrochon in *Babette et ses frères*, and also by Raymonde Vincent (last year's Prix Femina with *Campagne*) who gives a rather similar story of a young farmhand *Blanche*. Maurice Genevoix, now called the "grand animalier de France," tells the story of a stag, in *La dernière harde*. The Protestant writer Ph. Amiguet takes us in the mountain regions for a story of church life, *Où volent les aigles*. Of the pretty romanesque type is *L'amour sorcier*, situated in the Spain of picturesque and romanesque memory, by Claude Boyer and Francis de Miomandre.

Jean Giraudoux returns to the novel with *Le choix des élues*, a characteristic mixture of realism and fantasy: Two women are under the spell of a mysterious genius which they call Abalstitiel and who suggests that they both, but in very different manner, give up a happy and rational life for running after chimeras. In the same class of tales must be placed Edmond Jaloux's *L'oiseau-lyre*: A promising writer is happily inspired by Violette, the "oiseau-lyre," but a woman looking for a love adventure comes up, takes hold of the young man who, henceforth, produces only the most commonplace literature. Two novels deal with the problems of religious faith, one in orthodox Catholic spirit, Emile Bauman, in *L'Excommunié*, the other in a more objective manner, André Billy, (the author last year of *L'Approbantiste*) in *Introibo*—both tell of rather unusual cases confronting two priests. Another writer who preaches a very uncompromising ascetic gospel is Louis Artus, in *L'hérésie du bonheur*.

Three historical novels, by three masters in the field are: Albéric Cahuet, *Les abeilles d'or*, depicting the days that Napoléon spent on the island of Elba before the "cent jours" and before being removed to St. Helena; Henry Bordeaux, in *Le Gouffre*, telling of the "épopée marocaine" under Liautey, and André Chamson, in *La Galère*, endeavoring to explain the terrible days of February, 1934, when a communist upheaval only just failed to upset the Republic.

Among the many volumes of short stories the following seem to have won general recognition as particularly original: A. Fraignaux, *La grâce humaine*, (six children's stories for ages 13 to 15); J. P. Sartre, *Le mur*, a symbolic title, the "wall" being reality beyond which man tries in vain to escape (Sartre was the author of the much commented *La nausée* in 1938); Alex. Arnoux, *Paris sur Seine*, various stories from various parts of the capital; Henri Fauconnier, *Visions*, by the author of *Malaisie*, the 1930 Goncourt prize, and R. Francis, *L'oie* (six short sketches).

Varia. Personal recollections are always very favorably received; some of those for the year were: Louis Bertrand, (vol. vi of his series *Une destinée*) *Jérusalem*; Julien Green, continuation of his *Journal*, 1935-1939; A. de Chateaubriant, *Les pas ont chanté*; Emile Henriot, *Le livre de mon père* (one of the most charming books of the year); P. L. Fargue, of the Académie Mallarmé, *Le piéton de Paris* (his loafings in his own Paris); Robert Dreyfus, *De Monsieur Thiers à Marcel Proust* (memoirs both of political and literary life); Duhamel's *Mémoires de la guerre blanche*, collection of articles of one of the leaders of public opinion in France to-day. André Demaison, *Terre d'Amérique*, gives alert sketches written down during a rapid crossing of America—somewhat different from the usual pro or con books of travellers in the United States. Of a more philosophical nature is Michel Seuphor's *L'évasion d'Olivier Trickmasholm*, which may be an answer to Denis de Rougemont *Journal d'un intellectuel en chômage*, of 1938, who did not see the necessity of "evading" life; the latter tries his pen on another subject, *L'amour de l'Occident* in which he claims that Isolde did not love Tristan, at least if one calls love the love which is not purely sensual. Maeterlinck continues his attempts to solve the great mystery of death in *La grande porte*. Paul Valéry gives his fourth volume of

Variétés—speeches, various articles of this oracle of the day. Let us mention in various fields: *Le livre de mon chien* by the now very old poet Haraucourt; P. Reboux, *Les deux amours de Cléopâtre*; P. de la Varende *Charlotte Corday*. Finally, a book that was not expected from the pen of the king of present day fancy literature, Jean Giraudoux's *Pleins pouvoirs*—a book in which this famous writer discusses with much earnestness the political situation of the age; it may have been this book that induced the French government to make him head of the "Information service" during the war.

Literary History and Criticism. The amount of excellent work done in France during recent years in these domains is astounding, and it is naturally impossible to mention all that would deserve it. Hence a few representative books only will be named. First of all is the tenth volume of the epoch-making *Histoire de la langue Française*, under the title *La langue classique dans la tourmente* (i.e. during the Revolution), prepared by the late F. Brunot, and edited by his pupil and successor at the Sorbonne, Ch. Bruneau. A great collective work began to appear, under the direction of internationally known French scholars, among them Edmond Faral, the distinguished head of the École normale supérieure, *Les Lettres françaises*; there will be six large volumes when completed, a sort of encyclopedia of the history of French literature. Among individual works: Etienne Gilson, the famous medievalist, writes on *Abélard et Héloïse*. The new edition of Montaigne's *Essays*, 16th century (Soc. des Belles Lettres) has reached the 11th volume; and for the 16th century; one must mention also H. Charnard's *Histoire de la Pléiade*, plus several short volumes on Marot (Plattard), *La Boétie* (H. Day) *Rabelais* (Plattard) *Montaigne* (P. Moreau), and Calvin (Pannier's ed. of *Institution chrétienne*). For the 18th cent.: *Diderot* (J. Pommier) and *Voltaire* (J. R. Carré, R. Naves) receive much attention. In the 19th the year was favorable to Madame de Staël (P. de Lacretelle, *Mme de St. et les hommes*, and Comtesse de Pange Aug. Guill. Schlegel et Mme de Staël), and to Benjamin Constant, a very important book on this political writer of the time of Napoléon, by A. Fabre-Luce; *Chateaubriand*—as now for several years in succession—inspires excellent pages (M. Duchemin); Flaubert comes in three books, all or in part, by Ch. Bagnol, J. de la Varende, and very especially by Henri Guillemin who presents a decidedly very humane Flaubert. Also, there is a new *Verlaine* (F. Carco); a study of *Huysmans's art* (Cresset); another on the problem of Loti's *Désenchantées* (R. Lefèvre: Was Loti deceived by the women of the harem whose experiences he is supposed to report?). Finally let us mention V. Giraud's *De Chateaubriand à Brunetière, Essai sur le mouvement catholique en France au XIXe siècle*. The public seems to want information on present-day writers more than ever before; thus M. Lecat offers a *Philosophie de Maeterlinck*; P. Archambault, a *Vie héroïque de Péguy*; M. Clavière, a *Charles Maurras*; Ch. Sénéchal, a *Jules Supervielle, poète de l'univers*, and Daniel Mornet publishes the substances of his Columbia lectures the summer of 1939, *Introduction à l'étude des écrivains français d'aujourd'hui*.

September to December. Great efforts were made to keep things as normal as possible; the results were what could be expected. The annual reunion of the Institute, the five Academies was

held in October, but in a smaller room of the Palais Mazarin, not under the famous "Coupole." Louis Bertrand could not deliver his prepared address on Racine, being with the army; he was replaced by the Baron Seillère; Paul Valéry spoke on "La pensée et les arts." On December 7 the reception in the French Academy of Jérôme Tharaud—delayed on account of the war—took place; Tharaud occupies the "fauteuil" of Joseph Bédier.

The review *Révolution Française* published in the fall a special number on "Le cent-cinquantenaire de la Révolution"; and the *Revue de littérature comparée* also issued in the autumn a special "Racine" number. The great periodicals continued to appear, but, as explained above, in half their normal size: *Revue des Deux Mondes*—with a novel by Duhamel, *Combats contre les ombres*; *Revue de Paris*—with a novel by Thérive, *Comme un voleur*; *Mercure de France*, *Nouvelle Revue Française*, and a few others.

The theaters, entirely closed for a while, opened gradually without having yet reached the normal by the close of the year. The "Théâtre français" started with some "matinées poétiques" (from 3 to 5 o'clock), then produced some plays in the late afternoon, finally some plays in the evening. Sacha Guitry, in his playhouse, resumed his practice inaugurated during the Great War, of "spectacles coupés"—short numbers which will better stand interruption by air raids.

Some papers were started at the front, comic papers of course, for and by the soldiers; the first was *Le train qui regarde passer le boeuf*. The *Crapouillot* of 1914–18 fame came to life again.

One excellent novel, evidently printed when the war broke out, has to be mentioned: *Matterhorn*, by Henri Peyré, a graphic story centering around the grim aspects of climbing the famous mountain in Switzerland.

There seems to have been some hesitation whether or not the juries for the "Prix littéraires" usually awarded in December would meet. They did, and here are some results: "Prix Goncourt," to Philippe Hériat (author of *Les mauvais garçons*, and winner in 1891 of the Prix Renaudot with *L'Innocent*); his crowned novel this year is *Les enfants gâtés*—a French girl of bourgeois family milieu goes to the University of California where she falls in love. The "Prix Femina," goes to Paul Vialar, for *La rose de la mer*, a sea novel; and the "Prix Renaudot" to Jean Malaquais, for *Les Javanais* (see above). The "Prix interallié" rewards Roger de la Forest, for *Les figurants de la mort*, and the "Prix Moréas" (poetry) André Blanchard for *Entre jour et nuit*.

ALBERT SCHINZ.

FRENCH REVOLUTION, 150TH ANNIVERSARY OF. See FRENCH LITERATURE.

FRENCH SOMALILAND. See SOMALILAND, FRENCH.

FRENCH SUDAN. See FRENCH WEST AFRICA.

FRENCH TOGO. See TOGO, FRENCH.

FRENCH WEST AFRICA. A French colonial territory comprising the colonies shown in the table in the next column.

Chief towns: Dakar (capital), about 42,000 inhabitants; Saint Louis, 33,598 (1937); Porto Novo, 25,724 (1935); Bamako, 23,258 (1938); Abidjan, 17,476 (1935); Grand Lahou, 16,430

(1935); Kaolak, 15,645 (1936); Diourbel, 15,544 (1936); Ouagadougou, 14,172 (1935); Rufisque, 13,559 (1933); Thies, 18,502; Sikasso, 11,817 (1938).

| Colony | Sq. mi. | Pop. (1937) | Capital |
|---------------------------------|-----------|-------------|------------------------|
| Dahomey.... | 43,232 | 1,289,128 | Porto Novo |
| Dakar ^a | 60 | 126,929 | Dakar |
| French Guinea..... | 96,886 | 2,065,527 | Conakry |
| French Sudan ^b | 590,966 | 3,635,073 | Bamako |
| Ivory Coast ^b | 184,174 | 3,981,459 | Abidjan |
| Mauritania..... | 323,310 | 370,764 | St. Louis ^c |
| Niger ^b | 499,410 | 1,809,576 | Niamey |
| Senegal..... | 77,730 | 1,666,374 | St. Louis |
| French West Africa .. | 1,815,768 | 14,944,830 | Dakar |

^a Including Dependencies. ^b Upper Volta ceased to be a colony on Jan. 1, 1933, and its territory was divided among three other colonies as follows: French Sudan received 20,226 square miles; Ivory Coast, 59,212 square miles; Niger, 27,290 square miles. ^c The lieutenant-governor of Mauritania resides in St. Louis in the colony of Senegal.

Education. The 514 schools of all kinds had 68,310 pupils enrolled in 1936–37; the expenditure for education amounted to 27,367,000 francs in 1938.

Production and Trade. The chief products (with production figures for 1938 unless otherwise stated), in metric tons, were: Groundnuts (756,000); maize (520,000); rough rice (420,000); palm kernels (31,600); palm oil (13,700); cottonseed (18,000 in 1936); coffee (11,000 from Ivory Coast); cotton (5500 in 1936); tobacco (2300, estimated); sesamum (900); wool (200 in 1936 from the French Sudan). Gold exported in 1938 amounted to 127,220 fine ounces. Textiles, fuel oil, machinery, foodstuffs, and beverages were the main imports. In 1938 (values are given in old U.S. gold dollars), imports were valued at \$27,300,000; exports at \$24,100,000.

Communications. In 1938, the railways, consisting of four main lines connecting each of the coastal territories with the Niger Valley, had a total length of 2324 miles exclusive of narrow-gauge lines. There were 27,301 miles of highways. Air services were operated between Dakar and Pointe-Noire, Middle Congo, and between Cotonou in Dahomey and Toulouse, France. During 1937, 9564 vessels of 13,170,500 tons cleared the ports.

Finance. The various budgets for 1938 (with 1937 figures in parentheses) were balanced as follows: General budget, Fr335,000,000 (Fr200,200,000); the aggregate of the local budgets, Fr498,162,000 (Fr299,589,000); supplementary budgets, Fr478,597,000 (Fr347,788,000). The franc (Fr) averaged \$0.0405 in 1937; \$0.0288 in 1938.

Government. French West Africa is governed by a governor-general, aided by a council, the seat of government being at Dakar. Each colony is under the direct administration of a lieutenant-governor. Governor-General, Jules M. de Coppet (appointed, Sept. 13, 1936).

FREUD, froit, SIGMUND. An Austrian physician and psychopathologist, the founder of psychoanalysis, died in London, Sept. 23, 1939. Born in Freiberg, Moravia, May 6, 1856, he was educated at the University of Vienna (M.D., 1881). Early in his practice of medicine he became interested in nervous disorders. After study under Charcot at Salpêtrière, Paris, in 1885, he returned to Vienna to continue his investigations and practice the treatment of such ailments. In 1902 he was appointed professor of neurology at the University of Vienna, a position which he held until the German annexation of Austria in March, 1938. Of

Jewish stock, in June of that year he was driven to leave the country and sought refuge in London.

His novel system of psychology, a fresh approach to the study of human conduct that gave to the dictionary a new jargon, attracted the attention of Alfred Adler, Carl Jung, and others who became his disciples in 1906. Two years later they founded the International Congress of Psychoanalysis. Subsequently, several of his pupils, notably Jung and Adler, differed with the master and founded their own schools.

Freud's principal contributions to science were a new method for the analysis and treatment of hysteria and a comprehensive theory of dreams. It was his belief that most cases of hysteria were the indirect result of a nervous shock emotionally and usually sexual in nature. The ideas involved are, for various reasons, suppressed or inhibited until at length they are forgotten, i.e., cannot voluntarily be recalled. They find expression, however, in the hysterical state. The method of psychoanalysis consists in the employment of the patient's free associations as an aid to the subsequent recall of the forgotten or submerged group of ideas. When this end is accomplished the patient is believed to be on the highroad to recovery, since the ideas, once suppressed, are now brought into connection with normal associations and the cause of the hysteria is removed. After the World War his international reputation was enhanced. In his writings he tended to make less use of the principle of sexual symbolism, to which, his critics claimed, he gave too much importance, and relied more on the direct intuitions afforded by the psychological situation. The conception of libido continued to play an important role, but without complete identification with concrete sex experience. His psychology still being a highly controversial subject, to make a just estimate of the man and his work is not possible.

A prolific writer, his works were translated into many languages and went through many editions. They include: *Zur Auffassung der Aphasien* (1891); *Kinderlähmungen* (1891, 93, 97); *Studien über Hysterie* (1895), with J. Breuer; *Traumdeutung* (1900); *Psychopathologie des Alltagslebens* (1901); *Über den Traum* (1901); *Witz und seine Beziehung zur Unbewussten* (1905); *Drei Abhandlungen zur Sexualtheorie* (1905); *Wahn und Träume in Jensen's Gradiva* (1907); *Kindheitserinnerung des Leonardo da Vinci* (1910); *Sammlung kleiner Schriften zur Neurosenlehre, erste bis fünfte Folge* (1907-22); *Über Psychoanalyse* (his famous *Origin and Development of Psycho-Analysis*) (1910); *Totem und Tabu* (1913); *Vorlesungen zur Einführung in die Psychoanalyse* (1917); *Jenseits des Lustprinzips* (1920); *Massenpsychologie und Ich-Analyse* (1921); *Das Ich und das Es* (1923); *Hemmung Symptom und Angst* (1926); *Die Frage der Laienanalyse* (1926); *Die Zukunft einer Illusion* (1927); *Das Unbehagen in der Kultur* (1930); *Neue Folge der Vorlesungen zur Einführung* (1932); *Briefwechsel mit A. Einstein: Warum Krieg?* (1933); *Moses ein Ägypter* (1937); *Der Mann Moses und die Monotheistische Religion* (1939). Also, he contributed to and was the editor of *Internationale Zeitschrift für Psychoanalyse und Imago* and of *Schriften zur angewandten Seelenkunde I-XIX*.

Dr. Freud visited the United States in 1909 where he received the honorary degree of Doctor of Laws at Clark University. In 1930 he received the Goethe prize of the City of Frankfurt, Ger-

many, and in 1936 he was made an honorary member of the Royal Society.

FRIENDLY ISLANDS. Same as TONGA ISLANDS.

FRIENDS, or QUAKERS. A mystical religious sect founded in England by George Fox in the middle of the 17th century. The chief group, known as the Orthodox Group of the Religious Society of Friends, organized the Five Years Meeting of Friends in America in 1902. See RELIGIOUS ORGANIZATIONS.

FRITSCH, GEN. BARON WERNER VON. A German army officer, killed in the siege of Warsaw, Poland, Sept. 22, 1939. Born in Beurath, Germany, Aug. 4, 1880, he was educated in local schools, and in 1898 joined Field Artillery Regiment No. 25. After attending the War Academy and serving with the General Staff in Berlin, at the outbreak of the World War he was a captain. He served throughout the War as a general staff officer with the rank of major. His military qualities were not recognized until after the Armistice and in 1922 he was made brigade commander of the Fifth Artillery. Subsequently he entered the ministry of defense as a colonel and commanded the 2d Artillery at Stettin. In 1932 he was promoted to lieutenant general in command of the Third Military Department in Berlin, and although no admirer of the Nazi policies, soon after Hitler came into power, he was made chief of staff with the rank of general of artillery.

A conservative in military tradition, a severe disciplinarian, and an eminent strategist, he was credited with rebuilding the army of the Reich. In the army purge of Feb. 4, 1938, General Fritsch was relieved of his command on the grounds of "ill health," and shortly after was accused on a serious charge but was cleared by a military trial before a court of honor. In August, 1938, he was appointed honorary chief of the 12th Artillery Regiment "in recognition of the great service in rebuilding the Third Reich." In the announcement of his death it was reported that he was "carrying out a dangerous reconnoitering operation," and surprise was felt that he was in such a position and not with his staff officers in the rear.

FUR SEALS. See FISHERIES, BUREAU OF.

FUTUNA AND ALOFI. See NEW CALEDONIA.

GABUN. See FRENCH EQUATORIAL AFRICA.

GALAPAGOS ISLANDS. See ECUADOR.

GAMBIA. A British crown colony and protectorate in western Africa. Total area, 4068 square miles; total population (1931 census), 199,520. Capital, Bathurst, where resided most of the 14,370 inhabitants of the island of St. Mary. In 1938 there were 18 schools (13 elementary, 4 secondary, and 1 school for training teachers).

Production and Trade. The chief products are groundnuts (46,981 tons exported in 1938), hides, skins, palm kernels, and beeswax. Rice, maize, guinea corn, cassava, and cotton are grown for local consumption. In 1938, total imports (including specie, etc., of £128,350) were valued at £405,790 (aircraft parts, £26,016; cotton piece

goods, £23,461; metals, £22,125; kola nuts, £21,988); exports (including re-exports of £80,150), £335,851 (groundnuts, £246,691; palm kernels, £4535). Bathurst is an important link in the Lufthansa air service from Frankfort, Germany, to Natal, Brazil. During 1938 the 429 ships entered and cleared had a total net tonnage of 1,135,524. Highways extended over 860 miles in 1938.

Government. For the year ended Dec. 31, 1938, revenue totaled £166,749; expenditure, £263,199. On Dec. 31, 1938, the public debt was £38,760 against which the sinking fund for its redemption totaled £4609. The area of the colony (consisting of Bathurst and Georgetown and some adjacent land) is 69 square miles, but by an ordinance enacted in 1902, all Gambia except the island of St. Mary (4 sq. mi.) was placed under the protectorate system. In the protectorate there are four provinces each administered by a commissioner who is responsible to the governor. The governor, who controls the whole country, is aided by an executive council of 4 members. There is a legislative council for the colony, of which the governor is president, having 10 other members (5 official, including the members of the executive council; 4 unofficial; 1 ex officio). This legislative council has power to legislate for the Gambia protectorate. The Bathurst Advisory Town Council advises the government upon matters relating to the inhabitants of Bathurst. Governor and Commander-in-Chief, Sir W. T. Southorn (appointed, Mar. 10, 1936).

GAMBIER ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

GARBAGE AND REFUSE DISPOSAL. Garbage of many of the smaller cities of the United States and of some of fair size, is still fed to hogs. Many cities dump garbage and refuse on land otherwise unused and unusable until low and marshy areas have been filled. Where proper care is taken of such disposal areas they are called sanitary fills. Incineration of garbage and combustible refuse is gaining in cities both large and small. Some of the relatively small cities in the past few years have built joint garbage and sewage disposal plants. Most of these are combined only in that the sludge from treatment tanks is burned with the garbage and refuse. In a lesser number of cases, the order is reversed and the garbage (other refuse excluded) is ground and put through the sewage treatment plants. The combined sludge may then be burned, used as fertilizer (but rarely) or used to fill in low land. Data gathered by the U.S. Public Health Service as of 1937, but only recently made public, show that of 964 cities of 10,000 population or more in the United States, the garbage of 397 of 763 reporting disposal was fed to hogs. In 22 cases the hog farms were owned and operated by the cities. In 19 of the 48 states more than half the cities reporting used this method of garbage disposal. Most notable of these were two states, one on each Coast: Massachusetts, 53 of 56 cities; California, 38 of 41. The author of the paper (acting chief, division of Zoology, U.S.P.H.S.) maintained that since the garbage of only 29 of the 397 cities was cooked before being fed to hogs, and not all of it in some cases, garbage disposal by feeding to hogs is a means of spreading trichinosis among both hogs and humans.

Shutting down some of New York City's incinerators in 1938 and establishing sanitary fills in Queens Borough to reclaim land aroused the

ire of officials and citizens of that section. The grand jury of Queens County indicted the sanitation and health commissioners of New York City for maintaining a nuisance. By agreement the indictments were dismissed and a committee of outside health authorities to investigate the fills was appointed by the surgeon general of the U.S. Public Health Service. Earlier, a comprehensive study of the sanitary fill method of garbage and refuse disposal was instituted to be conducted by New York University and the WPA under an allotment of \$134,000 for biological and physical research. The project is sponsored by the New York City Department of Sanitation. A large advisory committee was created.

Across the continent, San Francisco, Seattle, and Portland are continuing sanitary-fill methods of disposal. (See *Engineering News-Record*, July 6, August 3, and September 28.) San Francisco and Seattle had each provided, built, and abandoned incinerators. Portland had also done the same but uses its latest incinerator to burn some of its wastes.

A 600-ton incinerator for Pittsburgh, Pa., was scheduled for completion at the close of the year. Smaller incinerators were completed at Mamaronck and Schenectady, N. Y. Grinding equipment with a capacity of 40 tons an hour was being installed at Gary, Ind., to prepare the garbage of 170,000 people for digestion with sewage sludge. It was estimated that the gas produced from the garbage would have a power value of \$15,000. (See SEWERAGE AND SEWAGE PURIFICATION). At Goshen, N. Y., a garbage grinding plant was installed. The ground garbage is ejected by air to the sludge digestors of the local sewage treatment works. At Tonowanda, N. Y., and Dayton, Ohio, garbage incinerators were under construction, with provision for burning sewage sludge at Tonowanda while at Dayton sludge partly dried was to be further dewatered sufficiently for either burning or for use as a fertilizer.

In Holland, the garbage of Amsterdam, which for years was shipped to the country for use on land is now barged to incinerators. At The Hague, refuse is shipped by rail "to a distant province," dumped, sprayed with water to aid decomposition, screened, and spread on sandy land. (*The Surveyor* (London) Aug. 18 and 25, 1939.

M. N. BAKER.

GARDEN CLUB OF AMERICA, THE. An organization founded in Philadelphia, Pa., in 1913. It consists of 119 member clubs, with a membership of over 8000 in 34 States and Hawaii. The objects of the association are: To stimulate the knowledge and love of gardening among amateurs; to share the advantages of association, through conference and correspondence in this country and abroad; to aid in the protection of native plants and birds; and to encourage civic planting. The office is at 598 Madison Avenue, New York, N. Y.

GARMENT INDUSTRY. Depressive conditions continued to afflict the men's and women's apparel industry during 1939. Trade adversity was attributed primarily to the sustained economic dislocation. Intensive competition and the hazardous style element, coupled with the ever-diminishing capital structure of individual manufacturers, impaired the healthful existence of the garment trades to a more disturbing degree than might be expected under ordinary circumstances.

Purchasing and production operations, based

on an eagerness for volume rather than on a careful study of marketing possibilities, were less common in 1939 than previously. At the outlook of hostilities abroad, with prices of many commodities rising sharply, the needle trade demonstrated the extent to which it has mastered the lesson of conservatism by declining to be stampeded into providing for future requirements on a substantial scale. The soundness of this cautious position became increasingly apparent as the fall season advanced and it was shown that neither retailers nor the public permitted fear of possible price increases to induce them to liberalize their purchases.

A significant tendency during the past year was the retail policy of greater concentration of commitments among a selected few sources of supply. Motivating this procedure was the stores' desire to insure closer collaboration in gaining preferred merchandise and service.

Evidence of the need for more efficient timing of the seasons in the higher quality branch of the dress industry was forthcoming in the sponsorship of earlier spring openings. This was conceived as a co-ordinated effort to obviate the danger of a deliveries' problem that otherwise would enter the scene at the height of the season; to sustain the reorder demand; and to prolong the regular selling period. See FASHION.

Substantial increases in style registrations and label distribution for 1939 over 1938 were reported by the Fashion Originators' Guild of America, national organization of women's apparel creators. The styles registered during the past year totaled 42,467, compared with 40,664 in 1938, while the distribution of labels to members of this organization was 6,131,718 in 1939 and 4,418,785 in the previous year. The rise in the number of styles registered indicated endeavors on the part of the Guild houses to broaden the diversity of their fashions. The increase in label distribution was due, to some extent at least, to the larger membership in 1939.

Marked expansion in the production of sportswear and popular priced wash dresses, and a decline in the importance of the daytime dress all contributed to a relatively poor showing for the regular dress field as compared with other items in the feminine apparel family.

In the women's coat and suit market, there was a rise of about 6.6 per cent in the number of units sold to the retailers all over the country. This was an estimate gathered from the sale of labels to manufacturers and jobbers in the United States by the National Coat and Suit Industry Recovery Board, whose members are responsible for 95 per cent of the country's total production of their garment types. In 1939, 16,269,495 labels were sold, as against 15,403,178 distributed during 1938.

Increase in volume can definitely be linked to a lowered unit price, which was also reflected in the retail departments. Inroads from trades such as blouses and skirts, the strong public demand for separate fur jackets, and the decline of fur-trimmed demand to two or three desirable trimmings hurt profit chances in the coat trade where labor costs exceed those of all other divisions of the industry.

The retail picture was naturally affected by these developments, although the majority of stores merchandised conservatively and managed to make a small profit. In the New York Federal Reserve area, for instance, coat and suit sales

showed a decline for the first nine months of 1939 as compared with 1938. The situation was somewhat improved in cities outside the New York district, but only slightly.

The mortality rate in the millinery trade continued high in 1939. Many manufacturers drew less than the most highly paid workers, while 50 per cent of the firms, it was indicated, made no profit at all. A fatal weakness of this trade of marginal producers was the fact that the failure of one concern led to the formation of three or four. Yet 1939 was a comparatively good year, especially for better hat makers. Two million more hats were sold than in 1938. The spring season, particularly, paid dividends, and many exclusive houses went from 10 to 30 per cent ahead.

Another record year for the full-fashioned silk hosiery trade, exceeding last year's volume of 42 million dozen pairs, was the 12-month period just past. But 1939 was another year of slender profit.

Retail fur volume for the season starting last July was about 25 per cent ahead of the year previous, but this was not as encouraging as it sounded, because 1938 sustained a loss from the year before. However, stores ended the season in good condition, and with low stocks. Manufacturers, too, ended the season with little stock, having had a fairly good year. The raw fur market opened on a much stronger tone than in 1938, which is regarded as a warning that business may suffer because of the price situation.

Sales of men's clothing and furnishings' stores and departments reached a preliminary total of \$1,050,000,000 in 1939, as compared with about a billion dollars in 1938. This represented an increase of about 5 per cent, or approximately the same rise as was registered in consumer income. The year witnessed a replenishment of stocks and a return to more normal operations. In 1938, it should be pointed out, one of the most drastic liquidations of inventories in years occurred, purchases of clothing from manufacturers by the WPA completing a reduction of inventories that had already practically run its course.

Men's and boys' clothing production rose about 28 per cent in the past year.

The advance from May through most of July of the shirt-slacks combination and of tropical worsted and worsted-mohair suits, as well as a growing demand for sport slacks made of all types of materials, presented the clothing trade with an aggregate of business that was most encouraging. But it did not satisfy the many producers of regular-weight clothes. August was not a good month for men's clothing, although the latter part was fair for boys' wear. War on September 1 caused cloth lines to be opened and withdrawn repeatedly, with every reopening at higher prices. By the end of September, when some of the larger clothing specialists opened 1940 summer and sportswear lines to retailers at minor price advances, buying became heavy and continued so through October. From mid-November until the end of the year, however, clothing business sloughed off appreciably.

SAMUEL FEINBERG.

GAS INDUSTRY. The gas utilities of the United States continued their record of progress and expansion during 1939. Manufactured and natural gas companies, supplying towns and cities with a population of almost 82,000,000, served a total of 17,548,000 customers, representing the largest number of consumers ever connected to

the mains of the industry and an increase of 376,000 over the year 1938. Of these, 10,100,100 were served by the manufactured gas industry and the remaining 7,447,900 were served by the natural gas industry. Revenues of the entire industry, both manufactured and natural, aggregated \$817,137,000, a gain of 5.2 per cent over the preceding year of 1938. The natural gas companies grossed \$449,073,000, a gain of 7.8 per cent for the year, while revenues of the manufactured gas companies were \$368,064,000, as compared with \$360,494,000 in 1938, an increase of 2.1 per cent.

STATISTICS OF THE GAS INDUSTRY

Statistical Department, American Gas Association

| | 1939 * | 1938 | Change % |
|-------------------------------------|---------------|---------------|----------|
| Customers | | | |
| Domestic (Incl. House Heating)..... | 16,491,400 | 16,140,000 | +2.2 |
| Industrial & Commercial..... | 1,056,600 | 1,032,000 | +2.4 |
| Total..... | 17,548,000 | 17,172,000 | +2.2 |
| Gas Sales (MCF) | | | |
| Domestic (Incl. House Heating)..... | 625,980,000 | 597,934,000 | +4.7 |
| Commercial..... | 1,071,297,000 | 964,062,000 | +11.1 |
| Total..... | 1,697,277,000 | 1,561,996,000 | +8.7 |
| Revenue (Dollars) | | | |
| Domestic (Incl. House Heating)..... | \$550,281,000 | \$532,045,000 | +3.4 |
| Commercial..... | 266,856,000 | 245,029,000 | +8.9 |
| Total..... | \$817,137,000 | \$777,074,000 | +5.2 |

* Preliminary estimates.

Sales of manufactured gas for domestic uses, such as cooking, refrigeration, house heating, water heating, etc. amounted to 249,367,000,000 cu. ft., an increase of 1.8 per cent for the year. House heating sales, registered a gain of 15.9 per cent. The sales of natural gas for domestic uses registered a pronounced upturn, rising from 352,964,000,000 cu. ft. in 1938 to 376,613,000,000 cu. ft. in 1939, a gain of 6.7 per cent. Sales of natural gas for industrial purposes rose from 589,398,000,000 cu. ft. in 1938 to 655,389,000,000 cu. ft. in 1939, an increase of 11.2 per cent. Sales of manufactured gas for industrial purposes showed an even greater upturn rising from 47,398,000,000 cu. ft. in 1938 to 55,645,000,000 cu. ft. in 1939, an increase of 17.4 per cent.

THE MANUFACTURED GAS INDUSTRY

| Commercial..... | 47,419,000 | 46,718,000 | +1.5 |
| Industrial..... | 25,803,000 | 22,855,000 | +12.9 |
| Miscellaneous..... | 1,293,000 | 1,534,000 | — |
| Total..... | \$368,064,000 | \$360,494,000 | +2.1 |

* Preliminary estimates.

Preliminary estimates indicate that the total production of natural gas in 1939, including

amounts used in the manufacture of carbon black and for field purposes, reached a total of 2,200,000,000,000 cu. ft. Approximately 192 billion cubic feet of natural gas were used as fuel for generating electric power in 1939. This was an increase of nearly 13 per cent over the previous year.

| Total..... | \$449,073,000 | \$416,580,000 | +7.8 |

* Preliminary estimates.

Gas companies continue to inaugurate more favorable rates for house heating through central plant burners and equipment. It is estimated that the total number of such installations connected to the lines of all United States gas companies in 1939 amounted to 900,000. In addition there were approximately 1,600,000 dwellings heated by unit heaters, space heaters, floor furnaces, etc., giving a total of more than 2,500,000 homes in the United States heated by gas.

The use of gas for commercial and industrial purposes throughout the country is growing rapidly in volume. New outlets are presenting themselves in this branch of the industry. Recent marked changes in materials which go into dwelling structures calling for more use of structural steel, glass, brick, synthetic stone, metalized wood, fabricated steel, and concrete in home construction are resulting in a correspondingly greater demand for use of gas in the production of these products.

In the field of industrial utilization new processes have been developed and equipment with improved efficiencies have come into general use. For example, a few years ago there was a distinct trend in the larger newspaper offices of the country toward melting type metal by electricity for stereotyping and other purposes. Through the American Gas Association's co-operative research with manufacturers, methods were developed which have resulted in a general acceptance of gas heat for these purposes.

For the fourth consecutive year the gas industry has sponsored a national co-operative advertising programme, the objective of which is the promotion of gas as a modern, efficient fuel for household, industrial, and commercial purposes for which heat is required. Sentiment for the programme is stronger now than at the beginning. Gas utility companies in all parts of the country are co-operating with an "All-gas" Demonstration Home Programme. More than 30 of such demonstration homes have been constructed

throughout the nation, and it is expected that additional homes will be built during the coming spring.

On Aug. 1, 1938 the American Gas Association set up "Certified Performance Requirements" to identify gas ranges that excel competitive equipment in cooking performance. Since that time 25 range manufacturers have produced more than 400 models of gas ranges meeting these requirements and more than 100,000 of such ranges have been placed in American kitchens. This new buying guide for modern cooking appliances has also had the effect of increasing the number and raising the quality of other gas ranges sold. Total gas range sales during 1939 were approximately 30 per cent higher than the previous year and more than 80 per cent of these ranges were equipped with oven heat controls. The Association of Gas Appliance and Equipment Manufacturers reports substantial increases in the sale of every major type of gas appliances and equipment during 1939.

PAUL RYAN.

GASOLINE. See PETROLEUM.

GATES, MILO HUDSON. An American Protestant Episcopal clergyman, died in New York, Nov. 27, 1939. Born in Gardner, Mass., June 29, 1866, he was educated at Amherst College (A.B., 1886; D.D., 1930) and at the General Theological Seminary (B.D., 1889). A deacon in 1889, he was assigned as assistant minister at the Church of the Ascension in New York, and two years later was ordained a priest. In 1892 he was assigned to the Church of the Ascension in Ipswich, Mass., as rector and in 1899 transferred to St. Stephen's Church at Cohasset, Mass. Brought to New York City in 1907 as vicar of the Chapel of the Intercession, Trinity Parish, he remained there until 1929, when he was appointed dean of the Cathedral of St. John the Divine.

While at Intercession, Dr. Gates built a new church and also wrote a *History of the Church of the Intercession*. In 1913 he was elected Bishop of Cuba but refused the honor, and in 1920 he was offered the deanship of St. John's Cathedral, Denver, but again refused the honor. A high churchman, he headed the Sanctity of Marriage Association which worked to prevent Episcopal priests from marrying divorced persons and he himself said that he had never officiated at such a marriage and never would. His interest in Belgian music led to his effort to familiarize Americans with the art of carillon music, for which service he received the Order of Leopold from the Belgian Government.

Active in the work of his diocese and his church, Dr. Gates served as a director of the Church Life Insurance Corporation, and of the Church Pension Fund, and was a trustee of the Home for Old Men and Aged Couples, of St. Luke's Home, and of the House of the Holy Comforter. He was a member of the Joint Commission of the Protestant Episcopal Church on Revision and Enrichment of the Book of Common Prayer, which after 15 years finished its task in 1929. He wrote a monograph on "Mozarabic Liturgy" and advocated the restoration of the Apocryphal books of the Bible.

GEARING. See MACHINE DEVELOPMENTS.

GENERAL EDUCATION BOARD, THE.

An institution incorporated by an Act of Congress in 1903, with the stated object of promoting education within the United States of America, with-

out distinction of race, sex, or creed. The total amount received by the Board in gifts and the accretion thereof, exclusive of income from investments, was \$179,756,000. The Board is empowered to expend the principal as well as the income from these funds. The present programme is restricted largely to three types of work: (1) the support of research and experimentation in relation to the problems presented in the field of general education, i.e. the secondary school through the junior college level; (2) the continuance of the existing programme in the Southern States; and (3) a programme, now coming to a close, in child growth and development. At the end of the year 1938 the Board's unappropriated assets amounted to \$23,907,761, of which the major portion was definitely earmarked for programmes already undertaken, leaving a free balance of about \$8,336,000.

During the year ended Dec. 31, 1939, appropriations approximating \$3,814,000 were made by the Board. Some of the larger of these were as follows: To the American Council on Education, \$442,000 for the work of its Commission on Teacher Education, \$373,480 for the programmes of its American Youth Commission, \$95,000 for its general expenses, and \$47,000 for the preparation of materials for the White House Conference on Children in a Democracy; to the Progressive Education Association, \$105,905 for its service programme; to Ohio State University, \$165,000 for support of a study of school broadcasting; to the Art Institute of Chicago, the Buffalo Fine Arts Academy, the Cleveland Museum of Art, the Milwaukee Art Institute, and the Museum of Modern Art, New York City, a total of \$89,300 to further co-operation of these institutions with secondary schools; to the American Association of Junior Colleges, \$25,000 for a study of terminal education at the junior college level; to the National Association of Secondary School Principals, \$24,600 for a study of occupational adjustment; to Teachers College, Columbia University, \$32,800 for a programme of science teaching of the Bureau of Educational Research in Science; to Bennington College, \$58,700 for a study of their experience in the field of general education for their guidance and that of other colleges.

To the Southern Association of Colleges and Secondary Schools, \$50,000 for a study by its Commission on Curricular Problems and Research; to the State Department of Education of Virginia, \$36,600 toward support of a co-operative project for the revision of the State high school curriculum; to the University of North Carolina, \$47,000 for agricultural research at North Carolina State College of Agriculture and Engineering; to Duke University, \$45,000 for studies of industrial problems related to the economic development of the South; to Clemson Agricultural College, \$25,300 for a study of the place of small-scale enterprises in the social and economic development of the rural South; to the University of the South, \$25,000 for repairs, furnishings, and general equipment for the science building and for laboratory equipment; and to the University of Mississippi, \$25,000 for books and periodicals for the library; for the salaries and travel expenses of state agents for rural schools for Negroes in the Southern States during 1939-40, \$140,000; to the Board of Control of the State Institutions of Higher Learning of Florida, \$35,000 for constructing and equipping a library building for Florida Agricultural and Mechanical

College for Negroes; to Meharry Medical College, Nashville, Tennessee, \$160,000 for current expenses of the Medical School and Hospital; to the University of Chicago, a final grant of \$75,000 toward the support of instruction of Negroes in the clinical branches of medicine in Provident Hospital; to Fisk University, Nashville, Tennessee, \$53,000 for current expenses while endowment is being raised.

The executive officers of the General Education Board during 1939 were: John D. Rockefeller, Jr. (to Apr. 6, 1939) and Ernest M. Hopkins (from Apr. 6, 1939), Chairman of the Board of Trustees; Raymond B. Fosdick, President; Albert R. Mann, Vice President; William W. Brierley, Secretary; Edward Robinson, Treasurer; George J. Beal, Comptroller; Thomas M. Debevoise, Counsel; Chauncey Belknap, Associate Counsel; Albert R. Mann, Director for Southern Education; Robert J. Havighurst, Director for General Education. The offices of the Board are at 49 West 49th Street, New York City.

GENERAL LAND OFFICE. The General Land Office was created by Congress in 1812 for the survey and disposal of the public land. It was at first under the Treasury Department as a real-estate agency selling the public domain to pay the debts of the Revolution. The public domain or original public land included all the States west of the Ohio and Mississippi Rivers except Texas, but today it comprises in addition the States of Alabama, Florida, and Mississippi, besides the Territory of Alaska.

The work of the General Land Office is to survey and manage the public domain. It receives and adjudicates applications for lands, grazing and mineral leases, rights-of-way, etc., and records the disposition or status of lands. These operations are conducted in accordance with the principles of conservation and are designed to secure the prudent use of the lands.

The General Land Office is a hall of records in the disposition of the public domain. Its 4300 tract books contain the base title record or status of every 40-acre tract in 76 per cent of the United States proper. These tract books are the index to the millions of original record files of applications for public land.

The public land activities are largely confined to the 11 westernmost States, the Dakotas and Alaska. Here the General Land Office maintains 25 district land offices and 12 public survey offices for the convenience of the public. Its Cadastral Engineering Service performs practically all surveys for title purposes within the original public domain for the various Federal bureaus and departments. The mapping division revises and issues the official map of the United States and maps of the public land States. During the fiscal year ended June 30, 1939, field projects were carried on in 24 States, the Territory of Alaska, and in the District of Columbia, under 220 separate groups, 111 of which in 17 States were resurvey projects. A total of 36,249 miles was surveyed and resurveyed, embracing 5,992,000 acres, in addition to engineering investigations, miscellaneous surveys, and special projects which are not measurable on a quantity basis. There were accepted and placed on file plats representing 1,444,180 acres of original surveys of public lands, and, in addition, 1,914,355 acres of lands resurveyed, comprising an aggregate area of 3,358,535 acres. There were sold 6421 photolithographic copies of township plats, for which \$3210 was received;

and 9756 copies were furnished other Bureaus for official use.

Despite its increased responsibilities, activities of the General Land Office were conducted at a profit, the total receipts during the fiscal year amounting to \$7,756,288. This was nearly four times the amount of expenditures for its operation.

With the enactment of the Taylor Grazing Act in 1934, new fields of activity were placed within the General Land Office for administration. Under that act, and in accordance with the provisions of Executive orders, all public lands were withdrawn from disposal. No allocation of any of the public domain may now be made until after scientific classification to determine the highest use to which it can be put.

Regulation of grazing on the vacant and unserved public lands formed an important feature of the conservation work. This was accomplished by the issuance of leases under Sec. 15 of the Taylor Grazing Act. While the primary object sought was the control of grazing, the leases during the fiscal year produced a revenue of \$137,365.

There were outstanding on June 30, 1939, 5051 mineral leases, permits, and licenses covering 5,780,701 acres. There were also outstanding 4190 leases other than mineral, embracing 6,916,900 acres. There were made during the year 686 original entries and selections, embracing 301,740 acres. This figure includes 150,749 acres selected for the California State Park system. There were also made 3948 final entires and selections for 1,198,080 acres. Patents and certificates issued for 5687 entries and selections having a total area of 3,281,224 acres. This figure includes 1,298,790 acres of school section land, patented to the State of Montana under the act of June 21, 1934. A total of 1,441,472 acres was patented during the year with a reservation of mineral in some form to the United States. The total area patented, as of the close of the fiscal year, in which mineral in some form was reserved aggregates 45,087,270 acres.

There were furnished during the year 43,744 certified and uncertified copies of papers, plats, field notes, patents, etc., for which there were received amounts aggregating \$12,348. In addition, there were furnished for official use by this and other departments and agencies, 27,938 copies of such items.

GEOGRAPHICAL SOCIETY, AMERICAN.

An organization founded in 1852 and today the leading institution in the United States devoted primarily to the promotion of geographical research. At its headquarters in New York City the Society maintains a research staff engaged in original investigations and in the preparation, editing, and publishing of books, maps, and a quarterly journal. The scholarly and scientific quality of these publications is generally recognized and may be attributed, in part at least, to the fact that the Society possesses what is probably the richest collection of selected geographical books and maps in the country (open to the public). The Society encourages such exploring expeditions as seem likely to yield valuable discoveries in geography and related sciences and co-operates

with other institutions with respect to the geographical aspects of their research and exploration projects. It participates in numerous studies that have wide practical application and that represent the fulfillment of its obligation as a national institution to concern itself with the national welfare and the problems of society. Lectures by distinguished explorers or geographers are sponsored annually and important contributions to the development of geography are recognized through elections to honorary and corresponding memberships and the bestowal of medals.

The Society's outstanding project of research during the past 19 years has been the compilation and publication of a 107-sheet map of Hispanic America, conforming to the International Map of the World on the scale of 1:1,000,000. This great undertaking is now approaching completion.

The Society awarded three gold medals during 1939: the Cullum Geographical Medal to Professor Emmanuel de Martonne of the University of Paris, for his contributions to physical and regional geography; the Charles P. Daly Medal to Professor H. J. Fleure of the University of Manchester, England, for his studies in human geography; and the David Livingstone Centenary Medal to John R. Rymill, Leader of the British Graham Land Expedition of 1935-37, for explorations in the Antarctic and in Greenland. Sir Wilfred Grenfell, Henri Baulig (a French geographer), and Giotto Dainelli (an Italian geographer and explorer) were elected to Honorary Membership, and five other distinguished scientists were made Corresponding Members during the year.

In the Society's quarterly journal, *The Geographical Review*, important articles appeared in 1939 dealing with such varied subjects as: "The Littoral of Pacific Colombia and Ecuador," "The Geographical Regions of Palestine," "Hurricanes into New England: Meteorology of the Storm of September 21, 1938," "Sea to Sahara: Settlement Zones in Eastern Algeria," "Post-War Locational Changes of British Industry," "Hunting Boundaries with Car and Camera in the Northeastern United States." A new volume, "White Settlers in the Tropics," by Dr. A. Grenfell Price, was added to the Society's *Special Publications* early in 1939, and, at the end of the year, "Environment and Conflict in Europe: Eighteen Basic Maps," with an accompanying pamphlet of text. Early in 1940 the Society will publish another *Special Publication*, "Inner Asian Frontiers of China," by Owen Lattimore.

The Society was represented by W. A. Wood, Head of the Department of Exploration and Field Research, on two expeditions: The Cabot Colombian Expedition to the Santa Marta mountains in the spring of 1939, and the Third Wood Yukon Expedition, to the St. Elias Range, Yukon, Canada, in the summer. Maps based on air surveys made during these explorations are being constructed at the Society with the aid of new techniques developed by O. M. Miller, Head of the Department of Mathematical Geography.

The president of the Society in 1939 was Roland L. Redmond, and the director, Dr. John K. Wright. Headquarters are at Broadway and 156th Street, New York City.

GEOGRAPHIC SOCIETY. NATIONAL. An organization for the "increase and diffusion of geographical knowledge," this Society was founded at Washington, D. C., in 1888, and since 1899 has

been directed by Gilbert Grosvenor, now President.

During its half a century the membership of The Society has grown to an enrollment of 1,100,000 persons, and its official publication, the *National Geographic Magazine*, has become world famous for its beautiful illustrations, comprehensive articles, and accurate maps.

The Society has sponsored more than 100 scientific expeditions, some of which required years of field work to achieve their objectives. For more than fifty years The Society has presented to its membership, in the *National Geographic Magazine*, personal narratives of these and other expeditions, and has amassed more than 300,000 photographs which constitute an unparalleled pictorial record of world geography.

On Jan. 16, 1939, M. W. Stirling, leader of the National Geographic Society-Smithsonian Institution Archeological Expedition to Vera Cruz, Mexico, discovered the oldest dated work of man in the Americas yet brought to light, a Mayan stela bearing a date equivalent to November 4, 291, B.C. Dr. Stirling's account of his find was published in the August, 1939, issue of *The Geographic*. Another outstanding record of archeological achievement appeared in the May issue in which Henry B. Collins, Jr., reported on his discovery of the first traces of the old Eskimo "Thule" culture in Alaska during the National Geographic Society-Smithsonian Institution Expedition to Bering Sea in 1937.

Mr. and Mrs. Wendell Chapman conducted an expedition for The Society during which they made photographs in color of big game animals in their native habitats from Arizona to Canada; these pictures were reproduced in the July *Geographic*. Dr. Maynard Owen Williams, W. Robert Moore, and Luis Marden made an eight-months survey of South America. John D. Whiting visited the volcanic pinnacles in Cappadocia, Turkey, and recorded in color the ancient cone dwellings where early Christian leaders sought seclusion. These pictures were shown in the December, 1939, issue of the *National Geographic Magazine*. In July Lincoln Ellsworth gave an account of his Antarctic expeditions.

Dr. C. W. Gartlein, director of the National Geographic Society-Cornell University three-year study of auroras, reported that he and his corps of assistants at their stations in Ithaca, Hamilton, and Geneva, New York, had clocked and measured the aurora borealis on August 11, 1939. This auroral display, described as the most spectacular in the United States in ten years, was photographed both in natural colors and in motion pictures. Charles Bittinger, the artist who accompanied the National Geographic Society-U.S. Navy Solar Eclipse Expedition to observe the eclipse of June 8, 1937, on Canton Island, completed his paintings of that phenomenon. They were reproduced in color in the *National Geographic Magazine* in July 1939 to accompany an article by F. Barrows Colton on the latest achievements in astronomy.

The year-long survey of an area of some 4,500,000 square miles in the South and Central Pacific Ocean, planned by The Society in co-operation with the University of Virginia and the U.S. Coast Guard, was necessarily postponed after the outbreak of hostilities in Europe.

The Society published in 1939 the first series of Kodachrome photographs of birds. These

natural color camera studies were made by Dr. A. A. Allen, Cornell University.

Two expeditions were announced to study the eclipse of the sun on October 1, 1940. Dr. Irvine C. Gardner, National Bureau of Standards, is to conduct a party to Recife, Brazil, and Dr. Theodore Dunham, Jr., is to lead The Society-Mount Wilson Observatory group to the central region of the Cape of Good Hope Province, South Africa.

The Society published large scale ten-color maps of "Reaches of New York City," "The Atlantic Ocean," "Central Europe and the Mediterranean," and "Mexico, Central America, and the West Indies."

In addition to the *National Geographic Magazine*, The Society has prepared a series of authoritative nature books. In December, 1939, The Society published *The Book of Fishes*, edited by Dr. John Oliver La Gorce. This is the most comprehensive, full-color presentation yet published of the better known species of North America's inland and coastal waters. Another outstanding work in the series is the two-volume *Book of Birds*, edited by Dr. Gilbert Grosvenor and Dr. Alexander Wetmore, the only publication which reveals in full color all the known species of birds of North America, north of Mexico. The most recent addition to The Society's *Contributed Technical Papers* is the monograph "National Geographic Society-U.S. Solar Eclipse Expedition of 1937 to Canton Island" edited in 1939 under the supervision of Dr. Lyman J. Briggs, Chairman of The Society's Research Committee.

President of the Society is Dr. Gilbert Grosvenor. Headquarters are in Washington, D. C.

GEOLOGICAL SOCIETY OF AMERICA. See GEOLOGY.

GEOLOGICAL SURVEY. The organic act of Mar. 3, 1879, gave to the Geological Survey the duties of classifying the public lands and examining the geologic structure, mineral resources, and products of the national domain. Additional duties imposed by subsequent legislation included the making of a topographic atlas of the United States, the investigation of surface and underground waters, and the supervision of oil, gas, and other mineral operations on public lands under permit or lease. About \$7,000,000 was made available from various sources for the Geological Survey's work in 1939.

Geologic investigations were continued during the year in a number of metal-mining and oil and gas districts in co-operation with the States, and physiographic and geologic studies were conducted in co-operation with other Federal agencies. With the Public Health Service, for example, the Survey made studies of geologic factors that might have a bearing on the prevalence of tuberculosis in certain southern areas, and, in co-operation with the Coast and Geodetic Survey, an investigation of gravity anomalies. A lexicon of geologic names, containing definitions of more than 10,000 named stratigraphic units in the United States and Alaska, was published during the year as part of the regular series of reports and will serve as an invaluable reference book for educators and students and for persons engaged in the mineral industry.

Topographic surveys, resurveys, or revisions in 1939 covered more than 27,000 square miles of the United States, and in this connection con-

tinuing experiments with the Tennessee Valley Authority proved conclusively that airplane photographs can be used quite successfully in topographic mapping. At this writing the multiplex wide-angle projector is considered the best stereoscopic plotting instrument for compiling maps from aerial photographs. Accuracy is, of course, the first consideration in the making of Geological Survey maps, and accurate maps of certain types of terrain are now being produced from aerial photographs more rapidly and at less cost than from ground surveys.

The prolonged droughts and calamitous floods of recent years have focused attention on the Geological Survey's investigations of the Nation's water supplies, recognition of the value of which is found in larger Federal appropriations and greatly increased contributions from the States, counties and municipalities. Today even the casually informed realize the importance of proper control and utilization of our water supplies, in which the Survey's work plays an important part. During the year 1939, the Survey made available for publication stream-flow records collected at 4165 river-measurement stations; measured periodically the water levels or artesian pressure in about 5000 observation wells; and analyzed 5000 samples of surface and underground waters to determine their suitability for industrial, agricultural, and domestic uses.

In the administration of the Government's public-land work, the Geological Survey contributed its share of advice and supervision. More than 9600 reports were made on land-classification and mineral-leasing matters. Supervision was given to the production of minerals on public lands, Indian lands, and naval petroleum reserves prospected or developed by private capital. As a result of that production the Federal government received a revenue of about \$9,500,000.

The Geological Survey issued 139 reports and miscellaneous publications during the year and distributed more than 100,000 books and pamphlets and 800,000 maps and folios. Its Library, probably the largest on geologic and related subjects in the world, received more than 21,000 new books, pamphlets, and maps.

W. C. MENDENHALL.

GEOLOGY. The Geological Society of America and its affiliated societies held the fifty-second annual meeting at the Nicollet Hotel, Minneapolis, Minn., from Dec. 28 to 30, 1939. About 650 members and guests were registered, a number considerably less than the usual registration at such eastern centers as New York City and Washington. During the sessions the presidential addresses of the heads of three societies were given: T. Wayland Vaughan of the Geological Society spoke upon the subject, "Ecology of Modern Marine Organisms with Reference to Paleogeography"; Ralph W. Chaney of the Paleontological Society spoke upon the subject, "Tertiary Forests and Continental History"; while E. S. Moore of the Society of Economic Geologists entitled his paper, "Genetic Relations of Gold Deposits and Igneous Rocks of the Canadian Shield." Because of illness, Max N. Short of the Mineralogical Society was unable to deliver his presidential address.

An unusually long slate of 42 geologists was elected to fellowship in the Geological Society, while Dr. Per A. Geijer, Professor of Geology and Mineralogy at the Tekniska Högskolans,

Stockholm, Dr. Erik H. O. Stensio, Director, Department of Paleozoology of the Naturhistoriska Riksmuseum, Stockholm, and Dr. Felix Andries Vening Meinesz, Professor of Geodesy and Cartography, Universiteit Utrecht, were made correspondents. While election to the associated societies is open to any serious student of geology, fellows of the Geological Society are selected on the basis of attainment in research and publication, and election is considered an honor. The average age of those elected to fellowship in 1939 was 36, the youngest age being 27, and the oldest 49. Because they are more apt to attract attention by publication, geologists connected with universities and surveys are likely to be elected to fellowship at an earlier age than those engaged in mining and petroleum work. In Memoriam, tribute was paid by George F. Kay to the following Fellows, who died during 1939: S. Prentiss Baldwin, Donald C. Barton, Arthur J. Collier, Arthur P. Coleman, William E. Ford, George Herbert Girty, Alfred Harker, Waldemar Lindgren, Wendell Clay Mansfield, Adolf Carl Noe, W. A. Tarr, and J. E. Woodman.

Professor Eliot Blackwelder of Stanford University was elected president of the Geological Society for 1940; Dr. William F. Foshag of the United States National Museum was elected president of the Mineralogical Society, and Professor Carl O. Dunbar of Yale University was voted president of the Paleontological Society; G. F. Loughlin, Chief Geologist of the United States Geological Survey, is head of the Society of Economic Geologists for 1940.

A summer meeting of the Geological Society under the auspices of the Cordilleran Section was held at the University of California in Berkeley from Aug. 8 to 10, 1939. In addition to the Society of Economic Geologists and the Paleontological Society, the Seismological Society of America took part in this meeting in which the papers were largely restricted to Rocky Mountain and Pacific coast titles. A number of excellent field trips were arranged in connection with this program.

Section E (Geology and Geography)

A.A.A.S. This section of the American Association for the Advancement of Science, under the direction of the secretary, Professor Howard E. Meyerhoff of Smith College, held two meetings during the year. The first of these at Milwaukee, Wisconsin, on June 19 to 23 was noteworthy for the participation of the American Society of Agricultural Engineers and the Association of American Geographers with whom soil conservation and land utilization problems were studied. The winter meeting was held in Columbus, Ohio, from December 27 to 29 in conjunction with a number of related societies. During these sessions particular emphasis was placed upon geologic problems of the Ohio Basin, teaching methods in elementary geology, industrial minerals, meteorite falls, the application of mathematics in the earth sciences, and hydrology. Professor Walter H. Bucher of the University of Cincinnati, retiring vice-president, spoke upon "Problems of the Atlantic Ocean." Professor Kirk Bryan of Harvard University is retiring vice-president in 1940, while Dr. Hugh D. Miser of the United States Geological Survey was elected vice-president and chairman of Section E.

Penrose Medal. Prof. William Berryman Scott, of Princeton University, was named by the Geological Society of America as the Penrose Medalist for 1939. The gold medal was presented

on December 29 at the fifty-second annual meeting of the Society in Minneapolis. (For a complete list of Penrose Medalists since 1927 see page 279, *NEW INTERNATIONAL YEAR BOOK*, 1938.) Professor Scott is the eleventh geologist to receive this medal. Born in Cincinnati, Ohio, in 1855 and now retired from active teaching, he was for 50 years Blair professor of geology and vertebrate paleontology at Princeton. In the words of the Committee on the Penrose Medal Award of the Geological Society:

"He is generally regarded as the leading American student of the Tertiary mammal faunas of the western hemisphere, with particular reference to their historical development and migrations. A familiarity with these problems led him also to a fruitful study of the principles of evolution. His many years of exploration of Tertiary deposits in the western United States and collaboration with Hatcher and others in Patagonia have resulted in more than fifty monographs as well as several comprehensive books."

There were no awards of the Penrose Medal of the Society of Economic Geologists or of the Roebling Medal of the Mineralogical Society for "meritorious achievement in mineralogy and allied sciences" for 1939.

International Geological Congress. The Geological Society of London announced that the eighteenth session of the International Geological Congress, which was to have been held in London from July 31 to Aug. 8, 1940, was indefinitely postponed. The invitation to hold the congress in London was accepted by the bureau of the Seventeenth Congress in Moscow in 1937 and was the outcome of a strong desire on the part of the fellows of the Geological Society of London and of British geologists in general to reciprocate the hospitality accorded to them on so many occasions in other countries, and to fulfil the wish that the congress, which last met in Great Britain in 1888, should meet there again. Sir William Bragg, president of the Royal Society, had been elected honorary president of the general organizing committee, and a great amount of effort had already been expended in preparations for what was expected to be an exceptionally well-attended congress. (An account of the proposed excursions and subjects for discussion in connection with the postponed congress is given in the 1938 *NEW INTERNATIONAL YEAR BOOK*, pp. 280-81.)

Women in Geology. That the field of geology is one in which eminent success by a woman practitioner is sufficiently unusual to attract widespread attention was indicated on Apr. 3, 1939, when extensive publicity was given to the merited appointment of Dr. Winifred Goldring as state paleontologist on the staff of the New York State Museum, one of the oldest organizations in American geology. Another indication of the small number of women professional geologists is seen in the list of fellows of the Geological Society of America, where there are only 12 or 15 women, at most 2 per cent, in a total of about 750. No figures are available for botany and zoology, the sister natural sciences of geology, but it seems probable that women occupy a place more nearly commensurate with their ability in these fields.

Geology is not the most promising field for women seeking careers in science, and this being true still greater credit is due those succeeding in it. In spite of the small numbers who take up advanced study in geology, opportunities for undergraduate instruction of women are practically as widespread as for men, and the cultural

value of the subject has made it very popular with women undergraduates. Many women showing interest in geology are discouraged from majoring in it by their college professors of geology, who are well aware of the difficulties facing women in this field. Women do, nevertheless, continue to go into and make successes in geology; a considerable number find employment as paleontologists or micropaleontologists with oil companies; others are teachers in colleges and universities, although even in the leading women's colleges men predominate in the geology departments; a small number find employment with museums or State and Federal geological surveys; few, if any, are employed in a geological capacity by mining firms.

It is unnecessary to enumerate universities where women may receive graduate instruction in geology, inasmuch as they are accepted as students in almost every important graduate school in the country. Several women's colleges, among which are Smith and Bryn Mawr, also offer graduate instruction of a high grade in this science.

Appalachian Drainage. Explanations of the transverse southeasterly drainage of the Middle Appalachian Mountains between the Roanoke River in Virginia and the Hudson in New York have undergone an evolution almost as remarkable as that of the drainage with which they are concerned. One of the first scientific explanations was that of Tietze who in 1878 suggested that the streams were older than the mountains and had maintained their courses during mountain uplift; two years later Peschel wrote that such streams as the Delaware, Susquehanna, and Potomac followed pre-existing fracture lines normal to the mountain trends, while in 1882 Löwl ascribed such stream courses to headward erosion through the resistant rock ridges of the Middle Appalachian Mountains.

These earlier suggestions were based on inadequate maps, and W. M. Davis in 1889 was the first to give an explanation of Appalachian drainage resulting from careful investigational study. According to Davis the original drainage of the Appalachians consequent upon uplift of these mountains was to the northwest into the interior of the continent. As a result of widespread downwarping east of the mountains in Triassic times these westward-flowing streams were supposed to have been reversed and to have assumed approximately the positions they now occupy. Davis' hypothesis was not seriously challenged until the publication of Douglas Johnson's *Stream Sculpture on the Atlantic Slope* in 1931. Here was set forth a hypothesis completely at variance with Davis; Johnson believes that paired wind gaps and water gaps and the long southeast-trending reaches of the major streams of Pennsylvania and New England can only be explained by assuming a formerly much greater inland extension of the sedimentary beds of the Atlantic Coastal Plain. These sedimentary rocks are believed to have been deposited upon an erosional surface, termed the Fall Zone peneplane by Sharp in 1929, which extended above the present tops of the Appalachians. According to this hypothesis, streams flowing southeastward down the slope of the overlapping Coastal Plain were superposed across the Appalachian structures. In spite of its lack of any apparent possibility of direct proof, this hypothesis of regional superposition has gained widespread acceptance, and it is probable

that Johnson's application of it to the former course of the Hudson in northern New Jersey will become a geological classic, not subject to any major changes in the future.

The absence of any geologic evidence to substantiate Johnson's explanation of Appalachian drainage has been raised as an objection to it and has stimulated search for an alternative hypothesis. At least two later hypotheses have appeared. Meyerhoff and Olmstead have stated their belief that the present Appalachian drainage dates back to Permian times, and that the antiquity of many modern streams entering the Triassic Lowland can be proved by correlation with Triassic conglomerate deposits. They account for the original southeastward direction of stream flow by assuming that the Permian regional divide was much farther to the northwest than is usually believed, and explain the lack of stream adjustment to structure by means of superposition from overturned folds and overthrust blocks and by ordinary drainage evolution in a region of folded mountains. Mackin has attacked the Meyerhoff-Olmstead hypothesis with cogent arguments. More recently Henry D. Thompson has explained the course of the Hudson through the Highlands and of other streams farther south by headward erosion and capture, in the case of the Hudson along lines of weakness, elsewhere due to tilting which increased the gradient of the eastward-flowing streams.

One thing is certain, if water falls upon a region of folded mountains, it will find a way to the sea, even though some advocates of the various hypotheses seem occasionally to think it would be there yet if it had not escaped according to their favorite explanation. Much remains to be studied in the problem of Appalachian drainage evolution, and it seems probable that much more may be done with a hypothesis which considers each stream as an individual developing in accordance with normal laws of folded mountain evolution. Like the lives of human beings the life of each stream would then be seen to follow the same general pattern, but the detailed variations would be infinite.

Geology on the Air. Geologists have never been much interested in publicity, but they have always been interested in education. Within recent years it has become apparent that the Geological Society of America, as the largest independent foundation of its kind in the world, had a responsibility as well as a great opportunity for keeping the public enlightened concerning the present status of the earth sciences. This has been and is being done by means of carefully edited releases to the press on such discoveries and advances as are of significance and of greatest popular interest. The radio was first used for this purpose in connection with the Fiftieth Anniversary of the Society in December, 1938. The first two trial addresses were so favorably received that arrangements were made for broadcasting eight 15-minute addresses over the National Broadcasting Company network in the spring of 1939. These were on subjects of outstanding geologic interest and timeliness and were prepared by recognized authorities. The scripts were later bound into pamphlet form for distribution by the Geological Society; they make delightful and instructive reading, and since their subjects indicate some of the more important lines along which geologists are working at present, their titles and authors are indicated as follows:

"Submarine Canyons," by Paul A. Smith, U.S. Coast and Geodetic Survey; "Shifting Ocean Levels," by Douglas Johnson, Columbia University; "Origin of Mountains," by Chester R. Longwell, Yale University; "Deep Earthquakes," by L. B. Slichter, Massachusetts Institute of Technology; "The Role of Minerals in the Present International Situation," by C. K. Leith, University of Wisconsin; "Geology in Engineering," by Charles P. Berkey, Columbia University; "Geology in the Search for Metals," by Donald H. McLaughlin, Harvard University; "Geology in the Search for Petroleum," by William B. Heroy, Houston, Texas; and "New Uses for Old Minerals," by Edward H. Kraus, University of Michigan.

Walther Penck's Geomorphology. For the meeting of the Association of American Geographers in Chicago, December, 1939, O. D. von Engel of Cornell University arranged a symposium upon the geomorphic teachings of Walther Penck. Unfortunately Penck's ideas are poorly understood by American and perhaps by all geologists; not only is it true that few Americans have read his *Morphologische Analyse*, for which there exists no English translation, but even geologists, whose native tongue is German, are forced to admit that the German used in it would have aroused Mark Twain's profane admiration. The language obscures Penck's meaning to such an extent that one may well doubt whether his ideas were not equally obscure in the author's mind. Part of this obscurity may be due to the editing and publication of the book a year after Penck's death. A long and valuable review of *Die Morphologische Analyse* with which few seem to be acquainted was written by Isaiah Bowman for the *Geographical Review* in 1926. Penck's ideas seem to have been rejected by most American students, perhaps on too little evidence, and it seems probable that the chief value of the Chicago symposium may have been to cause a renewed searching and testing of our geomorphic tenets which may rely too much upon the power of Davis' great reputation. It is to be hoped that some one well-acquainted with Penckian and Davisian teachings will go to the labor of preparing a long and detailed analysis of the former, so that his colleagues can learn what it is all about.

The Geologist and Political Geography. In these years of changing frontiers, when iron and coal and petroleum are as necessary to the survival of national units as wheat and beef and sugar, great public interest has been aroused in the related subjects of strategic minerals and international boundaries. While bordering on many fields of learning these subjects are usually accepted as being particularly within the province of geography. It should be pointed out, however, that the geologist is peculiarly fitted, because of his training, to arrive at a correct and fundamental understanding of them. While consideration of the earth is now frequently omitted from some subjects called geographic, it is one of the most important factors when the location of mineral deposits and international frontiers is discussed. Through his understanding of the mode of occurrence of mineral deposits the geologist finds it easy to remember the mineral deficiencies of any country. He knows instantly, knowing the geology of Norway, that oil and coal will not be found there. From his knowledge of landforms he is able to visualize and understand the natural boundaries of any country and the topography of strategic significance within them. Knowing that the southern coast of Finland is a peneplaned pre-Cambrian area sloping gently southward beneath the waters of the Gulf of Finland, he can picture perfectly its many islands and irregularities and

its relationship to the Estonian coast developed upon Paleozoic rocks overlying the Finnish peneplane. Knowing that the interior of Finland is a heavily glaciated peneplane on pre-Cambrian rocks, he sees vividly the bewildering number of lakes, swamps, morasses, bogs, and rivers, which make it an easy country to defend. He knows why Bohemia is a great natural fortress also easy to defend. Such examples could be multiplied indefinitely, but it must be apparent that few will have a better background for discussing strategic minerals and the strategic importance of topography than one well-trained in geology. Not only are almost all experts upon strategic minerals geologically trained, but some of the best work upon the influence of topography upon strategy and in the field of historical geography as well has been done by geologists.

Bibliography. Although selection may be invidious, the following publications appearing during 1939 seem particularly worthy of mention:

Geomorphology, by Armin K. Lobeck (New York, McGraw-Hill, 1939). The unusual and superb selection of photographs, drawings, maps, and diagrams illustrating this textbook makes it one of the most original and stimulating ever to be written by an American geologist, and it is at present the outstanding textbook of geomorphology in the English language. About two-thirds of the book consists of illustrations which can be perused by few people, even though they be professional geologists, without profit. Its use of the title, *geomorphology*, indicates an increasing tendency toward the discarding of the term, *physiography*, to designate the study of landforms.

Geology and Engineering, by Robert F. Legget (New York, McGraw-Hill, 1939). The author of this book is an engineer with an additional background of geological training. The high praise which it has received from professional engineering geologists indicates that it will fill a very important place in the training of geologists and civil engineers. It is characterized by an abundance of illustrative cases showing the application of geology to engineering problems drawn from all parts of the world.

Principles of Sedimentation, by W. H. Twenhofel (New York, McGraw-Hill, 1939). This invaluable text and reference work is an outgrowth of the author's earlier *Treatise on Sedimentation*. Emphasis is placed on sediments as products of environment, and those factors of environment having major influence on the production, transportation, deposition, and modification of sediments are considered in detail.

A Source Book in Geology, by Kirtley F. Mather and Shirley L. Mason (New York, McGraw-Hill, 1939). This is one of the series of *Source Books in the History of the Sciences* and gives a comprehensive view of the development of geological science through the last four centuries by presenting excerpts from the writings of 130 men who have molded geological thought in their time. Many of these excerpts have been translated from foreign languages; no material from living authors has been included. It makes tremendously interesting and instructive reading.

Geology and Allied Sciences. A Thesaurus and a Coordination of English and German Specific and General Terms. Part 1. German-English, by Walther Huebner (New York, Veritas Press, 1939). This, one of the most convenient and useful German-English geological dictionaries that the writer has ever seen, contains more than 25,000 terms in geology and the allied fields of botany, biology, chemistry, physics, geography, meteorology, and zoology.

Atlantic Submarine Valleys of the United States and the Congo Submarine Valley, by A. C. Veatch and P. A. Smith (New York, Geological Society of America, 1939). The sonic depth finder has enabled submarine topography to be mapped far more precisely than ever before, and no part of the continental shelves of the world has been more extensively mapped by this method than that of the eastern United States. This paper is a discussion of the charts constructed from these soundings with particular reference to the striking submarine "valleys," whose origins are still in dispute. The authors lean toward a subaerial erosional origin for the "valleys," in spite of the tremendous geologic difficulties in such an explanation.

Adirondack Igneous Rocks and Their Metamorphism, by A. F. Buddington (New York, Geological Society of America, 1939). This important study has as its major objectives the definition of the character of the igneous

rocks present, determination of the number, age, and origins of the igneous complexes, the understanding of the mechanics of intrusion, and the discrimination of primary magmatic structures from metamorphic features. It is a technical discussion of a classic area for the study of crystalline rocks.

Geology of North America, Volume 1, edited by Rudolf Ruedemann (1927-35) and Robert Balk (1936-39) and containing contributions by 16 American authorities (Berlin, Gebrüder Borntraeger, 1939). This the first of three volumes planned to cover the geology of North America is one of the series of *Die Geologie der Erde*. It contains a general introduction to the geology and geomorphology of the continent, followed by descriptions of the stable shield areas, the Mississippi Valley region, and the Atlantic and Gulf Coastal Plain.

Strategic Mineral Deposits, by G. A. Roush (New York, McGraw-Hill, 1939). This timely book discusses, from the point of view of the United States, the indispensable strategic mineral commodities of which our domestic supply is inadequate. The author, a well known authority, takes up for each metal such subjects as uses, substitutes, reserves, sources of supply, imports, exports, stocks, tariffs, and political and commercial control.

Recent Marine Sediments, a Symposium of 34 papers by 31 authors, edited by Parker D. Trask (Tulsa, American Association of Petroleum Geologists, 1939). This book discusses sedimentation and the environment of deposition, a subject voted as most important to the progress of petroleum geology by over three thousand oil geologists. Observational facts as opposed to theoretical discussions are emphasized.

The Origin of Submarine Canyons, by Douglas Johnson (New York, Columbia University Press, 1939). Much of the material contained in this book appeared in successive issues of the *Journal of Geomorphology* during 1938 and 1939, but it has been revised and now includes references to papers appearing in 1939. The distinguished author discusses all the leading hypotheses to explain submarine canyons and is very loath to accept a subaerial stream erosion explanation for them. He advances as a hypothesis worthy of consideration an origin by submarine spring sapping.

Bulletin of the Geological Society of America, Volume 50, Number 12, Part 2, 1939. Probably no bulletin of the Geological Society of America is looked forward to with more interest or referred to more often than this number containing abstracts of all papers presented at the meetings of the society and its affiliates, the Paleontological Society and Section E, during the year. Here in terse language—each abstract is limited to 250 words—are presented the results of hundreds of investigations. For various reasons some of these results may never appear in longer papers, in which case the abstracts are the only permanent records of them. There is no better place to learn the scope of modern geology than to look through this volume of abstracts.

GEORGE VI. See CANADA and GREAT BRITAIN under *History*; DISTRICT OF COLUMBIA.

GEORGE WASHINGTON UNIVERSITY, THE. A nonsectarian institution of higher learning for men and women in Washington, D. C., founded in 1821. The enrollment for the first semester of 1939-40 was 6493. The enrollment in the 1939 summer session was 1780. The faculty numbered 416.

The program of training in personnel work was expanded, courses being added in Personnel Psychology in the Public Service to supplement those already given which train for personnel work in private business and industrial organizations and in schools and educational organizations.

In the School of Engineering work was added in Naval Architecture and Marine Engineering, together with new courses in Management Problems and Contracts and Specifications, and a seminar in which seniors engage in round-table discussion with leading engineers.

Under the Civilian Pilot Training program of the Civil Aeronautics Authority, ground training and flight training were inaugurated.

The total endowment amounted to \$2,299,551, from which the income of 1938-39 was \$78,903. The total income from all sources was \$1,442,770.

The library contained more than 125,000 volumes. President, Cloyd H. Marvin, Ph.D., LL.D.

GEORGIA. Area and Population. Area, 59,265 square miles; included (1930) water, 540 square miles. Population: Apr. 1, 1930 (census), 2,908,506; July 1, 1937 (Federal estimate), 3,085,000; 1920 (census), 2,895,832. Atlanta, the capital, had (1930) 270,366 inhabitants.

Agriculture. Georgia harvested, in 1939, 10,639,100 acres of principal crops. Cotton, on 1,938,000 acres, made 916,000 bales (estimated farm value, \$41,669,000); corn, on 4,346,000 acres, 36,941,000 bushels (\$24,750,000); tobacco, 127,100 acres, 96,620,000 pounds (\$12,695,000); peanuts, 650,000 acres, 341,250,000 pounds (\$11,261,000); sweet potatoes, 117,000 acres, 8,892,000 bushels (\$7,114,000); tame hay, 1,111,000 acres, 579,000 tons (\$6,369,000); peaches, 4,290,000 bu. (\$6,864,000); oats, 426,000 acres, 8,946,000 bu. (\$3,757,000).

Manufacturing. Establishments manufacturing goods in Georgia numbered, in 1937, 2875 (in 1935, 2834) and employed 159,496 wage-earners (in 1935, 139,650), who received in wages \$110,501,344 (in 1935, \$81,495,168). The products of the manufactories aggregated in yearly value \$708,652,241 for 1937 (for 1935, \$514,655,015) and derived, of this value, \$269,507,109 from processes of manufacture in the State (for 1935, \$187,248,896). The group of industries dependent on the cotton plant led in importance, providing between one-third and one-half of the total manufactured output of 1937; the group included not only the weavers of cotton goods and the spinners of other cotton yarn and thread but also the makers of curtains, draperies, and bed spreads, the producers of knitted cloth and garments, and the dyers of cotton yarns. The cotton-weaving establishments employed somewhat over one-third of the manufacturing wage-earners, paid well over one-third of all Georgia's manufacturing wages to these earners, and produced goods to the value of \$164,173,283, of which \$71,708,022 was contributed by manufacture. The separate output of cotton yarn totaled \$46,929,575. The production of hosiery amounted to \$15,935,089, but in what part cotton and in what part silk and rayon was not specified. Cotton seed was treated and manufactured into oil, cake, and meal to the value of \$27,268,138. Forests supplied another important branch of manufacturing, which yielded \$18,100,369 in lumber and timber products and also \$7,782,587 in separately classified products of planing mills, and \$16,557,756 in turpentine and rosin.

Atlanta had in 1937 20,223, or over one-eighth, of the State's manufacturing wage-earners; its factories produced goods to the value of \$152,704,389, or over a fifth of the State's total. Macon's total of manufactures, for 1937, was \$26,146,400; Augusta's was \$25,824,694.

Mineral Production. As stated in 1939 by the U.S. Bureau of Mines the value of native minerals produced in Georgia in 1937 aggregated \$12,584,060, and the leading products in order of yearly value produced, were stone, raw clay, and clay products. The stone shipped or used by producers totaled 1,465,680 short tons (1938), as against 1,737,760 tons (1937); by value, the totals were \$3,581,319 and \$3,597,039. Parts of the total for 1938 were granite worth \$1,021,939, marble (chiefly monumental) valued at \$1,031,121, and totals for some other sorts of superior stone. Georgia, the leading State in the yearly value of

the production and sale of raw clay, sold in 1937 clay to the value of \$3,548,559. Kaolin, a fine clay used for making china and as a filler for paper, made up all but a trifle of this total. Sales of kaolin in Georgia amounted to \$3,314,918 for 1938 and \$3,546,059 for 1937. The value of the State's output of clay products (exclusive of pottery and refractories) totaled \$2,118,952 for 1937.

The State geologist reported (Nov. 15, 1939) a rich showing of gold, found by men examining the century-old and long unworked Calhoun mine near Dahlonega; work was started in order to determine whether the showing extended into an important auriferous formation.

Legislation. The General Assembly met in regular biennial session in January and adjourned March 19, leaving a record in marked contrast with the legislation of Governor Rivers's first term. Enactments of the previous Legislature had put into effect a series of intended improvements popularly called the Governor's little New Deal; the new Legislature failed to lay taxes needful for meeting an estimated deficit of \$22,000,000 to accumulate in the next two years. A tax at 2 per cent on sales, another at 1 per cent on gross income, and a cumulative tax on chain stores, according to the number in the chain, were all rejected, despite the striving of the Governor's friends.

A new member of the State's government, the State Hospital Authority, was created by statute; its three heads were to direct the construction of a new place of care for the insane, at Milledgeville. The Highway Department received power to issue about \$8,000,000 in bonds, over three years, toward matching Federal grants in aid of the State's road-building; this was done by passing a constitutional amendment to be ratified at the election in June; it opened the way for diverting existing highway funds to divers State expenditures. Permission was granted to increase the number of the State Highway Patrol to 200, from 120. To give effect to a constitutional amendment ratified by popular vote in 1938, an act let counties levy a tax for the medical care of the sick poor. A new State Purchasing Department was created; travel on the highways was allowed to go as fast as 55 miles an hour; the fixing of sentences on criminals was again taken out of the power of judges and was restored to juries; the law on libel was amended so as to give somewhat greater protection to the publisher. Affecting Atlanta, an act did away with the election of the members of the City Council by wards, by requiring that all be nominated at the primaries by the vote of all the city. A constitutional amendment initiated by the Legislature offered aid to the coastal counties in their effort to bring about the enlargement of U.S. Route 1 to a four-lane highway in their territory. In order to discourage authorities from lax granting of licenses for the marriage of young girls below the lawful marrying age, a statute gave girls' parents in such cases the right to sue the grantor of the license for damages. Bearing on the possible taxation of property held by the TVA, an act deprived of their exemption from the tax on property the Federal corporations having proprietary activities.

Political and Other Events. Governor Rivers, failing in his effort to bring the Legislature to create a great addition to the State's revenue, met with a check to his plans for giving State aid on a great scale to activities useful to the

poorer classes. The State faced a heavy operating deficit for the fiscal year ending with June. The State was pledged, by a statute, to pay a sufficient part of the salaries of the 21,000 teachers in the public schools to make good the difference between the means of the school districts and the minimum for teachers' pay through the required yearly length of the term of school. It was feared in March that only a small proportion of the schools could avoid shortening their terms; the payment of the State's part of salary checks was kept up for the time being by money obtained through loans from banks, but it remained likely that the State's guarantee to the public-school system would need a legislative grant of more revenue for its performance, before the expiration of the current biennium. Meanwhile the State retrenched by cutting the monthly total for old-age pensions and the expenditures of divers departments. Later Rivers diverted about \$2,500,000 from the tax on gasoline (earmarked for highways), to use the money for teachers' pay. He removed the Chairman of the Highway Board, W. L. Miller, December 3, and named L. L. Patten in Miller's place.

Governor Rivers, after the failure of his recommendation for a statute to establish a system of civil service for the employees of the State government, issued an order, May 1, putting all appointive posts (about 6500) in the State's governmental organization under such a system; as authority for his course he used a passage of thirteen words in the text of a budget law enacted eight years before. The State's system of unemployment compensation, created in 1937, began in January its function of granting weekly payments of money to persons whose employment in industry ceased. The maximum of payments allowed to applicants was \$15 a week for 16 weeks. Georgia took an active part in the movement among Southern States to obtain from the Interstate Commerce Commission or by act of Congress the removal of excess of the allowed rates of the Southern railroads for carrying freight, over the corresponding rates of the Eastern railroads; a meeting of the Governors of the Southeastern States, for concerting action on this subject, was held in Atlanta at the beginning of March. The State's plan for constructing additions to the mental hospital at Milledgeville, to cost about \$4,000,000, was put in motion in February by the appointment of the three members of the statutory Milledgeville Hospital Authority, which had just been created for the purpose; the fees of 6 per cent of cost, to be paid to the architects in charge of the work, formed the subject of hearings held by members of the lower house of the Legislature in February. A levee at Rome, built at the cost of \$314,000 as a Federal undertaking, to protect the city from inundation by floods of the Coosa River, was finished early in the year. The State's Board of Correction, in control of prisoners, started in Paulding County a special convict camp for the segregation of unruly convicts. See PRISONS.

Atlanta obtained Federal approval opening the way for the construction of the first portion of its projected municipal housing for the poor; this portion was to provide 602 domiciles, in a set of buildings holding 2475 rooms and occupying 30 acres near the previously built poor-housing known as Techwood homes; the cost of this first portion, \$3,300,000, was to be met by a Federal loan of \$3,000,000 and by bonds of the City of

Atlanta for the remainder; the intention was that rents at \$3 a month for the average room should extinguish the debt in 60 years. Atlanta sought an order to prevent the application of the minimum prices set for coal under the Federal Bituminous Coal Act, but suit was dismissed by the U.S. Supreme Court (November 13) with permission to sue later if actual injury to the city should occur.

Officers. Georgia's chief officers, serving in 1939, were: Governor, E. D. Rivers (Dem.); Secretary of State, John B. Wilson; Attorney-General, Ellis Arnall; Treasurer, George B. Hamilton; Comptroller-General, William B. Harrison; Superintendent of Schools, M. D. Collins.

GEORGIA, UNIVERSITY OF. A State institution of higher education for men and women in Athens, Ga., chartered in 1785. The enrollment in the 1939 summer session was 1740 and for the autumn term, 3428. The faculty numbered 201. The productive funds amounted to \$800,000. The library contained 110,000 volumes. During the year buildings to the cost of \$450,000 have been erected. President, H. W. Caldwell, LL.D.

GEORGIAN SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R., on the eastern coast of the Black Sea and north of Turkey in Asia. It includes the Abkhazian Autonomous Soviet Socialist Republic (3400 sq. mi.; capital, Sukhum), the Ajarian Soviet Socialist Republic (1085 sq. mi.; capital, Batum), and the South Ossetian Autonomous Region (1425 sq. mi.; capital, Stalinir). Total area, 26,875 square miles; total population (1939), 3,542,289. Tbilisi (formerly Tiflis), the capital, had 426,300 inhabitants in 1936. The chief agricultural products are tea, grapes, citrus fruits, tung, aromatic plants, eucalyptus, and grain. Manganese is the principal mineral produced (1,650,000 metric tons in 1937), the deposits at Chiatura being one of the most important in the world. Coal and petroleum also are produced. Georgia has numerous manufacturing plants and many others are under construction including a number of electric power stations. See UNION OF SOVIET SOCIALIST REPUBLICS.

GEORGIA SCHOOL OF TECHNOLOGY. An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1939 was 2600 while that in the summer session was 730. The faculty numbered 170. The endowment amounted to \$540,000, and the income from appropriations and fees was \$654,500. There were 43,899 volumes in the library. During the year the Clark Howell, Sr., and George W. Harrison, Jr., dormitories and experiment station building were completed at a cost of \$300,000. President, Marion Luther Brittain, LL.D.

GERMAN-AMERICAN BUND. See FASCISM; DIES COMMITTEE.

GERMAN LITERATURE. German literature has had to combat considerable difficulties during the year 1939. The separation between the literature created outside of Germany, the so-called literature of the emigration, and that written within the confines of the Reich under the supervision of the dictatorship is increasingly manifest. The sale of German language books outside of the limits of the Reich has become an almost insoluble problem, following the seizure of additional German language spheres (Austria, Czechoslovakia) and the outbreak of the war. Within Germany the few remaining literary

magazines, of which the *Neue Rundschau* is still the most representative, are appearing to a lesser degree, the sales possibilities of actual literature have been greatly diminished in favor of "party" literature, the institution of "best seller" has been abolished almost entirely; there are few editions. Of course there are "congresses of writers" (*Dichtertagungen*) (*Köpenick*, Mar. 30, 1939) and "excursions of writers" (*Dichterfahrten*) into the newly occupied territories; they, however, bear the official party stamp.

Among the large publishers only the Inselverlag has remained true to character and the S. Fischer Verlag still endeavors to maintain a certain literary level. As in previous recent years new authors of standing have been absent. A further growth of literature on the country, such as books about the native land, novels about the peasantry, can be noted, while authors anxiously avoid any discussion of the problems of the present and the problems of the regime.

The Inselverlag devotes itself almost exclusively to classical literature and publishes the works of only a few living authors. First place among the publications brought out by the Inselverlag should be given to the *Volksgoethe* (Popular Goethe) in six volumes and a *Volks-Schiller* (Popular Schiller) in three volumes. In addition a complete edition of the works of Adalbert Stifter, comprising seven volumes, a six volume edition of the collected letters of Rainer Maria Rilke, 23 new small volumes of the excellent inexpensive Insel library, as well as a Gottfried Keller biography by Erwin Ackerknecht, may be counted among the achievements of this publisher.

Living authors of rank and name, still residing in Germany, such as Hans Carossa or Hans Fallada or R. Kassner, have published nothing during the past year.

Gerhart Hauptmann has brought out two plays and a collection of early poems, *Aehrenlese* (Gleaning). The plays comprise a comedy on the minnesinger, *Ulrich von Lichtenstein*, and a romantic drama, *Die Tochter der Kathedrale* (The daughter of the cathedral): Two sets of twins are born to two reigning couples, these children being destined to intermarriage with each other. In a fit of anger one of the girls, however, is abandoned by its mother at the altar of a cathedral.

Novels. One of the better known authors, Alexander Lernet Holenia, has submitted a book *Ein Traum in Rot* (A Dream In Red), a political novel on the Soviet terror, a work which appeared before the German-Russian rapprochement. A novel by Joseph Ponten deals with the honeymoon of the painter *Rethel*. Wilhelm Schmidtborn describes the fate of a young meteorologist, *Anna Brand*. Friedrich Schnack's *Cornelia und die Heilkräuter* (Cornelia and the Medicinal Herbs) is the story of a young practitioner. Max Mell's *Steirischer Lobgesang* (Styrian Hymn of Praise), is a novel about the native land. Siegfried von Vegesack *Das Kritzelbuch* (The Scribble Book) is a collection of short stories.

There are many women among the younger authors of novels: Imma von Bodmershof, *Die Stadt in Flandern* (The City in Flanders), the story of a young historian of art; Ruth Solles, *Die Tochter* (The Daughter), the story of a daughter in search of her father; Gertrud Wickenhauer, *Eine Frau für schlechtes Wetter* (A

Wife for Bad Weather), a novel of married life; Geraldine Erben, *Salzburgische Symphonie* (Symphony of Salzburg); Elisabeth Kessel, a novel about *Elisabeth Barret-Browning*.

Additional novels: Bernt von Heiseler, *Die gute Welt* (The Good World), a novel dealing with the peasantry; Anton Dörfler, *Wendelin*; Edgar Maass, *Das grosse Feuer* (The Great Fire).

War novels are *Die Spur* (The Scent) by Roland Ziersch; Brzenk, *Wir jagten den Feind* (We Chased the Enemy); Franz Tumler, *Soldateneid* (Soldier's Oath); Th. Jakob's *Draktverhau* (Abatis of Wire). Hans Leip wrote a nautical novel, *Die Bergung* (Salvage); Carl Hänsel a novel on sports, *Der Letzte Grad* (The Last Grade).

Biography and Essay. Among the biographical and essayistic works the following should receive emphasis: a two volume collection of the works of Rudolf Alexander Schroeder; a biography by Johannes Ebert, *Joseph Haydn*; a collection of Otto Flake's short biographies, *Grosse Damen des Barock* (Great Ladies of the Baroque); a book by Wilhelm Schaefer on the king of the Goths, *Theoderich*; a biographical novel by Moritz Jahn on G. A. Bürger, *Die Gleichen* (The Equals); Oskar Lörke published a collective volume, *Hausfreunde* (Friends of the Family), with essays on Herder, Jean Paul, Ruckert, Stifter, Hugo Wolf, Goethe.

To all appearances lyricism is exhausted. Two not particularly gifted volumes deserve mention: Eberhard Meckel, *Durch die Jahre* (Through the Years); Wolf von Niebeschütz, *Preis der Gnaden* (Price of the Graces).

Science of Literature. The first volume of a large scale work by the historian of literature, J. W. Petersen, *Die Wissenschaft von der Dichtung. System und Methodenlehre der Literaturwissenschaft* (The science of writing: System and theory of method of the science of literature). This work has met with severe criticism because of its unbiased attitude. Others in this field include, H. Oppel, *Die Literaturwissenschaft in der Gegenwart* (The science of literature of the present day), a "party" product; Fr. Panzer, *Der deutsche Wortschatz* (The German vocabulary); R. Buck, *Rousseau und die deutsche Romantik* (Rousseau and German Romantic poetry).

Medicine. Among the literature along popular medical lines a book by the psychiatrist, A. Hoche, *Die Geisteskranken in der Dichtung* (The Insane in Poetic Production), should have special mention, as well as a book of reminiscences by the research scientist on nutrition, Bircher-Beuner, *Vom Werden des neuen Arztes* (Before the Genesis of the New Physician).

Politics. Political literature is very prolific: Baron von Freytag Loringhoven, *Deutschland's Aussenpolitik* (Germany's Foreign Policy); a book by the former Ambassador U. v. Hassell, *Im Wandel der Aussenpolitik* (The Change in Foreign Policy), a work which covers the period from the French revolution to the World War; the official presentation of the conquest of Poland, *Unser Kampf in Polen* (Our Fight in Poland); F. W. v. Örtzen, *Das ist Polen* (That is Poland). The books of two prominent journalists are noteworthy: Otto Kriegk, *Wer treibt England in den Krieg?* (Who drives England into the war?), a presentation of the "war-mongers" Duff-Cooper, Eden, Churchill; and F. Sieburg, *Blick*

durchs Fenster (A Glance through the Window), covering experiences in England and France. Hans Wendt's *Frankreich heute und wir* (France Today and We) constitutes a discussion with France.

Two particular literary groups concentrate their efforts upon the newly conquered territories and the lost colonies. Benno von Arant, *Ein sudetendeutsches Tagebuch* (A Sudeten German Diary); G. Geissler, *Von Metternich bis Sarajewo* (From Metternich to Sarajewo); H. Hinkel, *Judenviertel Europas* (European Ghetto); Anton Steininger, *Rebellen für Deutschland* (Rebels for Germany); Erhard Tewes, *20 Jahre Benesch System* (20 Years of the Beneš System).

Also in this section should be included, E. L. Cramer, *Wir kommen wieder* (We Shall Return), a German book on Africa; E. V. von Rudolph, *Heldenkämpfe in unseren Kolonien* (Heroic Battles in Our Colonies); Ilse Steinhoff, *Deutsche Heimat in Afrika* (German Homeland in Africa), and M. R. Breynne, *Deutsch-Ostafrika ruft* (German East Africa Calls).

Racial Literature. Racial and anti-Semitic literature is very numerous. Among the more important publications emanating from the national-socialist school of thought, the following should be mentioned: W. Gross, *Der deutsche Rassengedanke und die Welt* (German Racial Thought and the World); Walter Pahl, *Weltkampf um Rohstoffe* (World Fight on Raw Materials); O. Schmieder and H. Wilhelmy, *Die faschistische Kolonisation Nordafrikas* (The Fascist Colonization of Northern Africa); H. Wenz, *Das Indische Reich* (The Empire of India); H. F. K. Günther, *Das Bauerntum als Lebens- und Gemeinschaftsform* (Peasantry as a Form of Life and Community); R. Benze, *Die Erziehung im Dritten Reich* (Education in the Third Reich).

Exilic Literature. The most distinguished work which the German emigration has brought forth during the year 1939 is undoubtedly Thomas Mann's great novel, *Lotte in Weimar*, in which Lotte, the love of Goethe's youth, the heroine of *Werther*, meets Goethe once more after a lapse of forty-four years. The book is a love story of metaphysical depth and at the same time a dramatic and most significant analysis of genius. During the year there also appeared from the pen of Thomas Mann an essay, *Schopenhauer*, a political speech, *The Problem of Liberty*, and the first volumes of the new Stockholm complete edition, which will again make the works of this author available to the reading public, works that were confiscated in Vienna and have not since been obtainable.

A new novel by Franz Werfel, *Der veruntreute Himmel* (The Fraudulent Heaven) deals with the fate of an Austrian family of aristocrats and a Catholic maid servant and contains a masterly portrait of the late Pope Pius XI.

In his great novel of the end of the war, *Bürger und Soldaten* (Citizens and Soldiers), Alfred Döblin recalls the year 1918 and the enormous shocks to the Germany of that period.

Klaus Mann in a comprehensive work, *Der Vulkan* (The Volcano), depicts the fate of the émigré in many countries. The book is one of the most stirring dramatizations of the problem of emigration.

A two volume novel by Lion Feuchtwanger, *Exil*, has also been published; the first part bears the title, *Sepp Trautwein*, the second that of *Pariser Nachrichten* (Paris News). This is a

rather vague book, containing much personal gossip—a sort of key novel, which cannot be counted among the best achievements of this author.

Hermann Kesten is the author of the impressive book, *Die Kinder von Gernika* (Children of Gernika), depicting the fate of children in the Spanish Civil War. The gifted young writer Irmgard Keun is responsible for the new novel, *Kind aller Länder* (A Child of All Countries).

After a long pause the third and last part of the significant novel by Robert Musil, *Der Mann ohne Eigenschaften* (The Man without Qualities) has been published. This work must be catalogued among the most significant creations of modern German literature.

The following works should be placed in the category of good novels for entertainment: Gina Kaus, *Der Teufel nebenan* (The Devil Next Door), the love story of a weakling; Adrienne Thomas, *Von Johanna zu Jane* (From Johanna to Jane), a graceful tale of puberty; Carl Zuckmayer, *Herr über Leben und Tod* (Master of Life and Death), the marital adventure of a famous surgeon; Wilhelm Speyer, *Die Stunde des Tigers* (The Tiger's Hour), a novel of boy scouts; Vicki Baum, *Hotel Shanghai*, and Stefan Zweig's first attempt at a novel after a long lapse of time, *Ungehduld des Herzens* (Heart's Impatience), the action of which takes place in the military circles of a small Austrian town in pre-war days.

The last work of the late Joseph Roth, *Die Legende vom heiligen Trinker* (The Legend of the Sacred Drinker) depicts the Paris of our days; it is a work of great poetic beauty. In his novel, *Die ewigen Gefühle* (The Eternal Emotions), Bernard von Brentano analyzes a complicated love relationship.

Of biographical and autobiographical works the splendid *Descartes* by the eminent philosopher, Ernst Cassirer, now on the teaching staff of the University of Göteborg, should receive prominent mention. *Zeitgenössische Bildnisse* (Contemporary Portraits), by Franz Blei, contains 67 essays from Lenin to Franz Kafka. Alma Mahler, the former wife of the great composer and conductor, and now the wife of Franz Werfel, publishes reminiscences and letters to *Gustav Mahler*. Bertha Szeps-Zuckerkancl, wife of a prominent Viennese scientist and sister-in-law of Clemenceau, wrote an interesting book of reminiscences, *Ich erlebte fünfzig Jahre Weltgeschichte* (I Witnessed Fifty Years of World History). Annette Kolb describes her trip to the "World of Tomorrow" exhibition in New York and to the great congress of authors, in a charming report entitled *Glückliche Reise* (Bon voyage). In *Hölle im Paradies* (Hades in Paradise), Martin Gumpert gives a self portrayal of a German émigré physician of forty years.

Erika Mann contributes an impressive documentary report on the education of youth in the Third Reich by her *Zehn Millionen Kinder* (Ten Million Children).

Of the scientific works of the German emigration, published in the German language, particular mention should be made of the two volumes entitled *Weltgeschichte* (World History) by the historian, Veit Valentin, now connected with the University in London, as well as of the much discussed work by Sigmund Freud, *Der Mann Moses und die monotheistische Religion* (The Man Moses and Monotheistic Religion), an accomplishment of Freud's advanced years.

The only stage play published is *Der Gärtner von Toulouse* (The Gardener of Toulouse) by Georg Kaiser, who only recently left Germany.

A very fine volume, *Gedichte aus 30 Jahren* (Poems during Thirty Years), includes the most beautiful lyrics by Franz Werfel.

A series of writings entitled *Ausblicke* (Views) is being published in Stockholm; this series contains, in the form of short pamphlets, discussions of German and foreign authors on current problems. Seven volumes were published in 1939. *Das Forum der deutschen Dichtung* (The Forum of German Literature) constitutes a joint foundation of the three leading German publishers in exile. This organization prints the famous works of modern and classical German literature in inexpensive individual editions. It is principally a question of printing banished or forbidden literature: Heine, Schnitzler, Heinrich and Thomas Mann, etc. Seventeen volumes have appeared so far.

Mass und Wert still remains the most representative magazine of the emigration. It is published by Thomas Mann and is now appearing in Zurich for the third consecutive year.

As a natural consequence of the difficult situation in which the émigré publishers find themselves, a large number of German exiled authors witness the publication of their works in a foreign language before the issuance of the German editions. Many of such books have been published in the United States during 1939: Klaus and Erika Mann, *Escape to Life*; a very vividly written *Who's who in the Emigration*; a Johann Strauss biography by H. E. Jacob; *Going, going, gone*, a book of farewell from Austria by Ad. Czernin; a Stevenson biography by R. Berman; *Veronika*, a novel by Georg Kaiser; Ludwig Renn's, *Natural History of War*; an autobiography by Toni Sender; *Heil Hunger*, a report on the public state of health in the Third Reich, by Martin Gumpert, as well as novels by Vicki Baum and Walter Schoenstedt.

MARTIN GUMPERT.

GERMANY. A former Federal republic of Europe, transformed into a centralized, totalitarian state by the National Socialist revolution commencing in 1933. Capital, Berlin.

Area and Population. The area and popula-

EUROPE AS OF DEC. 31, 1939

The map shows the territorial annexations by Germany in 1938 and 1939; the Anglo-French alliance; the powers guaranteed by Britain and France; Soviet Russia and the nations under her domination; and the Anglo-French naval blockade of the Reich.

tion of Germany proper and its component states at the 1925 and 1933 censuses are shown in the table on page 313, with Saarland (reincorporated Mar. 1, 1935) included.

Subsequent annexations of territories to the Reich up to the end of 1939 are shown in the table on page 315.

The population of Germany proper, Austria, and the Sudetenland was 79,364,408 (preliminary) at the census of May, 1939. The annexation of Bohemia-Moravia, Memel, Danzig, and Western Poland brought the total population to approximately 108,718,408, exclusive of the protectorate of Slo-

vakia. See separate articles on AUSTRIA, DANZIG, CZECHO-SLOVAKIA, MEMEL, and POLAND.

Living births in Germany in 1938 (exclusive of Austria, but including an adjustment for the Sudetenland) numbered 1,346,911 (19.7 per 1000); deaths, 800,571 (11.7 per 1000); marriages, 644,367 (9.4 per 1000). Estimated populations for the chief cities on Jan. 1, 1938, were: Berlin, 4,299,000; Hamburg (Greater), 1,677,000; Cologne (Köln), 765,000; Munich (München), 760,000; Leipzig, 699,000; Essen, 671,000; Dresden, 638,000; Breslau, 623,000; Frankfurt-on-Main, 551,000; Dortmund, 546,000; Stuttgart, 542,000; Düs-

seldorf, 523,000; Hannover, 462,000; Duisburg, 439,000; Nuremberg (Nürnberg), 413,000; Wuppertal, 406,000; Bremen, 341,000; Königsberg, 339,000; Magdeburg, 326,000; Chemnitz, 334,000; Gelsenkirchen, 324,000; Bochum, 314,000; Mannheim, 279,000; Stettin, 274,000; Kiel, 250,000; Hal-

* Approximate.

le, 214,000; Kassel, 208,000. In 1933, 67.3 per cent of the total population was concentrated in towns and cities of 2000 or more. The Jewish population of Germany proper and the Sudetenland dropped from 500,000 in 1933 to about 185,000 on Oct. 1, 1939.

National Defense. See EUROPEAN WAR; MILITARY PROGRESS; NAVAL PROGRESS.

Education and Religion. Primary education is compulsory and there is little illiteracy. The estimated school enrollment in 1937-38 (excluding Austria) was: Elementary, 7,758,307; intermediate, 272,365; "gymnasien" and "realschulen," 670,985; universities and advanced schools, 69,981 (universities 45,989, advanced technical schools 9554, others 14,438). According to the 1933 census, Protestants comprised 62.7 per cent of the total population; Roman Catholics 32.5 per cent; other Christians 0.1 per cent; Jews 0.7 per cent; adherents of other sects 4 per cent. The Jewish population in July, 1939, was estimated at 380,000 as compared with 550,000 in 1933.

Agriculture. The Reich (including Austria and the Sudetenland) had 55,302,000 acres of arable land in 1939; 27,601,000 in meadows and pastures; 2,470,000 in trees, shrubs and orchards; and 42,032,000 acres of forests. Yields of the chief cereals in 1939 were (in metric tons): Wheat, 5,584,500; barley, 4,243,800; rye, 9,380,700; oats, 6,826,900; corn, 379,600 (1938). The 1938 harvest of spelt was 3,814,000 bu.; potatoes, 1,870,038,000 bu.; sugar beets, 15,546,000 metric tons; fodder beets, 38,445,000 metric tons; hay, alfalfa, and clover, 37,222,000 metric tons; hops, 21,867,000 lb.; tobacco, 73,854,000 lb.; wine, 59,967,000 gal. The livestock census, Dec. 3, 1938, (including Austria but not the Sudetenland) showed 26,353,000 swine; 22,507,000 cattle; 5,125,000 sheep; 3,797,000 horses (not including army horses); 2,755,000 goats. The value of farm production in 1938 was (exclusive of Austria and the Sudetenland) 12,600,000,000 marks (plant products, 3,588,000,000; animal products, 7,165,000,000). The agricultural indebtedness was 10,180,000,000 marks on Dec. 31, 1937.

Mining and Manufacturing. The gross value of industrial production was estimated at between 85 and 90 million marks in 1938 (77 millions in 1937). The 1938 output of minerals and metals in metric tons was: Coal, 186,179,000; lignite (excluding the Sudetenland), 194,959,000; iron ore, 3,100,000; lead, 185,300; copper, 70,000; potash (K₂O), 1,968,000 (1937); pig iron (excluding Sudetenland), 18,695,000; steel, 23,208,000; aluminum, 160,000; cadmium, 432,000; zinc, 194,600;

crude petroleum and shale, 552,000. Rayon production (including Austria but not the Sudetenland) was 65,000 metric tons; wood pulp, 2,544,000; paper, 3,536,000. Output of electric energy (excluding Austria and the Sudetenland) totaled 5,500,000,000 kilowatt-hour. There were 352,369 motor vehicles manufactured in 1938 (276,592 passenger cars and 75,777 trucks and buses). The average number of unemployed in all industries was 408,000 in 1938; 912,312 in 1937 and 1,592,655 in 1936.

Foreign Trade. Imports for consumption in 1938 were valued at 5,449,000,000 marks (5,468,000,000 in 1937) and exports of German products at 5,256,000,000 marks (5,911,000,000 in 1937). The trade balance which was favorable by 443,000,000 marks in 1937, thus became unfavorable by 193,000,000 marks in 1938. Nearly half of the 1938 import excess was accounted for by the unfavorable trade balance with the United States.

The value in gold marks of the chief 1938 imports was: Wheat, 149,084,000; butter, 121,262,000; coffee, 147,723,000; fruit, 139,791,000; raw cotton, 219,037,000; wool, 266,683,000; mineral oil, 224,787,000; coal, 69,358,000; copper ore, 20,826,000; timber, 49,904,000; iron ore, 281,458,000. The value of the principal exports was: Coal, 379,482,000; silk and rayon, 16,771,000; woolen goods, 24,113,000; cotton goods, 15,471,000; leather, 26,399,000; paper, 73,031,000; dyes, 150,710,000; pharmaceuticals, 166,802,000; glass and glassware, 66,676,000; iron and steel, 205,084,000; copperware, 57,960,000.

Of the imports, the United States accounted for 454,500,000 marks; the United Kingdom for 309,200,000 marks; Italy, 284,200,000 marks; Sweden, 267,400,000 marks; Argentina, 240,000,000; Brazil, 219,600,000; Netherlands, 208,100,000; Czechoslovakia, 188,800,000; France, 159,100,000; Belgium and Luxemburg, 154,400,000; British India, 151,200,000. Germany's exports were principally distributed as follows: Netherlands, 459,800,000 marks; United Kingdom, 374,100,000; Italy, 349,100,000; Sweden, 275,200,000; France, 229,000,000; Belgium and Luxemburg, 190,400,000; Brazil, 163,200,000; Czechoslovakia, 161,600,000; United States, 157,200,000; Argentina, 152,900,000. See IMPORTS AND EXPORTS.

Finance. Revenue from all Reich taxes for the fiscal year ended Mar. 31, 1939, was reported at 17,712,000,000 reichsmarks (13,964,000,000 in 1938), exclusive of the Jewish Property Contribution of 250,000,000 marks. The 1939 figure includes 300,000,000 marks from Austria for the first quarter of the year. Income, property and sales taxes provided 13,061,000,000 marks; consumption taxes 2,833,000,000, and customs duties 1,818,000,000. No budget figures have been published since 1933. However, a decree issued on Sept. 12, 1939, provided for a supplementary war budget of 15,000,000,000 marks for the fiscal year ending Mar. 31, 1940.

The public debt on Sept. 30, 1939, was officially reported at 35,500,200,000 marks as against 23,827,000,000 on Sept. 30, 1938. These figures were exclusive of large, unrecorded liabilities contracted for public works and rearmament. The foreign debt was estimated at 9,500,000,000 marks in February, 1939 (26,800,000,000 in June, 1930). On Sept. 30, 1939, Germany's central monetary gold reserves totaled \$17,000,000 (old U.S. gold dollars). The average exchange rate of the reichsmark was \$0.4020 in 1937, \$0.4016 in 1938, \$0.4006 in 1939.

Transportation. In 1939 there were 38,107 miles of railways in Germany (including the Sudetenland and Austria). Freight carried totaled 422,333,000 metric tons in 1938; passengers numbered 2,041,700,000. Gross receipts were 5,133,519,000 marks. Highways (1939) covered 174,732 miles (see **ROADS AND STREETS**). Civil aviation statistics for 1938 were: Miles flown, 13,655,887; passengers, 299,000; freight and baggage, 5,306,400 lb.; mail, 12,529,000 lb. The Lufthansa system operated air routes to South America, Asia and various parts of Europe. Air services to Denmark, Sweden, Hungary, other Balkan countries, Greece, and Italy—suspended at the outbreak of the war—were resumed on Oct. 4, 1939. On June 30, 1939, the German merchant marine aggregated 4,687,500 gross tons. During 1938 the net tonnage of vessels entering German ports was 32,868,000 (28,668,000 in 1937).

Government. Under the Enabling Act of Mar. 24, 1933, giving the cabinet unrestricted powers to legislate by decree, dictatorial powers were assumed by Adolf Hitler in his dual capacity as Chancellor (appointed Jan. 30, 1933) and head of the National Socialist (Nazi) party, the only legal political organization. Upon the death of President von Hindenburg, Aug. 2, 1934, Hitler assumed the functions of both Chancellor and President under the title of Leader (Fuehrer) and Chancellor (Reichskanzler). On Oct. 16, 1934, it was officially announced that Hitler would occupy both offices for life. Rights of the former Federal states were abolished by the decree of Feb. 1, 1934. Between 1933 and 1939, the Nazi party progressively brought under its control not only the government and the army but virtually all departments of political, cultural, social, and economic life (see preceding **YEAR BOOKS**).

The cabinet was composed as follows at the beginning of 1939: Fuehrer, Chancellor, and Minister of Defense, Adolf Hitler; Interior, Dr. Wilhelm Frick; Foreign Affairs, Joachim von Ribbentrop (appointed Feb. 4, 1938); Finance, Count Ludwig Schwerin von Krosigk; Food and Agriculture, Dr. Walther Darré; Economic Affairs, Dr. Walther Funk (Jan. 15, 1938); Labor, Franz Seldte; Posts, Dr. Wilhelm Ohnesorge (Feb. 2, 1937); Transport, Dr. Julius Heinrich Dorpmueller (Feb. 2, 1937); Aviation, and Commissioner for the Four-Year-Plan, Field Marshal Hermann Goering; Justice, Dr. Franz Guertner; Science, Education, and Public Instruction, Dr. Bernhard Rust (Apr. 30, 1934); Church Affairs, Hanns Kerrl (July 19, 1935); National Enlightenment and Propaganda, Dr. Joseph Goebbels.

HISTORY

Foreign Relations. Not content with the sensational gains achieved by his diplomacy in 1938 (see 1938 **YEAR BOOK**, p. 290 f.), Hitler pushed rapidly ahead with his drive for European hegemony in 1939. Czecho-Slovakia, emasculated by the loss of her allies and frontier fortifications in 1938, was extirpated on Mar. 15, 1939. German troops occupied Bohemia and Moravia in violation of both the Munich Accord of Sept. 29, 1938, and of Hitler's pledge to Prime Minister Chamberlain of Great Britain that the Sudetenland represented his "last territorial ambitions in Europe." Slovakia became a German protectorate on March 16. On March 22 Lithuania was forced to cede Memel to the Reich under threat of attack. Rumania, likewise in mortal fear of German armed might, on March 23 signed a treaty giving Germany exten-

sive economic rights. On the same day Hitler demanded that Poland (q.v.) surrender Danzig (q.v.) and grant the Reich an extra-territorial corridor across Pomerania to East Prussia.

Hitler's expansionist drive was slowed at this point by growing resistance. Poland, with the rape of Bohemia and Moravia fresh in mind, rejected the Fuehrer's demands. The Poles viewed the proposals as the opening wedge for eventual subjection and partition of their country. Support for Poland was forthcoming from Britain and France. Convinced by the invasion of Czecho-Slovakia that Hitler was determined to dominate Europe at all costs, the Chamberlain and Daladier Governments began to build a "stop-Hitler" coalition. The Franco-Polish alliance was revived. Britain also pledged military aid to Poland against German aggression. Britain and France guaranteed the independence of Greece, Rumania, and Turkey and sought to draw the Soviet Union into their anti-German combination.

Italian and Soviet Pacts. Countering the Anglo-French policy—labelled encirclement in Berlin—Hitler on May 22 concluded a 10-year military alliance with Italy. On August 24 he played his trump diplomatic card and concluded a non-aggression pact with Moscow insuring Russia's neutrality. By this pact Hitler sacrificed the worldwide prestige and support he had built up as the professed defender of European civilization against Bolshevism in the hope that it would shatter the Anglo-French "anti-aggression" front and leave Germany free to deal with Poland single-handedly. However Britain and France stood by their pledges when the German armies on September 1 suddenly invaded Poland. When Hitler ignored ultimatums demanding the recall of German troops from Polish soil, the British and French Governments declared war (September 3). Italy refused to be drawn into the conflict in support of Germany. Japan, which had been considering a military alliance with the Reich, was definitely alienated by the Soviet-German pact.

Poland's armies were decimated by the Germans in a short but bloody conflict, and the remnants were prevented from retreating to the marshes of eastern Poland and there continuing the war by the invasion of Poland from the east by Soviet armies beginning September 17. The Soviet-German treaty of September 29 once more partitioned unhappy Poland between its two great neighbors (see above under *Area and Population*). Supported by Moscow, Hitler then made Britain and France an offer of peace on the basis of recognition of his conquests. When this was rejected Nazi Germany settled down to a life-and-death struggle with the British and French Empires. See **EUROPEAN WAR**.

The German Strategy. In incorporating millions of Czechs and Poles in the Third Reich, Hitler abandoned the policy laid down in *Mein Kampf* of creating a purely German Reich and committed himself to the old German nationalist program of a unified German people dominating as its *Lebensraum* (living room) all Central and Eastern Europe. Through these territorial annexations and through economic accords such as that with Rumania, Germany undertook to reorganize the economy of all Central and Southeastern Europe so that this region would satisfy Germany's need for raw materials and foodstuffs and, in return, provide a larger market for German manufactures.

The primary aim of this economic program was to make the Reich immune to blockade by Anglo-

GERMANY'S PUSH TO THE EAST

FOREIGN MINISTER JOACHIM VON RIBBENTROP (standing, left), JOSEPH STALIN (beside Ribbentrop) AND PREMIER VIACHESLAV MOLOTOV (seated) SIGNING NAZI-SOVIET TREATY OF SEPT. 23, 1939, FOR THE PARTITION OF POLAND

French sea power, recognized as a primary cause for Germany's defeat in 1918. The imposition of a German economy upon Eastern and Central Europe found its political justification in the Nazi theory that "the Germans constitute a master race that has a mission to rule over inferior peoples and create a new world order." This dogma was reiterated by Dr. Robert Ley, leader of the German Labor Front, in December, 1939. It was supplemented by the Nazi "population war," in which the German state enlisted the procreative powers of its people to increase German numerical predominance over Britain and France and to offset the more rapid increase of the Slavic populations of eastern Europe. The success of this program was evidenced by the rise of the German birth rate from 14.7 per thousand in 1933 to 20.7 per thousand in 1939. The number of Germans born in 1939 was about 1,640,000, a figure more than 300,000 higher than the combined births in Britain and France.

Westwall Completed. In order to hold Britain and France at bay in the west while consolidating German power throughout Central and Eastern Europe, Hitler constructed the great Westwall fortifications from the Swiss border northward along the French, Belgian, and Dutch frontiers. This system, started in the spring of 1938, was virtually completed by the end of 1939.

Nazi World Aims. While undisputed German predominance in eastern Europe was Hitler's first objective, his aims and his policy were world-wide in scope. The likelihood of a Nazi bid for world domination, involving complete revision of the *status quo*, had been forecast by Hitler's creation in 1936 of a Fascist bloc, aimed ostensibly at Soviet Russia. The bloc, which at first included Japan and Italy, was broadened early in 1939 with the adherence of Franco Spain and Hungary. It enabled the expansionist powers to bring simultaneous pressure upon Britain, France, and the United States, with Germany acting in Europe and Latin America, Italy in Africa and the Mediterranean, and Japan in the Far East.

Other indications that Nazi aims collided with British, French, and, in some cases, American interests outside of Europe were the reiteration by Chancellor Hitler on Jan. 30, 1939, of his demands for colonies and greater participation in world trade; open German and Italian support of anti-British elements in Palestine and the Near East and of anti-French elements in French North Africa; the German claim in April, 1939, to 230,000 square miles of Antarctic territory, to be used as a base for German whaling ships; and the frank admission in June that Germany had sent thousands of regular troops, sailors, and airmen to the aid of General Franco in the Spanish civil war. Despite this aid, General Franco remained neutral in the European War.

Germany and Russia. The outbreak of war and the establishment of the Allied blockade made the further development of German economic plans in Southeastern Europe a matter of life and death for the Reich. To secure Russia's neutrality and economic collaboration, Hitler was forced to permit Moscow to take half of Poland and to establish virtual protectorates over the Baltic states—Latvia, Estonia, and Lithuania. The influential German minorities in the Baltic states were uprooted at Hitler's orders, apparently in response to Russian pressure, and were colonized in the territories newly annexed to the Reich from Poland. Hitler also gave Stalin a free hand in Fin-

land, sacrificing important German trade and the friendship of the previously pro-German Finnish army leaders. Once in control of Finland, the Soviet Union could if it wished block Germany's access to vital iron ore supplies in northern Sweden.

The gains accruing to the Reich from these policies up to the end of 1939 did not seem to warrant the sacrifices made to obtain them. Under the German-Soviet friendship pact of September 29, the Reich hoped to obtain in Russia enough foodstuffs and raw materials to offset the effects of the Allied blockade. But the inefficiency of the Soviet transportation system, the unco-operative attitude of some Soviet officials, and the disorganization of the program by the Soviet invasion of Finland all served to minimize the economic aid received from Russia. The first railway shipment of minerals, oils, and grains from the Soviet Union reached Germany at the end of December, although in October it was announced that delivery of a million tons of Russian grain would begin in 10 days. Moreover the ineffectiveness of the Red Army in Finland during December lessened the fear of Allied and neutral countries concerning German-Soviet military co-operation and led the Balkan and northern European countries to stiffen their resistance to German political and economic pressure. The Russo-Finnish war threatened to drag the whole of Scandinavia into the main European conflict, thus cutting off iron ore and other vital German supplies from that region.

Struggle for the Balkans. The Allies scored heavily against both Germany and the Soviet Union in the Balkans when the Anglo-French-Turkish military alliance was signed on Oct. 19, 1939. This move lessened the possibility that Italy would throw in her lot with Germany, and provided the Allies with a base for future land, air, and sea attacks upon German communications with Russian oil fields in the Caucasus. Turkey's subsequent warning that she would go to the aid of any Balkan state attacked by Germany or Russia strengthened those countries in resisting German economic demands. Meanwhile the Allies utilized their superior financial resources to buy up all possible exports of the Balkan countries and to advance credits for armaments and essential supplies. When Rumania and Yugoslavia in November yielded to German pressure and promised the Reich larger shares of Rumanian oil and Yugoslav minerals, the Allies exercised effective counter-pressure by threatening to withhold financial and military aid and to restrict Rumanian and Yugoslav imports from overseas.

Allied competition for the trade of the Balkans increased the shortage of foreign exchange available to the Reich for purchasing raw materials and supplies in neutral countries. The German Government repeatedly warned the Balkan countries that it might be compelled to resort to military occupation if the needed supplies were not forthcoming. Such a step, however, would extend the zone of military operations, permit the Allies and Turks to employ their formidable forces concentrated in the Near East, and might even embroil Germany with Italy and the Soviet Union.

Friction with other Neutrals. The same struggle was carried on between the Reich and its foes in the Scandinavian countries and in Belgium, the Netherlands, and Switzerland. These countries, and particularly Belgium and the Netherlands, were repeatedly threatened with invasion from Germany unless they followed economic and other

policies favorable to the Reich and disadvantageous to the Allies. In pursuing its counter-blockade by submarine, mine, and air against Britain, the Germans waged a destructive warfare upon neutral shipping carrying supplies to British ports. Later even neutral ships bound for neutral ports were indiscriminately attacked and sunk. These policies deepened anti-German sentiment in many neutral countries.

Relations with United States. The steady deterioration of Nazi Germany's relations with the United States, recorded in preceding YEAR BOOKS, continued in 1939. Washington indignantly refused to recognize the annexation of Bohemia, Moravia, and Poland. On April 15 President Roosevelt dispatched a message to Hitler and Mussolini asking them to agree not to violate the independence of a long list of other small countries. Hitler replied in a sarcastic and bitter speech before the Reichstag on April 29, offering to conclude non-aggression treaties with countries professing to fear German aggression. Three small countries—Denmark, Estonia, and Latvia—accepted the offer.

On June 15 Supreme Court Justice Owen T. Roberts, acting as umpire of the German-American Mixed Claims Commission, handed down a final decision in the famous Black Tom and Kingsland munitions explosion disasters in 1916 and 1917. The decision not only held the German Government responsible for the explosions, but declared it guilty of fraud and collusion in the presentation of its case. On the basis of this decision, the commission, from which the German member had withdrawn in April, awarded damages totaling \$50,000,000 to American claimants against the Reich Government. The German press denounced this "monstrous" decision as "devoid of all legality."

American bankers had joined on May 15, 1939, in extending to May 31, 1940, the "standstill" agreement covering German short-term debts. But when this agreement was annulled by the outbreak of war, five New York banks attached local assets of 16 German banking institutions in an effort to collect the sums due them. The German Government during the summer attempted to float an issue of \$73,000,000 of refunding bonds in New York to be distributed in lieu of interest to holders of German bonds in the United States. But its refusal to furnish the Securities and Exchange Commission with "essential information" concerning Germany's financial situation provoked difficulties and registration of the bonds was withdrawn September 18.

The sinking of the British steamer *Athenia* with the loss of American lives, the seizure of the United States ship *City of Flint* by a German commerce raider in October, and the repeal of the United States arms embargo by Congress in November all served to increase tension between the two countries. There was an intensification of the German-American struggle for trade and for political influence throughout Latin America.

Domestic Affairs. The successive diplomatic crises of 1939 and the war that followed upon them all served to spur the further development of the war economy and the totalitarian state which the Nazi party had been building at full speed since 1933. Typical of this trend was a decree issued in April making service in the Hitler Youth organization compulsory instead of voluntary. All boys were obliged to enter the Hitler Youth at the age of 10 and remain under 18, when they were transferred to the Labor Service. In

October all Hitler Youth members were ordered to commence their military training at the age of 16.

Conflict with Churches. The Nazi state also continued its efforts to crush the independence of Protestant and Catholic churches that still resisted National Socialist domination.

A most serious threat to dissident Protestant churches was posed by three decrees issued March 29 by Dr. Friedrich Werner as chairman of the pro-Nazi Supreme Council of the German Evangelical Church. They established the "Fuehrer principle" for the whole Evangelical Church and authorized replacement of pastors unacceptable to Evangelical Church officials. A pro-Nazi minority of a dissident congregation was empowered to choose a pastor other than the one selected by the congregation as a whole. The Confessional Synod replied on May 28 that it no longer considered Dr. Werner's orders as "legally binding."

In June there were dramatic protests by the congregation of Pastor Martin Niemöller's Berlin church against Nazi efforts to deprive him from his office and oust his wife and children from the parsonage. Niemöller had been in prison since July, 1937, for his leadership of the Confessional Church independence movement, but his congregation refused to accept another pastor. Ninety-two Confessional Church ministers took part in July in a service commemorating the beginning of the third year of his imprisonment. In September Niemöller offered to resume his World War services as commander of a German submarine, but the offer was rejected by the government.

After the outbreak of war, the hostility of the Nazi party and government was transferred from the Confessional Church to the Roman Catholic Church. While both Catholic and Protestant churchmen in Germany upheld the righteousness of the German cause, the Catholics were particularly resentful of the Nazi-Soviet rapprochement and the resultant impetus given to anti-religious forces in the Reich. The Pope gave special attention to conditions in Germany in his encyclical of October directed against atheism and religious persecution. In November it was announced in Rome that 687 Catholic monasteries and convents had been closed in Germany in the preceding months. Also see AUSTRIA under *History* for the religious situation.

Economic Trends. It was in the economic field, however, that the war produced the most rigorous application of totalitarian theory and practice. Germany entered the conflict with its economic system functioning at a high rate of activity, but showing signs of growing stress and strain. By the spring of 1939, industrial production and employment had risen far above 1929 levels and a stringent labor shortage had developed. To meet this labor shortage, which was particularly acute on the farms, Germans were recalled from abroad, Italian and Bulgarian peasants were hired for labor in Germany, and in June it was announced that every unmarried German woman under 25 would be conscripted for a year's agricultural labor. A decree of February 13 made conscription the normal method for securing workers for public construction projects and for arms and munitions industries.

The expansion of production was due to enormous expenditures of public funds on rearmament (see ARMAMENTS, COST OF), public works, etc., and to conscription by the state of all the resources of labor, capital, industry, and agriculture. By the

summer of 1939, however, the public debt was growing at an alarming rate. Taxes were approaching the confiscatory level and the amount of currency in circulation was increasing rapidly. "Bottle-necks" were beginning to appear in industry. The railways, electric plants, and many industrial plants were over-worked and their equipment was rapidly depreciating. The labor shortage was matched by a growing scarcity of raw materials. The highly unfavorable trade balance of 1938 lowered the German foreign exchange reserves and threatened to reduce further the vital imports of raw materials needed to keep industry operating. This situation was emphasized by Hitler's statement of January 29 that the Reich must "export or die."

Moreover correspondents in Germany in the months preceding the outbreak of war noted a general feeling of exhaustion as a result of the tension and pressure under which the nation had lived and worked during the preceding six years. There was a marked deterioration in the quality of work performed and in labor discipline. Labor's restlessness under long hours, low wages, and a shortage of wholesome and nourishing food led Marshal Goering to make a tour of industrial plants in July.

War Measures. With the outbreak of war the strain upon all classes of the nation was greatly increased. A rationing system covering all the principal foodstuffs except flour, bread, and potatoes was inaugurated August 28. The War Economy Decree of September 4 required the nation to make immediately sacrifices in terms of consumption, income, and services such as were imposed during the World War years 1915-17. Consumer goods were purchasable only through special permits issued on the basis of each individual's pressing needs. To finance the war a decree of September 1 imposed a drastic increase of taxes, a lowering of wages and prices, a 50 per cent reduction on all public expenditures not directly related to prosecution of the war, and short-term borrowing.

The rapid conquest of Poland and the accord with the Soviet Union enabled Germany to avoid a war on two fronts, and thus to keep the bulk of the nation's man power at work in factories and fields. Only about 3,000,000 men were mobilized for military service as against 10,000,000 in 1914. In addition the Reich conscripted thousands of Czechs and Poles for labor service in Germany. Nevertheless the government changed the normal working day from eight to 10 hours, without additional compensation, in mid-November. In munitions and other special industries 11- and 12-hour days were the rule. However this strain proved so great that it cut labor efficiency. Accordingly a decree of December 12, effective Jan. 1, 1940, restored the eight-hour day as standard and the pre-war system of bonuses and overtime for longer hours was resumed. The strain upon labor and industrial equipment was indicated by the 10 serious railway wrecks, taking 321 lives, that occurred in widely scattered parts of Germany between September 1 and December 23.

Toward the end of the year the government also abandoned the "New Financial Plan," inaugurated May 2, under which the cost of the armament and reconstruction program was to have been spread over many years through the issuance of special certificates anticipating future tax revenue. However no satisfactory substitute was devised for financing the war. Meanwhile the circulation of paper currency had risen steadily from 7,816,000,-

000 marks on Jan. 31, 1939, to 11,798,000,000 marks on Jan. 1, 1940, and the Reichsbank's ratio of gold reserve to outstanding circulation had fallen by the end of 1939 to 0.66 per cent, the lowest on record.

The year end found the German economic machine producing in sufficient quantities most of the goods and articles needed for war, but the supply of consumption goods had been reduced to a point that was not reached in the World War until 1916. All German overseas trade except that in the Baltic was at a standstill. And the Reich remained vitally dependent upon imports of a few crucial commodities, such as oil from Rumania and Russia and steel from Sweden.

Internal Politics. In politics as well as in economics 1939 witnessed a steady trend toward more radical policies on the part of the Nazi party and state. On January 20 Chancellor Hitler dismissed Dr. Hjalmar Schacht, the conservative head of the Reichsbank, and named Dr. Walther Funk, Minister of Economics, to his post. Dr. Funk was instructed to transform the Reichsbank "into a German bank of issue unconditionally subject to the sovereignty of the state, in conformity with National Socialist principles." On January 21 the Nazi Storm Troops were entrusted with the "defense education and training" of all German men over 17 years of age who were not receiving military training in the army, the Elite Guard or the Nazi Flying Corps. At the same time the aristocratic army oligarchy was dealt another blow through dissolution of the Reich League of German Officers. All reserve officers were required to join the Nazi-led Reich Veterans League. Thus Hitler carried into effect the military setup which Captain Roehm and other Nazi extremists demanded before they were executed at Hitler's orders in the Nazi purge of June, 1934.

The radical extremists within the Nazi ranks henceforth dominated the party councils, the outstanding exception being the relatively conservative Field Marshal Goering, who strengthened his hold as economic dictator. According to the British Ambassador to Berlin, the extremists actively prodded Hitler into war with Britain and France. He charged that whenever Hitler hesitated during the pre-war diplomatic crisis "the extremists . . . at once proceeded to fabricate situations calculated to drive Herr Hitler into courses which even he at times shrink from risking."

The Nazi-Soviet rapprochement was hailed by the Nazi radicals, while creating alarm and dismay among conservative elements within the party. It strengthened Hitler's hold upon lower-class groups, including many former Communists and radical Socialists, and was reflected in the growing hostility displayed toward the Christian churches, the aristocracy, capitalism, bourgeois customs and institutions, and even toward well-dressed individuals. Neutral diplomats and other observers leaving Germany toward the end of the year reported the development of a "Bolshevist spirit." The official war propaganda itself became increasingly anti-capitalist and proletarian in character. Fritz Thyssen, German steel master, and one of the chief financial backers of Hitler during his rise to power, fled to Switzerland in mid-November after his safety was threatened by his outspoken opposition to Hitler's pro-Soviet policy and the war.

In contrast with 1914, the German people entered the European War with little outward show of enthusiasm and with little evidence of resentment toward Britain and France. Some slight dis-

orders were reported in the Rhineland region early in September and the Gestapo (secret police) made numerous "protective" arrests of former Socialists and trade union chiefs. On September 16 and 17 several explosions attributed to anti-Nazis took place in Berlin. On the night of November 8 Chancellor Hitler narrowly escaped assassination when a bomb exploded in the historic Munich beer hall where veterans of the Nazi party had gathered for the anniversary celebration of Hitler's abortive *putsch* in 1923. The Chancellor, after delivering a scheduled speech, left the hall unexpectedly less than 15 minutes before the time bomb went off. It killed seven and injured 63 of those present. In a statement issued November 21 the German Government declared that a German named Georg Elser had confessed to the crime, that it was instigated and financed by the British Intelligence Service, and planned by Otto Strasser, a former associate of Hitler's who had broken with the Nazi party some years before and had since carried on underground warfare against it. Other quarters attributed the crime to former Nazis opposed to Hitler's Russian policy, or to friends or relatives of the victims of the Nazi "blood purge" of 1934.

Governmental Changes. On August 30, after war with Poland had been decided upon, Chancellor Hitler appointed a "Cabinet Council for the Defense of the Reich," headed by Field Marshal Goering and comprising Col. Gen. Wilhelm Keitel, chief of the army's supreme command; Cabinet Ministers Frick and Funk; Rudolf Hess, Deputy Leader of the Nazi party, and Dr. Hans-Heinrich Lammers, chief of the Reich Chancellery. The Council was authorized to issue decrees and ordinances without Hitler's signature in his absence. In his speech to the Reichstag on September 1, before leaving for the Polish front, Hitler said:

I have again put on that old uniform which was the most sacred and dear to me of all. I will not take it off until the victory is ours or—I shall not live to see the end. If anything should happen to me in this struggle, my first successor will be Party Member Goering. Should anything happen to Party Member Goering, his successor is to be Party Member Hess. It would then be your duty to follow these men as Fuehrer with the same blind loyalty and obedience as you follow me.

On September 5 Nazi district leaders in 15 of the 18 army districts were named Reich Defense Commissars to "assure unity of measures within the army district in all matters of civil Reich defense and guarantee close co-operation with the local army commander." Despite these well-laid plans for the organization and unitary prosecution of the war, there were indications during the last months of 1939 of differences regarding aims and strategy among Hitler's principal advisers and army chiefs.

See ARABIA, ARGENTINA, AUSTRALIA, AUSTRIA, BELGIUM, BOLIVIA, BRAZIL, BULGARIA, CANADA, CHILE, CHINA, COLOMBIA, CZECHO-SLOVAKIA, DANZIG, DENMARK, DOMINICAN REPUBLIC, ECUADOR, EGYPT, ESTONIA, FINLAND, FRANCE, GREAT BRITAIN, GUATEMALA, HUNGARY, IRAQ, ITALY, JAPAN, LATVIA, LITHUANIA, MEMEL, MEXICO, NETHERLANDS, NICARAGUA, NORWAY, POLAND, PORTUGAL, RUMANIA, SOUTH AFRICA, SPAIN, SWEDEN, SWITZERLAND, TURKEY, URUGUAY, and YUGOSLAVIA under *History*. CHURCH; UNITED STATES under *Foreign Relations*.

GHAZI I, gā'zē. King of Iraq, died in an automobile accident near Baghdad, Apr. 3, 1939. Born in 1912, he was educated at Harrow, England, and the Royal Iraqi Military College, and succeeded his father on Sept. 9, 1933. Shortly after he was married to his cousin, Princess Aliyah, daughter of former King Ali of the Hejaz. His son Feisal II, who succeeded him, was born May 2, 1935.

During his brief reign, Iraq was troubled by a series of tribal uprisings, the establishment of the dictatorship of General Sidqi during 1936-37, and a constant struggle for power by the contending factions in the country. However, on the credit side were the opening of a pipe line connecting the oil fields with the Mediterranean, the building of new roads and irrigation projects, and the signing of treaties with Iran, Turkey, Afghanistan, Saudi Arabia, and the United States.

GIBRALTAR. A British crown colony and fortified naval base near the western entrance to the Mediterranean. It is a narrow peninsula and includes a long mountain commonly called the "Rock" which has an extreme height of 1396 feet. Area, 17½ square miles; total civilian population (Jan. 1, 1939), 20,339 of whom 17,331 were fixed residents. Vital statistics (fixed population only): 354 births (20.48 per 1000), 252 deaths (14.54 per 1000). In 1938, there were 13 government-aided schools for primary education with a total of 2714 pupils on the registers, 4 secondary schools, and a few private schools.

Trade. The chief trade is the supply of coal, fuel oil, and provisions to shipping, and the transshipment of cargo to Morocco and Spain. No land is available in the colony for agricultural production. Fishing is carried on only for local consumption. Boat building, ship repairing, and the manufacture of tobacco, are minor industries. Statistics of imports and exports are not kept (except those that are recorded for revenue purposes). Gibraltar is practically a free port. There are about 14 miles of roads. During 1938 a total of 4752 ships aggregating 13,772,321 tons entered the port.

Government. For 1938, revenue totaled £207,628; expenditure, £199,725; public debt, nil. A governor assisted by an executive council of 7 members (4 official and 3 unofficial) administers the government. Legislative power is vested in the governor who, in addition, is the general officer commanding the garrison. Governor, Lt.-Gen. Sir Clive Liddell who assumed office during July, 1939, succeeding Gen. Sir Edmund Ironside.

History. During March, 1939, a landing field for aircraft was being constructed. The British Colonial Secretary approved the formation in Gibraltar of an anti-aircraft unit. Reports of Spanish troop movements near the frontier caused the authorities to have the road to the north barricaded and the frontier manned day and night. During the latter part of April a total of 53 warships (British, French, and German) were reported to be in the straits of Gibraltar and in nearby Moroccan and Spanish ports. A six-months' supply of food and ammunition was on hand, and, in order to insure an ample supply of fresh water, a tenth tank was constructed in the rock. Ten deep and spacious caverns were constructed as air-raid shelters for the population. On August 23, because of the threat of a general

war in Europe, boom defenses were placed in the harbor and all guns manned 24 hours a day. See SPAIN under *History*.

GIFTS. See **BENEFACTIONS**.

GILBERT AND ELLICE ISLANDS. A British colony in the mid-Pacific, consisting of the Gilbert group (16 coral atolls), the Ellice group (9 coral atolls), the Phoenix group, and the distant Ocean, Fanning, Christmas, and Washington islands. Total area, 216 square miles; population (1938 estimate) 35,000. Phosphate production in 1938 (chiefly from Ocean Island) was 312,000 metric tons; output of copra (1937) aggregated 5109 metric tons. In 1937 imports were valued at £119,201; exports at £449,940. Budget estimates for 1938-39 anticipated revenue of £80,679 and expenditures of £84,612. The colony is administered by a resident commissioner (with headquarters on Ocean Island), under the British High Commissioner for the Western Pacific (with headquarters in Fiji).

History. The Phoenix Islands were included in the Gilbert and Ellice Islands colony by a British Order in Council of Mar. 18, 1937. According to the Anglo-American pact of Aug. 10, 1938, the islands of Enderbury and Canton (Mary) of the Phoenix group are for the common use of Great Britain and the United States for civil aviation and communications. See CANTON ISLAND; ENDERBURY ISLAND.

GILMAN, LAWRENCE. An American music critic, died in Franconia, N. H., Sept. 8, 1939. Born in Flushing, N. Y., July 5, 1878, he was educated in the public schools and at the Collins Street Classical School in Hartford, Conn., and subsequently studied at the Art Student's League. He was on the staff of the New York *Herald* during 1896-98.

Interested in music from his youth, he was self taught in musical theory, composition, orchestration, the piano, and the organ. In 1901 Mr. Gilman joined the staff of *Harper's Weekly* as music critic. His association with this magazine lasted until 1913, and included such positions as assistant editor (1903-11) and as managing editor (1911-13). He was transferred to the editorial staff of *Harper's Magazine* in 1913, but in 1915 he joined the *North American Review* as music, dramatic, and literary critic.

In 1923, after the death of Henry E. Krehbiel, he was invited to join the New York *Herald Tribune* as its music editor. Thereafter Mr. Gilman contributed a daily and a Sunday column to that newspaper. His style, enthusiasms, and dislikes all combined to attract readers to his musical comment. Chief among his enthusiasms were the conducting of Arturo Toscanini and the works of Richard Wagner. He considered the latter, on whom he was the leading American authority, the greatest of composers.

From 1921, Mr. Gilman was the program annotator for the New York Philharmonic Society and the Philadelphia Orchestra, and during 1933-36 he was radio commentator for the Sunday broadcasts of the New York Philharmonic-Symphony, Toscanini conducting. Mr. Gilman set to music, for voice and piano, three poems of W. B. Yeats (q.v.), *A Dream of Death* (1903), *The Heart of the Woman* (1903), and *The Curlew* (1904).

Besides *A Guide to Strauss' "Salome"* (1907) and *A Guide to Debussy's "Pelléas et Mélisande"* (1907), he wrote *Phases of Modern Music* (1904), "Edward McDowell" in the *Living Masters of Music* series (1905; rev. and enl., 1909), *The*

Music of Tomorrow (1906), *Stories of Symphonic Music* (1907), *Nature in Music* (1914), *A Christmas Meditation* (1916), *Music and the Cultivated Man* (1929), *Aspects of Wagner's Operas* (1937), and *Toscanini and Great Music* (1938).

GIRL SCOUTS. A movement for girls from 7 to 18, started in Savannah, Ga., Mar. 12, 1912, by Mrs. Juliette Low, and adapted from the Girl Guide program begun in England by Lord Baden-Powell in 1909. Girl Scouting is a voluntary, non-sectarian, non-political leisure time program which supplements the home, the school, and the church. It helps girls to develop as individuals and as members of society through activities in ten fields of interest: homemaking, the out-of-doors, arts and crafts, community life, sports and games, nature, health and safety, literature and dramatics, music and dancing, community life, and international friendship. For Senior Girl Scouts, who are from 14 to 18 years old, there is an additional field, vocational exploration.

In 1939, Girl Scouts, Inc. adopted a new constitution reaffirming the dominant position of local groups in the national organization and making some structural changes including a plan for biennial conventions and election of officers for two years. A work plan for the adults of the organization was adopted covering the years 1939-41. Among the national objectives set forth in the plan are the following: 1. To develop and provide materials which will help Girl Scouts plan and carry out all their activities in a democratic way. 2. To develop and provide materials which will help the girl to be a constructive member of her family. 3. To provide ways for the girl to become better acquainted with her community and to participate in local affairs appropriate to her age and ability.

In August, five American Girl Scouts and their leader attended the annual gathering of Girl Scouts and Girl Guides at "Our Chalet," international Girl Scout meeting place near Adelboden, Switzerland. Nine other nations were represented. These meetings are made possible by the Juliette Low Memorial Fund, maintained by the Girl Scouts of the United States.

The official organ for girls is *The American Girl* magazine, and for leaders, the *Girl Scout Leader*, each a monthly publication. The national officers in 1939 were: Honorary president, Mrs. Franklin D. Roosevelt; president, Mrs. Frederick H. Brooke; acting chairman of the board of directors, Mrs. F. Louis Slade; national commissioner, Mrs. Frederick Edey; secretary, Mrs. Ralph G. Wright; treasurer, Miss Eleanor Frances Edson. At the national convention held in October, 1939, Mrs. Harvey S. Mudd of Beverly Hills, Calif., was elected president and chairman of the board, and Mrs. Ralph G. Wright, chairman of the executive committee. Mrs. Paul Rittenhouse is national director. Headquarters are at 14 West 49th Street, New York City.

GLASS. Glass has been known to exist for more than five thousand years, yet greater advances have been made both in methods of manufacture and in the character of the material, during the past decade, than in all the other years taken together. Some of the developments of 1939 are not only remarkable in themselves, but are suggestive of even more revolutionary developments that lie just ahead.

Reconstructed Glass. The process by which this type of glass is made was developed by the Corning Glass Works incidental to another line

of research it was pursuing. Certain types of borosilicate glasses are leached in an acid bath. This leaching leaves a residual porous structure, which is then condensed by firing at a vitrifying temperature. During the heat treatment, a linear shrinkage of 13 per cent or a volumetric shrinkage of 36 per cent occurs. The final product is a clear, solid glass, very high in silica and for practical purpose equal to fused quartz.

The commercial importance of this glass is its high resistance to thermal shock, the coefficient of linear expansion being 7.8 to 10^{-7} . A dish made of "reconstructed" glass can be placed upon a cake of ice and molten metal poured into it without cracking the glass. It is understood that a new top-of-the-stove ware will be placed upon the market, probably in late 1940 or in 1941.

"Invisible Glass." The observation upon which this discovery was made dates back to 1892, when Dennis Taylor observed that tarnished lenses were effectively faster than new lenses. The 1939 interpretation of this observation is that a film placed artificially upon a glass surface will reduce reflection of light, and hence increase its transmission. For such a film to be effective, two conditions must be fulfilled: the index of refraction of this film material should be just intermediate between that of air and the glass; also, that the optical thickness of the film should be one-quarter of the wave length of the light. Both conditions were fulfilled simultaneously by two investigators working independently and without knowledge of the other. Dr. Katharine B. Blodgett (General Electric Co.) applied soap film to the glass in successive monomolecular layers, and Dr. C. Hawley Cartwright (Massachusetts Institute of Technology) evaporated films of metallic fluorides. The first important application of the latter method has been in new projector lenses. During January of 1940, the Bausch and Lomb Optical Co. equipped each of 25 Loew's theaters with an advanced type of projector lens for the premier showing of *Gone with the Wind*, and as this film was in color, the improvement in focal sharpness and in image contrast was pronounced. See PHOTOGRAPHY.

The Sealed Beam Headlight. Representing three years of co-operative effort on the part of the glass, lighting, automotive industries, in which many state motor vehicle administrations assisted, the sealed beam headlight became a reality in 1939. The story behind this development is fantastic and it may prove to be one of industry's great losses that the tale may never be written. The new headlight is expected to revolutionize night driving. (See also AUTOMOBILES.)

The sealed beam headlight incorporates into one single unit both the (glass) reflector and the light source, with the lens sealed permanently into the unit so that this also becomes an integral part of it. The inside of the lens and reflector surface are thus protected from dust, dirt, moisture, and corrosion, enabling the headlight to retain almost its full initial efficiency throughout its life. This headlight carries no light bulb, the housing itself functioning in that capacity. Many 1940 cars already carry this equipment, but full servicing of automobile output has been hindered by inadequate production capacity.

The **Fluorescent Lamp** has been developed, offering a new type of lighting that generates less heat, is more efficient, and cheaper to operate. This lamp is a sealed glass tube incorporating a controlled composition of fluorescent coating on

the inside of the tube. Light is produced through the agency of invisible radiation acting on the coating. These fluorescent powders are highly effective converters of invisible energy into visible light with little radiant heat. Colors available are green, blue, pink, gold, and daylight.

The **Germicidal Lamp** is another new lamp that generates a short-ultra violet wave extremely effective in destroying microorganisms. It has found great usefulness when installed in air ducts, and is used widely by meat packers, butchers, bakers, and canners. Some refrigerators have been equipped with these lamps.

Safety Glass. Great improvements in the manufacture of safety glass have been recorded during 1939. Safety glass consists of two sheets of ordinary flat glass with a layer interposed of sheet plastic. By the use of polyvinyl acetal (sheets as thin as .015"), the plastic will elongate under impact more readily than with the plastic formerly used—cellulose acetate and cellulose nitrate. At 70° F., the Ili-Test laminations are at least twice as resistant as the cellulose plastics when subjected to the same impact, thus increasing the safety factor.

Building Materials. Glass building blocks have passed permanently from the development stage into quality production and their use in structures of all kinds has become almost commonplace. A new type of block was introduced in the fall of 1939 in which an interior screen of glass fibers has been made use of to reduce the transmission of solar energy. **Thermopane** was also introduced during the year. This is a double glazing with a layer of dehydrated air between, the whole having the appearance of a single glass. This glass is said to effect a reduction in heat transmission of from 53 to 56 per cent. Another addition to the construction field is the so-called **architectural glass**. For the first time a continuous method of producing molded panels has been evolved. These panels are cast in any form of relief called for in the architect's specifications. They are translucent and have important decorative values.

Fiber Glass. The insulating efficiency of glass has given its use in fiber form a tremendous impetus commercially. Whereas at the beginning of 1939, fiber glass had only two industrial uses, by November the number had increased to 425. Among the most notable uses of fiber glass are its application to the field of thermal insulation, electrical insulation, air filtration, acoustical insulation, fireproof decorative fabrics, and chemical filtration. Electric motors, for example, can be reduced approximately $\frac{1}{2}$ of normal size and weight by replacing the insulating material with glass; lead covered cable can be reduced substantially in diameter by insulating the individual wires with glass, thereby effecting important saving in the amount of lead used and in the weight of the cable itself.

High Index Glasses. By the use of certain rare oxides of high molecular weight, glasses have been obtained of high index up to 2.0 and of comparatively low dispersion. In lens design, the value of a glass depends upon the relation between refractive index and dispersion. The last great advance was the discovery by Schott of the dense barium crown glasses which had a much smaller dispersion than the glasses of the conventional crown flint series of the same refractive index. These new glasses of high refractive index show an even greater difference from the

conventional crown flint series, which should make possible the construction of lenses of high aperture and great freedom from residual aberrations. Lenses of this type are said to be an actual production.

Glass Containers. Improvements in the machinery used to form or shape bottles have resulted in forward progress, the speed of manufacture being increased and the quality of the ware improved. Most important of all, this improvement has made possible the new lightweight containers. Originating with the beer bottle which has been reduced some 40 per cent in weight, the lighter bottle is being extended into other fields, notably food packaging.

Glass Industry. Production of glassware for the year 1939 is estimated at approximately \$320,000,000 according to indices compiled and published by *The Glass Industry*. This makes the year the second largest in history, the high mark for all time being reached in 1937, when the total was \$354,038,944 according to U.S. Census figures.

Glass containers, the largest division of the industry, reached a total production of 51,224,555 gross, which lacked only 2.7 per cent of the peak reached in 1937. The year's output exceeded 1938 by 19 per cent. Shipments for the year totaled 49,167,000 gross, and this 2,000,000 shortage under production resulted in an accumulated inventory of 9,237,000 for the entire industry on December 31. While large, the stocks on hand are not unwieldy.

Plate glass production totaled 141,740,835 square feet for the year, a gain of 65 per cent over 1938, but well short of a record. 1939 was the fifth largest year, maximum activity having been reached in 1936 (198,068,838 sq. ft.), and the other three years being 1937, 1935, 1929, in the order named. Window glass during 1939 totaled 10,776,000 boxes.

All other glassware reached an aggregate of some \$100,000,000, a figure that exceeds 1938 by some 25 per cent. Tableware and illuminating ware are the most important items volumewise of the miscellaneous group, and the former had a particularly successful year.

Employment and Payrolls. According to *The Glass Industry*, there was an average of 70,000 persons employed during 1939 in the various divisions of the glass industry, a net gain of 6000 over 1938, which compares with 79,000 in 1937 and 68,000 in 1929. Payrolls totaled over \$91,000,000 for the industry, the largest sum of money paid to workers in any year except 1937 which was \$102,000,000. In 1929, payrolls totaled \$88,000,000.

Exports. Preliminary figures place the value of glassware exported at almost \$10,500,000, an increase of 25 per cent over 1938 and the highest total in a decade. Percentage gains were largest

Imports. Imports fell to \$5,158,000, a decrease of 21 per cent from 1938.

GOLD. Throughout 1939 the United States Treasury continued to pay \$35 per ounce for gold, thus establishing the United States as the only free market for the world's production, and accepting all that was offered. One result was that the trend of increased world production in recent years was continued in 1939, in spite of rising costs for labor, taxation, and supplies. The increase for 1939 over 1938 was about 7 per cent, as shown in the accompanying Table I

TABLE I—WORLD GOLD PRODUCTION
(In thousands of fine ounces)

| | 1939 | 1938 |
|---------------------------------------|--------|--------|
| Principal gold producing countries | | |
| North America | 11,961 | 10,738 |
| United States (including Philippines) | 5,592 | 5,090 |
| Canada | 5,324 | 4,725 |
| Mexico | 1,045 | 923 |
| South America | 888 | 815 |
| Colombia | 558 | 521 |
| Chile | 5,250 | 294 |
| U S S R. (Russia) | 14,464 | 5,255 |
| Africa | 12,361 | 14,154 |
| South Africa | 772 | 12,161 |
| Rhodesia | 837 | 815 |
| West Africa | 494 | 705 |
| Belgian Congo | 2,077 | 473 |
| Asia and Oceania | 1,771 | 2,013 |
| Australia | 306 | 1,692 |
| British India | | 321 |
| Total, principal countries | 34,640 | 32,975 |
| Other countries | 5,140 | 4,237 |
| World total | 39,780 | 37,212 |

‡ Preliminary.

World production for 1939 is estimated by *Engineering & Mining Journal* at 39,780,000 fine oz., compared with 37,212,000 oz. in 1938. Principal producing countries ranked in the following order: South Africa, 12,361,000 oz.; United States, including the Philippines, 5,592,000 oz.; Canada, 5,324,000 oz.; the U.S.S.R., for which accurate figures are always lacking, 5,250,000 oz.

In the United States California retained its leadership in gold production, and Homestake Mining Co., South Dakota, held its premier position among individual producers.

U.S. Treasury continued to accumulate gold in 1939 increasing its reserve from about \$14,500,000,000 at the close of 1938 to more than \$17,600,000,000 at the close of 1939. Table II, according to *Engineering & Mining Journal's* review, gives the sources of monetary gold acquired by the United States for the period January 1934 to August 1939.

Maldistribution of gold among the nations of the world is a source of continued speculation on the uncertain future of gold as a monetary metal. In 1913 the United States held one-fifth to one-quarter of the world's monetary gold. By 1918 the proportion had risen to two-fifths, and by 1939 to two-thirds. Gold is still money in the United States, but not in the United Kingdom; and other countries are liquidating their gold reserves and adopting new devices for international settlements. Thus the future of gold as a monetary metal is an uncertain quantity, which must ultimately have a profound effect on the future of the gold industry.

1939 UNITED STATES FOREIGN TRADE IN GLASS

| Kind of glass | Exports | Imports |
|-------------------|--------------|-------------|
| Plate | \$ 1,106,000 | \$ 75,000 |
| Window | 70,000 | 793,000 |
| Containers | 3,454,000 | 324,000 |
| Tableware | 1,936,000 | 873,000 |
| Illuminating Ware | 473,000 | 375,000 |
| All Other | 3,395,000 | 2,718,000 |
| Total | \$10,461,000 | \$5,158,000 |

with flat glass products, while actual volume increases were greatest in containers, tableware, and miscellaneous pressed and blown items.

War conditions led the United Kingdom early in September 1939 to fix the price of gold at 168 s. per ounce. South African producers, however, received only 150 s., the remainder being re-

TABLE II—SOURCES OF MONETARY GOLD ACQUIRED BY THE UNITED STATES
January 1934–August 1939

(Approximate figures in millions of dollars)

| | |
|--|-------|
| Mine output | |
| United States | 700 |
| Foreign (including U.S.S.R.) | 5,800 |
| Sales from private holdings in Orient | |
| India | 650 |
| Other countries | 125 |
| Return of scrap and coin (net) | |
| United States | 100 |
| Foreign | 125 |
| Total new supplies | 7,500 |
| Deduct estimated increase in private hoards in Western countries | 500 |
| Net total addition to world's monetary gold stock | 7,000 |
| Changes in central reserves in foreign countries (including estimated unreported holdings) | |
| Decreases | 3,700 |
| Increases | 1,000 |
| Net decrease | 2,700 |
| Increase in United States monetary gold stock | 9,700 |

tained by the Government. Australian producers received 156 s., and Canada was allowed the full benefit of the 10 per cent increase in the Canadian gold price, about \$38.50 (Canadian) per ounce.

H. C. PARMELEE.

GOLD COAST. A British colony in West Africa, comprising the Gold Coast colony (23,937 sq. mi.), Ashanti (24,379 sq. mi.), Northern Territories (30,486 sq. mi.), and the area of Togoland mandated to Great Britain (13,041 sq. mi.). Total area, 91,843 square miles; total population (July, 1937, estimate), including British Togoland, 3,700,267, of which 4463 were non-Africans. The principal towns are Accra (72,977 inhabitants), Sekondi (21,614), Cape Coast (19,412), Kumasi (43,413); Tamale (18,591), Koforidua (13,957), and Ho (3549).

Production and Trade. The main products are cacao, kola nuts, palm kernels, copra, rubber, maize, yams, timber, gold, manganese ore, and diamonds. The 1938–39 cacao crop was estimated at 292,600 metric tons. Gold production in 1938 totaled 674,927 fine ounces, the highest in the history of the Gold Coast. The Gold Coast is the second largest producer of diamonds and the third largest producer of manganese ore in the world. In 1938, total imports (including specie and currency of £2,722,589) were valued at £10,380,323; exports (including re-exports of £4,345,626) totaled £15,425,496, of which cocoa (263,229 tons) accounted for £4,540,899; gold (677,480 fine oz.), £4,841,633; manganese (324,207 tons) £907,972; diamonds (1,296,763 carats) £548,027. The colony is the chief producer of the world's cocoa.

Communications. In 1938 the length of railway line open to traffic totaled 500 miles; 3,436,478 passengers and 1,004,876 tons of freight were carried. Accra is the exchange center for air mails received and dispatched by Imperial Airways and the French Aeromaritime services. Takoradi, the chief harbor, is the only port accommodating ships of over 30 ft. draught between Sierra Leone and Nigeria.

Government. In the year ended Mar. 31, 1938,

net revenue totaled £3,791,673; net expenditures, £3,636,569. The government of the colony is administered by a governor assisted by an executive council, and a legislative council of 15 official and 14 unofficial members. Ashanti, the Northern Territories, and Togoland (British) are administered by the governor of the Gold Coast, and their statistics for trade, etc., are included in the general total for the Gold Coast. Governor and Commander-in-Chief, Sir Arnold W. Hodson (appointed Oct. 20, 1934).

GOLDEN GATE INTERNATIONAL EXPOSITION, 1939. The Golden Gate International Exposition, on 400-acre Treasure Island in San Francisco Bay, was a "Pageant of the Pacific" celebrating the great strides made by Western America and the Pacific Basin, both industrially and as a vacationland playground. Its site was reclaimed from the harbor bottom by U.S. Army Engineers at a cost of \$3,800,000 in PWA funds, sponsored by the Exposition. Additional WPA and PWA funds were applied to construction of permanent buildings and public services such as drainage, sewerage, and water supply. At the close of the Fair, which operated from February 18 to October 29, 1939, Treasure Island will become a municipal airport valued at \$10,000,000 and operated by the city of San Francisco for the benefit of the Bay Area. It is 5520 feet long and 3400 feet wide and stands 13 feet above sea level. It is located just north of Yerba Buena Island, and access to the Island is by the San Francisco–Oakland Bay Bridge and ferry.

Sponsors of the West's World's Fair were the eleven Western States of America, supported by some 30 foreign nations and outlying territories, including Japan, Guatemala, Nicaragua, Costa Rica, Mexico, the Netherlands East Indies, Ecuador, Brazil, Peru, French Indo-China, Argentina, El Salvador, New Zealand, Australia, British Columbia, Johore, Venezuela, Uruguay, Paraguay, Chile, Bolivia, France, Czechoslovakia, The Netherlands, Germany, Norway, Italy, and Hawaii. Many of these nations erected their own buildings, of colorful native architecture, in the Pacific Basin area—a chain of lagoons eastward of the main palace group on Treasure Island—and others were found in the hall devoted to international exhibits.

The Exposition expended \$6,512,330.24 in operating and maintaining the Fair for the 254 days of its duration. More than \$15,800,000 was spent by visitors for gate admissions and concessions. Of this, \$11,700,000 represented concessions and \$4,100,000 admissions. The Exposition sold 12,300,000 admissions, of which 1,800,000 tickets were unredeemed. Approximately 10,000 were employed on the grounds of Treasure Island during the peak of the operating period. Of these, 2500 were employed by the Exposition and 7500 by exhibitors and concessionaires and other participants.

The Exposition was built, at the cost of \$17,500,000, in the form of a walled city, with a new "Pacific" type of architecture that blends old Mayan, Incan, Malayan, and Cambodian forms. Buildings were finished with iridescent stucco that reflected sunlight or floorlights, and landscaping cost \$15,000,000, turning the sandy island into a luxuriant subtropical garden of exotics and tall trees. The illumination program, at a cost of \$1,000,000 made a permanent contribution to the science of color in floodlighting

FOUNTAIN OF EVENING STAR

When in action the Fountain of the Evening Star on Treasure Island, San Francisco Bay site of the 1939 Golden Gate International Exposition, cascades arches of water over this pool. At the right is the majestic Tower of the Sun

Courtesy Golden Gate International Exposition

NETHERLANDS EAST INDIES PAVILION

Surrounded by grotesque statues, the Netherlands East Indies Pavilion on Treasure Island is perhaps the most picturesque foreign building at the Golden Gate International Exposition

and was completely indirect, not a single light-source being visible to the eye.

Dominating the "magic city" in the central Court of Honor was the Tower of the Sun, 400 feet high and crowned by a golden Phoenix, symbolic of San Francisco's rise from its ashes after the fire of 1906. This tower, splendidly lighted at night, mounted a carillon of 44 bells. From it radiated the main axes of the Exposition—the Court of the Seven Seas and Court of Pacifica toward the north; the Courts of Flowers and of Reflections eastward, and the Court of the Moon and Enchanted Gardens toward the south. These courts were framed by the massive exhibit halls, with subordinate towers at their outer terminals, and great murals and sculptures everywhere.

Separate courts had their separate color schemes, carried out in flowering trees and seasonal blooms as well as in architectural features, but unity is maintained by flowing color-changes without sharp contrasts.

Some of the outstanding buildings, exhibits, and unique features of the Western World's Fair included:

China Clipper Base. On Treasure Island, every operation of Pan American Airways in its Transpacific division was "under glass" for millions of visitors. Arrivals and departures of the China Clippers, largest flying boats in the world, took place in the Port of the Trade Winds; complete terminal overhaul was made in the Hall of Air Transportation, behind glass walls.

Indian Presentation. The six distinct civilizations of the American Indian, with artisans producing fine hand-made articles that rank with the best importations, were dramatically presented as part of the Federal exhibit.

Cavalcade of the Golden West. Superpageant that dramatized the colorful history of the Western Empire from first explorations to modern times.

The Gayway. "Forty Acres of Fun" with an exotic international flavor, from Javanese dancing girls to the dizziest mechanical "rides" and games of skill.

Fine Arts. A history-making collection of Old Masters from Europe, prehistoric and modern arts of the Pacific Basin, decorative arts, the Japanese National Treasure, and other items.

Fiesta in the West. The Golden Gate International Exposition was the climax of a west-wide celebration in 1939. Every State and community enlarged the regional pageants—rodeos, harvest and flower festivals, "jumping frog" contests, fishing derbies, snow carnivals, etc.

Administration Building. A million-dollar, three-story semicircular structure of concrete and steel near the causeway to the Bay Bridge. During the Fair it housed Exposition business offices; after 1939 it will be the Airport Terminal.

Federal Building. A seven-acre structure housing the \$1,500,000 United States Government exhibit, on the eastern frontage of Treasure Island. A hollow rectangle pierced by a great Colonnade of States, it contained a lavish Indian presentation and exhibits dramatizing many of the activities of the Federal Government.

Hall of Western States. Built around a huge relief map of the West, this imposing structure presented the economic story of the commonwealths sponsoring the Fair. British Columbia was included with California, Oregon, Washington, Wyoming, Montana, Idaho, Nevada, Utah, Colorado, Arizona, and New Mexico.

Pacific House. An imposing cruciform structure on an island surrounded by the Pacific Basin lagoons. It housed exhibits dealing with problems of health, geography, and industrial evolution in the Pacific, as well as a Hall of Pacific Relations in which international commissions discussed the issues of the hour.

International Hall. A section of the main exhibit palace group, devoted to foreign nations which did not erect their own buildings. Their exhibits stressed their progress in cultural and economic fields.

California State Group. This \$5,000,000 "Golden State" exhibit included a total of 11 buildings—the California Hospitality Building, nine others dedicated to groups of California's 58 counties, and a huge Livestock Coliseum. The county buildings included Redwood Empire, Mission Trails, Shasta-Cascade, Alameda-Contra Costa, San Francisco, Sacramento Valley, and Mountain, San Joaquin, Southern California, and Alta California.

Japan. An elaborated feudal castle and detached Samurai house, fabricated in Japan and shipped in sections to Treasure Island. The \$500,000 display was set in typical Japanese gardens on the bank of a lagoon, and stressed transportation and communications, silk, arts and crafts, and pearl culture.

Netherlands East Indies. A Javanese pavilion fabricated in Batavia of native woods, intricately carved. Authentic Balinese dances were a feature of the display, which also touched upon arts, crafts, and agriculture of the glamorous Spice Islands.

Hall of Air Transportation. One of the two huge permanent hangars, containing the Transpacific base of the China Clippers, "under glass" for the full view of visitors. One-fourth of the building contained commercial aviation exhibits featuring domestic air transport.

Palace of Fine Arts. The second fireproof hangar contained an art show running the range of Old Masters loaned by European galleries; an amazing collection of Pacific Basin arts, both prehistoric and modern; a substantial share of the Japanese National Treasure, and many other features.

At the end of the year it was announced that the Fair would reopen on May 25, 1940. See ARCHITECTURE; ART EXHIBITIONS; PEACE, SCULPTURE, TELEPHONY.

GOLD IMPORTS. See BANKS AND BANKING; FINANCIAL REVIEW.

GOLF. See SPORTS.

GOODNOW, FRANK JOHNSON. An American educator and legal scholar, died in Baltimore, Md., Nov. 15, 1939. Born in Brooklyn, N. Y., Jan. 18, 1859, he was educated at Amherst College (A.B., 1879; A.M., 1887), Columbia University (LL.B., 1882), and at the École Libre des Sciences Politiques, Paris, and the University of Berlin. Upon his return he joined the faculty of Columbia University and was successively instructor in history and lecturer in administrative law of the United States (1883-87), adjunct professor (1887-91), professor of administrative law (1891-1903), and Eaton professor of administrative law and municipal science thereafter. During 1906-07 he was acting dean of political science.

In 1913, Dr. Goodnow resigned to act as legal adviser to the first government of the Republic of China; many of his recommendations were incorporated into the Chinese Constitution. In

the following year he was elected president of Johns Hopkins University. Under his guidance, the University expanded along conservative lines; though it grew in size and in numbers, there was no sacrifice of scholastic standing. An authority on international affairs himself, it was largely through his efforts that the Walter Hines Page School of International Relations was established. Also, he instituted the Institute of Legal Research, but the project was later abandoned through lack of funds to carry it on. One of his last acts at the University was a reorganization in which greater stress was laid on graduate work and specialization than on the general undergraduate studies. In 1929 Dr. Goodnow was retired with the title of president emeritus.

One of the country's foremost experts on municipal, state, and national government administration, Dr. Goodnow served on the New York Charter Revision Committee (1900), also on the Public Ownership Commission of the National Civic Federation, which investigated municipal ownership undertakings in Europe (1906); as a representative of the United States at the convention on administrative science at Brussels (1910), and as a member of President Taft's economy and efficiency committee (1911-12).

Dr. Goodnow was a prolific writer in his chosen field of administrative law; his works include: *Comparative Administrative Law* (1893), *Municipal Home Rule* (1895), *Municipal Problems* (1897), *Politics and Administration* (1900), *City Government in the United States* (1904), *Principles of the Administrative Law of the United States* (1905), *Municipal Government* (1910), *Social Reform and the Constitution* (1911), and *Principles of Constitutional Government* (1916). He edited *Principles of Constitutional Government* (1916) and *China, An Analysis* (1926). He received honorary degrees from Amherst, Columbia, Harvard, Brown, Princeton, Johns Hopkins, and the University of Louvain, and was a fellow of the American Academy of Arts and Sciences and the first president of the American Political Science Association.

GOUCHER COLLEGE. A nonsectarian college for women in Baltimore, Md., founded in 1885. The enrollment for the first term of the year 1939-40 was 608. The faculty had 77 members. The endowment funds of the college amounted to \$2,456,141, and the income for 1938-39 was \$539,619. The library contained 71,836 volumes. President, David Allan Robertson.

GOUGH ISLAND. See **ST. HELENA**.
GOVERNMENT REPORTS, OFFICE OF. The Office of Government Reports was created to perform certain functions transferred to the Executive Office of the President pursuant to the President's Reorganization Plan No. II, effective July 1, 1939. The functions assumed were those of the National Emergency Council with the exception of the Radio and Film Divisions of the Council, which were transferred to the Office of Education, Federal Security Agency. The National Emergency Council, an independent establishment, was abolished in accordance with provisions incorporated in the Reorganization Plan.

The purposes of the Office of Government Re-

ports, as defined in Executive Order No. 8248 of Sept. 8, 1939, are:

1. To provide a central clearing house through which individual citizens, organizations of citizens, State or local governmental bodies, and, where appropriate, agencies of the Federal Government may transmit inquiries and complaints and receive advice and information.

2. To assist the President in dealing with special problems requiring the clearance of information between the Federal Government and State and local governments and private institutions.

3. To collect and distribute information concerning the purposes and activities of executive departments and agencies for the use of the Congress, administrative officials, and the public.

4. To keep the President currently informed of the opinions, desires, and complaints of citizens and groups of citizens and of State and local governments with respect to the work of Federal agencies.

5. To report to the President, on the basis of the information it has obtained, possible ways and means for reducing the cost of the operation of the Government.

The principal divisions of the Office of Government Reports are as follows: Administrative Division; Division of Field Operations; Division of Press Intelligence; United States Information Service.

As directed by the President the Office of Government Reports, through its Division of Field Operations, prepares reports concerning the programs of Government departments and agencies, studies progress in the accomplishment of the objectives of these programs, and recommends desirable steps to be taken to overcome obstacles. When requested by other Government agencies, the Office obtains from its field representatives surveys of current conditions relating to specific problems of such agencies.

The Division of Press Intelligence performs a comprehensive press clipping service for Government officials and Members of Congress. It compiles daily newspaper clippings, of which it furnishes duplicates and lends file copies; provides special research upon request; publishes a daily bulletin summarizing news items and editorials on the work of every Federal department and agency; and issues a weekly report comprising abstracts of magazine articles and editorials on public affairs.

The U.S. Information Service functions as a central clearing house for information on all phases of Government activity. It serves both the Government and the general public by furnishing, upon request, factual information on the structure and operations of the Federal departments and agencies and by directing inquiries into proper channels. A branch office is located in New York City. The Service publishes the *United States Government Manual*, an authenticated reference book covering the creation and organization, functions and activities of all branches of the Government.

GRAY, CARL RAYMOND. An American railroad executive, died in Washington, May 9, 1939. Born in Princeton, Ark., Sept. 28, 1867, he was educated in the preparatory department of the University of Arkansas, and in 1883 joined the St.

Louis and San Francisco R.R. Co. as telegraph operator and station agent. Through a number of lesser advancements with this railroad, he became division superintendent (1897), superintendent of of transportation (1900), vice president and general manager (1904), 2d vice president in charge of operation (1906), and senior vice president (1909).

On May 1, 1911 he assumed the presidency of the Spokane, Portland & Seattle and the Oregon Electric Railways and a year later of the Great Northern Railway. From 1914 to 1918 he was president of the Western Maryland Railway and during 1917-18 was chairman of the Wheeling and Lake Erie Railway. During the wartime period (Jan. 5, 1918-Jan. 15, 1919) he served as director of the division of operation of the U.S. Railroad Administration, and on the latter date resumed the presidency of the Western Maryland and the chairmanship of the Wheeling. In 1920 he was elected president of the Union Pacific System, serving as such until 1937 when he retired on reaching the age limit of 70. He was then elected vice chairman of the board of directors. Under his leadership, the road became one of the most profitable in the country, being one of the few railroads to pay dividends on common stock during the depression.

During 1938-39, Mr. Gray served on President Roosevelt's special committee of railroad management and labor executives.

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. Capital, London. Sovereign in 1939, George VI, who succeeded to the throne upon the abdication of Edward VIII on Dec. 10, 1936, and was proclaimed King on Dec. 12, 1936. Great Britain, together with Northern Ireland, the Isle of Man, and the Channel Islands, forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland, are included under Great Britain. See BRITISH EMPIRE; IRELAND, NORTHERN.

Area and Population. The area of Great Britain, the census population of Apr. 27, 1931, and the estimated population on June 30, 1938, are shown by political divisions in the accompanying table.

GREAT BRITAIN · AREA AND POPULATION

| Divisions | Area in sq. miles | Population | |
|---|----------------------|-------------------|-------------------|
| | | 1931 | 1938 |
| England (including Monmouthshire) . . . | 50,874 | 37,794,003 | 41,215,000 |
| Wales . . . | 7,466 | 2,158,374 | |
| Scotland . . . | 30,405 | 4,842,980 | |
| Isle of Man . . . | 221 | 49,308 | |
| Channel Islands . . . | 75 | 93,205 | 145,000* |
| Total | 89,041 | 44,937,444 | 47,485,000 |

* Jan. 1, 1938.

Live births in England and Wales in 1938 numbered 621,627 (15.1 per 1000); deaths, 478,927 (11.6 per 1000); marriages, 360,339 (8.7 per 1000). Live births in Scotland in the same year totaled 88,604 (17.8 per 1000); deaths, 62,953 (12.6 per 1000); marriages, 38,747 (7.8 per 1000). Permanent British emigrants to places outside of Europe numbered 31,144 in 1938 and immigrants of British nationality into Great Britain numbered 40,611. Of the emigrants, 1992 went to the United States, 3367 to British North America, 5427 to Australia, 2425 to New Zealand, 6003 to British South Africa, 5540 to India and Ceylon. The pop-

ulation of England and Wales is 80 per cent urban and 20 per cent rural.

Estimated populations of the chief cities in 1937 (except when otherwise indicated) were: Greater London, 8,655,000; County of London, 4,141,000 (1936); Glasgow, Scotland, 1,126,000 (1938); Birmingham, 1,029,700; Liverpool, 836,300; Manchester, 736,500; Sheffield, 518,200; Leeds, 491,880; Edinburgh, Scotland, 468,500 (1938); Belfast, Northern Ireland, 438,112; Hull, 319,400; Bradford, 289,510; Newcastle-on-Tyne, 290,400; Stoke-on-Trent, 272,800; Nottingham, 278,800; Leicester, 262,900; Portsmouth, 256,200; Croydon, 242,300; Cardiff, Wales, 224,850; Plymouth, 210,460; Salford, 201,800.

National Defense. See EUROPEAN WAR; MILITARY PROGRESS; NAVAL PROGRESS.

Education and Religion. For the school year 1937-38, there were in England and Wales 21,678 elementary schools with an average attendance of 4,526,701; in Scotland, 2898 primary schools, with an average attendance of 567,220. For secondary education, there were in England and Wales 1393 grant-aided schools with 466,245 pupils; in Scotland, 252 secondary schools with 151,988 students. Attendance at industrial and commercial schools in England and Wales was: Full time, 49,057; part time, 1,157,179. The 11 universities in England had 40,444 students in 1938-39; the four Scottish universities, 10,364; and the University of Wales, 2935 students.

The Church of England (q.v.), with an Episcopal form of government, and the Church of Scotland (Presbyterian) are the "established religions" in England and Scotland, respectively. Recent statistics of "full members" of leading denominations in England and Wales were: Anglican, 2,294,000; Methodist, 1,244,374; Congregational, 494,199; Baptist, 401,175; Calvinistic Methodist, 272,935. The number of Roman Catholics was estimated at 2,361,504 in 1937. The Church of Scotland had 2588 congregations and 1,288,571 full members on Dec. 31, 1936; the Roman Catholic Church in Scotland, 614,205 adherents.

Agriculture. In 1938 arable land totaled 12,957,000 acres (21.7 per cent of total area); permanent grass, 18,798,000 acres; orchards and small fruit, 319,000 acres. The value of agricultural production in England and Wales in 1937-38 was £223,500,000 (livestock and products, £154,400,000; farm crops, £35,300,000; fruit, vegetables, and miscellaneous crops, £33,800,000). Wheat production in 1939 totaled 1,619,500 metric tons in England, Scotland, and Wales. The yield of other crops for the entire United Kingdom in 1938 was: Barley, 42,199,000 bu.; oats, 139,419,000 bu.; potatoes, 190,974,000 bu.; turnips and swedes, 10,924,000 long tons; sugar beets (excluding Northern Ireland), 2,239,000 long tons; beet sugar in 1938-39 (excluding Northern Ireland), 336,000 long tons; hops (England and Wales only), 28,784,000 lb.; hay, 6,127,000 long tons. Livestock statistics for the United Kingdom in 1939 were: Cattle, 8,875,000; sheep, 26,904,000; swine, 4,390,000; horses (in Great Britain on farms), 1,076,000; poultry, 69,119,000. The wool clip as in the grease was about 108,700,000 lb. in 1938.

Mining and Manufacturing. Mineral and metallurgical production of the United Kingdom in 1938 was (in metric tons): Coal, 231,875,000; iron ore, 3,615,000; pig iron and ferro-alloys, 6,871,000; steel ingots and castings, 10,561,000; copper, 7200; aluminum (smelter production), 23,000; tungsten ore, 84,000 in 1937; lead ore, 26,800

in 1937; zinc (smelter production), 63,000 in 1937. The production of alcoholic spirits was 58,011,000 U.S. gal. in 1938; beer, 1,066,775,000 gal. Vessels (of 100 or more tons) launched in 1938 aggregated 1,030,000 gross tons. A total of 447,561 motor vehicles were manufactured in 1938 (342,390 passenger cars and 105,171 trucks and buses). Rayon manufacture was 48,285 metric tons.

Fisheries. During 1937 the fisheries of England and Wales landed 851,825 tons of fish valued at £11,951,195 and those of Scotland 235,083 tons valued at £3,422,178.

Foreign Trade. Recent trends in British foreign trade are shown in the accompanying table.

BRITISH FOREIGN TRADE*
[In thousands of pounds sterling]

| Calendar year | Imports ^b | Exports British products ^c | Re-exports (imported merchandise) ^c | Total exports ^c | Excess of imports |
|---------------|----------------------|---------------------------------------|--|----------------------------|-------------------|
| 1929 .. | 1,220,765 | 729,349 | 109,702 | 839,051 | 381,714 |
| 1932.... | 701,670 | 365,024 | 51,021 | 416,045 | 285,625 |

* Not including bullion and specie movements. ^b C. i. f. value. ^c F. o. b. value. ^d Provisional figures.

Foodstuffs accounted for nearly half of Great Britain's purchases in 1938, other leading imports being: Non-ferrous metals and manufactures, £49,847,707; manufactured oils, fats, etc., £44,123,348; wood and timber, £42,900,021; raw wool and woolen rags, £42,693,710; oil seeds, fats, etc., £30,610,925; cotton, £29,586,905; tobacco, £23,344,359; machinery, £21,838,190. The chief exports were: Machinery, £57,906,966; cotton yarns and manufactures, £49,684,368; vehicles (including locomotives, ships, and aircraft), £44,639,716; iron and steel and associated manufactures, £41,598,968; woolen and worsted yarns and manufactures, £26,815,716; chemicals, drugs, dyes, and colors, £22,048,681. In 1938 the United States supplied 12.8 per cent of all British imports, Canada 8.5, Australia 7.8, India and Ceylon 7.4, New Zealand 5.1, Argentina 4.2, Denmark 4.1, Germany 3.3. Of the 1938 exports of British products, India and Ceylon purchased 8.5 per cent, South Africa 8.4, Australia 8.1, Canada 4.9, Germany 4.4, United States 4.3, Ireland 4.3, New Zealand 4.1. See IMPORTS AND EXPORTS.

Finance. Budget operations for the fiscal years ending March 31 are shown in the accompanying table.

UNITED KINGDOM: BUDGET OPERATIONS

| Years ending March 31 | Receipts | Expenditures | Balance |
|-----------------------|---------------|---------------|---------------|
| 1932-33 | £827,031,000 | £859,310,173 | - £32,279,173 |
| 1933-34 | 809,379,149 | 778,231,289 | + 31,147,860 |
| 1934-35 | 804,629,050 | 797,067,171 | + 7,561,879 |
| 1935-36 | 844,775,000 | 841,834,000 | + 2,941,000 |
| 1936-37 | 896,596,194 | 902,193,385 | - 5,597,191 |
| 1937-38 | 948,660,000 | 919,874,000 | + 28,786,000 |
| 1938-39 | 1,006,235,000 | 1,018,949,000 | - 12,714,000 |
| 1939-40* | 942,600,000 | 942,444,000 | + 156,000 |

* Estimates

At the end of September, 1939, the estimates for 1939-40 were revised. Receipts at that time were expected to yield £54,000,000 less than originally anticipated, but increased taxation was estimated to bring the total of Ordinary Revenue to £995,000,000 while an additional £938,000,000 was to be borrowed, in order to meet total estimated expenditures of £1,933,341,000 of which £1,249,000,000

represented defense expenditures. The total net public debt on Mar. 31, 1939, amounted to £8,163,289,000. The principal foreign obligation was the debt of £897,534,000 owed to the United States Government. The total floating debt on Dec. 31, 1939, was £1,535,150,000. The average exchange value of the pound sterling was \$4.9440 in 1937, \$4.8894 in 1938, \$4.4354 in 1939.

Shipping. The British merchant marine on June 30, 1939, aggregated 21,001,925 gross tons. It consisted of 7203 vessels of 17,781,000 gross tons on June 30, 1938. A total of 68,376,000 net registered tons entered the ports of the United Kingdom in the foreign trade in 1938. The national income from shipping in 1938 was estimated at £100,000,000.

Railways, etc. There were 20,162 miles of railway line open in Great Britain on Jan. 1, 1939 (51,000 miles of track). The gross receipts in 1938 totaled £159,709,000 of which £53,061,000 represented passenger fares. Net revenue for the year was £28,984,000. Roads and highways (1939) of the United Kingdom totaled 178,904 miles (see ROADS AND STREETS). Fourteen British air lines operated 74 scheduled services in August, 1939. The total length of air routes, after elimination of duplications, was 30,624 miles; about 21,020 miles of this was operated by Imperial Airways while British Airways operated over 2662 miles and 12 local companies shared the remainder. Total distance flown by all British civil aircraft in 1938 was 13,556,000 miles; passenger miles were 54,267,000; freight ton-miles, 904,000; mail ton-miles, 9,335,000.

Government. The United Kingdom of Great Britain and Northern Ireland is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by universal male and female suffrage on the basis of one member for every 70,000 of population. The House of Lords in 1938 had 785 members, including 24 minors not seated, who are variously selected—by heredity, appointment, by virtue of office, and by election.

The elections of November, 1935, gave the National Government 431 out of the 615 seats in the House of Commons. The standing of the government parties toward the end of 1939, modified slightly by by-elections, was as follows (names of leaders in parentheses): Conservatives (Neville Chamberlain), 374; Liberal National party (Sir John Simon), 32; National Labor party (Malcolm MacDonald), 7; Independent Nationals, 5; total, 418. The Opposition was made up as follows: Labor party (Clement R. Attlee), 164; Independent Labor (James Maxton), 3; Liberal party (Sir Archibald Sinclair), 18; Independents, 11; Communists, 1; total, 197.

The War Cabinet formed Sept. 3, 1939, was composed as follows: Prime Minister and First Lord of the Treasury, Neville Chamberlain (C.); Foreign Affairs, Viscount Halifax (C.); Chancellor of the Exchequer, Sir John Simon (L. Nat.); Lord Privy Seal, Sir Samuel Hoare (C.); War, L. Hore-Belisha (Lib. Nat.); Co-ordination of Defense, Lord Chatfield; Air, Sir Kingsley Wood (C.); Admiralty, Winston Churchill (C.); Minister without Portfolio, Lord Hankey. The other Ministers were: Lord President of the Council, Earl Stanhope (C.); Lord Chancellor, Viscount Caldecote (C.); Home Secretary and Minister of

HISTORY

After 10 years of vacillation and of retreat before the aggressively expansionist diplomacy of Germany, Italy, and Japan, the British Government in March, 1939, scrapped its policy of appeasing Germany and on September 3 entered into another armed struggle with Hitler's resurgent Reich. See *EUROPEAN WAR*.

Foreign Policy. Disillusionment with the Munich "peace with honor," achieved by Prime Minister Chamberlain at the expense of Czecho-Slovakia on Sept. 29, 1938, was widespread in Britain by the end of that year (see 1938 *YEAR BOOK*, p. 305). Events early in 1939 convinced virtually all elements of the British people, and of the Chamberlain Government, that Hitler aimed at the military domination of Europe and that this aim directly endangered the safety of the British Empire. See *GERMANY* under *History*.

This danger was emphasized by the close diplomatic co-operation between Germany, Italy, and Japan in well-timed assaults upon British interests in various parts of the world. Hitler's bellicose speeches, the activities of German and Italian armies in Spain, Japanese attacks upon British subjects and their properties in China, and Mussolini's seizure of Albania were regarded in Britain as bitter fruits of the Munich capitulation. But it was Hitler's military occupation of Bohemia and Moravia on March 15, more than any other event, that led Prime Minister Chamberlain to reverse Britain's historic foreign policy by concluding military alliances with Poland and Turkey and guaranteeing the independence of Greece and Rumania. See those countries and Czecho-Slovakia under *History*.

The "Stop-Hitler" Coalition. In building a coalition designed to check further aggressions in Europe, Chamberlain received effective co-operation and support from Premier Daladier of France. The first step was taken March 31 when the British Government promised to go to Poland's aid if the latter country decided to resist any German action clearly threatening its independence. The crucial decision as to whether German action called for Polish armed resistance and British intervention was left in the hands of the Polish Government. A permanent Polish-British mutual assist-

ance pact was signed August 25, a week before the outbreak of the German-Polish war.

On April 13, a week after Italy invaded Albania, Chamberlain announced that Britain had agreed to aid Greece and Rumania if their independence was "clearly threatened" and they "respectively considered it vital to resist with their national forces." On May 12 Britain and Turkey agreed to aid one another "in the event of an act of aggression leading to war in the Mediterranean area." This pledge was affirmed in an Anglo-Turkish military alliance concluded October 25.

The British and French Governments also sought to enlist the Soviet Union in their anti-German coalition. These negotiations were begun in Moscow in April—mainly at French insistence—and ended with the sensational announcement of the German-Soviet non-aggression pact, signed on August 24. The British and French Governments both deeply distrusted the Soviet Government's motives, and were unwilling to give it the free hand in the Baltic states and in Poland that Stalin won from Hitler. Nevertheless the Soviet-German rapprochement was a severe blow to the "stop-Hitler" coalition. It sealed the fate of Poland and forced Rumania, Greece, Turkey, and possibly other potential Anglo-French allies to avoid participation in the conflict during its first phase. On the other hand, the Hitler-Stalin rapprochement shattered the unity of the anti-Comintern powers. It powerfully influenced Japan, Italy, Spain, Hungary, and Bulgaria in their refusal to enter the war on Germany's side.

Alliance with France. With the rapid conquest of Poland, the "stop-Hitler" coalition was reduced to Britain and France, although the conclusion of the Turkish alliance in October assured them additional allies if the war spread to the Balkans and the Mediterranean. Anglo-French collaboration became progressively closer. It was marked by Chamberlain's pledge to support France against Italian territorial demands, by President Lebrun's visit to London in March, by their close diplomatic unity throughout the year, by the merging of their military, naval, and air forces upon the outbreak of war, and by their subsequent agreements for co-operation in the financial and economic fields (see *FRANCE* under *History* for details).

Negotiations with Germany. From the beginning of 1939 Britain and France followed the dual policy of preparing to resist further aggressions by armed force and of seeking to reach an understanding with their potential enemies. Until the German invasion of Poland on September 1 they continued to work for a peaceful settlement of German-Polish issues, although stipulating that Germany must not impose a settlement by force or threat of force, as was done at Munich.

Upon the announcement of the Soviet-German pact on August 22 the British Government took precautionary military measures. On the same day Prime Minister Chamberlain warned Hitler that Britain's pledge to Poland still stood. He urged that both Poland and Germany suspend "press polemics" and other incitements to war, and that they open negotiations for a settlement to be guaranteed by the other powers. In reply to this warning, delivered by letter to Hitler at Berchtesgaden by the British Ambassador, Sir Neville Henderson, on August 23, Hitler replied that nothing short of a complete change in British policy could "now convince him of the British desire for good relations." His formal reply to Chamberlain, dated the same

day, stated that the Reich had "definite interests which it is impossible to renounce," including Danzig and the Polish Corridor.

On August 25 Hitler sent Chamberlain another communication stating that "Poland's actual provocations have become intolerable," and that Germany was determined "to abolish these Macedonian conditions on her eastern frontier." He said the pact with Russia would make Germany "secure economically for the longest possible period of war." He offered to "accept" the British Empire and "to pledge himself personally for its continued existence and to place the power of the German Reich at its disposal" provided his "limited" colonial demands were fulfilled. If Britain rejected this offer, there would be war. To the British Ambassador he declared that all he required for an agreement with Poland "was a gesture from Britain to indicate that she would not be unreasonable."

After consulting France and Sir Neville, who had returned to London with Hitler's message, the British Government replied in a note dated August 28 that it could not "for any advantage offered to Great Britain, acquiesce in a settlement which put in jeopardy the independence of a state" to which a British guarantee had been given. The note again urged direct Polish-German negotiations for a peaceful settlement and declared that failure to reach a just settlement would plunge Britain, Germany, and possibly the whole world into a calamitous war. Sir Neville, presenting the note to Hitler that evening, said Britain wanted friendship with the Reich "but only on the basis of a peaceful and freely negotiated solution of the Polish question."

Hitler replied that Poland would never be "reasonable" so long as she had a pledge of Anglo-French assistance, and threatened to "annihilate" her. He asked Sir Neville if Britain "would be willing to accept an alliance with Germany," and warned that Britain would make a great mistake if she thought he was bluffing. Sir Neville replied that Britain was fully aware of the fact and was not bluffing either.

On August 29 Hitler in a note to Chamberlain said the Reich was prepared to accept the British proposal for direct negotiations with Poland, although "sceptical of the outcome." However he said Germany could not give or participate in guarantees covering any territorial rearrangement without the Soviet Union. The note declared Germany "never had any intention of touching Poland's vital interests" or questioning its independent existence. Hitler offered to receive a Polish emissary with full powers to negotiate and said he expected the emissary's arrival the following day (August 30).

London replied through Sir Neville on August 30 that it could not advise Poland to produce in Berlin that day a representative with full powers to decide the issues at stake. It suggested instead that Berlin follow the "normal procedure" of handling its proposals to the Polish Ambassador for transmission to the Polish Government. If the proposals offered a reasonable basis for negotiation, the British Government offered to use its influence in Warsaw on behalf of a settlement.

When Sir Neville Henderson called at the German Foreign Office on the night of August 30 to deliver this note, Foreign Minister von Ribbentrop read to him "at top speed" a 16-point program for the settlement of German-Polish issues. It called for immediate return of Danzig to the Reich, retention of Gdynia by Poland, and the turning over to an international commission of the rest of the

Polish Corridor pending determination of its ownership by a plebiscite at the end of one year. The plebiscite was to be confined to persons born in the territory before 1918 or residing there on that date.

Sir Neville asked for the text of these proposals. Von Ribbentrop replied that it was "now too late, as a Polish representative had not arrived in Berlin by midnight." The circumstances under which the German proposals were presented led the British and Poles to charge that they were never intended for any other purpose than to strengthen the German case before world opinion. On August 31 the Polish Government authorized its Ambassador in Berlin to inform the German Government of Poland's acceptance of the British proposal for direct German-Polish negotiations. Von Ribbentrop declined to receive the Polish Ambassador until that evening and then the Ambassador stated that he did not have plenary powers to negotiate a settlement on behalf of his government. Up to the last, the Polish Government apparently suspected that Britain as well as Germany might repeat the Munich procedure and reach a settlement at Poland's expense.

That same evening the German State Secretary informed Sir Neville that Germany could no longer be put off "with empty subterfuges and meaningless declarations." Having waited two days for the arrival of a fully empowered Polish negotiator, the German Government considered its proposals to have been rejected. The note listed the German 16-point program in full—the first time the text had been seen by either the British or Polish Governments. But Hitler had already given the order to attack and at 5 a.m. the next morning the German invasion of Poland began.

Meanwhile the Italian Government and the governments of the Oslo Powers had sought to mediate and avert war. To both of these initiatives, the British and French Governments stated their willingness to continue negotiations with the Reich, provided German troops were withdrawn from Polish soil. No time limit was fixed at first, but public opinion in Britain was now unanimous in demanding that the government fulfill its obligations to Poland immediately. At 9 a.m. on September 3 the British Ambassador notified the German Foreign Office that Britain expected a reply by 11 a.m. to the London Government's formal warning that it would fulfill its pledge to Poland if the invasion was not ended. When no reply was forthcoming by that hour, the British Government issued a formal declaration of war and France followed suit that evening. See *GERMANY and POLAND under History*.

Aid from the Empire. The various British Dominions, colonies, protectorates, and dependencies and even the mandated territories rallied to the British cause in September of 1939 no less willingly than in 1914, although the Dominions were now complete masters of their own policies. Eire remained neutral, although majority sentiment was more favorably disposed toward Britain than in 1914. The South African Parliament overthrew the Hertzog Government when it opposed participation in the war, and entered the struggle under the leadership of the veteran Gen. Jan C. Smuts. Australia, Canada, New Zealand, Newfoundland, and Southern Rhodesia entered the war without dissent from any important group in their populations.

The Indian princes and many other Indian leaders and economic and religious groups showed

their loyalty by contributing men and money, but the powerful Congress party withheld co-operation in default of the immediate granting of Indian self-rule. Declarations of support and gifts of troops, arms, and funds for prosecution of the war poured in from other units of the Empire in all parts of the world. Canada and Australia not only prepared to send troops to fight in Europe and the Near East, respectively, but joined with New Zealand and Britain in the adoption of a far-reaching scheme for marshaling and expanding the Empire's air power, with Canada (q.v.) as the chief training ground. The Empire's industries and economic resources, greatly expanded since the World War, were mobilized for the prosecution of the European conflict. Representatives of the Dominion and Indian governments arrived in London before the end of October to co-ordinate the war efforts of the principal units of the Commonwealth. For the individual contribution of each unit of the British Empire (q.v.), see the separate article on each.

Britain's allies, Egypt and Iraq, likewise severed diplomatic relations with Germany although they did not declare war upon the Reich. Their armies were placed on a war footing with the aid of British armaments, credits, and military instructors.

Relations with Italy. If Prime Minister Chamberlain's appeasement policy had not averted war with Germany, it apparently contributed to the virtual isolation of Hitler when the supreme test came. Anglo-French diplomacy, backed by the growing power of their armaments, was a powerful factor inducing Italy, Japan, Spain, Hungary, and Bulgaria to avoid participation in the conflict on the German side.

Prime Minister Chamberlain paid a visit to Rome on January 11-13, but his conferences with Mussolini proved barren of immediate results. He also seized the opportunity to make a courtesy call upon the Pope. The Italian attack upon Albania in April and the Italo-German alliance in May produced added tension in Anglo-Italian relations. But this tension was greatly eased by the withdrawal of Italian troops from Spain after Franco's victory, and especially by Mussolini's non-intervention in the European War. On October 31 London gave *de facto* recognition to Italy's annexation of Albania, four days after conclusion of an Anglo-Italian accord facilitating closer commercial intercourse.

At the year end Britain and France appeared ready to make substantial concessions to keep Italy neutral; they even expressed some hope of winning her collaboration. At the same time they made formidable preparations to blockade and strangle Italy if Mussolini threw in his lot with the Reich. See *FRANCE* and *ITALY* under *History*.

Danger from Japan. In the Far East, the British and French possessions were less defensible against the threat posed by Japan. Despite the co-ordination of Anglo-French forces in that area, the lack of a battle fleet at Singapore and the exigencies of the European War caused them to beat a slow but steady retreat under the pressure vigorously applied by the Tokyo Government and Japanese military leaders in China. See *CHINA*, *FRANCE*, and *JAPAN* under *History*.

Attitude Toward U.S.S.R. Despite the reluctance of British Conservatives to trust or collaborate with the Soviet Union, the Soviet-German pact of August 24 aroused indignation and some chagrin in London. Taking the position that its pledge to Poland applied only against Germany, the British Government took no positive action

when Soviet troops invaded Poland on September 17, and partitioned that country with the Reich on September 29. On October 3 Prime Minister Chamberlain announced in Parliament that Russo-German collaboration would not change Britain's determination to "put an end to successive acts of German aggression." Indeed some British circles hailed the Russian advance into German spheres of influence as a setback to Hitler's influence and to German morale. On October 11 Britain signed an agreement to barter tin and rubber for Russian lumber.

Negotiations for a permanent trade treaty also were opened, but these were broken off when the Soviet Government, despite British warnings, invaded Finland on November 30. This action was vigorously denounced by British leaders of all groups except the Communist party, but the government still displayed reluctance to break with Moscow and thus force Stalin into close co-operation with the Reich. On December 14 Prime Minister Chamberlain stated that Britain would give what help she could spare to Finland, but that the defeat of Germany remained its primary objective. See *FINLAND* and *UNION OF SOVIET SOCIALIST REPUBLICS* under *History*.

Policy Toward Other Countries. In its struggle with the Reich, Britain brought into action its powerful navy and all the great financial and economic resources of the Empire. A blockade was clamped on Germany and its naval and merchant vessels were swept from the seas. All vessels bound for neutral countries bordering Germany were forced to submit to the Allied contraband control from the beginning of the war, and in November this control was extended to German goods exported from neutral countries in neutral ships.

Before the war started Britain advanced large credits to Poland, Rumania, Turkey, and Greece to aid them in resisting German economic and diplomatic pressures. After war began, the British sought to divert trade from Germany and draw neutrals to the Allied side by concluding trade agreements with Sweden, Yugoslavia, Greece, and Turkey. Surplus products in large quantities were bought up from the Balkan and Scandinavian countries. British relations with the Arab states, which had been endangered by the Arab-Jewish conflict in Palestine (q.v.), were placed on a friendly basis.

Anglo-American Relations. The collaboration of preceding years with the United States (see 1938 YEAR BOOK, p. 305), was extended during 1939. The reciprocal trade treaty of Nov. 17, 1938, went into effect on January 1 with favorable effects upon mutual trade up to the beginning of the European War. On April 6 an Anglo-American agreement for joint control and administration of Canton and Enderbury Islands (q.v.) in the Pacific was announced. Lord Lothian, a close student of American public opinion, replaced Sir Ronald Lindsay as Ambassador to Washington in the summer. On June 23 an agreement for the exchange of British-owned rubber for American cotton was signed in London. The action of the United States Congress on November 2 in repealing the arms embargo opened up "an arsenal of tremendous resources" to the Allies, according to British Minister of Supply. It enabled Britain and France to call upon the great American aircraft industry for thousands of planes to offset Germany's initial superiority in the air.

As the war progressed, however, friction de-

veloped between the British and American governments over the conduct of the Allied blockade. On December 8 Secretary Hull protested the application to American ships and goods of the British decision to seize all exports from Germany. The British Government also declined to recognize the Pan American neutrality zone except under certain conditions (see *NEUTRALITY*; *PAN AMERICANISM*). But these controversies did not impair the diplomatic collaboration of the two powers in the Far East nor the apparent conviction of the Roosevelt Administration that the mutual interests of the two countries were complementary rather than antagonistic.

The Home Front. From January to September the British Government and people were busy making preparations for war in the event that the negotiations with Hitler failed to bring a peaceful solution of European problems. The determination not to countenance another capitulation such as that at Munich was reflected in the virtual unanimity with which a huge £580,000,000 (\$2,725,000,000) armaments bill was approved by Parliament for the year ending in March, 1940. With only five dissenting vote the House of Commons on February 21 agreed to double the government's borrowing capacity to pay defense costs. A supplementary arms budget of July 13 raised the April total to almost £730,000,000. The first war budget, passed at the end of September, estimated revenue at £995,000,000 and receipts from loans of £938,000,000. To secure this increased sum the standard rate of income tax was raised to 37½ per cent of income; estate duties were raised 10 per cent; and surtaxes and other levies were likewise drastically increased.

With a per capita debt burden already twice that of the United States, Britain was faced with a possible transformation of the entire economic system as a result of the armament burden even before the outbreak of war. To meet the danger of a sudden and large-scale attack by land, sea, and air, Britain was gradually forced into somewhat the same type of regimented economy that prevailed in Germany, although none of the totalitarian political and social controls were introduced until after war was certain.

On August 29 Parliament passed the Emergency Powers (Defense) Act, granting the government a virtual dictatorship for the duration of the war. Under this act the government assumed complete authority over all aspects of industrial production, including prices, over agriculture, transportation, communication, and navigation. Parliament remained in session through November, however, and retained its usual powers of control over the government's activities. Among the measures passed or carried into effect with Parliament's consent were the registration of the entire population on September 29; rationing of fuel; introduction of blackouts and the large-scale evacuation of children from the larger cities; government control of foreign exchange transactions and of imports and exports; and the allocation of labor for defense work in accordance with agreements reached jointly by employers and trade union representatives. Profiteering was curtailed by drastic arms profits taxes. A government censorship was instituted for the purpose of preventing leakage of information to Germany but in general the customary civil liberties were maintained within and without the halls of Parliament.

Military Preparations. The steady expansion of defense equipment and plans during the year

was marked by some notable departures from British traditions. Early in March War Minister Hore-Belisha announced that participation in a continental war would begin with the dispatch of 19 divisions (about 300,000 men) to France. On March 29 the Territorial Army (national guard) was ordered doubled by voluntary enlistments. On April 18 the government appointed 12 regional commissioners to assume full control of separate parts of the kingdom if the expected German bombing raids on London disrupted communication with the rest of the country. On April 26 compulsory military training was introduced in Britain for the first time, and ratified by an overwhelming majority of Parliament over Labor's more or less formal opposition. Thereafter there was a steady acceleration of the production of trained men for the defense services, of airplanes, ships and armaments, and of the vast supplies needed for overseas war and home defense. The constructions of bomb shelters and other air raid precautions cost £10,000,000 in London alone up to the end of 1939. By that time the government was spending over £6,000,000 daily on the war. See *EUROPEAN WAR* for other data.

Politics. Prime Minister Chamberlain made several changes in his Cabinet during the year in addition to those listed above under *Government*. Late in January Sir Thomas Inskip was replaced as Minister for Co-ordination of Defense by Admiral of the Fleet Lord Chatfield. There had been strong criticism of the inadequacy of defense preparations. A further reshuffling of the Ministry took place on April 21 without stilling criticism of the government's slowness in pushing war preparations. Late in May the Prime Minister yielded to these criticisms to the extent of establishing a new Ministry of Supply through which armaments contracts obtained priority over peace-time orders. A secret session of Parliament was held December 14 to debate opposition charges that the Ministry of Supply was failing in its job of organizing British industries for the prosecution of the war.

The reconstruction of the government on September 3-4, bringing Winston Churchill and Anthony Eden into the cabinet, was widely popular. As the war progressed, Churchill stood out more and more as the cabinet member most likely to succeed Prime Minister Chamberlain should the latter retire. On September 22 representatives of the principal political parties reached an agreement not to hold parliamentary or municipal elections during the course of the war.

According to a poll taken by the British Institute of Public Opinion early in December 61 per cent of those polled were satisfied with the government's conduct of the war, 18 per cent were dissatisfied, 11 per cent favored stopping the conflict, and 10 per cent voiced no opinion. The only outspoken opposition to the war came from Britain's Communist party, after it recovered from the shock of the Nazi-Soviet pact (see *COMMUNISM*), from Sir Oswald Mosley's Fascist party, and from a few pacifists and some extreme left-wing labor groups. The British Labor party, which in June had once more rejected proposals for a united front with the Communists, pledged its full support to the government in the war with Germany. On November 15 Clement R. Attlee was unanimously re-elected leader of the Labor party in Parliament for the next session. A few by-elections held during the war months returned large majorities for government supporters.

War Aims Dispute. A vigorous debate over

British war and peace aims began immediately after the war. In speeches on October 12 and November 26 the Prime Minister laid down the government's objectives in general terms. On October 12 he said Britain sought no material advantage and wanted nothing from the German people that would injure their self-respect. "We are not aiming," he said, "only at victory but rather looking beyond it to the laying of a foundation of a better international system which will mean that war is not to be the inevitable lot of every succeeding generation." He said the German Government alone stood in the way of such a peace. He called for "righting the wrongs done to Czecho-Slovakia and Poland" and for practical measure to assure the cessation of aggressions by Germany since "no reliance can be placed upon the promises of the present German Government."

The following day the Council of Action for Peace and Reconstruction, a dissident Liberal group headed by former Prime Minister David Lloyd George, attacked this statement as inadequate and vague. On November 26 Chamberlain was slightly more explicit. He stated that Britain's war aim remained to defeat "that aggressive, bullying mentality (in Germany) which seeks continually to dominate other peoples by force . . ." Her peace aims called for a new Europe based on good will and mutual tolerance; adjustment of boundary and other disputes on a basis of equality for all parties; increased trade; the unfettered right of each country to choose its own form of government so long as that government did not pursue an external policy injurious to its neighbors; and the gradual reduction of armaments to the point necessary for maintenance of internal law and order.

See ARABIA, ARGENTINA, AUSTRIA, BELGIUM, BULGARIA, BURMA, CHINA, CZECHO-SLOVAKIA, EGYPT, IRAQ, GUATEMALA, IRELAND (EIRE), IRELAND (NORTHERN), JAPAN, MEXICO, NETHERLANDS, PORTUGAL, RUMANIA, SPAIN, STRAITS SETTLEMENTS, SWEDEN, TURKEY, and URUGUAY under *History*. Also ARMAMENTS, COST OF; CHEMISTRY, INDUSTRIAL; COMMUNISM; EUROPEAN WAR; FASCISM; MILITARY PROGRESS; NAVAL PROGRESS; REPARATIONS AND WAR DEBTS.

GREECE. A Balkan kingdom. Capital, Athens. Greece has an area of 50,270 square miles (mainland, 41,652; islands, 6818), and a population estimated at 7,108,000 in 1939. The 1928 census showed 6,204,684 (urban, 2,058,510). Living births in 1937 numbered 183,868 (26.4 per 1000); deaths, 105,674 (15.2 per 1000); marriages, 45,833 (6.6 per 1000). Estimated populations of the chief cities in 1938 (preliminary) were: Athens, 499,360; Piraeus, 287,800; Salonika (Thessaloniki), 267,870; Patras, 73,840; Kavalla, 55,280; Volos, 51,000; Candia (Érakleion), 43,550; Xanthi, 37,550; Canea, 36,810; Corfu (Kerkyra), 34,740.

National Defense. Military service is compulsory. The active army on Nov. 1, 1939, numbered 140,000 officers and men (455,000 in reserve). The air force consisted of 1660 men, with 4500 trained reserves and 120 aircraft. The navy comprised 1 armored cruiser, 1 cruiser mine layer, 8 torpedo boat destroyers, 12 torpedo boats and 6 submarines. See the articles on MILITARY PROGRESS and NAVAL PROGRESS.

Religion and Education. The school attendance in 1936-37 was: Elementary, 967,588; secondary, 90,709; university, 10,561. Illiteracy is high. The 1929 census returns showed 5,961,529 members of the Greek Orthodox Church, 126,017

Moslems, 72,791 Jews, 35,182 Roman Catholics and 9003 Protestants.

Production. Approximately 54 per cent of the working population are supported by agriculture and fishing, 16 per cent by industry and 8 per cent by commerce. There were 6,087,000 acres of cultivable land in 1938. The value of agricultural production in 1937 was 30,172,800 drachmas. Yields of the chief cereals in 1939 were (in metric tons): Wheat, 960,000; barley, 217,700; rye, 62,500; oats, 152,600; corn, 172,500. Other leading crops in 1938 were: Potatoes, 5,254,000 bu.; currants and raisins, 416,074,000 lb.; figs, 71,987,000 lb.; wine (must), 108,314,000 gal.; olive oil (1938-39), 24,780,000 gal.; tobacco, 91,656,000 lb.; cotton (ginned), 32,026,000 lb. (1938-39). The 1937 livestock returns showed 1,065,000 cattle; 465,000 swine; 8,451,000 sheep; 5,288,000 goats; 969,000 horses, mules and asses.

The value of mineral production in 1937 was 626,773,000 drachmas. Factory production, 1938 (excluding wine, olive oil and wheat milling), was 13,552,000,000 drachmas. In 1938, 267 metric tons of rayon, 250 metric tons of silk and 21,000 metric tons of paper were produced. Chief minerals (in metric tons) in 1937 except as otherwise indicated were: Chromite, 19,900; zinc, 10,000; iron ore, 145,000; iron pyrites, 245,000 (1938); lead, 9300; lignite, 131,000; nickel, 1000; bauxite, 150,000 (1938); superphosphates of lime, 5800 (1938); sulphuric acid, 43,000 (1938).

Foreign Trade. In 1939 imports for consumption were valued at 12,275,000,000 drachmas (14,761,000,000 in 1938) and general exports totaled 9,200,000,000 drachmas (10,149,000,000 in 1938). Among the chief exports were tobacco (40,000 tons valued at 3,978,000,000 in 1939), olive oil, raisins, olives, wine, figs, and citrus fruits. Germany supplied 28.8 per cent of the 1938 imports; the United Kingdom, 13.0 per cent; Rumania, 10.3 per cent; and the United States, 7.2 per cent. Of the exports, Germany took 38.5 per cent; the United States, 17.1 per cent; with the United Kingdom and Italy the third and fourth best customers. See IMPORTS AND EXPORTS.

Finance. Budget estimates for the fiscal year ending Mar. 31, 1940, placed receipts at 13,077,000,000 drachmas and expenditures at 14,654,000,000 drachmas. Revenue estimates for 1938-39 totaled 13,338,000,000 drachmas; expenditures, 15,679,000,000. Appropriations for the Ministries of War, Marine and Air represented 26 per cent of the 1939-40 expenditures. The public debt on Dec. 31, 1938, was 81,942,000,000 drachmas, including the railway debt. Of this total, about 68,000,000,000 drachmas represented the external debt, with foreign currency converted at current rates. The average exchange rate of the drachma was \$0.0091 in 1937, \$0.0090 in 1938, \$0.0082 in 1939.

Transportation. The length of railway lines in operation on Mar. 31, 1938, was 1870 miles, including 944 miles of state railway. During the year ending Mar. 31, 1938, all railways carried 31,620,000 passengers and 2,357,914 metric tons of freight. Gross revenues were 888,815,000 drachmas. Highways extended 8060 miles in 1939 (see ROADS AND STREETS). At the end of 1939 there were four air services in operation covering 749 route miles. Athens is an important aviation center, having connections with French, British, Italian, German, and other airlines. During 1938, 2992 vessels of 5,475,764 net registered tons entered Greek ports in the foreign trade. The Greek merchant marine on June 30, 1939, consisted of 607

vessels (of 100 tons or over) with a gross tonnage of 1,780,666. The Corinth Canal, which was closed for nearly a year as a result of landslides, was reopened on Oct. 2, 1939. With the construction in 1939 of a new international radio transmitting center near the village of Spata, the Eastern Telegraph Co., Ltd., a British concern, acquired a monopoly of all international telegraphic and wireless communications not operated by the Greek Government itself.

Government. The government in force in 1939 was a dictatorship in the hands of Premier John Metaxas, acting as the servant of the Crown. This dictatorship came into existence on Aug. 4, 1936, with the support of royal decrees dissolving Parliament, suspending constitutional guarantees, abolishing the political parties, and subjecting the press to supervision and censorship. At the end of July, 1939, Metaxas was declared dictator for life. The sovereign power resides in the King of the Hellenes. The King in 1939 was George II, who succeeded to the throne in 1922, fled from Greece, Dec. 18, 1923, in the Venizelist revolution, was succeeded by a republic, Mar. 24, 1924, and returned to the throne, Nov. 25, 1935, in accordance with the result of a plebiscite, to rule under the restored monarchic constitution of 1911.

HISTORY

Domestic Affairs. The government of General Metaxas strengthened its position in Greece during 1939 in a number of ways. The handling of strained relations with Italy, over the Albanian frontier, as related below, improved its standing with the population in April. It proceeded immediately to deal with an alleged new Venizelist movement in Athens. Themistocles Tsatsas, a liberal and a lawyer of high standing, was arrested for attempting to present to King George a written request for the admittance of some of the excluded leaders to the cabinet and was sent into exile, about the middle of April. In July E. J. Tsouderos, accused of secret correspondence with some of the leading Greek émigrés while serving as governor of the Bank of Greece, was arrested, with some 15 other officials of the bank, and a number of them were sent into exile. On October 22 it was announced that about 200 individuals in Samos had been seized by the police on charges of anti-dictatorial activity. A Communist former member of Parliament, Michael Kases, was arrested, November 15, and the authorities declared that they had found, in Athens and on a Greek vessel, concealed printing presses for producing Communist propaganda. The course taken by the Russian government in Poland, stirring up popular fear of a Russian drive toward the Aegean, had lately brought communism into keen dislike. While the incidents of war in Europe thus afforded the government opportunities to act against its opponents, support from Great Britain and France, against possible invasion, helped give the government the aspect of a source of strength in time of peril.

Steps were taken to assure the somewhat more distant future of the government. Metaxas added to his other ministerial functions, in January, that of directing education; thus he acquired direct control of the dissemination of ideas among the pupils of the schools. With regard to rule over the trade unions, these had been put on a virtual corporate basis. The arbitration of disputes with employers was compulsory. Strikes and lockouts were forbidden. The country had received a sys-

tem of social insurance. Minimum wages were in effect. The government promoted an association to teach the better use of leisure among the population. Obtaining from Great Britain a credit for purchases in the United Kingdom, the government continued to strengthen the country's defenses. It put into strict application, October 1, a law of 1937 requiring military conscripts to give 24 months of service. The Greek National Youth, an organization promoted by the government in order to effect control of the adolescent group, was aided in January with contributions obtained from individuals by the personal solicitation of the dictator. In December the establishments of the Young Men's Christian Association in Athens and Salonika were dissolved and their properties were taken for the Youth organization's use.

Foreign Relations. The government had to deal throughout the year with the severe stresses, in the external relations of southeastern Europe, responsive to the violent disturbance in divers parts of the continent. It witnessed with alarm the appropriation, in April, of its own small neighbor, Albania, by Italy, and it thus acquired the hazard of an Italian frontier. Greece also faced the possibility, after the German and Russian conquests in Poland, of a Russian invasion of the Balkan region. External pressure compelled Greece to provide for its own defense by taking sides. In doing so it turned to the associated powers from which it had least to fear, Great Britain and France.

The Italian invasion of Albania, April 7, brought to a head negotiations at Athens, in which the British sought naval privileges and aeronautic bases in Greek territory and offered Greece protection from attack. An understanding was apparently reached by April 12, and the British government announced on the 13th that it would defend Greek territorial integrity; the French premier simultaneously expressed his country's identical intention. The Italian government, on the night of the 11th, aware of the imminence of such declarations, expressed in a note to Athens its assurance that Greek territory would be respected. Athens, apprehending that the Italian invasion might not stop at the Greek border, had increased its forces in the area, and the extra guards were maintained until some months later.

The new Greek understanding with Great Britain, though its details were not fully published, was seen to involve Greek grants of facilities to British naval forces and British grants of credit to the Greek Government from time to time, whether for strengthening Greek defenses or for economic support. The Greek press, expressing only what the government wished expressed, declared for Greek neutrality toward warring European nations. Nothing indicated that Greece had undertaken to lend armed aid to its protectors. In July Greece reportedly obtained a British credit of £2,040,000 for the purchase of British goods.

While the understanding of April with Great Britain had been formed under the pressure of Italy's entry into the Balkan peninsula, it held good during the second and in some respects equally serious crisis of September, involving Germany. Greece remained neutral in the war against Germany; but though the German market normally took about two-fifths of the Greek exports, Greece maintained the special relations established with Great Britain, now Germany's adversary. The government's pro-Ally policy was strengthened by the conclusion of the Anglo-French military alliances with Turkey, which was already an

ally of Greece. The government at Athens announced, late in September, that a set of forts along the Albanian and Bulgarian frontiers had been completed.

GREEN, COL. E. H. R. See **MASSACHUSETTS**; **SUPREME COURT**.

GREENE, **FREDERICK STUART**. An American engineer and public official, died in Washington, D. C., Mar. 26, 1939. Born in Rappahamock Co., Va., Apr. 14, 1870, he was educated at the Virginia Military Institute (1890). He worked as an engineer on the Central R.R. of Georgia (1890-91), with the cable railways in Washington and New York (1892-93), as an assistant engineer with the U.S. Engineers (1894-95), and as general superintendent of John Monks & Co., dock builders (1896-1900). Thereafter he was associated with the American Manufacturing Co. (1900-05), and the Waterproofing Co. of New York City (1905-17). Greene saw service with the 302d Engineers in France from April 14, 1918 to the close of the War and participated in the Oise, Aisne, and Argonne offensives.

In 1919 he was appointed commissioner of highways for the State of New York by Governor Smith, but with a new administration in 1921 he retired to private life as president of Greene-Huie Co., engineers and contractors. With the reelection of Smith in 1923, Colonel Greene was again appointed commissioner of highways, and in 1925 he was placed in charge of the newly-created position of Superintendent of Public Works for the State of New York, which included canals and waterways, public buildings, all State engineering and architecture, as well as highways. He was reappointed to this post by successive governors and shortly after being reappointed for the 10th time, he resigned on Mar. 23, 1939 because of ill health. Colonel Greene also was chief engineer of Whiteface Mt. Highway Commission and of Grand Island bridges, supervisor of the N. Y. State Roosevelt Memorial, and chairman of the Rockland-Westchester Hudson River Crossing Authority. He wrote *The Blue Book of Rope Transmission* (1901), and several short stories.

GREENLAND. A Danish insular colony near northeastern Canada, extending from 50° 49' N. to 83° 39' N. The interior consists of a plateau about 10,000 ft. high, covered with an ice cap of 1000 ft. in thickness. Total area 839,800 square miles, of which some 120,849 square miles are part free from ice. Population (1938 estimate), 17,000 (16,000 Eskimos and about 400 Danes). Julianehaab (3500 inhabitants), Godthaab (1300), Godhavn, and Angmagssalik are the main settlements.

Cryolite, graphite, seal oil, whale oil, cod liver oil, fish, furs, skins, walrus ivory, and eiderdown are the chief products. Commerce is a monopoly of the Danish government. In 1937, imports to Denmark, 2,428,000 crowns; exports to Denmark, 6,794,000 crowns. For 1936-37, revenue was 3,117,000 crowns; expenditure, 4,959,000 crowns (crown averaged \$0.2219 for 1936; \$0.2207 for 1937). The administration of Greenland, which is divided into the three inspectorates of North Greenland (capital, Godhavn), South Greenland (capital, Godthaab), and East Greenland, is vested in

a director (appointed by the King) in Copenhagen, Denmark, who is aided by inspectors and local assemblies in the colony. See **POLAR RESEARCH**.

GRENADA, grê-nā'da. A British island colony in the Windward Islands group of the West Indies. Area, including South Grenadines, 133 square miles; population (Jan. 1, 1938, estimate) 88,201. Capital, St. George's (4629 inhabitants in 1921). Principal products are cacao, nutmegs, mace, limes, sugar, bananas, cotton, and coconuts. In 1937 imports were valued at £367,707; exports, £362,075. For 1937 revenue totaled £177,342; expenditure, £177,900; net public debt, £371,536. The colony is administered under the Governor of the Windward Islands (who resides at St. George's, Grenada) and has a legislative council of 16 members (8 official, 3 nominated and 5 elected). See **WINDWARD ISLANDS**.

GRINNELL COLLEGE. A coeducational, nonsectarian institution of higher learning in Grinnell, Ia., founded in 1846. The enrollment for the year 1939 was 750. There were 68 faculty members. The productive funds amounted to \$1,510,000 and the income for the year was \$364,930. The library contained 110,000 volumes. President, John Scholte Nollen, Ph.D.

GROENER, GEN. **WILHELM**. A German army officer and politician, died in Potsdam, May 4, 1939. Born in Ludwigsburg, Nov. 22, 1867, he entered the German army in 1884 and was promoted through the ranks until at the outbreak of the World War he was chief of the railway department of the General Staff with the rank of colonel, and as such organized railway transport and supply. In 1916 he was a lieutenant-general and chief of the war council of the Prussian War Ministry, and in the following year he commanded a division in France. In 1918 he was chief of the General Staff Army group at Kiev and later in the year succeeded General Ludendorff as General Quarter Master. He retired from military service in the following year.

Upon his retirement General Groener entered political life and was Reich minister of communications during 1920-23. He became minister of defense in 1928 and received the additional post of minister of the interior in 1931 in order to concentrate the control of the army and police. As such he was director of the political strategy by which the government hoped to put down the National Socialists, and he advocated the suppression of the Nazi storm troops, which were disbanded on Apr. 13, 1932. A month later he lost the interior post and later in the year, upon the fall of the government, that of defense.

He wrote *Der Weltkrieg und seine Probleme* (1920), *Das Testament des Grafen Schlieffen* (1927), and *Der Feldherr wider Willen* (1930).

GUADELOUPE, ga'de-lōōp'. A French West Indian colony comprising the main islands of Guadeloupe (Basse-Terre and Grande-Terre), and the dependent islands of Les Saintes, Désirade, St. Barthélemy, St. Martin, and Marie Galante. Total area, 688 square miles; population (1938 estimate), 310,000. Chief cities: Basse-Terre, capital (13,638 inhabitants) and Pointe-à-Pitre (43,551). The annual production of chief crops in metric tons is: Cane sugar, 58,000 (1938-39); cacao, 100 (1937-38); coffee, 500 (1938-39). Other products are rum, bananas, vanilla, logwood, and manioc. In 1938 the estimated value of merchandise imports (in old U. S. gold

dollars) was \$5,000,000 (1937, \$5,300,000); exports, \$7,000,000 (1937, \$7,200,000). There were 596 miles of road in 1938. The budget for 1938 was balanced at 69,527,243 francs (franc averaged \$0.0288 in 1938). The colony is under a governor who is assisted by an elected council and is represented in the French parliament by one senator and two deputies.

GUAM. An insular possession of the United States; the largest and most populous island of the Marianas group, in mid-Pacific. It lies about 5100 miles from San Francisco, 3300 from Honolulu, 1350 from Yokohama, and 1500 from Manila. Area, 225 square miles; population (July 1, 1939), 22,843, which included 21,199 native-born, 778 foreign-born, and 866 members of the naval establishment. Capital, Agana (pop., about 12,000).

The native population is mainly of Chamorro stock. The languages in use are English, Spanish, and Chamorro. Public instruction through high school grades is available to all children who make satisfactory progress. Commencing with the seventh grade, attendance is limited by competitive examination. The number of enrolled pupils in the public schools averaged 4217 for the year 1938-39. Most of the pupils were in native schools, taught by native teachers. An American school, for children of non-natives, was maintained. Copra, coconut oil, alligator pears, and kapok are exported. Products grown for the domestic market are cacao, coffee, rice, sugar, corn, sweet potatoes, and fruits. Exports for the year ending June 30, 1939, amounted to \$124,178, and were mainly of copra. Imports totaled \$659,650.

Guam is a United States naval station; its Governor, who is also the commandant of the station, is a naval officer commissioned by the President. Governor in 1939, Capt. James T. Alexander, U.S. Navy. An elective native Congress consisting of a House of Council (16 members) and a House of Assembly (27 members) has only an advisory voice in the government. Planes of Pan American Airways operating between Alameda, Calif., Manila, and Hong Kong stop regularly at Guam. A cable station on the island relays messages between San Francisco and the Philippines, China, and Japan.

History. A sharp controversy over the advisability of developing Guam as a United States naval base developed in Congress early in 1939 after President Roosevelt on January 12 had recommended a \$5,000,000 appropriation for improvement of the harbor works at Agana. This item was attacked in the Senate and House as a first step toward converting Guam into a first-class naval base. The move aroused an adverse reaction in Japan (q.v.) and in view of the strong opposition in Congress the Guam appropriation was dropped from the Naval Air and Submarine Base Bill. However provision for improvements to the Guam naval station was made in the Naval Public Works Act approved June 2, 1939.

GUATEMALA, gwä'tä-mä'lä. A republic in Central America. Capital, Guatemala City.

Area and Population. Area, 42,364 square miles; population, estimated at 3,044,490 on Dec. 31, 1938. Some 60 per cent of the population are Indians and the bulk of the remainder are mestizos. The small ruling class is largely of European origin. Populations of the chief cities with their suburbs in 1938 were: Guatemala City, 164,771; Quezaltenango, 30,125; Cobán, 26,774; Zacapa, 18,094.

Defense. Military service is compulsory. The

active army comprises about 6000 of all ranks, with a small air force.

Education and Religion. About four-fifths of the adult inhabitants are illiterate. The 1938 school enrollment was: Primary, 134,330; secondary, 5658; University of Guatemala, 694. In 1938 53,193 school children and 3157 adults were taught to read and write. Roman Catholicism is professed by the great majority.

Production. Coffee and bananas accounted for about 90 per cent of all exports in 1938. Coffee exports in 1938-39 were 54,000 metric tons; bananas in 1938, 9,376,593 stems. Banana shipments from the Pacific coast rose from 660,819 stems in 1934 to 3,551,924 stems in 1938. Corn, beans, wheat, sugar cane, and rice are the other chief crops. Livestock population in 1938: 532,257 cattle, 240,939 sheep, 162,743 swine, 95,215 horses, 38,736 mules and asses. The forests yield chicle and hardwood. Some gold is produced. The main industries are coffee-making, flour and sugar milling, and shoe, soap, and pottery making.

Foreign Trade. Imports in 1938 totaled \$16,761,388 (\$16,742,907 in 1937); exports, \$16,336,282 (\$16,108,609). The United States supplied 44.7 per cent of the 1938 imports, Germany 35.1, United Kingdom 5.9. Of the exports, the United States took 69.5 per cent, Germany 14.1.

Finance. For the fiscal year ended June 30, 1938, governmental receipts were 12,497,464 quetzales; expenditures, 10,979,063 quetzales. The public debt on Dec. 31, 1938, was 9,223,687 quetzales and 1,520,432 pounds sterling. The quetzal exchanged at one U.S. dollar in 1937 and 1938.

Transportation. Guatemala in 1939 had 737 miles of railways. On January 1 there were 3626 miles of roads and 792 miles under construction. Domestic air lines in 1938 carried 4991 passengers and 1,895,798 kilos of mail and freight; international lines in Guatemala, 5616 passengers and 105,433 kilos of mail, express, and baggage. The chief ports are San José and Champerico on the Pacific and Puerto Barrios and Livingston on the Atlantic.

Government. See 1938 YEAR BOOK, p. 309-310.

History. Gen. Jorge Ubico, Guatemala's dictator-President since 1931, maintained his firm grip on the reins of power during 1939 without encountering the armed opposition that flared up sporadically in preceding years. He proceeded to consolidate his absolute control and to put into effect measures of an economic and financial nature. A New Year's party and meeting of Guatemalan and Salvadorean newspapermen on the border between the two countries was broken up by President Ubico, apparently because a Salvadorean newspaper stated that a campaign for democracy in both countries would be discussed at the meeting.

In March Congress passed a law that virtually barred immigrants and foreigners from carrying on businesses in Guatemala. There had been much complaint from native business men against foreign competition. In May the President issued decrees barring all foreign political organizations and political activity by diplomats accredited to the government. The decrees affected particularly Nazi and Fascist organizations among the German and Italian colonies and the German and Italian diplomats and consular agents who had engaged in active propaganda among Guatemalans as well as among their own nationals.

In furtherance of Ubico's policy of co-operation

with the United States, an agreement for the dispatch of a U.S. military mission to Guatemala was signed in Washington on March 28. Early in April the Guatemalan normal schools were militarized. Instruction of the teachers was delegated to officers graduated from the Military College. Normal school graduates were to receive commissions as sub-lieutenants in the infantry reserve as well as teachers' certificates. On June 21-24 Ubico was host to President Somoza of Nicaragua, who was making a tour of the Central American capitals.

The government published a "white paper" reviving Guatemala's 80-year-old claim to British Honduras, which was seized upon by Nazis in Guatemala as a means of anti-British and anti-democratic propaganda. The Foreign Office at Guatemala City announced on August 23 that the dispute over British Honduras had not affected Guatemala's cordial relations with Britain. On September 4 President Ubico proclaimed Guatemala's strict neutrality in the European conflict. A conference of Treasury officials of the American republics was held in Guatemala City in November (see PAN AMERICAN UNION; PAN AMERICANISM).

Effective Feb. 18, 1939, a tax of from 5 to 12 per cent on the profits of commercial, banking, industrial, agricultural (corporate only), and public-service enterprises was imposed. It was announced on April 5 that the government had signed a contract with the International Match Company Realization Corporation, representing holders of the 1930 International Match loan, under which the unpaid principal and interest totaling 2,903,364 quetzales was cancelled in return for a cash payment of 900,000 quetzales. On April 27 President Ubico approved a decree cancelling on the ground of unconstitutionality the match monopoly given the Swedish Match Company in connection with the loan. An appropriation of \$100,000 was voted at the end of March for distribution among selected employees of the Ministry of Finance and Public Credit for their work in reorganizing the public finances. In August it was announced that the National Mortgage Bank had been authorized to issue \$300,000 of 20-year 3 per cent mortgage bonds to finance agricultural and other economic activities. The bonds were to be taken up by the Central Bank.

GUGGENHEIM, göög'ën-him, MURRY. An American capitalist and philanthropist, died in New York, Nov. 15, 1939. He was born in Philadelphia, Aug. 12, 1858, the son of Meyer Guggenheim, and received a public school education. In 1881 he joined with his father and brothers in organizing the firm of M. Guggenheim's Sons, and in 1901, when the smelting and refining branches of the business were merged with the American Smelting and Refining Co., he became a director and chairman of the finance committee and later headed the sales department. In 1916, the firm of M. Guggenheim's Sons became Guggenheim Brothers and Mr. Guggenheim continued active in this organization, being senior partner at the time of his death. Other organizations of which he was a director included the Yukon Gold Co., the Nevada Northern Railway Co., the Utah Copper Co., the Kennecott Copper Corporation, and Keno Hill, Ltd.

Generous to the city of New York, in 1919, with his brother Daniel, he gave the Central Display Greenhouses to the New York Botanical Garden in Bronx Park, and he assisted in defray-

ing the expenses of the Goldman Band concerts on the Mall in Central Park. In 1921 he shared with his brothers in contributing \$1,000,000 for the construction of the Barbara and Meyer Guggenheim pavilion at Mount Sinai Hospital. With his brother-in-law, Alfred Bernheim, he erected a dormitory at the University of Paris in 1929, for which the French Government made him an Officer of the Legion of Honor.

In 1929, Mr. Guggenheim, with his wife, established the Murry and Leonie Guggenheim Foundation to afford "charitable and benevolent assistance to the children of greater New York through the practical application of dentistry and oral hygiene to the children of New York City." The Foundation runs a free dental clinic and in 1932 established a School for Dental Hygienists. In his will, Mr. Guggenheim left \$5,000,000 to the Foundation.

HADRAMAUT. See under ARABIA.

HAITI, hä'ti. A West Indian republic, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince.

Area and Population. Area, 10,204 square miles; population, estimated on Dec. 31, 1937, at 2,700,000 (1,631,000 at 1918 census). With the exception of some 3000 white foreigners and a few thousand mulattoes, the inhabitants are all Negroes. Estimated populations of the chief cities in 1936: Port-au-Prince, 105,000; Cap Haitien, 15,000; Aux Cayes, 15,000; Gonaives, 10,000; Saint Marc, 10,000; Jacmel, 10,000. French is the language of government and the educated class. The peasants, comprising more than 80 per cent of the population, speak a dialect known as Creole French.

Religion and Education. Most of the inhabitants profess the Roman Catholic faith. About 85 per cent of the people are illiterate. There are about 1060 primary schools, with 87,000 pupils; 21 secondary schools, with 6000 pupils; 68 farm and vocational schools, with 12,200 pupils; 2 normal schools; and colleges of medicine, law, applied science, and agriculture.

Defense. The armed constabulary, organized by U.S. officers during the American military intervention (1915-34) and since 1934 under Haitian command, comprises about 2500 officers and men. A United States military mission was contracted for by the Haitian Government in 1938 to reorganize the military school and act as technical advisers to the general staff of the Garde d'Haiti (constabulary).

Production. Agriculture supports the mass of the population. The country's prosperity is largely dependent upon export crops, chiefly coffee. For the fiscal year ended Sept. 30, 1939, the principal exports were: Coffee, 29,283,933 kilos (kilo equals 2.2 lb.) valued at 18,728,054 gourdes (gourde equals \$0.20); cacao, 1,805,357 kilos valued at 613,780 gourdes; cotton, 4,671,839 kilos valued at 4,416,524 gourdes; bananas, 2,029,767 stems valued at 2,820,679 gourdes; sisal, 7,492,062 kilos valued at 2,702,274 gourdes; raw sugar, 37,144,990 kilos valued at 4,878,536 gourdes; logwood, 6,919,200 kilos valued at 287,133 gourdes. Grapefruit, oranges, goatskins, lignum vitae, rum, honey, and corn are other exports. Manufacturing is confined to sugar refining, rum distilling, and the

preparation of tobacco products, vegetable lard, and canned fruit.

Foreign Trade. Imports during the 1938-39 fiscal year totaled 40,904,000 gourdes (37,974,000 in 1937-38); exports, 36,338,000 gourdes (34,732,000). The United States furnished 62.96 per cent of Haiti's 1938-39 imports (55.09 per cent in 1937-38); British Commonwealth, 13.78 (19.01); Germany, 5.65 (6.43). Of the 1938-39 exports, 34.73 per cent went to the United States (43.11 in 1937-38), 21.03 to France, 19.72 to the British Commonwealth, and 10.29 to Belgium.

Finance. For the fiscal year 1938-39 revenue receipts were 31,145,584 gourdes and loans for public works 8,321,161 gourdes. Total receipts were 39,466,745 gourdes and expenditures 36,768,818 gourdes. The 1939-40 budget estimates balanced at 29,189,000 gourdes. The gross public debt on Sept. 30, 1939, was 52,137,000 gourdes (43,950,000 on Sept. 30, 1938).

Transportation. Railways in 1939 extended 158 miles; highways, 1418 miles. Port-au-Prince has a connection with the Pan American Airways Caribbean network. During 1937-38, 655 steam and motor ships of 1,518,449 net tons entered the ports. For public works in 1939, see *History*.

Government. For the Constitution of June 17, 1935, see 1938 YEAR BOOK, p. 311. President in 1939, Stenio Vincent, who was elected by the National Assembly on Nov. 18, 1930, and whose term of office was extended for five years from May 15, 1936, by a special clause in the 1935 Constitution. All members of the cabinet and parliament were personal followers of President Vincent and no organized opposition was permitted.

History. The year 1939 was relatively uneventful for Haiti. Economic and financial conditions showed some improvement over the depressed conditions of 1938. Continuance of the \$5,000,000 public works program started by the J. G. White Corporation in 1938 helped to stimulate business activity and steady progress was made in improving and extending roads, trails, irrigation works, water and sanitary systems, etc. Government finances were aided by the payment of \$275,000 to Haiti by the Dominican Government on Feb. 17, 1939, in a compromise settlement of the indemnity awarded Haiti for the killing of some thousands of Haitian peasants in the Dominican Republic in 1937 (see DOMINICAN REPUBLIC under *History*). A conference between President Vincent and ex-President Trujillo of the Dominican Republic in March was reported to have strengthened friendly relations between the two governments. But doubt was cast upon the sincerity of Trujillo's professions of friendship toward Haiti when in October he permitted Col. Demosthenes P. Calixte and other Haitian exiles, previously living in New York City, to establish headquarters in the Dominican capital for the purpose of furthering revolutionary activities in Haiti. Colonel Calixte was dismissed as commandant of the Haitian constabulary by President Vincent in January, 1938, because of his alleged Presidential ambitions.

Although President Vincent during 1939 announced that he would retire as Chief Executive upon the expiration of his second term of office on May 15, 1941, the extensive amendments to the Constitution of 1935 proclaimed by the National Assembly on Aug. 8, 1939, indicated that he and his political associates intended to maintain their dictatorial control over the government and coun-

try. These 20 amendments were overwhelmingly approved by the voters (restricted to literate property owners) in a government-controlled referendum on July 23, 1939.

Election of the President was vested in the National Assembly and a two-thirds vote of that body was required, as against the simple majority of the popular vote necessary under the 1935 Constitution. Likewise the power of amending or revising the Constitution was transferred from the electorate to the National Assembly. President Vincent's future was taken care of by an amendment providing that former Presidents completing their terms after Nov. 10, 1930, shall be life members of the Senate, with full rights, and shall receive from the Public Treasury a monthly stipend of one-fourth the monthly salary of the President. Decrees issued by the Permanent Committee of the National Assembly while that body was not in session were given the full force of law by another amendment. For further details of Constitution, see *Bulletin of the Pan American Union*, January, 1940, p. 53.

To ease the strain on Haiti's finances, the United States Government in a Supplementary Executive Agreement signed July 8, 1939, agreed to a further modification in the financial convention of Aug. 7, 1933. For the year beginning October 1 Haiti was authorized to make a minimum payment covering only the interest and \$20,000 toward amortization of the outstanding dollar loans. President Vincent and several of his cabinet officers paid an informal visit to Washington during December 11-15 to seek additional financial aid. (The closing of European markets to Haitian exports by the European War threatened to have adverse economic and political repercussions.) A tentative agreement was reported to have been reached for the extension of a small loan by the Export-Import Bank for the construction of two tourist hotels, at Port-au-Prince and Cap-Haitien, respectively, in order to stimulate the tourist trade.

The law of 1935 restricting retail trade in many basic commodities to native-born Haitians whose fathers were also native-born was changed in January. Native-born Haitians, regardless of the origin of their fathers, were authorized to sell retail articles specified in the law. In an effort to eliminate street beggars, special taxes were levied to establish homes for aged and infirm persons unable to provide for themselves, and to maintain establishments for the care and education of abandoned or delinquent minors.

The European war caused an increase in prices of both imported and exported commodities. The partial disruption of the regular European markets and sources of supply caused a shift in Haitian trade to the United States. The government took steps to prevent excessive exportation of sugar and other products. A law of September 12 gave the Executive power to issue decrees with the force of law to protect the consuming public against undue price rises and shortages. The government proclaimed its neutrality on September 16. Early that month it revoked licenses granted to persons maintaining and operating radio, radio-telegraph, and radio-telephone stations, apparently to prevent violations of Haitian neutrality.

HAMBURG. See GERMANY.

"HAM AND EGGS." See CALIFORNIA; OLD-AGE PENSIONS

HAMILTON COLLEGE. A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 450

students was registered for the 1939 autumn session. There were 46 members of the faculty for the year 1939-40. The productive funds of the college were approximately \$4,547,000 and the income for the year 1938-39 was \$378,709. The library contained 185,000 volumes. A new gymnasium and swimming pool will be completed in the spring of 1940. President, W. H. Cowley, Ph.D.

HAMMOND, JOHN STEVENS. An American sportsman, died in New York, Dec. 9, 1939. Born in Crown Point, N. Y., Dec. 5, 1880, he was graduated from the U.S. Military Academy, where he was a famous athlete, in 1905. He saw service in Cuba in 1907 and during 1910-12 served as a military attaché in various South American countries, his last post being in the Argentine. There he met Tex Rickard and left the army to join him in various oil and cattle deals. With the entrance of the United States into the World War, Hammond re-entered the army. Known for his book, *Gunner's Handbook of Field Artillery*, he was assigned to Plattsburg, N. Y., as senior instructor of field artillery and later commanded the firing center at Camp McClellan, Ala. He retired from the army in 1919 with the rank of colonel, and returned to South America, where he engaged in various enterprises.

Returning to New York in 1922, he joined with Tex Rickard in plans for a new Madison Square Garden. He handled most of the financing of the Madison Square Garden Corporation which built the \$7,000,000 sports arena, located in New York City at Eighth Avenue and 49-50th Streets. He was made vice-president in charge of new ventures and was instrumental in bringing professional hockey to the City. He purchased the franchise of the New York American team and was for a short time president of the club. In the spring of 1926 he purchased a second franchise for New York and the New York Rangers Club came into being. Hockey proved to be one of the biggest drawing cards of the Garden's long array of sports and became one of the major sports in the United States. In 1929, Colonel Hammond succeeded Tex Rickard as acting general manager of the Corporation. He resigned in 1932 and also quit the presidency of the New York Rangers Hockey Club, the Garden team. In 1934 he obtained control of the board of directors and served as its chairman, but a year later he resigned.

HAMPTON INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1939 was 601 men, 386 women; total 987, while that for the summer school was 70 men, 386 women; total 456. The faculty numbered 113. The endowment for the fiscal year ending June 30, 1939 was \$10,328,576 from which the income was \$402,148. Gifts to the endowment and investment funds amounted to \$132,173. There were 64,733 volumes in the library. President, Arthur Howe.

HANDBALL. See SPORTS.

HARBORS. See PORTS AND HARBORS.

HARVARD UNIVERSITY. A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1939-40 was 8379. Of the 3574 registered in the college 753 were seniors, 807 juniors, 938 sophomores, 1000 freshmen, and 76 out of course. Those in the graduate schools were distributed as follows: Arts and sciences, 1082; business administration, 929; and

education, 194. The professional schools reported the following registrations: Public administration, 14; engineering, 155; divinity, 71; law, 1390; medicine, 522; dentistry, 159; public health, 85; and design, 95. For the summer session of 1939 the registration was 2003. The officers of instruction and administration for 1939-40 numbered 1984, of whom 306 were professors, 97 associate professors, 142 assistant professors, and 21 clinical professors. Endowment funds of the University in June, 1939, exclusive of land and buildings used for educational purposes, had a book value of \$140,185,769. Total expenses of the year for instruction, research, and administration were \$10,959,902. Gifts for the year ending June, 1939, totaled \$4,128,686. The library contained 4,079,541 volumes and pamphlets. President, James Bryant Conant, Ph.D., LL.D., D.C.L. See ARCHAEOLOGY.

HAVERFORD COLLEGE. An institution of higher education, under the control of the Society of Friends, in Haverford, Pa., founded in 1833. Enrollment for 1939-40 totalled 326, including 12 graduate students. There were 44 members on the faculty. The total endowment as of Aug. 31, 1939, was \$4,437,498. The library reported 140,000 volumes. President, William Wistar Comfort, Ph.D., LL.D., Litt.D.

HAWAII (TERRITORY OF). A territory of the United States, comprising the Hawaiian Islands, in the Pacific Ocean, about 2800 miles west-southwest of San Francisco. Capital, Honolulu.

Area and Population. The islands forming the Territory have a combined area of 6407 square miles. Their population as reported by the Governor, for June 30, 1939, numbered 414,991. It exceeded by about 12½ per cent that of the census of 1930, which totaled 368,336. It also exceeded the total of 411,485, reported for June 30, 1938. The diverse racial origins of the inhabitants had an important bearing on the government of the Territory. The leading group, that of Japanese origin totaled 155,042 (1939), or 37.36 per cent of all; the group of Hawaiian or partly Hawaiian race, 63,858, or 15.39 per cent; the Caucasians (including nearly 40,000 Portuguese, Puerto Ricans, and Spanish), totaled 107,381, or 25.88 per cent. These three groups all increased in the course of the year: the Hawaiian-race group, by 1723, Japanese by 1503, and Caucasians by 382. Of other groups, Filipinos numbered 52,430 (1939), came to 12.63 of the total, and were on the decrease; Chinese 28,601, or 6.89 per cent, gained moderately in number; Koreans, 6738, were 1.62 per cent of the population; all other inhabitants numbered 941. The year's birth, 9033, surpassed the 3214 deaths by 5819; the excess of this gain over the gain of 3506 in population indicated a loss by net departures, etc., of 2313. The number of American citizens rose during the year, by 6472, to 334,657 (1939), or four-fifths of the whole. About five out of nine of the 80,334 non-citizens were Filipinos, consequently American nationals; the remainder were chiefly natives of the Orient, of relatively advanced age. The people of Hawaiian race were all citizens. The island of Oahu had (1939) 228,586 inhabitants; its chief city, Honolulu, capital of the Territory, had 154,476.

Education. Enrollments of pupils in public schools in the year ended June 30, 1939, numbered 91,099; those in private schools (December, 1938),

17,430. Expenditures of the year for public schools, \$7,449,534, included \$5,734,974 for teachers' salaries. Public schools numbered 187; private, 110. The extension of high-school education was going on, perhaps causing a greater relative change than in most other parts of the United States, since within less than a generation earlier it had extended to none but those whom the Governor's report styled "the selected few." The University of Hawaii had, in the academic year 1938-39, 1997 regular students, or 21 per cent more than the year before; it had also 1588 part-time students and 1488 enrolled in the summer session. It granted 313 bachelor degrees, 75 fifth-year certificates in education, and 33 master degrees. The University's expenditures for the year, \$1,079,187, were met mainly by Territorial appropriations (44.4 per cent) and Federal aid (24.4); partly, by fees from students (25.7).

Production. Goods produced in the Territory have in most cases a vegetable or an animal origin. They fall into two classes—those for domestic use and those for the exterior market, mainly the United States. Normally, goods of the latter sort cover the cost of the imports. Production for domestic use included the cultivation of many articles of diet, such as the taro plant; fisheries continued to provide an important part of the food; the government planted both the native oyster and the Japanese oyster in parts of the coast in 1939. The 25-year-old quarantine against the Mediterranean fruit fly was modified in November; and tests about this time indicated that papaya fruit of the proper grade, rightly handled, might be put through the required sterilization by heat and reach the U.S. mainland without spoiling; this raised hope that one of the products previously limited to domestic use might be added to the list of exportations.

Cane sugar and preparations of the pineapple account for over nine-tenths of the value of exports. The crop of sugar cane that was converted into sugar in 1939 apparently exceeded in quantity those of 1938 and of 1937; it yielded shipments estimated at 966,000 short tons of raw sugar, of which the value approximated \$57,700,000. The growers got an additional \$9,000,000, more or less, from a U.S. subsidy for compliance with the Federal sugar act. Nevertheless they complained that mounting costs in 1939 devoured any apparent gain over the unprofitable results of 1938. The growers and canners of pineapples reported in 1939 a good crop in quantity and quality and greater shipments of canned fruit and juice. The Honolulu Chamber of Commerce estimated the total of wages paid in the Territory in 1939 as \$118,000,000.

Oversea Trade. Hawaii shipped to the United States, in 1939, exports to the total value of \$113,206,898, as against \$96,556,679 for 1938. The imports, into Hawaii, of goods from the United States, totaled \$101,817,230 for 1939 and \$101,227,151 for 1938. Of Hawaii's exports (1939) sugar made \$55,217,960; canned pineapples, \$34,098,779; pineapple juice, \$16,723,754.

Finance. The general fund of the Territorial government reported, for the fiscal year 1938-39, receipts totaling \$14,468,992, payments amounting to \$14,631,310, and a closing balance of \$2,415,008. The chief part of the year's receipts was \$10,961,532 from taxes, special assessments and charges, etc. The main item of expenditure was \$6,656,647 for education. The Territory owed (June 30, 1939) \$39,046,000 on bonds outstanding,

or \$2,879,000 more than a year earlier; the bonds, to the extent of somewhat less than one-half, were for the requirements of Honolulu and of divers counties. Deposits in the seven banks totaled (June 30) \$111,361,392.

Transportation. The Territory had 2095 miles of highways in 1939. American, Canadian, and Japanese lines of steamships call at Honolulu and give connections with North and South American ports, Australia, and ports of the Orient. The Matson Navigation Company operates regularly between the Islands and the United States. The Inter-Island Steam Navigation Company carries passengers and freight from island to island. Airplanes of the Pan American Airways touch at Honolulu on weekly flights between the United States and the Orient. Inter-Island Airways, Ltd., operates a service of amphibian airplanes among the islands. Automobiles registered in 1939 numbered 66,485. Of 333 miles of railroad in the islands, 168 were on the island of Oahu.

Government. The Governor of the Territory of Hawaii (in 1939 Joseph B. Poindexter) is appointed by the President of the United States, for a term of four years. A bicameral Legislature (15 Senators and 30 Representatives), elected by the registered voters of the Territory (Senators quadrennially, Representatives biennially), votes appropriations and other Territorial acts. The Territory elects by popular vote a Delegate to the U.S. Congress (in 1939 Samuel W. King).

History. The U.S. Government's policy of rapidly strengthening defenses in the Pacific Ocean went into effect in the Hawaiian Islands. Waters near Pearl Harbor were forbidden, May 31, to vessels, unless holding special authorization. Fishing vessels were seized in November for disregard of this order; one of them was owned by a resident of Japanese race. The Navy Board, recommending to Congress, January 3, plans for 25 bases for aviation, included Ford Island in Pearl Harbor, Kaneohe Bay (also on Oahu Island), and the Palmyra Islands, midway between the Hawaiian Islands and Samoa. Formal claim to the Palmyras was made in December, on the ground that the United States had acquired them in the annexation of the Hawaiian Islands, and action was started in the U.S. District Court at Honolulu to obtain title from eight private claimants.

Contracts were let in August for some of the work to be done at Pearl Harbor, Kaneohe Bay, and the Palmyras, the first work ordered under the Navy's new plan for aeronautical bases. The aircraft carrier *Enterprise* and a force of cruisers and destroyers were ordered to the Hawaiian area in October for training in handling aircraft in those waters. The U.S. Army announced, December 12, a plan to increase its force in the Territory by 3000, mostly in the Air Force, to 25,000 men, in the course of 1940. The Government, December 4, contracted for the preparations of a floating drydock, 525 feet long, for towing from New Orleans to the Panama Canal, where it was to be taken partly to pieces, put through the canal, reassembled, and towed to Pearl Harbor. Japanese warships were prohibited, November 17, from carrying cargoes of any sort from Hawaii to Japan.

Governor Poindexter, on a visit to the United States in August, expressed the Islands' concern lest interests in the States should effect a reduction of the Territory's quota of yearly exportation of sugar to the mainland. He pointed out that Hawaiian trade with the continental United States gave it the fifth place among the latter's external

customers, and that the Islands could not continue buying unless they could sell also. A bill was introduced in Congress, to aid Hawaiian legislative reapportionment.

HAY. The hay crop in 1939 of 84,526,000 tons which included 75,726,000 tons of tame hay and 8,800,000 of wild hay, about 7.5 per cent less than the 91,531,000 tons harvested in 1938 and compared with the 1928-37 average of 78,180,000 tons. The 69,245,000 acres harvested averaged 1.22 tons per acre and the 68,751,000 acres harvested in 1938 (1.33 tons per acre) compared with the 10-year average (1.16 tons per acre) of 67,671,000 tons. The carry-over of 16,000,000 tons from previous years provided a total supply 13,000,000 tons larger than the 10-year average and only 3,000,000 tons below the 104,000,000 ton supply for the 1938-39 season. Leading States in production of tame hay were Wisconsin 5,829,000 tons, Iowa 4,814,000, Minnesota 4,773,000, and New York, Illinois, and California each with around 4,180,000 tons; and of wild hay Minnesota 1,357,000 tons, Nebraska 1,316,000, North Dakota 962,000, and South Dakota 900,000 tons.

Important kinds of tame hay produced and the States ranking highest in each class included alfalfa 27,035,000 tons from 13,494,000 acres, California 3,229,000 tons; clover and timothy 23,640,000 tons from 20,828,000 acres, New York 3,152,000 tons; lespedeza 3,860,000 tons from 3,692,000 acres, Tennessee 919,000 tons—phenomenal expansion continued in southern parts of the Corn Belt and northern parts of the Cotton Belt; soybeans 6,263,000 tons from 4,423,000 acres, Illinois 1,241,000 tons; sweetclover 1,030,000 tons from 912,000 acres, North Dakota 326,000 tons; cowpeas 1,720,000 tons from 1,919,000 acres, Texas 538,000 tons; peanuts 878,000 tons from 1,924,000 acres, Georgia 206,000 tons; small grains cut for hay 3,828,000 tons from 3,800,000 acres, California 705,000 tons; sweet sorghum (sorgo) for forage and hay 8,666,000 tons from 5,875,000 acres, Kansas 2,040,000 tons; and other hay crops 7,472,000 tons from 7,355,000 acres, Minnesota 651,000 tons. Seed of important hay crops included alfalfa seed 1,357,900 bu., red clover 1,713,700, alsike clover 304,300, sweetclover 1,351,600, timothy 1,412,800 bu., and lespedeza 138,975,000 lb. The large area of 3,972,000 acres for seed resulted from large supplies of hay, the agricultural program, increased use of combines for seed harvest, and dry conditions favoring seed production rather than hay.

The season average price per ton received by farmers for all hay was \$7.59 and the estimated value of production was \$641,651,000 in 1939 compared to \$6.82 and \$623,854,000 in 1938.

HENRY M. STEECE.

HAYASHI, hä'yä-shē, BARON GONSUKE. A Japanese diplomat, died in Tokyo, June 27, 1939. Born in Aizu in March, 1861, he was educated at the Tokyo Imperial University, graduating from the Law College in 1887, when he entered the diplomatic service. After service in China, he was assigned to the London Embassy in 1893, where he remained until 1898 when transferred to Peking. Subsequently, he was made director of the bureau of commercial affairs at the Foreign Office, and in 1899 was appointed envoy extraordinary and minister plenipotentiary at Seoul, Korea.

In 1906, Hayashi was given that post at Peking,

and two years later he was sent to Rome. He returned to Peking in 1916 with the additional title of ambassador extraordinary and plenipotentiary. During 1919-20 he was governor-general of Kwantung Territory, and then was named Japanese ambassador extraordinary and plenipotentiary to the Court of St. James's. He retired from the diplomatic service in 1925. During his sojourn in England he attended the Economic Conference at Genoa and the Allied Conference on war debts and reparations in London in 1922 and the Inter-allied London Conference in 1924 as a representative of his government.

Hayashi was created a baron in 1907 and a privy councillor in 1934. After his retirement from the diplomatic service he was appointed grand master of ceremonies at the Imperial Court.

HEALTH PROGRAM, NATIONAL. See MEDICINE AND SURGERY.

HEATING AND VENTILATING. Formerly business conditions in the heating, ventilating, and air conditioning industries were closely related to the volume of new building construction. In recent years, however, so much of the total activity has been in modernizing or repairing existing buildings that the former close relationship has been upset. There is now no one general index which can be relied upon and consequently it is necessary to consider important components separately.

In building heating, *Heating & Ventilating's* "Index of Heating Business Activity" is perhaps the best single indicator. This index is based on 1929 = 100. During the early part of 1938 it was substantially steady at slightly over 60, rising to 70 just as the year closed, establishing an average for the year at about 63. Early in 1939 it rose to 88, and then fell to give an average for the year of about 80. At the year-end the index was again pointing upward. Based on this index the heating business was about 25 per cent greater in dollar volume in 1939 than in 1938 and about the same as during 1931, 1936, and 1937.

The increased volume was by no means uniformly distributed over the field. Sale of oil burners, following a very disappointing year in 1938, rose by 50 per cent in number until the 175,000 reported sold during the year was about the same as during the former record years of 1936 and 1937. On the other hand, automatic coal-fired stokers reported disappointing results compared to 1938, for the number reported sold fell by nearly 10 per cent. Sale of gas-burning equipment rose well over that reported for 1938. By the end of 1939 it was reported that the number of houses heated centrally by oil burners was close to 2,000,000, by automatic coal stokers close to 450,000, and by gas-burning equipment close to 800,000.

In the cooling of buildings, which is the phase frequently, although probably loosely, referred to as air conditioning, there is no clear-cut single index of business activity. This phase is relatively new; methods and practices are undergoing constant change, and there is so much confusion in thought and nomenclature that attempts to develop activity indexes are premature.

In the absence of a single index of activity, perhaps the best procedure is to compare the changes in electric load due to air cooling as reported by the electric utility companies. On this basis it is estimated that the dollar volume of

cooling business was substantially the same as, or slightly less than, during 1938. This represents a drop of 35 to 40 per cent from the volume reported in 1937 which was the banner year for this activity.

Dollar volume of business done in connection with cooling has always been but a small fraction of that done in building heating. During the period from 1932 to 1937 this relative volume increased each year. During 1938 and 1939 however it has decreased, and for 1939 it represented about 10 per cent of the total.

Due to an absence of a single statistics-gathering organization there has always been some question as to how extensive the use of air cooling has become. During the year, statistics were gathered by Edison Electric Institute from 141 electric utilities showing the estimated horsepower of air-conditioning load attached to their systems. As these utility companies furnish power to a large part of the installations, publication of these figures was revealing. According to this report there were over 770,000 h.p. of this type of load early in 1939. The author estimates that, allowing for additions during 1939 and for loads not reported, at the close of 1939 there was about 1,000,000 h.p. of electric motor capacity in buildings in the United States furnishing motive power to air cooling equipment.

This same report also permitted the first firm estimate of the kinds of buildings into which this cooling equipment has been placed. The principal classifications and the per cent of the total horsepower in each are presented in the accompanying table.

PERCENTAGES OF THE TOTAL AIR-COOLING LOAD
INSTALLED IN VARIOUS TYPES OF BUILDINGS

[Based on reports to early 1939]

| | |
|--------------------------------------|-------|
| Stores and Store Buildings | 24.0 |
| Theaters | 20.0 |
| Offices and Office Buildings | 17.5 |
| Restaurants, Hotels and Recreational | 14.5 |
| Factory and Industrial Buildings | 12.0 |
| Public Buildings | 6.3 |
| Banks | 2.5 |
| Residences and Apartments | 2.0 |
| Hospitals | 0.6 |
| Broadcasting Systems | 0.6 |
| Total | 100.0 |

This tabulation also indicates what exceedingly small progress has been made up to the end of 1939 in getting acceptance of the idea of applying mechanical cooling to buildings where there is no profit motive in the installation. Of the several building types listed in the table only residences, apartments, public buildings, and hospitals can be considered as non-commercial, and most apartment buildings and some hospitals are erected with a distinctly commercial motive. Granting, however, that all such buildings are cooled for purely personal comfort, they add up to only 9 per cent of the total. Consequently it can be seen that over 90 per cent of all cooling in buildings has been done because of the hope of profit or commercial advantage of some kind. It is evident that those who believe that purely personal-comfort motives will eventually account for the common use of air cooling in buildings still are a long way from having their beliefs realized.

An important development in connection with cooling practice was the rise in importance of the self-contained cooling unit, wherein mechanical cooling equipment is built into a metal enclosure

suitable for placing in the room to be cooled or adjacent to it. These units, formerly on the market in capacities of only 1 to 5 tons of refrigeration (200 to 1000 B.t.u. per min.) were developed until they are available in sizes of 15 to 20 tons. Since they are shipped fully charged with refrigerant and with refrigeration piping complete they eliminate much of the field erection problem formerly encountered. To add to their attractiveness they are portable and can thus be put into rented space, such as chain stores. Moreover there has been a steady trend downward in the capacity of the average installation of air cooling equipment until a great many of these can be served by a unit of no greater capacity than 20 tons.

Notable during 1939 was the letting of a contract to cool the entire office quarters of the Social Security Board, which required a cooling plant of over 4000 tons of refrigeration and which is believed to be the largest single installation ever put into one building. Of interest too was the offering on the market of a factory-installed, standard accessory for cooling and heating passenger automobiles. It was offered late in the year at the time of the introduction of 1940 models and no record of the public acceptance or performance is available as yet. Little progress was made during the year in securing adoption of cooling for passenger buses. It is reported that about 400 cooled buses are in operation on regular runs mostly in the Southwest and West. About 650 railroad passenger cars were cooled during 1939, bringing the total of such cars to about 12,000. See AIR CONDITIONING.

Hazards to the health of workmen in factories arising out of the presence of injurious foreign substances in the air drew much attention during 1939. Enactment of Workmen's Occupational Diseases Acts in a number of States in recent years has greatly stimulated interest in these problems. During 1939 a committee of American Standards Association presented preliminary drafts of codes intended to establish the allowable concentration in air of a few of the more injurious gases and vapors, including carbon monoxide, carbon bisulphide, and benzene. This is preparatory to similar drafts covering other substances, and also preparatory to anticipated efforts to get the whole subject systematized.

HISPANIC SOCIETY OF AMERICA, THE (Spanish Museum and Library). Founded in 1904. An educational institution, containing objects of artistic, historic, and literary interest, its purposes are to advance the knowledge of the Spanish and Portuguese languages, literature, and history and to encourage the study of the countries wherein Spanish and Portuguese are or have been spoken languages. In furtherance of these aims, paintings and other art objects together with manuscripts, maps, and a library of about 40,000 books were placed in charge of the Society. These varied collections have been gradually increased so that, for example, the library now forms one of the most notable Hispanic libraries in America. A

number of temporary exhibitions have been held of the works of noted Hispanic artists. The Society has issued more than 600 imprints relating to Spanish art, history, and literature. In this group are the Huntington reprints of early books, monographs, catalogs on the collections, a Handbook of the museum and library collections (1938), and several works published in co-operation with other institutions. Membership in the Society is honorary and is limited chiefly to Hispanists of distinction. President, Archer M. Huntington. Headquarters: Broadway, between 155th and 156th Streets, New York City.

HISPANIOLA. Official name of the island commonly known as Haiti. See HAITI; DOMINICAN REPUBLIC.

HISTORY. See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; ETC.; also, sections on *History* under each country.

HOBART COLLEGE. An institution for the higher education of men in Geneva, N. Y., founded in 1822. William Smith College, a co-ordinate institution for separate instruction of women, was established in 1908. Undergraduate work at both colleges leads to A.B. or B.S. degrees, with advanced work leading toward Master's degree in some departments. The student enrollment at Hobart for autumn of 1939 was 364, and for William Smith was 194. The combined faculty totaled 54 members. Library contained 105,000 volumes. Endowment was \$1,353,217; value of grounds and building \$1,017,978; income for the year approximately \$390,734; gifts received in 1938-39 college year \$36,506. President, William Alfred Eddy, A.B., A.M., Ph.D., LL.D., L.H.D.

HOCKEY. See SPORTS.

HOGS. See LIVESTOCK.

HOLLINS COLLEGE. A liberal arts college for women, founded 1842, located six miles north of Roanoke, Va. It is nonstate, nonsectarian, with an endowment of \$444,819. The 1939 enrollment was 326. The faculty numbered 39, excluding all administrative officers. There were 11 academic buildings, exclusive of faculty residence halls and residences on a campus which included more than 400 acres. The library contained 30,592 volumes. The physical equipment was valued at \$1,468,523 in 1939. President, Bessie Carter Randolph, Ph.D.

HOLY CROSS COLLEGE. A Roman Catholic college for men, under the Society of Jesus, in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1939 totaled 1269. The faculty numbered 84. The library contained 123,153 volumes. President, The Very Rev. Joseph R. N. Maxwell, S. J., inducted Nov. 26, 1939.

HONAN. See CHINA under *Area and Population*.

HONDURAS, hõn-dõõ'räs. A Central American republic. Capital, Tegucigalpa.

Area and Population. Area, about 46,250 square miles. Population, estimated at 1,014,738 on June 30, 1938 (854,154 in 1930). The people are mainly of mixed Spanish and Indian blood, except for a considerable Negro element in the

north coast banana region and some 35,000 aborigines. Populations of the chief cities (with suburban areas) in 1935 were: Tegucigalpa, 42,903; Comayagüela, 15,095; San Pedro Sula, 32,721; Tela, 14,460.

Defense. Every male citizen is liable to three months compulsory military service at the age of 21 and to service in the reserves from 23 to 40. The army in 1938 comprised about 2000 men and 19 airplanes. Defense budget for 1939-40, 2,082,000 lempiras.

Education and Religion. About 67 per cent of the inhabitants over seven years old were illiterate at the 1935 census. In 1937 there were 757 public elementary schools with 40,836 pupils, 16 secondary and 6 normal schools, and a National University with 298 students. Roman Catholicism is the prevailing religious faith.

Production. Agriculture and stock raising are the chief occupations. Bananas account for about 60 per cent of the value of all exports and minerals, chiefly gold and silver, for about 25 per cent. Banana production (8,458,803 stems in 1937-38) has been steadily declining due to the "Sigatoka" disease. Coconuts, coffee, leaf tobacco, corn, beans, and sugar cane are other crops. The forests yield mahogany and other hardwoods. There is little domestic manufacturing.

Foreign Trade. Effective July 31, 1937, the fiscal year was changed to end June 30. For the 11-months ended June 30, 1938, imports totaled \$9,467,874; exports, \$7,356,388. Banana exports were valued at \$4,225,801; gold and silver, \$1,921,594. The United States supplied 62 per cent of the 1937-38 imports and purchased 86.5 per cent of the exports. See IMPORTS AND EXPORTS.

Finance. Budget revenues and expenditures were estimated to balance at 11,451,000 lempiras in 1938-39 and at 11,026,000 in 1939-40.

The public debt on June 30, 1938, totaled 20,733,035 lempiras (internal, 14,809,160; external, 5,923,875). The official exchange rate of the lempira was \$0.50 in both 1937 and 1938.

Transportation. Honduras in 1939 had about 950 miles of railways and 511 miles of roads. The inadequacy of rail and highway transportation facilities enabled the TACA air system, with headquarters at Tegucigalpa, to develop into a very large freight carrying concern. It operates planes from Tegucigalpa to all parts of Honduras and to the principal centers in Nicaragua, El Salvador, and Guatemala. Tegucigalpa is a stopping point on the Pan American Airways international service.

Government. The Constitution of Apr. 15, 1936, extended the terms of office of the President, Vice President, and members of Congress from four to six years. It stipulated that the incumbent President and Vice President should continue in office until Jan. 1, 1943, and that the Constitutional Assembly of 59 members (all Nationalists) should automatically become the regular National Congress with the members holding office until Dec. 4, 1942. President in 1939, Gen. Tiburcio Carias Andino (Nationalist), who assumed office Feb. 1, 1933.

History. The major economic problem of Honduras is the drastic decline of banana production that resulted in 1936-37 in the reversal of the customary favorable trade balance. In 1929-30 exports exceeded imports by \$10,225,000; in 1937-38 imports topped exports by \$2,111,486. The campaign to check the banana plague was reported to be meeting with some success in

1939. But the government decided that a more ambitious economic reconstruction programme was in order. Early in February Congress approved a law sponsored by Dr. Julio Lozano, Secretary of Finance, Public Credit and Commerce, which authorized the President to engage a foreign technical mission to study the republic's economic condition, propose a revised taxation system, draft other economic and financial legislation, and prepare a general program for agricultural and industrial development.

The law also called for the employment of agricultural experts to train Honduran farmers and encouragement of immigration of farmers. Once the technical mission had completed its task, Congress was to authorize the President to contract a loan for use in promoting economic activity.

On June 22 the Honduran Government followed the precedent set by Guatemala in prohibiting political activities by diplomats, consular agents, and others in the service of foreign governments. The decree also barred publication of political pamphlets and documents and the wearing of uniforms or insignias of foreign political or ideological organizations. The decree was said to have been directed mainly at Nazi and Fascist propaganda activities.

Negotiations for a settlement of the Honduran-Nicaraguan boundary dispute were continued in 1939 by the Mediation Commission established in 1937 in San José, Costa Rica (see 1938 YEAR BOOK, p. 319). Publication in May of Nicaragua's new Constitution affirming Nicaragua's claim to the colonial boundary of 1821 added fuel to the dispute. But the amicable status of the controversy was indicated by the cordial reception accorded President Somoza of Nicaragua by President Carias Andino and his cabinet upon the former's visit to Tegucigalpa on June 29.

HONDURAS, BRITISH. See **BRITISH HONDURAS**.

HONG KONG. A British crown colony consisting of the island of Hong Kong (32 sq. mi.), Old Kowloon (3 sq. mi.), and the New Territories (356 sq. mi.) leased from China (June 8, 1898) for 99 years. Total area, 391 square miles; total population (1938) 1,010,000, of whom 98 per cent were Chinese. A large number of unrecorded refugees have entered the colony since the outbreak of Sino-Japanese hostilities. In 1938 there were 35,893 births and 38,818 deaths. The 1249 schools had a total enrollment for 1938 of 104,134; the Hong Kong University had 538 students enrolled.

Production and Trade. The main industries were the manufacture of sugar, cement, flashlights, rubber shoes, lard, and ships. Deep-sea fishing is carried on extensively. Trade (merchandise) in 1938: imports, HK\$618,169,000; exports, HK\$511,902,000 (Hong Kong dollar averaged \$0.3046 in 1938). Exports declined sharply in 1939 due to the Japanese capture of Canton and Kowloon and to trade restrictions on the China coast. Principal commodities of trade were foodstuffs, metals, piece goods, oils and fats, Chinese medicines, and fertilizers. Hong Kong, a free port, is the chief port for South China. Its harbor is fortified and is the headquarters for the China Squadron of the British Navy. A total of 67,007 vessels aggregating 30,962,756 tons, entered and cleared the colony during 1938.

Communications. There is an electric tramway of more than nine miles; a cable tramway

joining the Peak district with the lower levels of Victoria; and a government railway on the mainland joining Kowloon with Canton. After the Japanese occupation of Canton (Oct. 21, 1938), the government railway's receipts dropped from HK\$1,500,000 monthly to less than HK\$40,000. Highways extended 371 miles in 1938 (173 miles on the island of Hong Kong, 106 on Kowloon, and 92 in the New Territories). Five large air companies (Pan American Airways, Imperial Airways, Air France, China National Airways, and Eurasia Airways) used Kai Tak airport in Hong Kong as a terminus for their services.

Government. For 1938, revenue totaled HK\$36,735,854; expenditure, HK\$37,175,897; net public debt, HK\$11,760,000. The government announced (December, 1939) that Hong Kong would contribute annually HK\$6,000,000 to Great Britain's war chest, the donation to be raised chiefly by income taxes, the first of such taxes ever to be levied in Hong Kong. The colony is governed under Letters Patent of Feb. 14, 1917, and Royal Instructions of the same and following dates, by a governor who is assisted by an executive council of 6 official and 3 unofficial members. There is a legislative council, presided over by the governor, of 9 official and 8 unofficial members. Governor, Sir G. A. S. Northcote (appointed 1937).

History. The outbreak of the war in Europe was followed by dislocations in the economic life of Hong Kong, which had already been subjected to violent vicissitudes since the beginning of hostilities in China. In order to conserve British foreign exchange resources, dealings in Hong Kong in all currencies other than sterling and currencies linked to sterling were restricted by government order on Sept. 8, 1939. Ten factories engaged in the manufacture of electric torches were forced to curtail their output in September when the price of copper soared to prohibitive heights. It was estimated that more than 1000 Chinese men, women and children were thrown out of employment in this one industry alone.

Trade with China—negligible since the capture of Canton by the Japanese (Oct. 21, 1938)—was further reduced by Japan's intensified blockade of China's coast. The sudden removal of Germany from Far East trade lanes was felt particularly in Hong Kong, where German imports in 1938 amounted to HK\$39,039,104 (mostly chemicals, drugs, dyeing, and tanning materials). Exports to the Reich in 1938 totaled HK\$13,138,525.

Hong Kong military defenses were strengthened in 1939; additional naval units were assigned to the colony; the manufacture and distribution of gas masks were accelerated; and the colony experienced its first blackout on September 23. See **CHINA** under *History*.

HORTICULTURE. Definitely on the upturn following the long continued economic depression, American horticulture, particularly that portion concerned with exportable fruits, such as the apple, pear, orange, and grapefruit, was suddenly confronted in the late Autumn with restricted exports in its most important outlets, the United Kingdom and France. On November 15, the Brit-

ish Board of Trade announced a complete prohibition, except under license, of imports of fresh apples and pears. The situation arose from the exigencies of the new World War, with ships and money needed badly for the transport and purchase of war supplies and staple foods. The French government announced that in view of the large apple crop in France, no imports of American apples would be needed before the middle or end of the first quarter of 1940. The seriousness of the situation is indicated in the fact that Europe in the 1938-39 season took 89 per cent and 84 per cent respectively of the American apple and pear exports. The United Kingdom was by far the most important consuming country.

To offset the foreign market collapse, certain of the exporting States, particularly Washington and Oregon, put on active campaigns to increase home consumption. The results were very helpful, and despite the larger commercial crop of apples in 1939 than in 1938, there was about the same amount of apples in cold storage on December 1 as the year before. As a result there was no disastrous slump in prices, although the season average price per bushel received by farmers was somewhat lower than in 1938. There was, on the other hand, no material difference in the total value of the commercial apple crop in the two years. The citrus industry suffered a disastrous year because of unprecedented production, particularly of grapefruit.

World Production. October estimates of the Canadian apple crop indicated a production of 15,623,000 bu.—a slight decrease from the 1938 final figure. A serious situation arose through the drastic limitations on exports to the United Kingdom—the total authorization being less than half the amount exported in each of the two preceding seasons. Australasian apple and pear production also faced a critical situation, with exports curtailed seriously by shortage of refrigerated ships.

The rapid expansion in the world citrus crop was reflected in the Egyptian area where yields attained an all time record of 729,000 boxes, more than double that of the preceding year. Spanish grape exports were still restricted due to the recent civil war, only 35 per cent of the pre-war period. The Mediterranean-basin almond crop was the smallest in ten years. The Italian lemon crop was light due to after effects of a heavy crop year in 1938 and unfavorable spring weather. The prospects for a large crop of winter vegetables in Cuba were good, with the tomato the dominant item.

Foreign Trade. Based on data released by the U.S. Department of Commerce there was a decline in value of both export and import horticultural products in 1939 as compared with 1938. The total value of export items for the first ten months of 1939 was \$85,528,992 as compared with \$90,274,270 for the corresponding period of 1938. The total value of import items was \$54,450,372 in 1939 and \$62,153,351 in 1938. Leading export items were oranges, boxed apples, pears, raisins, prunes, canned peaches, canned pears, and canned fruits for salad. Leading import items were bananas, tapioca, olives, cashew nuts, Brazil nuts, and tulip bulbs. The banana was again by far the most valuable single import item, totaling over 24 million dollars.

Undoubtedly the war was the primary factor leading to reduced foreign trade in horticultural commodities. There was some improvement in South American trade, with Argentina granting

unlimited importation on American apples up to Jan. 31, 1940, and Uruguay increasing the import quota on apples and pears.

Domestic Production. Fruit production in the United States was about 10 per cent greater in total than in 1938 and about 23 per cent above the 10-year average, 1928-37. Among crops showing an increase were apples, apricots, cranberries, cherries, peaches, plums, and strawberries. Fortunately domestic conditions, based on an increasing consumer buying power, were improved, and in addition the Federal Surplus Commodities Corporation purchased large quantities of various fruits for relief distribution. Despite somewhat lower unit prices, the total cash income to producers was slightly higher than in 1938.

In the vegetable field, the production of truck crops for canning in 1939 was somewhat less than in 1938. On the other hand the production of truck crops for fresh market was slightly larger.

| Crop | 1939 | Unit | 1938 |
|--------------------------|-------------|--------|-------------|
| Apples | 100,284,000 | Bu. | 82,390,500 |
| Peaches | 61,730,000 | " | 51,945,000 |
| Pears | 30,910,000 | " | 32,473,000 |

| Onions | 17,470,000 | Sacks | 15,038,000 |
| Peas | 9,627,000 | Bu. | 8,505,000 |
| Spinach | 13,430,000 | " | 12,556,000 |
| Sweet corn | 114,400,000 | Ears | 110,250,000 |
| Tomatoes | 24,585,000 | Bu. | 24,724,000 |

Research. With increased production no longer an objective, because of surplus crops, interest centered in the production of better quality crops and decreased costs of growing and handling. The development of improved varieties of fruits, flowers, and vegetables was continued actively by various research organizations. The Connecticut State Station distributed the Hebron and Shelton strawberries, products of its experiments. From the Texas Station came the Alamo, Ranger, and Riogrande strawberries, and from the North Carolina Station, working jointly with the U.S. Department of Agriculture, the Day-break, Eleanor Roosevelt, and Fairmore strawberries. Two new peaches, Fireglow and Pace-maker, were added by the New Jersey Station to its list of fine new varieties.

Further studies by several of the agricultural experiment stations on the effective placement of fertilizer opened the way to material savings to vegetable growers. More evidence was secured that various of the so-called trace elements, such as boron, manganese, and magnesium, may be deficient in certain soils to the extent of limiting production or damaging the crops. Great interest was displayed in the use of synthetic growth-promoting substances for inducing freer rooting of cuttings and sturdier growth of seedlings. The U.S. Department of Agriculture reported that certain of these growth substances when sprayed on apple trees two or three weeks before normal

harvest season, would prevent premature dropping, a serious fault in certain varieties, such as the well known McIntosh apple.

Ornamentals. No field of horticulture exceeded that of the ornamentals in expansion and nation-wide interest in 1939. This was well shown in the large number of new books on various aspects of home gardening and in the activities of the numerous horticultural societies and garden clubs. Great interest was shown in the growing of plants in water cultures, with several books appearing on the subject. That water culture is not altogether a passing fancy was indicated in the fact that several large commercial greenhouses were equipped to grow flowers in gravel or sand supplied with nutrient solutions.

HOUSE OF REPRESENTATIVES. See CONGRESS, U.S.; UNITED STATES under *Legislation*.

HOUSING. Federal. The year 1939 was notable for the progress of public housing programs under Federal, State, and local authorities.

There are now functioning no less than eleven Federal agencies concerned with housing. These are:

In the Department of Agriculture: Farm Credit Administration (FCA), which as part of the agricultural co-operative credit system makes loans available for construction and improvement of farm houses; Farm Security Administration (FSA) which makes loans to certain classes of farmers and is completing rural community projects begun by the Resettlement Administration and other previously existing agencies.

Under the Federal Loan Agency: the Federal Home Loan Bank Board supervises four separate agencies operating in the field of home mortgage finance. Three of these deal only with home-financing institutions. The fourth, the Home Owners' Loan Corporation (HOLC), an emergency agency to lend to home-owners facing foreclosure, ceased lending operation in 1936, and is now servicing its loans and caring for acquired properties. The Federal Housing Administration (FHA) insures loans made by private institutions for residential building or improvement. Two other agencies purchase or refinance certain classes of mortgages.

Under the Federal Works Agency: the U.S. Housing Authority (USHA) makes loans and "grants-in-aid" to local housing authorities to develop low-rent housing and slum clearance projects. It exercises supervision to ensure (1) that projects will reach low-income families living under substandard conditions; (2) that an equivalent number of substandard dwellings will be demolished; (3) that at least 10 per cent of the development cost is raised from sources other than the Federal Government; (4) that the locality matches the annual Federal contribution on the basis of at least one to five; (5) that costs are within limitations of the United States Housing Act of 1937. Before a community can receive financial assistance from the USHA, it must:

(1) Set up a local housing authority. This can be done only in States with housing enabling acts.

(2) Determine the extent of substandard housing conditions and the rents which families living in bad housing can afford to pay.

(3) Raise 10 per cent of the development cost.

(4) Agree to make local annual contributions.

(5) Guarantee that for all dwellings built with USHA funds an equal number of slum dwellings will be eliminated.

(6) Observe strict economy in construction.

(7) Guarantee the payment of prevailing wages.

There are 38 States in which communities can legally set up authorities empowered to borrow money from the USHA. All available USHA funds have been parceled out among 15 of these. At the end of the year there were 260 local housing authorities.

At the end of the year total USHA loan contracts were \$581,996,000 for 147 local housing authorities; 145 projects in 85 cities with an aggregate of 58,169 dwelling units were under construction in 23 States, the District of Columbia, the Territory of Hawaii, and Puerto Rico, with projects in Augusta, Ga.; Austin, Tex.; Buffalo, N. Y.; Charleston, S. C.; Jacksonville, Fla.; New York City, and Toledo, Ohio, already occupied.

Outstanding loans totaling \$581,776,000 representing 90 per cent of the \$646,569,000 total estimated cost of projects, had been approved for 155 communities; more than 17,000 persons migrated from substandard dwellings into USHA-aided projects during 1939, and 10,000 substandard structures had been eliminated in 26 cities; net construction cost of dwellings under construction is \$2831 per dwelling unit; shelter rents will average \$11.45 per dwelling per month in the South and \$15.80 in the North. The entire program calls for loans totaling \$693,000,000, which will defray 90 per cent of the \$770,000,000 cost of projects to rehouse approximately 160,000 low-income families of 166 communities now having either loan contracts or earmarking funds.

Construction and operating costs and rents in urban housing projects are reported becoming lower month by month. This proves, according to USHA officials, that (1) with USHA communities can clear slums and rehouse families formerly living in unfit and unsanitary buildings, (2) costs are lower than average private construction in every community, (3) rents in every community are as low as or lower than average rents paid for slum tenements and country tumble-down shacks.

Thirty housing authorities in cities and towns with populations of approximately 10,000 or less in 16 States, were organized to co-operate in the USHA rural low rent housing program started in 1939. The USHA-aided farm homes would include living, cooking and dining space, three bedrooms, storage space, and a work porch; average construction costs about \$1700 per dwelling. Rents would range from about \$4.00 to \$5.00 a month per house. Construction has begun on two projects. Four authorities have applied for USHA loans to finance a total of 800 farm homes and are ready to start construction. Five more are ready to submit applications for about 1000 dwelling units.

Under the FHA program 153,496 dwelling units were constructed in 1939, about 95 per cent being single-family houses with an average value of \$5000 or less; and 512,849 old properties were modernized. Home-financing insurance during 1939 amounted to \$954,000,000 as compared with \$693,500,000 in 1938, a 37.5 per cent increase. Loans on large-scale rental projects totaled \$51,436,625 as compared with \$47,493,150 in 1938.

New York State. New York is the only State with its own housing program in effect. At the State election in November 1938, a Constitutional

amendment was adopted to enable the Legislature to act. The amendment authorized a total of \$300,000,000 in loans for housing projects and a million dollars a year in subsidies, total subsidies not to exceed \$5,000,000. The Desmond-Moffat-Mitchell bill, officially known as the State Public Housing Law, was passed by the Legislature in January and was signed by the Governor July 1. The law authorizes an appropriation of \$150,000,000 which the State may borrow on its own credit to be loaned to municipalities or their housing authorities to meet capital cost of low rent housing projects; \$1,000,000 was appropriated for yearly subsidies to insure the low rent character of such projects. Not more than one-third of loan and subsidy may be granted to municipalities outside of New York City and not more than two-thirds to New York City. Under the old State law providing for limited dividend housing projects—the bulk of which is retained—there was an unpaid State Board of Housing. The new law substitutes for the old Board a salaried Superintendent of Housing, who is Mr. Edward Winefeld. One application has been approved under the new law, by New York City, for a project in the congested Navy Yard district of Brooklyn to provide shelter for 3800 families at a cost of \$22,000,000. The New York law applies only to low income groups and the annual income of a tenant may not be more than five times the annual rental of an apartment except when there are three or more dependents when the income may be six times the rent. Each project must be part of a definite plan for replacing a blighted area. Loans are made at the going rate of interest plus the cost of marketing the bonds and must be amortized in fifty years. They may be made up to 100 per cent of the cost. The municipalities must guarantee interest and amortization payments. Subsidies are at the going rate of interest plus 1 per cent and must be matched by the municipality. There is no tax exemption on the original value of the property and the municipality retains the original tax income. State projects must be kept independent of Federal projects.

New York City. The most notable local housing developments have been in New York City. The New York City Housing Authority was the first local housing authority and the first to work with the USHA under the Federal Housing Act of 1937. It is undertaking the largest slum-clearance and housing projects in the country, expected to provide 12,711 apartments for 45,786 persons at a cost of \$72,830,797.67, of which \$46,146,641.67 had been spent up to November 1.

During 1939 the public housing program of New York City was reinforced by two new sources of funds, the City (through recent amendments to the City Occupancy Tax Law) and the State; and Gerard Swope, former head of General Electric, became Chairman of the New York City Housing Authority. Successful operation of the three public housing developments already occupied at the beginning of the year, First Houses (122 apartments), Williamsburg Houses (1622 apartments), and Harlem River Houses (574 apartments) was continued. The construction of Red Hook Houses, the 2545-apartment development in Brooklyn, was completed at a cost of \$12,229,695. Queensbridge, the 3149-apartment development in Long Island City costing \$13,936,686, the largest public housing development in the United States, was two-thirds occupied by the

end of the year and scheduled for completion within three more months. More than 100,000 applications were investigated and nearly 5000 families selected from among them, and moved from the slums into new homes in Red Hook and Queensbridge Houses. The first housing project in the United States financed solely by municipal funds—Vladeck City Houses—is under construction; three other projects, Vladeck Houses, South Jamaica Houses, and East River Houses, to house 3149, are under construction. Construction will begin shortly on two projects to house 1768 families; and plans are under way for a large project financed solely by State funds to house approximately 3800 families in the Navy Yard district in Brooklyn.

The New York City Housing Authority continued its slum clearance program and, in addition to the buildings razed to clear public housing sites, demolished more than 954 buildings, containing 8395 dwelling units.

The New York City Planning Commission has published plans for assigning 34 areas in the city's four largest boroughs for low-rent housing for 1,250,000 people.

General. Housing authorities note that the object of all public housing is to provide for the gap between the present low class housing costing three to six dollars per month per room which is all the tenants can afford and the 13 dollars a month per room which is the lowest price that can be offered by private capital. Plans to induce private capital to enter the "no-man's land" of residential construction are being studied by the Department of Commerce. Public housing built with the aid of the USHA is intended for families with annual incomes averaging below \$1200, the group for which private builders agree that they cannot afford to provide homes. Practically all present private construction is for families earning over \$1750 annually, thus leaving untouched the housing needs of the \$1200 to \$1750 income group. In line with this and with recent efforts in New York City to stimulate the entrance of private capital into the field of middle-class or white collar housing, the New York State Legislature is considering legislation to permit savings banks and life insurance companies to invest their funds in limited dividend housing companies. See ARCHITECTURE; BUILDING.

More than 200 American institutions of higher education—among them such universities as Harvard, Cornell, Maryland, Columbia, Dartmouth, New York University, and Xavier—offer courses related to some phase of public housing.

See ARCHITECTURE; BUILDING; LIVING COSTS AND STANDARDS.

B. P. ADAMS.

HOUSING OFFICIALS, NATIONAL ASSOCIATION OF. A non-profit and non-partisan organization founded in 1933 to be the clearing house on all phases of housing administration by public and semi-public agencies. It is the recognized professional association for collecting, sifting, and passing around the growing body of facts, experience and tested opinions on housing methods and practice. It has direct personal contacts with all types of housing agencies. Its program is kept flexible to meet the changing need of its members. Its only limitation is that all its activities further its major objective—to better all forms of public administrative practice in the housing of families of low and moderate income.

The organization publishes *Naho News*, *Housing Management Bulletin*, a *Housing Yearbook*, and several special publications. The membership is composed of three grades: active membership, available only to housing officials; associate membership, available to consumer, labor, and other citizen organizations, educators, and other private persons; and agency membership, open to agencies of local, state, and federal government directly engaged in provision or management of housing for families of low and moderate income, rural or urban. The 1939 annual meeting of the association was held at Cincinnati, Ohio, from December 6 to 8.

The officers for 1939 were: President, L. Kemper Williams, New Orleans, La.; vice-presidents, Nicola Giulii, Los Angeles and Dr. C.-E. A. Winslow, New Haven, Conn.; director, Coleman Woodbury. Headquarters are at 1313 East Sixtieth St., Chicago, Ill.

HOWARD, SIDNEY COE. An American dramatist, killed by a tractor left in gear at his farm near Tyringham, Mass., Aug. 23, 1939. He was born in Oakland, Calif., June 26, 1891 and educated at the University of California (A.B., 1915). During 1916 he worked under George P. Baker at his "47 Workshop" at Harvard University. He saw service with the American Ambulance on the Western Front and in the Balkans and subsequently served in the aviation service. After the War he joined the editorial staff of *Life* and in 1922 was appointed its literary editor. In the following year he was a special feature writer for the *New Republic* and *Hearst's International Magazine*.

In 1921, his first play, *Swords*, was produced, but it was not until 1924 that he was recognized as one of America's leading playwrights. In that year the Theatre Guild produced his *They Knew What They Wanted*, awarded the Pulitzer Prize in 1925 as the best American play of the year. This was followed by *Lucky Sam McCarver* (1925); *Ned McCobb's Daughter* (1926); *The Silver Cord* (1926), which was very popular; *The Late Christopher Bean* (1932), adapted from the French; *Alien Corn* (1933); *Dodsworth* (1934), adopted from the novel by Sinclair Lewis; *Yellow Jack* (1934), with Paul de Kruif; *Paths of Glory* (1935), adapted from the novel, and *The Ghost of Yankee Doodle* (1937).

In 1938, with Robert E. Sherwood, Elmer Rice, Maxwell Anderson, and S. N. Behrman, he formed the Playwright's Company to produce their own plays. Though none of his work was given in the first year, plans were made to produce his *Madam, Will You Walk?* during the 1939-40 season, and also his adaptation of Carl Van Doren's biography, *Benjamin Franklin*, on which he was at work. Also, he was working on an adaptation of Graham Green's novel, *Brighton Rock*, for production in London.

Mr. Howard adapted *S.S. Tenacity* (1922) from the French, *Casanova* (1923) from the Spanish, *Sancho Panza* (1923) from the Hungarian, *The Last Night of Don Juan* (1925) from the French, *Olympia* (1928) from the Hungarian, *Marseilles* (1930) from the French, and *Ode to Liberty* (1934), also from the French; and had written *Bewitched* (1924) with Edward Sheldon, *Salvation* (1928), with Charles McArthur, and *Half-Gods* (1929). Also, with Robert Dunn he wrote *The Labor Spy* (1921) and in 1924 he published a book of fiction, *Three Flights Up*. His adaptations for the motion pictures included *Bull Dog Drum-*

mond, *Arrowsmith*, *Dodsworth*, *Gone With the Wind*, etc.

A member of the National Institute of Arts and Letters and of the American Academy of Arts and Letters, he served as president of the American Dramatists Guild during 1935-37. In 1922 he was married to Clare Eames, and in 1931, to Leopoldine Damrosch.

HOWARD UNIVERSITY. A nonsectarian coeducational institution in Washington, D. C., open to students without regard to race, but principally for the education of Negroes. The registration for the first semester of 1939-40 was 2393. The faculty numbered 244; 153 of this number were full-time members and 91 part-time, with a full-time equivalent of 171 persons. The total endowment amounted to \$979,098. The total appropriation of the U.S. Government for 1939-40 was \$723,364 for current expenses and \$461,627 for construction. The Founders Library, a new library building, was completed and put in operation at a cost of \$1,105,000. A new Men's Dormitory is under construction and will be completed early in 1940, at a cost of \$646,200, the funds being supplied by the PWA. The library contains 119,146 volumes. President, Mordecai W. Johnson, S.T.M., D.D., LL.D.

HOWLAND ISLAND. See **BAKER, HOWLAND, AND JARVIS ISLANDS.**

HUDSON COUNTY. See **NEW JERSEY.**

HUNAN. See **CHINA** under *Area and Population*.

HUNTER COLLEGE OF THE CITY OF NEW YORK. A college of liberal arts and sciences in New York City, established in 1870 for the higher education of women. Maintained by public funds, it is one of the four municipal colleges governed by the Board of Higher Education, the other three being The City College for men and Brooklyn College and Queens College for men and women. The enrollment for the fall semester of 1939 included 7000 students in the Day Session and 4277 students in the Evening and Extension Sessions. The enrollment in the Summer Session of 1939 was 2283. The teaching staff for Day, Evening, and Extension Sessions numbered 603 in the fall semester of 1939. The library contains 112,000 volumes. A new building of 16 stories is under process of erection at Park Avenue and Sixty-eighth Street and should be ready for occupancy in 1940. President: Eugene A. Colligan, A.M., Ph.D., LL.D. Acting President: Dean George N. Shuster, A.M., D. Litt.

HUNGARY. A kingdom in central Europe. Capital, Budapest. Regent in 1939, Nicholas Horthy de Nagybanya.

Area and Population. Including the territorial annexations of 1938 and 1939, the area of Hungary was estimated at 45,253 square miles and the population at 10,320,000. Of this total, 4566 square miles and 1,027,450 inhabitants were ceded by Czechoslovakia under the Italo-German arbitral award of Nov. 2, 1938, and about 4966 square miles and 633,057 inhabitants were acquired through the annexation of Carpatho-Ukraine (Ruthenia) and additional parts of Slovakia in March and April of 1939. Living births in 1938 numbered 176,733 (19.5 per 1000); deaths, 129,345 (14.3 per 1000); marriages, 73,287 (8.1 per 1000). Estimated populations of the chief cities in 1937 were: Budapest, 1,059,131; Szeged, 140,182; Debrecen, 126,588; Pesterzsébet, 84,653; Kecskemét, 82,997; Kispeszt, 75,671; Újpest, 74,647; Pécs, 71,848.

National Defense. Military service has been

compulsory since 1938. On Nov. 1, 1939, the army consisted of 400,000 active soldiers and 300,000 trained reserves, according to the Adjutant General's Office, Washington, D. C. The air force personnel was 4500 on Jan. 1, 1939. There is no navy, though several small vessels patrol the Danube. See MILITARY PROGRESS.

Education and Religion. In 1938 about 9.6 per cent of the population, six years and over, was illiterate. According to the 1930 census, Roman Catholics comprised 64.9 per cent of the population; Helvetian Evangelicals, 20.0 per cent; Augsburg Evangelicals, 6.1 per cent; and Jews, 5.1 per cent.

Production. About 51.8 per cent of the working population is engaged in agriculture, 23 per cent in industry and mining, 9.3 per cent in trade, transportations, and communications. There were 2,727,000 acres under forest in 1937. Yields of the chief cereals in 1939 were (in metric tons): Wheat, 3,039,000; barley, 780,500; rye, 896,900; oats, 356,700; corn, 2,250,900. Other products in 1938 (in metric tons except where otherwise specified) were: Potatoes, 2,500,000; beet sugar, 127,300; tobacco, 20,400; coal, 1,042,000; iron, 105,000; bauxite, 540,700; beer, 7,608,000 gal.; wine, 80,836,000 gal.

Foreign Trade. Merchandise imports in 1938 were valued at 418,169,000 pengös (475,483,000 in 1937) and exports at 521,935,000 pengös (588,618,000 in 1937). The 1938 exports were chiefly distributed as follows (in pengös): Germany, 239,137,000; Italy, 44,227,000; Great Britain, 41,503,000; Czecho-Slovakia, 21,778,000; Rumania, 20,974,000; Switzerland, 16,779,000; Yugoslavia, 15,598,000; United States, 12,720,000. Of the imports (valued in pengös), Germany supplied 170,837,000; Rumania, 42,259,000; Czecho-Slovakia, 30,341,000; Italy, 25,362,000; Great Britain, 25,149,000; Yugoslavia, 21,704,000; United States, 21,367,000. See IMPORTS AND EXPORTS.

Finance. The budget for the fiscal year ending June 30, 1940, was estimated to balance at 1,732,000,000 pengös. In 1939 revenue was estimated at 1,335,000,000 pengös (1,119,000,000 in 1938) and expenditures at 1,335,000,000 (1,267,000,000 in 1938). Actual receipts for the fiscal year ending June 30, 1937, were 1,312,000,000 pengös; expenditures, 1,305,000,000 pengös. The total public debt on June 30, 1938, amounted to 1,597,700,000 pengös. The average exchange value of the pengö was \$0.1973 in 1938 and \$0.1924 in 1939.

Transportation. The Hungarian railways, with some 5700 miles of line, carried a total of 1,629,000,000 ton-miles of freight in 1938. Highways in 1939 extended 39,569 miles (see ROADS AND STREETS). At the end of 1939 there were two air services with a weekly flying mileage of 9576.

Government. Politically Hungary is a monarchy based on the constitutional system in force prior to Oct. 31, 1918, and with a vacant throne. The head of the State in 1939 was the Regent, Admiral Nicholas Horthy (elected Mar. 1, 1920). Parliamentary government is in force. The Parliament comprises an upper and a lower house. The upper house consists of 243 members; a few belong by title of birth, others are representatives of certain privileged classes of electors, holders of divers high dignities, and individuals appointed for life by the head of the State. The lower house is elected according to districts, by male and female suffrage—in 1939, for the first time, the secret ballot was required for the election of the deputies. Twelve parties are represented in the lower house.

HISTORY

More Territory Annexed. When the German forces seized the greater part of Czecho-Slovakia on and after Mar. 15, 1939, Hungary improved the moment by taking possession of the easternmost of the four divisions of the doomed republic. This was Carpatho-Ukraine, otherwise known as Ruthenia; it had an area of 4283 square miles, somewhat sparsely populated by 552,124 inhabitants, according to a census taken in 1930. The exact limits of the territory occupied in this district by Hungary and the number of the inhabitants therein could not be stated with certainty at the end of the year. The population did not everywhere allow peaceful possession. Inhabitants of inaccessible parts kept up guerrilla warfare for some time. Hungary had hoped that by holding the region she would have the advantage of contact with Poland, for mutual aid and protection; but the extinction of Poland, following within about six months, withered this hope. Carpatho-Ukraine had formed the eastern tip of the territory that Hungary lost to Czecho-Slovakia by the redistribution effected at the end of the war of 1914-18.

During the period that followed the suppression of Czecho-Slovakia as an independent nation. Hungarian forces made some extension of the Slovak territory previously occupied (in 1938) in the first partition of the country. Announcements were made as to understandings reached with the Slovak authorities, by which Hungary appeared to have gained some hundreds of square miles of additional territory in the aggregate. The Premier, announcing in March the annexation of Carpatho-Ukraine, indicated that autonomy was being granted to the population. In connection with the main settlement with Slovakia as to Hungarian acquisitions, made on April 4, it was announced that Hungary had gained 1,622,000 in added population from territorial gains since 1938. But Hungary's territorial ambitions were by no means satisfied.

Survival Among Clashing Nations. Hungary's efforts to keep unhurt in the collision of German, Italian, Polish, Rumanian, and other policies in the Balkan area concerned the nation more deeply than did the acquisition of territory. The fall of Czecho-Slovakia extended the frontier along which German and Hungarian domination touched. The partition of Poland by Germany and Russia in September gave Hungary a new neighbor, Russia, with which she had been unfriendly; and this new Russian frontier was soon in process of fortification by Hungary. The breakdown of German and Italian co-operation made it difficult to take any course that would suit both the powers on which Hungarian security depended. The advent of the Franco-British war against Germany threatened to involve the Hungarian Government in another major European conflict.

The relations with Germany were complicated by the fact that Germany as now constituted took more than two-fifths of Hungary's exports and by the existence of an active Nazi party, the Hungarists, within the kingdom itself. The ministry's policy was, as in 1938, to continue close concord in relations with Germany as to trade and external matters yet at the same time to oppose the Germanization of Hungary's internal politics and social system.

In continuing the external part of this policy Hungary went so far as to reverse its attitude to Russia. The Hungarians had on Feb. 24, 1939, given their adherence to the anti-Comintern agreement of Germany, Japan, and Italy; and Russia, on

the same day, severed diplomatic relations with Hungary; but within a few weeks after Germany's non-aggression agreement with Russia, Hungary followed suit, to the extent of appointing a Minister to Moscow (October 5), despite the ruling landholders' dread of a renewal of the Bolshevik influence that they had tasted in 1919. The step committed the government somewhat definitely to German hegemony as against the Italian influence, which remained strongly anti-Russian. The entry into the anti-Comintern agreement was followed, early in April, by Hungary's resignation from the League of Nations, lest—as the Foreign Minister, Count Stephen Csáky, explained to a committee of Parliament—continued membership might eventually cause a clash with the country's own interests or those of its friends.

These incidents did not signify any eagerness on Hungary's part to join either Germany or Italy in immediate enterprises of conquest. On the contrary, Regent Horthy, in a speech to Parliament in June, made an indirect appeal to the Pope to propose to the powers that they settle their disagreements by conference. Later, after the outbreak of war in September, Hungary failed to take the customary step of declaring neutrality, but the government avoided giving any immediate offense to the opponents of Germany or committing the country more closely to the German side. The supply of agricultural products to Germany was liberally maintained: so much so that by the end of the year the rationing of foods had begun, in this land of agricultural surplus. The efforts of the Franco-British alliance and of the southern Balkan powers to bring Hungary into a combination for creating an anti-German front naturally bore no fruit, for Hungary found no incentive to trade its German market for a dangerous belligerency, nor for giving up its long nursed intention of eventually recovering Transylvania and other territory from Rumania.

The Ministry. A ministerial change occurred in February. Béla Imrédy resigned as Premier, and Count Paul Teleki succeeded him. Imrédy expressed two reasons for resigning: he had found his cabinet's situation toward the Parliament unsatisfactory since the defection of some 60 members from the government's side in the previous November; and,—important because of the government's anti-Jewish policy—he had recently found documents showing one of his great-grandfathers to have been a Christianized Jew. The Jewish strain did not suffice to create a legal disability, but it tended to diminish the influence of a premier in an anti-Jewish government.

Teleki held to his predecessor's general course of policy. He soon dissolved the Parliament and called an election, held at the end of May. The high cost of electioneering, said to approximate \$12,000 for a candidacy, gave the landed magnates their usual advantage. The government party took 180 seats out of the 262 in the lower house; this increased the government's delegation by about 11. Nazis got 53 seats, distributed among the Hungarists and other Nazi organizations. Their representation in the previous House had been but six; they made their gains chiefly at the expense of Agrarians and of Socialists. The ministry acquired a huge majority of supporters, while the Nazis' gains, at first alarming, led to discord among their group in the new chamber and thus ultimately tended to weakness.

Teleki, as well as his predecessor Imrédy, worked persistently to check the Nazi political

groups. The dissolution of the Hungarist movement was declared on February 25 by the Minister of the Interior, though without immediately apparent result. Imrédy, previously, had launched a Hungarian Life Movement, for fervent patriotism, strict morality, discipline, unity, and abnegation; it held out a project of social justice; and its appeal was of a sort to compete with that of the Nazi propaganda; but its progress in the course of the year was not evident. Teleki, in August, accused the Hungarists of receiving funds from abroad and warned their German friends "not to make things difficult for us." An alleged plot for an outbreak of Nazi extremists led, October 16, to the arrest of 140 of the outlawed Hungarists; some convictions and further arrests followed.

The government had to face in December another form of popular disquiet, brought on by Russia's attack on Finland. The educated classes entertained a conviction of racial kinship with the Finnish people, and anti-Russian sentiment was already widespread. Though now in friendly relations with Russia the government tolerated to a certain extent unofficial measures to send volunteers to help the Finns.

Treatment of the Jews. New and more severe legislation against Jews was enacted in May. They were allowed to engage in business and professions only to certain percentages—from 6 to 12—of the total numbers thus engaged; the supposedly great number who would consequently have to emigrate and find new livings elsewhere had five years' in which to be gradually removed, a fraction every three months; exemption was allowed to those whose strain had been Hungarian ever since 1848 and who professed Christianity by not later than 1919, and to veterans of the wars; Jews were excluded from public and governmental services; they still might vote, but only for candidates of their own race; finally, Jews' holdings of farming land in excess of half an acre each were to be taken by the government, paying compensation therefor. With regard to the provision as to farm land, the intention was to use the land thus obtained as an immediate installment toward the program of agrarian distribution.

Agrarian Legislation. A new general plan for distributing land among a million or more landless peasantry was proposed to the Parliament; the lower house voted it, but the upper house, toward the end of the year, still held out against it. The bill called for the appropriation of about 1,500,000 acres in the proportion of 10 per cent of estates exceeding 750 acres.

Payment on War Debt. Hungary again, in 1939 made semi-annual payments of \$9828, totaling 1 per cent of the principal owed to the United States Government.

ICC. Interstate Commerce Commission (q.v.).

ICELAND. An independent island state between Scotland and Greenland. Area, 39,709 square miles; population (Jan. 1, 1938), 117,692. Chief towns: Reykjavik (capital), 36,103 inhabitants in 1937; Akureyri, 4674; Hafnarfjörður, 3673; Vestmannaeyjar, 3480. During 1937 there were 2365 births, 1312 deaths, and 645 marriages.

Production and Trade. Potatoes, turnips, and hay are the chief agricultural crops. The output of the sea fisheries in 1936 totaled 199,500 tons valued at 22,200,000 crowns. Livestock (1937): 654,000 sheep, 47,000 horses, 38,000 cattle, and 2000 goats. The main imports consisted of textiles, metals, machinery, timber, coal, and cereals. Wool, fish, frozen mutton, and sheepskins were the main exports. In 1938, imports were valued at 49,100,000 crowns; exports, 57,800,000 crowns (crown equaled approximately \$0.21 for 1938).

Communications. In 1937 the 394 merchant vessels of Iceland aggregated 39,906 gross tons. Iceland has no railways. There were, in 1938, 2982 miles of roads, and over 9700 miles of telegraph and telephone lines. During 1938-39 the Icelandic Air lines completed 157 flights (including 94 between Reykjavik and Akureyri) for a total of 49,710 miles; 1100 passengers and 5328 lb. of mail were carried.

Government. Budget estimates (1939): revenue, 17,904,960 crowns; expenditure, 16,705,791 crowns. The public debt on Dec. 31, 1937, totaled 46,639,000 crowns. On Apr. 5, 1939 the crown was devalued by 18 per cent (£ sterling equals 27 crowns instead of 22.15 crowns). Iceland and Denmark are free sovereign states, united by one King, and by the agreement embodied in the Act of Union of Nov. 30, 1918. According to the Charter of May 18, 1920 (amended in 1934), the King exercises executive power, through a responsible ministry. Legislative power rests conjointly with the King and the parliament (called Althing) consisting of not more than 49 members (one-third of whom are elected to the upper chamber by the whole Althing; the other two-thirds form the lower chamber). The Act of Union between Iceland and Denmark will expire in 1943, and on that date it may be denounced by either party. During the fall of 1938, the parliament voted to assume full control of its national affairs in 1943. The opinion of the people on this issue is to be obtained by a referendum during 1940. Ruler, King Christian X of Iceland and Denmark; Premier, Hermann Jónasson (appointed July 29, 1934; Progressive).

History. During March, 1939, the German Lufthansa sought the permission of the Icelandic government for the establishment of bases for an air service between Iceland and Germany. In parliament, the prime minister, Hermann Jónasson, said that no foreign company would be granted any air concession in Iceland. A British Royal Air Force flying boat was forced down by fog on Sept. 26, 1939, at Raufarhofen. Two days later the flying boat left for Britain. The government of Iceland charged that the members of the crew had broken their parole after being interned by the authorities. According to the Air Ministry in London, the pilot said that he did not believe that he was on parole but the British government agreed that the pilot should return to Iceland as soon as possible to remain for the duration of the war.

IDAHO. Area and Population. Area, 83,888 square miles; included (1930) water, 534 square miles. Population: Apr. 1, 1930 (census), 445,032; July 1, 1937 (Federal estimate), 493,000; 1920 (census), 431,866. Boise, the capital, had (1930) 21,544 inhabitants.

Agriculture. Idaho harvested, in 1939, 2,706,000 acres of the principal crops. Tame hay, on 1,040,000 acres, made 2,196,000 tons (estimated value on the farm, \$14,494,000); wheat, on 893,-

000 acres, 22,624,000 bu. (\$13,348,000); potatoes, 129,000 acres, 29,670,000 bu. (\$11,275,000); dry beans, 110,000 acres, 1,551,000 100-lb. bags (\$3,996,000); sugar beets, 73,000 acres, 972,000 tons (\$4,970,000, on somewhat greater production of 1938); apples, gathered for market, 2,150,000 bu. (\$1,290,000); barley, 155,000 acres, 5,580,000 bu. (\$1,953,000); dry peas, 56,000 acres, 1,092,000 bu. (\$1,747,000); oats, 164,000 acres, 6,232,000 bu. (\$1,745,000).

Manufacturing. Establishments engaged in manufacturing in Idaho numbered in 1937, 533 (in 1935, 455); they had in their service in 1937, 12,797 wage earners (in 1935, 9635), and paid wages totaling \$16,249,586 (in 1935, \$10,738,374). Products from manufactories had a total value, for 1937, of \$101,324,545 (for 1935, \$64,987,613), to which manufacture contributed \$37,691,241 (in 1935, \$25,668,125). Much of the industry had to do with processing the products of husbandry for the consumer. Butter made in 47 establishments classed as factories had a value of \$11,963,887; Cheese, made in 25 factories, of \$1,993,522. Eight refineries made beet sugar to the value of \$7,758,654; meat-packers' output totaled \$2,503,783. The amount of the lumber and timber products, \$29,213,931, was, however, the greatest single item among the State's manufactures of 1937; the wage earners engaged in this production numbered 8040, or nearly two-thirds of the manufacturing labor of the State, and they received \$10,604,364 in wages, or about two-thirds of the whole manufacturing pay of the State.

Mineral Production. Mines in Idaho increased production of ores of gold, silver, copper, lead, and zinc to the total value, in recoverable metals, of \$30,166,000 for 1939 (preliminary approximation), from \$29,028,103 for 1938. These five metals had furnished more than nine-tenths of all the mineral value produced in 1937. The production of gold rose to 114,000 oz. for 1939, from 103,513 for 1938, and thus exceeded any year's quantity subsequent to that of 1895; by value the yearly gold produced rose to \$3,990,000 (1939) from \$3,622,955 (1938). The mining of lead decreased in quantity to some 181,400,000 lb. (1939), from 184,354,000 (1938); but increased in value of recoverable metal, to \$9,070,000 (1939), from \$8,480,284 (1938). The total for zinc rose by quantity to 93,150,000 lb. (1939) from 88,060,000 (1938); by value as well, to \$4,936,950 (1939), from \$4,226,880 (1938). The output of silver fell both in quantity and in value, to 17,199,600 oz. (1939), from 18,993,676 (1938); and to \$11,674,880 (1939), from \$12,278,470 (1938). The value of the production of copper for either year was somewhat below \$500,000. The Morning Mine of the Federal Mining and Smelting Company, greatest producer of zinc in the State, became also in 1939 the chief producer of lead, increasing its output while those of some other leading producers declined. The Ceur d'Alene region in Shoshone County yielded about seven-eighths of the year's totals, for the State, of silver, copper, lead, and zinc.

Education. For the academic year 1938-39, Idaho's inhabitants of school age (from 8 years to 18) plus about 39,500 others admissible to public schools were reported to number 145,262. Enrollments of pupils in the public schools totaled, for that year, 122,952; this comprised 88,371 in elementary study and 34,581 in high schools. The year's expenditures for public-school education amounted to \$12,114,312. The 3129 teachers in

elementary positions and the 1407 in high schools were paid respectively at the medians of \$926.24 and \$1311.62.

Political and Other Events. Fires in the forested areas of Idaho during the summer and early autumn were said by the State forester to have been the worst since 1931. Dry weather and high winds speeded their spread. An urban fire at Boise, starting in a lumber yard, August 11, destroyed the Boing Arena, a show-house for sporting exhibitions, and did damage said to approximate \$1,000,000.

Officers. Idaho's chief officers, serving in 1939, were: Governor, C. A. Bottolfson (Rep.); Lieutenant-Governor, Donald S. Whitehead; Secretary of State, George H. Curtis; Attorney-General, J. W. Taylor; Auditor, Calvin E. Wright; Treasurer, Myrtle P. Enking; Superintendent of Public Instruction, John W. Condie.

IDAHO, UNIVERSITY OF. A coeducational State institution of higher learning at Moscow, Ida., founded in 1889, with a southern branch at Pocatello. The total regular collegiate enrollment at Moscow in the autumn of 1939 was 2823, and at Pocatello 924. The enrollment for the 1939 summer session was 894. The faculty numbered approximately 200. The endowment principal amounted to \$2,597,989, June 30, 1939, and the income for the year 1938-39 was \$1,042,129, not including income from auxiliary enterprises or receipts from N.Y.A., PWA, or bond sales. During the year the University observed its semi-centennial, honoring J. W. Brigham, 82-year-old farmer, the only living member of the Fifteenth and last Idaho Territorial Legislature, who sponsored the legislative act creating the institution. The library contains approximately 100,000 volumes. President, Harrison C. Dale.

IFNI. See SPANISH WEST AFRICA.

ILLINOIS. Area and Population. Area, 56,665 square miles, exclusive of State's part of Lake Michigan; included other water, 622 square miles. Population: Apr. 1, 1930 (census), 7,630,654; July 1, 1937 (Federal estimate), 7,878,000; 1920 (census), 6,485,280. Chicago had (1930) 3,376,438 inhabitants. Peoria, 104,969; Springfield, the capital, 71,864.

Agriculture. Farmers in Illinois harvested, in 1939, 18,418,400 acres. Corn, the chief crop, on 8,051,000 acres, made 418,652,000 bushels (estimated value on the farm, \$217,699,000); the harvested acreage of corn was the lowest after 1934, but the yield to the acre, 52 bushels, averaged exceptionally high. A feature of 1939 was the rise of soybeans to the rank of the State's second crop in point of estimated farm value; on 1,854,000 acres soybeans made 45,423,000 bushels, in value \$34,067,000. Tame hay, on 2,877,000 acres, 4,183,000 tons (\$26,771,000); wheat, 1,865,000 acres, 39,021,000 bushels (\$26,534,000); oats, 3,118,000 acres, 93,540,000 bushels (\$25,256,000); potatoes, 37,000 acres, 3,441,000 bushels (\$2,925,000); barley, 169,000 acres, 4,140,000 bushels (\$1,697,000).

Manufactures. The manufacturing establishments in Illinois numbered, in 1937, 11,764 (in 1935, 12,018); they employed 668,841 wage earners (in 1935, 525,945); and paid wages totaling \$862,793,453 (in 1935, \$581,388,171). Their products attained the total value of \$5,304,282,629 (for 1935, \$3,743,099,217). But as the industry of the State was highly diversified, much of the finished product of one line of manufacture became the raw material of another, and its value thus reappeared in the latter's total production; so that the

totals of value as stated above express the output of the separate manufacturing establishments, but exceed the total value of separate goods put out by the manufacturing industry as a whole. The value added to material by manufacture, not subject to similar duplications was, in Illinois \$2,319,035,734 for 1937 (for 1935, \$1,612,068,627). Manufactures connected with metals and with husbandry held the lead. Meat-packing establishments attained for 1937 the output of \$584,059,504, the highest for any group in the official classifications; but the meat packers' wage earners, 26,120, and the contribution of their processes to the value of their products, \$85,668,499, were surpassed by totals in other groups. Steel works and rolling mills employed 41,246 wage earners, produced \$287,207,667 in goods, and contributed thereto \$127,486,751 by manufacture; makers of agricultural implements, a long established group in Illinois industry, employed 38,912 wage earners, attained an output of \$282,223,674, and contributed to this total \$133,038,598 by their own processes; producers of electrical machinery, apparatus, and supplies employed 34,958 wage earners, made goods to the value of \$221,523,649, and contributed thereto by their processes \$148,904,509. A very great total of separately classified industries' production in ferrous and other metal work depended largely on the steelworks' output for its raw material. The making of electric and railroad cars produced \$67,522,579 in value of output.

About two-thirds of the State's manufacturing activity was concentrated in Cook County (mainly Chicago). Here in 1937, 8288 establishments employed 438,171 wage earners, paid them \$584,210,656, made goods to the value of \$3,647,785,127, and contributed to this sum, by manufacture, \$1,594,642,112. Cicero's manufactures attained \$146,326,019; Peoria's, \$87,288,610; Rockford's, \$82,617,871.

Mineral Production. More striking than any other of the year's changes in the production of the State's native minerals, a swift ascent in the yield of petroleum brought the daily rate of production, by the middle of August, 1939, close to 300,000 barrels, approximating the rate of 100,000,000 barrels a year, as against an actual production, for as recent a year as 1936, of but 4,475,000 barrels. The new exploitation of petroleum in the State had begun in 1937 in Clay and Richland counties in east-central Illinois. These areas continued as leading producers in 1938, but new discoveries in the Centralia district and in Fayette County greatly expanded production, and oil was found in the Devonian structure in the formerly worked Sandoval area. Intense competition in drilling brought the number of completions of oil wells to 1806 for 1938. In 1939 the exploitation kept up its pace, in spite of dissatisfaction among the longer established leading producers among the States, some of them enforcing a fairly strict limitation on their own producers and therefore ill pleased to have a newcomer break down the market for crude petroleum; in Illinois the plea was made, for unrestricted production, that the State would make an undue sacrifice if it should agree to limit the output before it had determined how great a production its resources justified.

Coal, which had long stood as the chief component of the State's yearly production, by value, of native minerals, provided \$89,271,000, or two-thirds of the \$133,437,554 constituting that total for 1937. The yearly quantity of the production of coal declined to about 40,650,000 net tons, for

1938, from 51,602,000 for 1937. Of cement, the producers' shipments, 4,357,119 barrels for 1938, fell below the total of 4,713,734 barrels for 1937; by value, they diminished to \$5,993,644, from \$6,756,747. The production of clay products (exclusive of pottery) attained \$6,545,686 for 1937.

Apart from the production of its native minerals, there continued in Illinois a great industry in the production of iron and steel and in the making of coke, largely used in reducing iron ore brought from the mines of the Lake Superior region. From coal dug mainly in West Virginia, ovens in Illinois produced 1,738,106 net tons of coke, in 1938, falling short of the total of 2,998,663 tons (value, \$20,213,129) for 1937. Pig iron, shipped from furnaces to the quantity of 1,519,572 gross tons for 1938, fell sharply below the total of 3,357,959 tons, for 1937; by value, the total fell to \$30,899,012, from \$70,893,278. Open-hearth steel ingots and castings made in 1938 totaled 1,950,224 gross tons.

Education. For the academic year 1937-38 (the latest for which all the data that follow had been published) Illinois reported 1,936,806 inhabitants of school age—from 6 years to 21. Enrollments of all pupils in public schools totaled 1,321,738; this comprised 962,970 in the elementary group and 358,768 in high schools. The year's expenditure for public-school education totaled \$138,415,910. The teachers in public schools numbered 48,663; their salaries for the year averaged \$1502.

Legislation. The regular biennial session of the Legislature started January 4 and ended June 30. It made appropriations calculated to total \$464,000,000, falling short by \$14,000,000 of the total ascribed to the previous Legislature. Republicans, holding a slight majority in the lower house, espoused a policy of reducing expenditure but were reported not to be able to count on all their group in all votes. Governor Horner was ill and out of the State for about the first half of the session.

An act was passed to enable the Chicago area to raise and spend \$60,000,000 for elevated highways that would take the through-going motor-borne travel off some of the most heavily used streets; city and county, for this purpose, were authorized to borrow on the security of future receipts from the proceeds of the tax on gasoline. The yearly allowable levy in Chicago for the support of public schools was made \$48,000,000, or \$3,000,000 above the previous level. The pre-adjudication of taxes imposed in Chicago, much as under an act of 1937 later declared invalid, was enacted.

Rates of weekly unemployment compensation were increased and the waiting period before the payments was reduced to two weeks. Women were declared eligible to serve as jurors. The repeal of about 400 obsolete laws was enacted. Medical tests for determining if syphilis were present were required in pregnancy.

Governor Horner vetoed a measure to increase the maximum monthly rate of public assistance for the aged poor to \$40; two days after his veto, Congress enacted the Federal social security act of 1939, permitting a maximum monthly rate of \$20 for the Federal contribution to such assistance. Horner then accordingly recalled the adjourned Legislature in a brief special session to repass the measure, vetoed by him because of the lack of Federal matching toward making up the additions to payments.

Political and Other Events. A serious and

protracted illness kept Governor Horner laid up at Miami, Fla., where he had gone in the previous November, for the first three months of 1939. Lieutenant-Governor Stelle thus became the constitutional temporary head of the State Government. Although a frequent opponent of the political plans of Horner in the past, Stelle created an administrative board of four officials, all in harmony with Horner, and governed in accord with this so-called regency. Horner resumed his duties at Springfield early in April but took little active direction of legislative policy. For this he made up by vetoing numerous measures and some \$4,000,000 in items of appropriation; in addition to the proposed lottery for the support of a housing plan and the intended Toll Bridge Authority (feared as likely to promote the unloading of old toll bridges on the State), he vetoed a reportedly ill-drawn bill for a State pension system, two measures to delegate to commissions authority to regulate in economic fields, and a bill to forbid building highways with stone crushed by convicts' labor.

Upon the death of the State's senior U.S. Senator, James Hamilton Lewis (q.v.), the Governor (April 14) appointed James M. Slattery of Chicago to be Senator. An act of 1933, reclassifying the prisons and thus making the old Pontiac Reformatory a penitentiary threw into doubt the right of the State to keep there confined several hundred convicts who had originally been consigned to the reformatory. A decision in Criminal Court (June 2) held one prisoner so confined to have been deprived of a constitutional right. Taking a further step, in compliance with the order given by the U.S. Supreme Court in 1930 in termination of the suit of several lake-bordering States against Illinois to prevent further lowering of the Great Lakes' level, the Chicago Sanitary District reduced (January 1) the release of water from Lake Michigan, to pass down the Illinois River, to 1333 cu. ft. a second, as against 5000 cu. ft. for 1938.

A Federal effort, the third on the part of the agricultural branch of the Administration, was made to regulate the traffic between producers and distributors furnishing milk to Chicago and its surroundings. Hearings on the subject were held in Chicago in the course of June, by a representative of the AAA, on the request of associations, of which one represented a great majority of the dairy farmers, some 16,000 in all, supplying the area. On August 1 these dairy farmers, chiefly voting through this association as their agent, accepted a submitted proposal that the Secretary of Agriculture fix the prices to be paid for their product. The proposal was thereafter officially declared ratified and in force as a marketing agreement, and the prices for milk were raised, at both ends of the journey to the consumer, early in September.

Events in Chicago. Edward J. Kelly (Dem.) was re-elected Mayor of Chicago, April 4, for a second term of four years, defeating Dwight H. Green (Rep.). An unofficial report gave Kelly's vote as 820,517; that for Green, 637,107. Though Kelly exceeded his total of 1935, the margin of his plurality was reduced to 183,410, as against about 540,000 for 1935.

The cost of Chicago's projected subway had been figured late in 1938 as \$40,000,000, and the Federal PWA had on this basis agreed to contribute \$18,000,000 toward the total, while Chicago would furnish the rest, \$22,000,000, from

its traction fund. However, P. J. Harrington, the city's commissioner of subways and traction, announced that the estimated cost had risen to \$47,000,000 and that in the inability of the PWA to supply further money, the city would have to supply the additional \$7,000,000. As explaining the increased expense, engineers cited the disclosure of soft ground in the downtown district and the resulting need to bore with the aid of great steel shields so as to work in safety and cause less disturbance to high buildings above.

Some of the distinctive features of the public finances of Chicago remained much the same. The sum carried on the books as unpaid taxes was about \$435,000,000 at the end of June; the rate of the tax on property for the year 1938 was announced, Mar. 14, 1939, as \$9.12 per \$100 of assessed valuation. A plan for the unification of the traction system, put forward in proceedings before Federal Judge James H. Wilkerson, met with difficulty in April on account of objections from some of the bondholders. The demolition of the 20-story Capitol Building in the Loop district, formerly for years the world's largest and tallest office building, was cited as one of the effects of the city's high tax rates.

Officers. The chief officers of Illinois, serving in 1939, were: Governor, Henry Horner (Dem.); Lieutenant-Governor, John Stelle; Secretary of State, Edward J. Hughes; Auditor, Edward J. Barrett; Treasurer, Louie E. Lewis; Attorney-General, John E. Cassidy; Superintendent of Public Instruction, John A. Wieland.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher learning in Urbana-Champaign, Ill., founded in 1867, with professional schools of medicine, dentistry, and pharmacy located in Chicago. The enrollment in the autumn of 1939 was 13,894, of whom 10,393 were men and 3501 were women. The summer session enrollment was 3894, of whom 2314 were men and 1580 were women. The number of persons on the teaching staff above the rank of assistant was 1039. The operating income for the year 1938-39 was \$8,179,648, of which \$5,045,154 was from the State. Expenditures for capital improvements amounted to \$352,137 in 1938-39, \$114,632 of which came from special state appropriations. Federal grants amounting to \$572,728 were made available during the year for buildings now in process of construction. The productive funds from Federal endowment totaled \$649,013, and from private gifts, \$692,033. The library contained 1,175,692 volumes and 328,921 pamphlets. President, Arthur Cutts Willard, B.S., LL.D.

ILLITERACY. See articles on various foreign countries under *Education*.

IMMIGRATION AND EMIGRATION. During the fiscal year ended June 30, 1939, 82,998 immigrants were admitted to the United States. This was the highest figure reported since 1931, and represented a steady increase as compared with the total of 67,895 immigrants for the fiscal year 1938, 50,244 for 1937 and 36,329 for 1936. The U.S. Commissioner of Immigration, in his annual report, called attention to the sharp increase in immigration from Central Europe since the German annexation of Austria in March, 1938. He also stated that the few additional nonimmigrants admitted (185,333 in 1939 as compared with 184,802 in 1938) disproved the sensational stories that had appeared in certain newspapers and magazines to the effect that the country was being flooded with alien visitors. The admissions

and departures of aliens by countries is shown in the following table.

TABLE I—IMMIGRANT ALIENS¹ ADMITTED AND EMIGRANT ALIENS DEPARTED, FISCAL YEARS 1938 AND 1939, BY COUNTRIES OF LAST OR INTENDED FUTURE PERMANENT RESIDENCE

| Countries | Immigrants | | Emigrants | |
|--------------------|------------|--------|-----------|--------|
| | 1938 | 1939 | 1938 | 1939 |
| All countries | 67,895 | 82,998 | 25,210 | 26,651 |

¹ Includes both quota and nonquota immigrants.

² Immigrants admitted from the "barred zone" of Asia are mainly of the white race.

Table II shows the number of admissions under the Quota Law of 1924. The figures for admissions include many aliens to whom visas were issued during the latter part of the preceding year (since visas are valid for admission within four months of the date of issue). These visas were charged to the quota for the preceding year. For this reason, the fact that 32,759 immigrants were admitted from Germany during the fiscal year 1939 does not mean that German quota was over-issued. The quota was almost entirely filled in the first ten months of the year and the excess of admissions represented persons whose visas had been issued the year before. The number of aliens debarred at ports of entry during 1939 was 6498; about half of them were without valid consular visa and 1832 were considered likely to become public charges if admitted.

TABLE II—ANNUAL QUOTAS ALLOTTED UNDER 1924 ACT, AND QUOTA IMMIGRANTS ADMITTED, FISCAL YEARS 1938 AND 1939, BY COUNTRIES OR REGION OF BIRTH AND SEX

* Quota for colonies, dependencies, or protectorates included with allotment for the European countries to which they belong.

Repatriations and Deportations. Section 23 of the Act of 1917 provides that indigent aliens may be removed to their native land at Government expense, thereby becoming ineligible for readmission except upon the approval of the Secretaries of State and of Labor. Under this provision, 2419 aliens filed applications to be removed during the fiscal year 1939; 1941 received approval and 1825 left the country before the end of the year.

During the year, 8202 aliens were deported, while 9590 deportable aliens were allowed to depart at their own expense, making a total of 17,792 forced departures, as compared with 18,553 in the previous fiscal year. The largest number of these, 4415, were deported to Mexico, the other leading countries of destination being Canada, 1915, Italy, 320, Great Britain and Northern Ireland, 228, and Germany, 172.

Special Cases. The *Strecker* case (see previous YEAR BOOKS) reached the Supreme Court, which ruled on April 17 that past membership in the Communist party is not grounds for deportation. See the separate article on the *BRIDGES* CASE.

The case of John Strachey remained unsettled in view of the fact that the British author decided to sail for home early in the year without awaiting the final decision of the court. Strachey, arriving in the United States for a lecture tour in October of 1938, found that his visa had been cancelled two days after he sailed from England because of his alleged membership in the Communist party. He was detained at Ellis Island and subse-

quently admitted to the country on bond but not permitted to lecture. The Circuit Court of Appeals ruled that he had not received a fair hearing by the immigration officials and that the American consulate had no power to cancel his visa after it had been issued. His case was still subject to appeal by the Labor Department when he decided not to await the final outcome.

Naturalization. Naturalization courts admitted 188,813 aliens to citizenship during the fiscal year 1939, as compared with 162,078 in 1938. Declarations of intention were filed by 155,691 aliens (150,673 in 1938) and petitions were filed by 213,413 (175,413 in 1938). These figures indicate a considerable advance in the number of persons seeking United States citizenship. Factors in the increase were the action of Congress in excluding aliens from WPA employment, the exclusion of aliens from old-age benefits in some States, and the advantage of American citizenship in protecting property rights in Europe. The resulting decrease in the alien population was considerable: 3,628,103 (estimated) in 1939 as compared with 6,234,613 at the census of 1930.

Legislation. Aside from the elimination of aliens from the WPA (enacted in the Work Relief Act), a number of proposals affecting aliens were put forward in Congress during 1939, some of a drastic nature. They included proposals to reduce immigration to 10 per cent of its present level, to require registration of all aliens, to deport aliens on relief, inimical to public interest, or advocating change in the government. The American Committee for Protection of the Foreign Born estimated that there were more than 70 so-called anti-alien bills pending in the 76th Congress at the end of the year. The Committee particularly decried the proposed registration of noncitizens as a step toward regimentation of the entire population and a threat to democratic government.

A Pennsylvania State law requiring the registration of aliens was enacted in 1939. This act was of particular interest because it was one of the first of its kind and because it was invalidated by the Federal District Court less than 24 hours before its effective date. The law required aliens 18 years of age or over (with certain exceptions), residing in Pennsylvania, to register annually with the State department of labor and industry. The person registered was to pay a fee of one dollar and to receive an identification card which he was required to carry at all times. The Federal Court, in declaring the law unconstitutional, held that it was enacted in "a field reserved for the Federal Government."

See PUBLIC HEALTH SERVICE.

IMPORT QUOTAS. See CUSTOMS SERVICE.
IMPORTS AND EXPORTS. United States. Exports from the United States attained a higher total for 1939 than for 1938. The excess was less than \$83,000,000. The last four months' exports of 1939 exceeded the corresponding months of 1938 by about \$236,000,000. They not only overcame a prevailing shrinkage of exports through the first eight months of 1939, as compared with corresponding months of 1938, but lifted the year's total exportation (1939) above that of the year before. The main cause of this rise in exports was generally recognized as foreign purchasing stimulated by the European war.

The accompanying table shows both years' totals of exports and imports. It makes plain what happened to trade month by month. With regard to the movement of gold as means to meet the foreign

payments for high additional exports, to start with September, the table indicates that transfers of gold to the United States ran at their highest in September and October, 1938, and in April, 1939, and did not thereafter again attain \$500,000,000 in any month. In the last four months of 1939, the months of a major war in Europe, less gold came into the United States than in either of the year's two preceding periods of four months; less, also, than in the two months, September and October, of 1938. From these comparisons it would appear that the recent transfers of gold to the United States responded more to the prudential motive than to the immediate need to pay for the purchase of excess of exports from the United States, over imports thereto. See FINANCIAL REVIEW under *International Capital Movements*.

The year 1939's U.S. exports of goods, it will be noted, exceeded imports by somewhat over \$859,000,000, an excess less than that for 1938. In 1939, the last four months, the period of war in Europe, accounted for nearly \$402,000,000 of all the year's excess of exports, or somewhat less than one half thereof.

U. S. FOREIGN TRADE, BY MONTHS

As appears from an accompanying table of yearly exports and imports according to the nature of the commodities, by no means all of the chief groups of these were exported from the United States in 1939 in amounts as high as in 1938. Agricultural merchandise as a whole fell considerably short of its total for 1938. Exports of grain and its preparations and those of unmanufactured tobacco were the conspicuous losers. The increased exportation of non-agricultural goods was unevenly distributed. The products of iron and steel mills, chemicals as a whole, and aircraft related goods accounted for more than half of the increase of 1939's total of non-agricultural exports. Much of the year's increase in imports into the United States was to be found in the cases of crude rubber, raw silk, and tin—goods of the class useful in war and somewhat likely not to be easily bought later.

An accompanying table of yearly total exports and imports according to countries shows changes

PRINCIPAL EXPORTS AND IMPORTS

| <i>Class and Commodity</i> | <i>Millions of dollars</i> | |
|---|----------------------------|-------------|
| | <i>1938</i> | <i>1939</i> |
| EXPORTS | | |
| Exports (U. S. mdse.), total | 3,057.2 | 3,123.9 |
| Agricultural, total | 827.5 | 655.6 |
| Cotton, unmanufactured | 228.6 | 243.5 |
| Grains and preparations | 223.5 | 99.5 |
| Tobacco, unmanufactured | 155.7 | 77.4 |
| Fruits and nuts | 99.1 | 83.2 |
| Packing-house products | 48.0 | 54.8 |
| Non-agricultural, total | 2,229.6 | 2,468.3 |
| Machinery | 486.3 | 502.2 |
| Petroleum and products | 388.6 | 383.7 |
| Automobiles, parts and accessories | 270.4 | 253.7 |
| Iron and steel-mill products | 184.2 | 235.5 |
| Chemicals and related products ^a | 128.9 | 164.7 |
| Copper, incl. ore and manufactures | 86.8 | 97.2 |

| Non-agricultural, total | 994.1 | 1,158.5 |
| Paper & mfrs. (mainly newsprint) | 113.0 | 126.8 |
| Paper base stocks | 86.4 | 88.4 |
| Chemicals and related products ^a | 78.0 | 79.5 |
| Whisky and other spirits | 49.2 | 48.3 |
| Furs and manufactures | 45.8 | 55.5 |
| Tin (bars, blocks, pigs) | 44.9 | 70.6 |
| Petroleum and products | 39.5 | 43.5 |
| Copper, incl. ore and manufactures | 37.9 | 44.4 |
| Cotton manufactures, yarn, etc. | 34.6 | 39.6 |
| Fish, including shellfish | 28.3 | 32.4 |
| Burlaps | 28.3 | 28.0 |
| Diamonds | 28.3 | 45.1 |
| Flax, hemp and ramie manufactures | 20.5 | 22.4 |
| Wool manufactures, yarns, etc. | 17.8 | 25.6 |

^a Includes a few agricultural items. ^b Includes a few non-agricultural items.

in the trend of trade with the 42 leaders in commerce with the United States. The figures for Poland and Danzig cover only as much of 1939 as preceded the extinction of Poland by Germany and Russia. Czecho-Slovakia does not appear as a leader in trade with the United States, for it lost its unity and independence early in 1939, before it could attain any great total of yearly trade. Blockade virtually ended direct trade with Germany at the outset of September. This accounted, in the main, for the year's smaller commerce with the Reich. For conditions that affected trade with individual countries, see TRADE AGREEMENTS. See also CUSTOMS, BUREAU OF.

World Trade. The United Kingdom ranked first among all countries in the value of foreign trade in 1938, with imports and exports totaling \$3,839,600,000 (old gold dollars); the United States held second place with a total of \$2,956,900,000. The United States had the highest total of exports and ranked third in the value of imports, while the United Kingdom was first in imports and second in exports. The values of imports and exports of the leading commercial countries are shown in the table on page 357, based on figures published in the *Statistical Year-Book of the League of Nations*. See the separate countries under *Foreign Trade*.

^a Excludes trade between Germany and Austria. ^b Excludes trade with possessions. ^c Includes Luxemburg.

INACCESSIBLE ISLAND. See ST. HELENA.

INCINERATION. See GARBAGE AND REFUSE DISPOSAL.

INCOME. See BUSINESS REVIEW; LIVING COSTS AND STANDARDS.

INDIA. A dependency of the British Empire, consisting of British India, or the territories subject to British law, and the Indian States, ruled by native princes but under the indirect control of the British Parliament. Capital, New Delhi. Summer seat of the government (April to October), Simla.

Area and Population. On Apr. 1, 1937, Burma (q.v.) and Aden were separated from India and created Crown Colonies. The total population of British India and the Indian States under British control (excluding Burma) was officially estimated

at 365,700,000 on Nov. 30, 1938. The area and population of the British (governors') provinces and of the Indian States and Agencies at the 1931 census are shown in the accompanying table.

BRITISH PROVINCES AND INDIAN STATES:
AREA AND POPULATION

| British Provinces | Area in sq. miles | Population, 1931 |
|-----------------------------|----------------------|---------------------|
| Ajmer-Merwara | 2,711 | 560,292 |

| Total India | 1,808,679 | 352,837,778 |
| India without Burma | 1,575,187 | 338,170,632 |

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore.

Registered births in the British provinces in 1937 numbered 9,388,457 (34.5 per 1000); deaths, 6,112,375 (22.4 per 1000). Populations of the chief cities at the 1931 census were: Calcutta, with suburbs and Howrah, 1,485,582; Bombay, 1,161,383; Madras, 647,230; Hyderabad, 466,894; Delhi (including Shahdara, New Delhi, and Cantonment), 447,442; Lahore, 429,747; Ahmedabad, 313,789; Bangalore, 306,470; Lucknow, 274,659; Amritsar, 264,840; Karachi, 263,565; Poona, 250,187; Cawnpore, 243,755; Agra, 229,764; Nagpur, 215,165; Benares, 205,315.

Education and Religion. The number of persons able to read and write is about 30,000,000. The number of pupils reported in attendance by 256,152 educational institutions in the academic year 1936-37 was 13,958,695. About one-half of the elementary schools were aided or maintained by the State. Universities numbered 18 in 1936-37; 15 of them were in British India and 3 in Indian States. The 1931 census showed 239,195,140 Hindus; 77,677,545 Moslems; 12,786,806 Buddhists; 8,280,347 followers of tribal cults; 6,296,763 Christians; 4,335,771 Sikhs; 1,252,105 Jains; 109,752 Zoroastrians; and 24,141 Jews.

Production. About 71 per cent of the population is engaged in agriculture or stock-raising. The planted area in the crop year 1936-37 totaled 213,763,258 acres in the British provinces (exclusive of Burma) and some 70,000,000 acres in the native states. The wheat harvest was estimated at 10,086,300 metric tons in 1939 as compared with 10,936,700 metric tons in 1938. The barley crop

was 2,348,100 metric tons in 1937; the production of corn approximates 2,200,000 metric tons a year. The output of rice totaled 35,969,000 metric tons in the 1938-39 season. Other products (in metric tons) were: Rice, 35,969,000 (1938-39); coffee, 17,000 (1937-38); sugar, 2,750,000 (1938-39); tobacco, 510,100 (1938-39); tea, 195,200 (1937); cotton, 929,000 (1938-39).

Mineral production (in metric tons) in 1938 (except when otherwise specified) was: Iron ore, 1,850,000; pig iron, 1,576,000; steel (ingots and castings), 982,000; coal (British provinces only), 25,624,000; salt, 1,878,000 (1937); manganese, 450,000; crude petroleum, 317,000; copper (smelter), 5400; cement, 1,142,000 (1937). Indian mills produced about 1,159,513,000 lb. of cotton yarn in the year ending Mar. 31, 1938. Textiles of jute are an important industry.

Foreign Trade. Merchandise imports in the year ended Mar. 31, 1939, totaled 1,518,000,000 rupees; exports, 1,691,900,000 rupees. In 1937-38, merchandise imports were valued at 1,733,200,000 rupees; exports at 1,892,000,000 rupees.

In the 1939 fiscal year, the principal exports were cotton, raw and manufactured, jute, tea, hides, skins, and leather. Exports were consigned chiefly to the following countries: United Kingdom, 33.75 per cent; Japan, 8.96; United States, 8.51; Burma, 6.16; Germany, 4.66; France, 3.78 per cent. Of the imports, the United Kingdom supplied 30.67 per cent; Burma, 15.86; Japan, 10.13; Germany, 8.49; United States, 6.41. See **IMPORTS AND EXPORTS**.

Finance. For the fiscal year ending Mar. 31, 1940, revenue was estimated at 821,500,000 rupees; expenditures at 826,500,000 rupees. Revised computations showed receipts of 830,000,000 rupees in 1938-39 and expenditures of 856,500,000 rupees. Actual revenue in 1937-38 totaled 857,600,000 rupees; actual expenditures were 865,400,000 rupees. On Jan. 1, 1939, the public debt of the Central Government was 7,148,639,000 rupees, including a floating debt of 2,770,012,000 rupees. It was 7,130,916,000 and 2,757,953,000 rupees respectively on Jan. 1, 1938. Central monetary gold reserves totaled \$162,000,000 (old U.S. gold dollars) on Sept. 30, 1939. The average exchange value of the rupee (in terms of the current American dollar) was \$0.3659 in 1938 and \$0.3328 in 1939.

Transportation. On Mar. 31, 1938, railway mileage totaled 41,076 (29,372 miles of Imperial State lines and 6991 miles of Indian State lines). Railway passengers (1937-38) numbered 521,284,700; freight carried, 87,289,000 tons; gross receipts, 1,075,700,000 rupees. The Indian merchant marine aggregated 247,819 gross tons on June 30, 1938. Highways extended 280,746 miles (of which 73,632 miles were unimproved earth and non-surfaced) in 1939 (see **ROADS AND STREETS**). The principal Indian cities are linked with British, Dutch, and French air lines to the Far East and, via Hong Kong, with the American trans-Pacific service. In August, 1939, there were 9 air routes covering 5247 miles.

Government. India, as defined by Parliament under George V, comprises all parts of the Indian Peninsula under British government or protection. The King of England bears also the title of Emperor of India. In many respects, however, the imperial system of government in India was changed by the British Parliament's act of 1935 known as the Government of India Act. This provides means for establishing gradually a federated India to include the British governors' provinces,

the chief commissioners' provinces, and the acceding native States. Provinces and States in general are to retain local self-government; a central government is to conduct matters of concern to the whole federation.

The plan was partly in force in 1939. The eleven British provinces had their own legislative assemblies and ministries responsible thereto. The Council of India (in Great Britain) no longer operated, and the Governor-General (the Viceroy) was under the Secretary of State for India in London as to matters within the ruler's discretion. The native States had not yet consented to enter the proposed Federation. The Federal Legislature was yet unformed. The Governors of the British provinces retained power of veto over acts of provincial legislatures. The Governor-General in Council still exerted great powers; but he no longer performed under this title the functions of the Crown in regard to the Indian States; he now performed such functions under the title, vested in him, of Crown Representative. The pre-existing Indian Legislature (Governor-General, Council of State having 58 members, partly appointed, and Legislative Assembly of 102 elected and 39 appointed members—in operation since 1921) continued to exert a limited power of legislation. Awaiting the realization of a ministry that would hold office at the projected Legislature's pleasure, the Indian Executive Council was still a body of seven appointed officials responsible to the Governor-General. The Viceroy in 1939 was the Marquess of Linlithgow (assumed office Apr. 18, 1938).

HISTORY

Character of Public Activity. The public activity of 1939 centered until September almost wholly around the efforts to advance and shape the political and social new era promised by the Government of India Act. India became early in September a participant in Great Britain's war against the German Reich. Thereafter events were complicated by the double motivation of India's attitude to the war and to its own political outlook. The year's succession of happenings involved a number of groups, each an agent and some of them mutually opposed. The chief of these agents were the Indian administrative government, the British government, the Congress party, the All-India Moslem League, the group immediately following Mohandas K. Gandhi, the Provincial governments, and the native States and rulers.

The Indian administrative government sought to keep the movement for the enfranchisement of India within the confines of the Government of India Act and the British obligations to the native rulers; also, after the outbreak of war, it endeavored to lend India's military aid to Great Britain and to maintain those Indian groups which could best serve this object—the native rulers and the Mohammedans. The British government was prevailingly of a mind with the Indian administration but was harassed by an active minority in Parliament, which pressed the cause of the Indian nationalists. The Congress Party, though divided within itself between liberals and conservatives, acted together in pressing for the advancement of the program of federation; it sought to make the advent of war useful for gaining further definite pledges from the British authority. Gandhi and his following opposed the ultra-liberal tendency of a great part of the Congress party but took the lead in that party's efforts on behalf of Indian self-government. The Mohammedans and the native princes (a great

many of them Moslems) held out against pressure on them to enter the proposed federation; after the outbreak of war they became energetically helpful to the British cause, by reason, in many cases, of their aptitude for war, and thereby won the favor of the British authorities.

Pressure on Native Rulers. The purpose of the Hindu partisans of federation was to bring into a federated and democratized India some 500 native States, most of them of little extent or power, but for the most part having princes who clung tenaciously to their own advantage, to the old ways, and to their rights as assured by Great Britain long ago. One of the less important of these states, Rajkot, was the realm of a prince named Thakor Sahib. He had given what the nationalists regarded as a promise to institute an advisory council. Gandhi, as spokesman for that group, charged that Thakor had not lived up to the promise.

When Thakor would not implement the undertaking with definite means of establishing the council, Gandhi, early in March, undertook a fast, to end only when Thakor should submit. Less than a year under the age of 70 and frail of body, Gandhi was regarded with veneration by a great part of India's huge population. The Viceroy, facing the prospect that the Congress party's ministries in the eleven British provinces would resign if the fast continued, speedily exerted himself to bring Thakor to compliance. A compromise was arranged: the question of the disputed reform and of the alleged promise was referred for determination to Chief Justice Sir Maurice Gower. Gandhi accepted this arrangement and ended his fast on March 7, his fifth day without food.

Defeat of the Leftists. Among the most energetic leaders in the Congress party were several individuals strongly indoctrinated with ideas far more liberal than the classical system of representative democracy would accept. One of these men, Subhas Chandra Bose, president of the party, was re-elected to that position in January, against the opposition of Gandhi and a considerable moderate wing. At this time the native princes were in some danger from mobs instigated by extremists on behalf of reforms. Major R. L. Bazalgette, British political agent at Orissa, had been killed a fortnight before by such a mob, advancing on the palace of the Raja of Ranpur. On April 29, however, the moderates in the Congress party brought about the resignation of Bose and elected Rajendra Prasad party president in his place. Bose was later excluded from membership in party committees and formed a leftist group of his own within the party. The Congress party in 1939, though controlling many millions of adherents, was comparatively compact, reportedly numbering only about 4,000,000 members.

Princes Averse to Federation. The Indian Chamber of Princes met, March 13-14, at Delhi, heard proposals for federation in an address by the Viceroy, and expressed its attitude to these proposals. The Viceroy admonished the princes that their interest and duty alike required them to remedy legitimate grievances of their subjects and urged the need of their meeting the latter's legitimate aspirations as well. Popular aspirations signified above all, at this time, the inclusion of the native States in the projected federal bond. The question of redressing grievances of the subjects in these States was intimately connected with the question of federation, for concessions leading toward popular government tended to put into the

people's hands the power to convert the States into simple elements of a united India.

The princes' reply to the Viceroy conceded their duty to effect administrative improvements but declared constitutional changes to be their own particular concern and held against consenting to federation before determination of possible resulting damage to their own rights. There followed a statement from the British authorities outlining to the princes a basis on which they were expected to find it reasonable to accept federation; this statement was not published. Many of the native rulers, conferring in Bombay about the middle of June, rejected the outlined terms of this statement as "fundamentally unsatisfactory" and likely to damage rights that they held from Great Britain by treaty. A recommendation from Gandhi, June 4, that the Congress party use more conciliatory ways of dealing with the princes had failed to win them. About 50 of them on June 12 definitely rejected federation under the new British proposals; as the great majority of the native rulers had small realms, the number of the rejections signified less than the possible number of the subjects affected by them.

With regard to reforms within principalities some princes made substantial concessions in 1939. The Nizam of Hyderabad issued in July a plan of government calling for a unicameral Legislature composed of elected members to the extent of almost one-half and granted the right to hold political meetings without special authorization; the executive power to reverse the Legislature was, however, retained. The Maharaja of Baroda, in February assented to a bigger Assembly, the majority of its members holding by election; one member, acceptable to the Assembly, was added to the State's executive council.

Postponement of Federation. Shortly after the 50 princes' rejection of federation in June the Viceroy issued a decree prolonging the operation of the old Central Legislature for another year; this indicated the abandonment of hope for an early establishment of the Legislature provided by the British Act of 1935. The Congress party rejoined by boycotting the Legislature's ensuing session. A new declaration from the Viceroy on September 11, just after the start of the war with Germany, suspended until after the war all further steps toward federation. This move placated the Moslems and diminished the likelihood of the recurrent religious riots between Moslems and Hindus, often sanguinary affrays and generally harmful to the cause of a united India.

India Enters the War. After the British government's declaration of war with Germany on September 3 the government of India promptly and without awaiting the co-operative action of the Indian parties decided to range the Empire on the side of Great Britain. It had the support of widespread native sentiment against Germany: Gandhi expressed his sympathy with the British and French cause on September 5. M. B. Roy, a leftist leader in the Congress party, expressed similar sentiments, September 8. Sir Sikander Hyat-Khan, Premier of the Punjab, had previously, late in August, declared that province, the native ground of about three-fifths of India's indigenous troops, ready to back Great Britain. The Maharaja of Bikaner and the Aga Khan both offered their own services and contributions of money or of military units. The chief Indian princes followed suit with voluntary contributions. Troops were soon dispatched out of India, both

to other Asiatic areas and to the European front, where a contingent arrived late in December.

Congress Party Seeks New Gain. Gandhi made of the outbreak of war an occasion to seek from the British authorities further and more ample commitments as to self-government for India. In taking this course he drew the condemnation of the Marquess of Zetland in the British Parliament, as pressing Great Britain when she was locked in a life-and-death struggle. It was pointed out on Gandhi's behalf that the government had put India into a war without consulting the spokesmen for the people of the country and that troops had been sent out without effort to get the consent of the Legislature in conformity with an alleged British pledge of 1935.

Late in September Gandhi held conferences with the Viceroy, to obtain a fuller exposition of the aims with which the British government had gone to war. On these conferences Gandhi reported, October 2, to a committee of the Congress party, authorized to decide on the party's co-operation in the war. The committee, in turn, voted a resolution asking for the British aims and for assurance of action on Indian self-rule. The Viceroy replied, October 18, that at the end of the war the British government would be ready to consult with representatives of India on any necessary modifications of the Act of 1935—in other words, apparently, to call another Round-Table conference; it was too early, the Viceroy intimated, to state the British aims in the war.

This response disappointed the Congress party, first because they wanted assurance that the British were fighting against Nazism and for Democracy—this position would have been helpful to their own demand for self-government; secondly, because of the possibility that the proposed revision of the Act of 1935 might work in favor of the native princes, now engaged in displaying the best feudal virtues as staunch military upholders of the overlord.

The rejoinder to the Viceroy soon came. It took the form of identical demands, moved in the several Provincial Legislatures, that the British regime regard India as an independent nation entitled to write a constitution of its own, and that it give early assurance to this effect. The first of these resolutions was moved in the Province of Bihar, October 16. On the 22nd the Congress party bade the ministers in all the Provinces to resign in protest against the unsatisfactory attitude of the central authority, which had not given the desired assurances. In a short time eight Provinces' ministries had resigned, and representative government in these eight went into abeyance, succeeded inevitably by authoritarian rule. This development was felt as a blow in Great Britain. It received considerable discussion in Parliament, some Conservatives taking a tone of uncertainty as to the outlook for India's enfranchisement, while Wedgwood Benn, Laborite, espoused the Indian position, thus tending to make the subject once more a partisan issue. In the closing weeks of the year the Indian Nationalists were making ready for the possible new employment of the tactics of passive resistance and for other sorts of demonstration. Plans of the Viceroy for creating a consultative council of representatives of all the Indian groups, to help use India's energies in prosecuting the war, received a setback. The Moslem League, however, rejoiced, observing December 22 as a day of thanksgiving for the cessation of the Congress party's government in the Provinces.

INDIA, PORTUGUESE. See **PORTUGUESE INDIA.**

INDIANA. Area and Population. Area, 36,354 square miles, exclusive of State's part of Lake Michigan, but including (1930) other water, 309 square miles. Population: Apr. 1, 1930 (census), 3,238,503; July 1, 1937 (Federal estimate), 3,474,000; 1920 (census), 2,930,390. Indianapolis, the capital, had (1930) 364,161; Fort Wayne, 114,946; Evansville, 102,249; South Bend, 104,193; Gary, 100,426.

Agriculture. Indiana's farmers harvested 9,845,800 acres of principal crops in 1939. About two-thirds were in grains and hay, but these were yielding some of their acreage gradually to soybeans. Corn, by far the leading crop, raised on 4,144,000 acres, made 213,416,000 bushels (estimated farm value, \$106,708,000); wheat, on 1,534,000 acres, 27,612,000 bushels (\$19,605,000); tame hay, 1,969,000 acres, 2,723,000 tons (\$18,244,000); oats, 1,009,000 acres, 25,225,000 bushels (\$7,315,000); potatoes, 48,000 acres, 4,560,000 bushels (\$3,876,000); soybeans, 716,000 acres, 13,962,000 bushels (\$10,472,000).

Manufacturing. Indiana's 3939 establishments engaged in manufacturing in 1937 (in 1935, 3917) employed 313,342 wage earners (in 1935, 248,196) and paid them during the year wages totaling \$402,116,998 (in 1935, \$257,802,311). They turned out products to the value of \$2,497,547,946 (in 1935, \$1,649,530,092); of this, the greater part, \$1,478,675,753 (in 1935, \$946,283,850) represented the cost of materials, etc., and the remainder, \$1,018,980,193 was contributed by manufacture (in 1935, \$703,246,242). The foremost group in the manufacturing industry, steel works and rolling mills, included in 1937 only 18 establishments, but employed 43,400, nearly 14 per cent of the manufacturing wage earners, and produced goods to the total of \$356,646,436; it paid, for the year, wages of \$76,237,096. It used a great part of the product of the blast furnaces, which product totaled \$60,099,508. Another leading branch of manufacture, the making of motor vehicles, parts, and bodies, carried on in 67 establishments, by 32,560 wage earners, produced parts and bodies to the value of \$131,260,240 and, in part using these as material, put out motor vehicles to the value of \$188,593,660. The output of the 6 refineries of petroleum had the value of \$190,332,763, but of this total less than \$50,000,000 was contributed by the manufacturing done at the refineries. Electrical machinery, apparatus, and supplies were produced to the value of \$113,230,341, of which the manufacturers contributed the greater part, \$57,905,713. Glass-making, which attained a production of \$38,558,514, was a specialty (as to certain sorts) shared mainly with Ohio.

The manufactures of Indianapolis, for 1937, amounted to \$284,925,868, in value of products. East Chicago, producing \$304,323,701, was somewhat higher as to this total, but was surpassed by Indianapolis in the total of value contributed by manufacture (Indianapolis, \$137,255,191; East Chicago, \$114,289,999). Evansville's manufactures in 1937 aggregated \$188,308,542; South Bend's, \$134,772,551.

Mineral Production. The value of the native minerals produced yearly in Indiana totaled, for 1937, \$54,886,756. Coal, cement, stone, and clay products were this total's chief components; coal alone furnished over half of it. The mines' output of bituminous coal dropped by about 21 per cent

to some 14,050,000 net tons, for 1938, from 17,765,000 tons for 1937, for which year the value of the output attained \$28,601,000. The producers' sales and direct use of stone, totaling 3,782,410 short tons for 1939, exceeded slightly the total for 1937, of 3,504,530 tons; by value the totals were \$6,486,996 (1938) and \$6,397,891 (1937). About half of the value of the output of stone, or \$3,231,421, for 1938 represented oolitic limestone, mainly for fine building; much of this was in the form of cut and sawed pieces of specified dimensions, sold at an average price well in excess of \$1 a cu. ft., to a total of \$2,605,983. The State's clay products, other than pottery and refractories, attained for 1937 a total of \$4,670,619.

The State's industry in the working of minerals obtained from outside, an activity largely distinct from the production of its native minerals, included the making of coke, pig iron, and open-hearth steel. Byproduct ovens, producing Indiana's coke, used as their raw material in 1937 7,784,418 tons of coal, almost all from Kentucky and West Virginia. There were produced, in 1938, 2,894,548 net tons of coke; but for 1937 the production, much higher, totaled 5,467,061 tons and had a value of \$32,655,355. The production of pig iron, much reduced in 1938, approximated shipments from blast furnaces, which declined to 1,807,808 gross tons (1938), from 3,694,360 (1937); by value, they dropped to \$37,025,980, from \$77,990,597. There were made in the State 3,435,360 gross tons of open-hearth steel ingots and castings in 1938, as against 5,947,368 tons in 1937.

Education. For the year 1938-39 the enrollments of pupils in all Indiana's public schools numbered 678,858; this comprised 473,665 in the elementary group, 190,612 in high schools and 14,581 otherwise listed. The year's expenditure for public-school education totaled \$50,675,798. More than half of this total was required for the year's salaries of 23,168 teachers; the average of these salaries was \$1260.71.

Legislation. The General Assembly convened in regular biennial session January 5 and adjourned March 7. The Democratic administration of the State and the Republican group controlling the lower house failed to unite on any broad plan of legislation. The enacted budgetary appropriations totaled somewhat over \$84,000,000 for the two years ahead, as against \$78,689,284 voted by the previous Legislature.

The session voted the State's ratification of Ohio Valley Sanitation Compact, an agreement of eight States for checking the pollution of the flowing waters of the Ohio River's basin. The State's so-called monopoly, whereby the right to import beer from outside the State's bounds was in effect restricted to 13 firms, came to an end by reason of an act extending the right of importation to the licensed wholesalers of beer in general. Other enactments exempted municipally owned public-utility enterprises from taxes on property; set up a traffic code including formulae for determining drivers' intoxication, for courts' purposes, by percentages of alcohol in the blood; and requiring that applicants for marriage licenses submit, as lately decreed in divers other States, to medical tests for detecting venereal disease. Measures that failed of passage included provisions for reducing the burden of the State's gross-income tax on retail merchants; for diverting to the cities and counties half of the proceeds of the State's tax on gasoline; and for extending the power of the

direct primary to cover the selection of candidates for Governor and U.S. Senator.

Political and Other Events. Small merchants took the occasion of the legislative session to conduct in some localities a campaign for the repeal or modification of the State's tax on gross income, designated by one spokesman as a club to beat the little business man to death. In South Bend, where numerous merchants had concerted to refuse payment of the tax, the State authorities took out over 100 warrants late in March for seizing non-payers' property; later, the State tried proceedings to put defendants in receivership. The tax law that the merchants hoped to bring the Legislature to repeal was part of the body of modernized tax laws given to the State in the days of Governor McNutt; it levied 1 per cent on the gross income of individuals and firms, was described as the first law of its kind in the current practise of the United States, and had made itself needful to State administrations by bringing in a substantial revenue year after year.

The State Supreme Court granted in May, to Edward Dircks, grocer, of Indianapolis, an injunction against the picketing of his shop, on the ground that the statements on pickets' placards were calculated to give a false impression; the rule was established that strikers' pickets might not while picketing display such statements. The U.S. Senate's committee on elections dismissed a petition submitted by Raymond E. Willis, Republican candidate in 1938 for the Senate, who sought to contest the re-election of Frederick Van Nuys, Dem., as Senator from Indiana. Six citizens of Kokomo, former Mayor Holt included, were found guilty in a Federal trial in May, of having conspired to divert WPA labor to private enterprises.

The State's act restricting to a few firms the importation of beer into Indiana went out of force March 31. Upon the law's repeal, Illinois, Ohio, and Michigan terminated their orders excluding Indiana's beer from their respective territories by way of reprisal. The formerly favored importers and a group of about 150 wholesalers of beer contested the admittance of others to their numbers under the terms of the new law. Recourse to the Marion County Superior Court brought a decision that the new code of regulation of liquor allowed the Alcoholic Beverage Commission to refuse permits for wholesaling beer, on the economic ground that applicants' intended territory had too little business to give more wholesalers a living. This decision, in turn, was overthrown by the State Supreme Court, which held in June that the Commission could not refuse on such economic grounds the granting of a license.

The State government had still the help of some of the \$27,000,000 left by Governor McNutt as surplus cash at the termination of his time in office. The unused money, however, was becoming steadily less, and the budgetary provisions for the new biennium were expected to reduce the remainder to less than a million dollars. The cost of poor-relief, particularly in Indianapolis and neighboring towns, compelled the levying of high local taxes, of which a great part went toward the service of debt incurred for this purpose in the course of the previous several years. In Lawrence and Martin counties a projected Federal enterprise of damming the eastern fork of the White River to make a reservoir 90 miles long covering 58,000 acres, for holding back floods, met

with local opposition among owners of fertile farms likely to be condemned.

Officers. Indiana's chief officers, serving in 1939, were: Governor, M. Clifford Townsend (Dem.); Lieutenant-Governor, Henry F. Schrickler; Secretary of State, James M. Tucker; Auditor, Frank G. Thompson; Treasurer, Joseph M. Robertson; Attorney-General, Omer Stokes Jackson; Superintendent of Public Instruction, Floyd I. McMurray.

INDIAN AFFAIRS, OFFICE OF. Subject to exceptions (Alaska, Eastern Oklahoma, certain Eastern States, and Indians not on reservations), the Federal government exercises exclusive jurisdiction over Indians. It renders special services to all save a few groups east of the Mississippi. On Jan. 1, 1939, the Indians numbered 351,878, including 29,983 Indians and Eskimos in Alaska. Certain full-blood tribes have increased at rates up to nearly 2 per cent a year. The aboriginal population of the territory now the United States and Alaska has been estimated by authorities as between 800,000 and 900,000.

The present system and program of Indian administration are best comprehended in the light of history. From the beginning, Congress and its instrumentalities asserted exclusive jurisdiction over the tribes. Until 1868, Indians were treated as sovereign and yet dependent nations, in treaty relationship with the United States. Treaties were lavishly negotiated, ratified with solemnity, and usually broken by the government. The direct and indirect cost of the resultant Indian wars was huge. And valid claims against the government, based on breaches of contract, were rolled up in amounts of hundreds of millions or billions of dollars. (Most of the claims are yet unsettled, and their total is unknown.)

After 1868, Congress ruled the Indians through its plenary authority. Administration was transferred (in 1849) from the Department of War to the Department of Interior. Commencing in the eighties, policy was searchingly directed toward sundering the tribal and communal, even the family, bonds of Indians, effacing the languages and customs, including the arts and crafts, and compelling an individual as distinct from a tribal ownership of land. Indian land ownership shrank from nearly 156 million acres of mostly good land in 1881, to 47 million acres of mostly poor land in 1933. Extreme poverty deepened with the years. The minority of tribes still owning their lands collectively, also were the tribes using their lands and accomplishing more or less of self-support.

Policy was redirected through the Indian Reorganization Act of June 18, 1934 (Stat. 48-984), and collateral enactments. The new policy stops land losses to whites, and furnishes new lands to subsistence-seeking tribes. It encourages and assists tribal organization and community organization. It stresses day schools, serving young and old alike, in place of distant boarding schools, the residual boarding schools being specialized for elder age groups and for types of future occupation. Professional and advanced education for Indians is facilitated through non-interest-bearing educational loans. A modern, though as yet inadequate, agricultural credit system has been set up. Indians, by statute, are given preference for Indian Service employment, within a competitive Civil Service for Indians alone which as yet is incompletely developed.

Fundamental is the changed policy toward In-

dian organization. Tribes are organized for domestic self-government and are chartered for industrial operations. Even the applicability of the Reorganization Act was made subject to tribal acceptance, and Indians numbering 86,365 (77 tribes) elected, for the present, not to live under the Act. One hundred and thirteen tribes (including those in Alaska) numbering 115,092 members, have organized under tribal constitutions, to date, and 82 tribes, numbering 74,882 members, have adopted industrial charters under the Act.

Through the Indian Arts and Crafts Board, created by statute within the Indian Service, native arts are being protected and aggrandized. Through co-operative arrangements with the Department of Agriculture, through the Indian branch of CCC, and through the tribal organizations, the conservation of natural resources, particularly soil and water, is being pressed in all Indian areas. Other activities of the Service include field medical and nursing and hospital operations, forestry, agricultural extension, comprehensive trusteeship operations, co-operation with the tribes in maintenance of law and order, and planning at the physical, the human, and the administrative levels. Indians in most States receive social security benefits. Under the Johnson-O'Malley Act (Stat. 48-596) of Apr. 16, 1934, as amended June 4, 1936 (Stat. 49-1458), States, their political subdivisions, and privately supported institutions, are through contract brought into the service of Indians.

JOHN COLLIER.

INDIANA UNIVERSITY. A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1939-40 the registration aggregated 6431 students (4239 men and 2192 women). The registration for the summer session totaled 2051 (1051 men and 1000 women). The faculty had 446 members, an increase of 10 over 1938-39. The endowment funds amounted to \$2,404,167, and the total income for the year, from State and private sources was \$7,429,185. A \$3,500,000 building program, now nearing completion, will add to the physical plant the following buildings: Auditorium, Business Administration Building, Physical Science Building, Two Dormitories for Men, Two Dormitories for Women, and the Extension Center Building at East Chicago for the Calumet District. The main library contained 324,498 volumes. President: Herman B. Wells, B.S., A.M.

INSURANCE. Interest of the insurance fraternity of the country during 1939 centered largely about the investigation of life companies by a Congressional committee, which, inaugurated in 1937, was continued from time to time through the succeeding 12 months, and apparently is still far from being concluded, as sessions have been planned for various dates during the early months of 1940.

While the study of the committee thus far has been devoted in the main to a probing of the investment practices of the life companies, the impression generally held by close observers of developments is that the investigation is preliminary to a move by the Federal government to assume greater authority over the insurance industry than it now has—a result that would be highly displeasing to the underwriting fraternity, whether office or field employees. The possibility of Federal jurisdiction in such connection was warmly discussed, not alone at conventions of insurance workers but by the commissioners of insurance of the different states, all of whom are stoutly opposed to any extension of control by the Government over the business. Underwriters maintain that such development would add to rather than remove legislative requirements to which they are now subjected; for obviously the states would not surrender any of their constitutional rights, and any regulations the Federal authority might impose, should Congress grant it the right so to do, would merely be in addition to those of the states to which companies are already subjected.

The United States Supreme Court, in the famous case of *Paul vs. Virginia* reviewed in 1869, held insurance was not commerce, and hence was not under control of the National Government. Whenever the suggestion of Federal jurisdiction was proposed, as has been true from time to time in past years, that decision proved an effective answer. Whether a like opinion would be given by the Supreme Court today, were the same issue presented, is regarded as doubtful.

In spite of a number of hampering influences affecting the insurance industry during 1939, however, the business on the whole fared pretty well. Little gain in premiums from any of the major divisions of the business was anticipated, though exact figures were not available at the close of the year. By and large an underwriting profit was earned, while values of securities carried by companies in their portfolios were about what they were at the beginning of the year. Nor was there any material change in the type of security holdings, though virtually all classes of carriers increased their Federal bond investments. British fire and casualty companies continued their long established practice of favoring bonds rather than stocks. Bank deposits too were increased—of necessity rather than desire, for managements awaited opportunity to make security purchases upon more advantageous terms and anticipated such occasion would offer in the near future.

The European war, so upsetting to many lines of general business, exercised little direct effect upon the insurance fraternity up to the close of the year. Upon the outbreak of hostilities insurance carriers of all classes adopted such programs as, it was felt, would deal with the initial situation. Some life offices adopted a clause in new policy issues denying liability in the event of

death caused through war activity. Accident and health writing companies made no material changes in their contracts, feeling that the provisions now governing were ample to cover contingencies. Fire companies, however, issued new types of coverage, providing for loss through bombing, malicious mischief in manufacturing plants, and for other special hazards incident to the uncertainties existing in a war period. Marine writing companies were directly affected, of course, and, profiting by the experience gained in the World War, adopted measures which thus far have proven satisfactory alike to shippers and insurers.

Another marked feature of the year was the increased appreciation shown by underwriters of the value of publicity regarding the nature and conduct of their business. The National Board substantially increased the activity and scope of its publicity department. Its representatives spoke before college and high school assemblies in all parts of the country, as well as before chambers of commerce and kindred commercial bodies; they advocated reduction in the fire waste, and advised how this may be done through the adopting of proper building construction and fire protection methods. Similarly, both the National Bureau of Casualty and Surety Underwriters and the Surety Association of America conducted aggressive publicity campaigns; the former stressing particularly the means for reducing accident hazards, and the latter pointing out safeguards against defaults on the part of trusted employees.

Many universities of the land now recognize the importance of the insurance industry and the opportunities it affords for trained men and have instituted insurance courses under qualified instructors. The Insurance Institute of America and the Insurance Society of New York, both in existence for a number of years, broadened their respective instruction courses in 1939. Each had a large student body, mainly young people already employed in the business but anxious to equip themselves for advanced posts—an ambition given every encouragement by their employers. Various state agents' associations too arranged for instruction courses for their respective members and their employees, and this practice promises to extend in future.

The credit men of the country have been exceptionally concerned in insurance affairs within the past twelve months, the subject appearing upon the agenda of the National and of a number of state credit men's associations. In conjunction with underwriters, the credit men prepared a form of inquiry to all seekers of credit, requiring not only a record of the amount of fire insurance carried, but the forms and character of other insurance held by their clients as well. It is obviously desirable that a house extending credit should know the amount of indemnity that a customer might receive in the event of fire or other misfortune.

Few new laws adversely affecting insurance industry were enacted in 1939, through a number of bills, introduced in certain state legislatures, would have been decidedly troublesome had they passed. The great legislative uncertainty through the twelve months was over those measures that Congress might enact as a result of the investigation of insurance affairs by its special committee. But not in many years had so many policy forms, on all divisions of the business, been altered as in 1939—changes usually effected by

broadening the contract conditions without any increase in the rates. Managing underwriters studied the needs of the business world as never before and arranged forms of indemnity to safeguard them adequately, appreciating that only by following a forward program could insurance hope to continue the confidence of the general business world it had long enjoyed.

Marine Insurance. Chief activity in underwriting circles was naturally in the marine line, for the outbreak of war in Europe created a demand for cargo war-risk coverage far beyond the normal and under exceptional hazards. With the opening of hostilities American ocean marine writing offices, faced with the cancellation of reinsurance treaties with London Lloyds, and the necessity of establishing new arrangements, determined to make the home market self-sustaining. To that end last June the American Cargo War Risk Reinsurance Bureau was launched, with a company membership possessing aggregate assets of approximately \$1,000,000,000. Under its plan a normal line of \$2,500,000 can be written upon a single vessel, and in exceptional cases twice that amount may be assumed. Moreover, the Exchange proved of distinct benefit to both the companies and to shippers, as was intended, for it enabled the former to assume liabilities far beyond that possible without such reinsurance arrangement, and it guaranteed to shippers that full indemnity was readily available and at uniform rates. When the sea-borne traffic of the Allied Powers, and in but slightly lesser degree that of neutral nations, was systematically attacked by German submarines and mines, marine war cargo rates changed rapidly, advancing for sea lanes where sinkings mainly occurred, and declining with a lessening of peril in other parts of the world. Whenever possible under sound underwriting practice, marine underwriters of this country met the rates for cargo insurance provided by the special insurance bureaus of the British and of other governments. It developed that many shippers favored the protection accorded by companies of America, rather than that granted by foreign governmental agencies, even where the rates of the latter were less than those charged by companies here. Insurance on hulls, as distinct from cargo war-risk indemnity, increased during the latter part of the year, induced in part by the higher values placed upon hulls and by the preference of many shipowners for indemnity from American companies rather than from foreign corporations or London Lloyds.

The demand for marine insurance on vessels sailing the Great Lakes was below the average through the better part of the year, but increased materially during the last three months, largely due to the shipment of material demanded by European nations. Despite the sinking of a number of vessels and the damaging of others through collision, the loss record for lake business in 1939 was held satisfactory.

Fire Insurance. At the beginning of 1939 the fire insurance carriers of the country—stock, mutual, reciprocals, and Lloyds—possessed total assets of about \$2,900,000,000, while their net premium income for 1938 aggregated over \$862,812,000. It is unlikely that complete returns for 1939 will show any marked change in these figures. The increase that may be looked for from such specialty lines as automobile, inland marine, fine arts, and the like, will probably be offset by the reductions in straight fire premiums, due to

the steady downward revision of rates upon many classes of business. In the 10 years, 1929 to 1938 inclusive, the average fire rate per \$100 at risk, fell from 89 cents to 69 cents, and the reducing process still goes on. On the other hand, the fire waste of the country is on the increase, the total losses as estimated by the National Board, having been \$313,498,840 in 1939, compared with \$302,050,000 suffered in the previous year. A vigorous campaign to reduce losses is being waged, with the co-operation of Federal, state, and municipal government agencies.

As a result of rate reductions and the relatively limited volume of new business offerings—both building and stock—the competition for premium income was severe throughout the year, as indeed it had been for some time previous. To escape undue loss underwriters exercised unusual care in the consideration of submitted risks, promptly rejecting those that did not measure up to required standards, or, whenever possible, inducing assureds to improve the character of their fire prevention equipment.

Upon the outbreak of the war in Europe and the assumption that business interests in this country would be affected thereby, fire companies arranged to grant indemnity against malicious mischief, damage caused by "sit-down" strikers, or other special types of hazard incident to periods of war or industrial upheaval. While no especial demand for any on these coverages arose during the year, numerous inquiries as to rates and the like made by brokers on behalf of their clients showed an interest in such coverage.

Of the total net premiums received by fire companies, a considerable percentage is derived from the automobile business—up to 50 per cent in one of the giant offices. The total automobile premiums in 1939 promise to exceed those of the preceding year, and, as was true in 1938, will yield a profit to the carriers despite the rate reductions applied in many sections of the country. The agitation against granting preferential treatment to finance companies in the matter of rates, long a sore point in the fraternity, continued, and, though no satisfactory answer has yet been found, the problem was explored by various managerial and agency committees and by a committee of the National Association of Insurance Commissioners.

In an effort to hold the cost of fleet business within bounds, the insurance companies fixed the commission to be paid at 30 per cent. Some of the leading financing companies of New York and other centers, rather than suffer any curtailment of income from insurance granted car purchasers on time payments, formed subsidiary insurance companies for handling their own accounts. Appreciating the field offered for loans for automobile car purchasing, banking houses in various centers are actively competing with specialty institutions, and in the main have the support of local agents who are usually accorded the writing of the insurance. See FIRE PROTECTION.

Casualty Insurance. Fire companies assume the fire, theft, and collision automobile hazards, and in some instances the property damage liability as well, though the latter is more particularly held to be a form of casualty indemnity. Casualty companies supplement the coverage of the fire offices by writing the bodily injury as well as the property damage and collision features, and the combination of fire and casualty

indemnity protects the motorist against every form of liability he or she is likely to encounter. Rates for the collision as well as for the fire and theft hazards are prepared by the National Association of Automobile Underwriters, while the charges for collision and bodily injury indemnity are fixed by the National Bureau of Casualty and Surety Underwriters, both types of carriers using the rates thus derived.

In the casualty and surety divisions of insurance the trend toward broadening policy and contract provisions without, in most instances, increasing the cost, was marked during 1939, especially in connection with the automobile division. Here under a revised classification of risks, owners of private passenger cars were granted policy concessions far more liberal than any previously proposed and at the same time were amenable to the 15 per cent premium return for a non-accident record over the twelve months. While the companies paid out large sums to assureds qualifying under the refund stipulation, the marked reduction in the number and seriousness of road accidents during the year proved that the safety stipulation had a distinctly beneficial influence, and company managers are heartened because of it. There will be an underwriting profit from the casualty lines on the year's operations despite the rate reductions and the extension of liability coverages added in all of the major risk classifications. As has been true over a considerable period, the burglary, machinery and boiler, and the plate glass divisions all scored a profit during the year.

In point of premium income workmen's compensation insurance ranks second only to that of automobile liability in casualty underwriting, its aggregate income in 1938 being \$253,931,368 against \$287,536,189 for automobile public liability risks. Rates for workmen's compensation are constantly undergoing revision, impelled by changes in state laws liberalizing benefits to workmen injured or killed in the course of their employment, and to fluctuations in the loss experience, both as to industry classifications and as to state records. While rates based upon loss experience were increased in certain commonwealths in 1939, they were reduced in others, the net result country-wide being an average decrease of 6 per cent.

Surety Bonding. Results in the fidelity and surety bonding fields through the year were fairly good, though, as one underwriter expressed it, "not enough to warrant a spirit of unmixed optimism." Contract bonds were in the main upon projects of the Federal Government and mounted into large figures. In the closing months of the year there was a notable sloughing off of large construction work which meant a lessening of premiums for the surety companies from such source. This shrinkage, however, was offset in part through the demand for bonds on merchant vessels, the construction of which was sanctioned by the Maritime Commission.

The cost of conducting business continued a major problem of company executives, and close study was given to all controllable items. Strict limits of agency commissions and brokerages allowable in the great income producing center of Cook County, Ill., were agreed upon by both the casualty and the surety acquisition cost conferences, and made operative as of December 1, with an administrator engaged to insure the carrying out of the new regulations.

Life Insurance. Washington supplied the two major life insurance developments of 1939. As the year progressed it became obvious that the life insurance phase of the Temporary National Economic Committee's broad monopoly investigation was aimed at promoting Federal supervision of life insurance. Insurance men opposed any such move, citing the adequacy of state supervision and distrusting further centralization of authority in Washington. However, despite a proposal by Senator Wagner of New York for government annuities to be sold through the postoffices, Senator O'Mahoney of Wyoming, TNEC chairman, denied any intention of putting the government into competition with private insurance.

Of equal importance to life insurance was the amendment of the Social Security Act to provide substantial income benefits to widows with dependent children, to the children themselves, and to widows age 65 and older. These benefits, plus the increase in retirement benefits and advancing the benefit payment dates to Jan. 1, 1940, gave millions of employees immediate and life insurance protection amounting to several thousand dollars apiece. Insurance men view this move as a stimulus to sale of new business. For unemployment insurance, see SOCIAL SECURITY BOARD.

Of major importance was the formation of the Institute of Life Insurance by a large group of representative companies, the aim being to interpret the life insurance business to the public and to pass along to the home offices the public's reactions on life insurance matters. The president is Holgar J. Johnson, former general agent Penn Mutual Life, Pittsburgh, and immediate past president of the National Association of Life Underwriters, the life agents' association.

Another development was the establishment of savings bank life insurance in New York State, following the Massachusetts pattern. By the year-end, seven banks had established insurance departments and seven more were acting as agency banks. Eight thousand policies were written for a total of \$6,500,000 of insurance in force.

Companies have scrutinized the war hazard, but only a few companies doing business in Canada or otherwise subject to special war risk exposure have inserted war risk exclusion clauses in their policies.

INTERGOVERNMENTAL COMMITTEE ON POLITICAL REFUGEES, THE. This Committee organized in July of 1938 at Evian, France, at the instance of President Franklin D. Roosevelt, by his chosen representative, Myron C. Taylor, as set forth in the 1938 YEAR BOOK (*Jews, Refugee Problem*), was composed of representatives of 33 nations, and has since been continuously occupied with the problem of involuntary emigration.

The chairman of the Intergovernmental Committee is Earl Winterton of England, with the following vice-chairmen: Henry Bérenger of France, M. A. Le Breton of Argentina, Helio Lobo of Brazil, W. C. Beucker-Andreae of the Nether-

lands, and Myron C. Taylor of the United States. Sir Herbert Emerson now acts in the dual capacity of Director of the Intergovernmental Committee and High Commissioner for Refugees of the League of Nations.

At the very root of the social and political turmoil in the continent of Europe, which has now assumed the form of military warfare, is overpopulation. Crowding, in countries under the stress of economic ills, results in antagonism to minorities. Political groups tend to capitalize this antagonism to their own ends and, soon, there is pressure on the minorities of such a nature and degree that they are obliged to leave their country of origin and seek refuge in neighboring countries. But these countries, too, in Europe are over-crowded and can give succor only temporarily. The "minorities" must move on, somewhere, anywhere. Thus is created the migrant.

In normal times, when there is reasonable economic security, the pressure at the source is relatively mild and the flow of migrants as a consequence is within reasonable bounds. The world outside Europe is able to absorb individual migrants by infiltration and there is no need for finding and developing new lands. In abnormal times, however, when there is great economic stress, the trickle of emigration becomes a wild and chaotic stream of flight. In other words, the migrant, multiplied perhaps in the millions, has become the refugee.

In March, 1938, such a condition had arisen in the center of Europe. Pressure, notably in Germany, had reached a fever pitch. Men, women, and children were in flight by the hundreds of thousands. Countries of refuge, that is those countries immediately surrounding the zone of unrest, and countries of final settlement, including the United States, were faced by a common problem of great magnitude, not of their making it is true but which they could not wish away, and it was to meet this problem, as reported last year, that an Intergovernmental Committee was set up in London, with Mr. George Rublee as executive director.

From September, 1938, when Mr. Rublee took up his duties, to January, 1939, when the Director finally went to Berlin, attempts to establish contact with the German Government failed. The conversations initiated with Dr. Hjalmar Schacht were interrupted when his official position with the Reichsbank was severed. Under the ægis of Marshal Goering, conversations were renewed with Mr. Helmuth C. H. Wohlthat. These conversations covered the whole field of migration of minority elements in Germany and, on Feb. 1, 1939, Mr. Rublee received the detailed program which the German Government, acting unilaterally and independently, was prepared to adopt. Germany, it was made clear, was disposed to adopt a policy which would in every way facilitate and encourage the organized emigration of Jews and that, under certain conditions, it would put into effect a program designed to carry out this policy. The essence of the program was the desire of the German Government to emigrate an aggregate of 150,000 persons, consisting of men and single women between the ages of 15 and 45, who were individually capable of earning a living and were otherwise fit for emigration, over a period of three to five years. In addition to this wage-earning group, the German authorities desired that their dependents, estimated to

approximate 250,000 persons, should follow the wage earners when the latter were established and able to receive them. This latter group should emigrate by the normal channel of infiltration.

These desiderata of the German Government were set out in the first section of a German memorandum which dealt generally with the organization of emigration. For instance, it was provided that the organization should be supervised by Jewish bodies in Germany with the aid of foreign experts and that there should be adequate retraining facilities.

The second section of the memorandum dealt with the position of old persons and persons unfit for emigration who would have to remain in Germany and also with the position of those awaiting emigration. In fact, the memorandum outlined an entirely new policy on the part of the German Government in this respect, including a centralization of the administration of Jewish affairs, which at that time were largely handled by local authorities and party leaders, assurances that a Ghetto policy would not be resorted to, further assurances that these persons would have opportunities of employment, and agreement that the responsibility for affording public relief to those unable to work would be assumed by the German authorities.

The third section of the memorandum dealt with financing, specifically with the establishment of an internal trust fund, transfer arrangements, abolition of taxes and other restrictions upon the removal of emigrant property from Germany. In a brief word, Germany was willing to recognize that 25 per cent of the Jewish capital in Germany should be eligible for transfer abroad in order to finance emigration. The wealth eligible for transfer would be set aside and administered by three trustees, one of them a foreigner of recognized standing. The principle of private property would be respected, and it was hoped that the trust fund might be utilized by individuals who would make contributions. It was hoped that the emigrants who received the benefit of purchases out of the principal of the trust fund would be required to obligate themselves to make repayment to the purchasing corporation so that the equity of the original contributors to the fund would be maintained.

The transfer arrangements outlined in the memorandum would involve the purchase in Germany for export, out of the capital of the trust fund, of equipment for emigrants and capital goods for the development of settlement projects. Fundamentally the object was to establish relations on a businesslike basis between the authorities and the trustees of the fund in Germany and such outside settlement agencies as would have to be established to centralize and effect the purchases out of the fund.

While these conversations were in progress the officers, Chairman and Vice Chairmen, of the Intergovernmental Committee conferred in Paris and London, giving Mr. Rublee instructions; and following the conclusion of the conversations in Berlin, the Intergovernmental Committee met at London in February, 1939, and, taking note of Mr. Rublee's report, recommended that the Director should inform the German authorities that the Committee, acting independently, had been, was using, and would use its best endeavors to develop opportunities within the next five years for permanent settlement of involuntary emigrants from Germany within the limits of the laws and prac-

tices of the member governments, and took cognizance of the projected formation of a private international corporation which would serve as an agency for financing emigration from Germany and for maintaining such contacts with the German authorities as might be necessary for this purpose.

The February meeting of the Committee had, too, to consider a reorganization of the bureau in view of the fact that Mr. Rublee did not feel that he could remain absent longer from his private business. The Intergovernmental Committee was fortunate in being able to make an arrangement with Sir Herbert Emerson, the League of Nations High Commissioner for Refugees, whereby he would unite in his person, while the separate existence of the two organizations was maintained, the offices of High Commissioner and Director of the Committee. Sir Herbert Emerson was especially qualified for this post since, as Governor of various provinces in India, including the Punjab, he had organized transfers of population extending into the many hundreds of thousands. Moreover, Sir Herbert had back of him the personnel and machinery of the League Commission and the confidence of the principal governments concerned.

Between February and July the conversations with the German authorities were continued by Mr. Robert T. Pell, Vice-Director of the Committee. The first point that was agreed upon was that the program of the German authorities for the emigration of involuntary emigrants from Germany and the Committee's program for the resettlement of involuntary emigrants, as well as the establishment of the internal trust and an outside purchasing agency, should proceed *pari passu*. Accordingly, Mr. Wohlthat was informed in detail of the efforts that were being made to open up places of settlement and was also told of the conversations that had been initiated between private groups in New York and London looking to the establishment of an external trust or foundation. Mr. Wohlthat then took steps to prepare a draft decree providing for the establishment of the internal trust and a second decree setting up a central Jewish organization inside Germany. The next step, which was to have been taken had not war intervened, was to set up simultaneously the internal trust and the outside foundation, and to appoint the third or foreign trustee of the German internal trust.

In June, as a result of these conversations, Mr. Wohlthat agreed to come to London, where he met Lord Winterton, Sir Herbert Emerson, and the other personalities concerned with the refugee work and the organization of the foundation. Preparation was made for bringing the whole machinery into simultaneous action; September was named as the date. Unfortunately, the war intervened.

Negotiations with the German Government were only one aspect of the work of the Intergovernmental Committee. The Evian conference early sensed the conditions which in broad outline would need to be met to provide a workable basis for refugee activities. As time passed these became further crystallized. There appeared particularly four conditions which were essential if the problem was to be solved: (1) adequate time within which to carry out orderly emigration and settlement; (2) reasonable conditions for those awaiting emigration so that their departure might take place in a well-organized manner; (3) adequate

money for the financing of the emigration and resettlement of migrants, and (4) places in the world where the refugees might be resettled by both infiltration and large-scale settlement. Time, the three to five year period, was assured as a consequence of the conversations with the German authorities. Reasonable conditions for those awaiting emigration were promised by the German authorities. There remained to determine whether adequate funds could be raised and whether there were places where the migrants might be resettled.

To take the last point first, parallel with the conversations with the German Government strenuous efforts were made by private organizations under the ægis of the Intergovernmental Committee to discover new places in the world where refugees might be settled. In the one year, 1938, between 120,000 and 140,000 persons left Germany. A high proportion of these were still in what had come to be called countries of temporary refuge, such as Belgium, the Netherlands, Switzerland, the United Kingdom, and France. Many others had entered places of final refuge, notably the United States, by the normal process of individual migration. Others were awaiting resettlement in such unsatisfactory places as Shanghai. Clearly it was necessary to supplement infiltration by large-scale settlement, and accordingly the governments members of the Intergovernmental Committee were canvassed and opportunities for large-scale settlement were scientifically examined in British Guiana, the Dominican Republic, Northern Rhodesia, and the Philippines. Commissions were sent to these places and reported on the possibilities with varying degrees of enthusiasm. By the end of the year active steps had been taken to organize the projects made possible through the generosity of the Dominican Government and through the generosity of the Government of the Commonwealth of the Philippines. Other possibilities were being explored and a comprehensive program was being worked out under the auspices of the International Co-ordinating Foundation.

The scope of this Foundation, the organization of which was originally motivated by the necessity of setting up an outside purchasing agency to correspond with the internal German trust, was expanded so that when it came into being in July it had as its objectives, first, co-operation with individuals and organizations engaged in improving conditions of persons discriminated against in Germany because of their political or religious beliefs or racial origins; second, co-operation with the Intergovernmental Committee, League of Nations High Commission for Refugees, and any government, authority, body, trustee or other agency or official where, in the opinion of the Foundation, such action was calculated to benefit the refugees inside or outside Germany; third, the promotion of the improvement of conditions of those persons who for one reason or another were unable to leave Germany; fourth, co-operation with individuals and organizations in investigating the facilities for emigration and in conducting negotiations and arrangements for furthering plans of emigration and resettlement. A distinguished Anglo-American group, Jewish and non-Jewish alike, sponsored the Foundation and the management was placed in the hands of a small committee which made arrangements with M. Paul van Zeeland, former Prime Minister of Belgium, to serve as President.

In the meantime the problem of financing emi-

gration and resettlement of refugees was becoming serious. The burden of maintaining, emigrating, and resettling refugees between 1933 and 1939 amounted to over \$75,000,000, which was subscribed exclusively on a private charitable basis. The situation in the early months of 1939 was that private subscriptions were becoming less as the demands were becoming greater, and in addition the necessity for financing large-scale settlement had to be envisaged. It was clear that existing means of financing should be supplemented by fresh measures and the possibility of governmental financing was not ignored. At the July meeting of the Intergovernmental Committee the British Government announced that it was prepared to go into financing of emigration and resettlement on a 50-50 basis with private contributors, provided that other governments would do the same. The matter did not come to an issue because of the outbreak of war.

The concluding chapter of the first year of activity of the Intergovernmental Committee took place, upon the invitation of President Roosevelt, when the officers of the Committee, together with the President of the Co-ordinating Foundation, met at Washington on October 17 for the purpose of canvassing the new situation created by the outbreak of war. President Roosevelt, in an opening address to the officers, differentiated between the short-range problem, which was to emigrate refugees as soon as possible from the neutral countries of refuge such as the Netherlands, Belgium, and Switzerland, and the long-range program, namely that of resettling the many millions of people who might wish to leave Europe in the wake of the war. There was some disposition on the part of the belligerents to contend, in reply, that they were fighting the war precisely in order to put an end to refugee problems and to enable the refugees to return to their homes, but, after discussion, it was agreed that the Committee would do everything in its power to stimulate the investigation of places of large-scale settlement in order to be prepared for every contingency.

MYRON C. TAYLOR.

INTERIOR, U.S. DEPARTMENT OF THE. Harold L. Ickes of Illinois was Secretary of the Interior during 1939, and Harry Slattery was Under Secretary. By the administrative reorganization of July 1 (see under UNITED STATES), the Office of Education (q.v.) and the United States Housing Authority (see HOUSING) were removed from the jurisdiction of the Department of the Interior and transferred to the Federal Security Agency and the Federal Works Agency respectively. The National Bituminous Coal Commission was abolished as such, and its functions were taken over by the Secretary of the Interior. At the same time, the Department took over the Bureau of Fisheries, the Bureau of Biological Survey, and the Bureau of Insular Affairs, consolidating the last-named with the Division of Territories and Island Possessions. In line with the policy of reorganization, Secretary Ickes in December transferred the activities of the Wildlife Division from the National Park Service to the Bureau of Biological Survey and the Bureau of Fisheries; no change in personnel was involved. For expenditures of the Department, see the table under PUBLIC FINANCE. See also separate articles on the following divisions: BIOLOGICAL SURVEY, BUREAU OF; FISHERIES, BUREAU OF; GENERAL LAND OFFICE; GEOLOGICAL SURVEY, BUREAU OF; INDIAN

AFFAIRS, OFFICE OF; MINES, BUREAU OF; NATIONAL PARK SERVICE; RECLAMATION, BUREAU OF.

INTERNATIONAL BANKING AND FINANCE. The outbreak of the European war had a profound effect on world finance. It made necessary the virtual suspension of the tripartite monetary agreement, under which the governments of Great Britain, France, and the United States had been collaborating in the interests of monetary stability. It resulted in the partial destruction of the sterling currency bloc, as most countries outside of the British Empire which adhered to that arrangement abandoned it when Great Britain declared war and imposed foreign exchange restrictions of her own. The war not only witnessed a marked increase in centralized control over finance in the belligerent countries, but it also gave rise to an agreement calling for very close financial and economic co-operation between Great Britain and France which was openly recognized in both countries as a step towards a post-war European economic federation.

Up to the final political crisis which led to the opening of hostilities among the major powers, the course of events in world finance corresponded rather closely to that in the closing months of 1938. Each new war scare, such as that which followed the German occupation of Bohemia and Moravia in March, brought an acceleration of the flight of capital from European countries to the United States, where these nervous funds were added to the enormous total of bank balances already accumulated here for European account. France, however, which was enjoying a recovery at the end of 1938 following the adoption of the Reynaud program for reducing government expenditures and liberalizing economic and social legislation, witnessed a further heavy repatriation of capital during the first half of the year. As a result, not only was it possible to increase the resources of the Bank of France through the transfer of 10,000,000,000 francs in gold from the Equalization Fund, but the gold holdings of that fund increased by leaps and bounds nevertheless to upwards of 17,000,000,000 francs by August. This heavy repatriation of capital from abroad facilitated the financing of the French government's deficit, and even permitted some refunding of maturing obligations at a reduced interest cost.

During the period preceding the final war scare, the pound sterling was pegged at \$4.68, the Equalization Account losing large amounts of gold in the process. In April, exports of gold from the United Kingdom to the United States were almost \$385,000,000, and they exceeded \$300,000,000 in May. Thereafter, the loss of gold by Great Britain was considerably smaller, although this was offset to some extent by shipments of earmarked gold from Canada to the United States.

Japan found it necessary to ship additional large amounts of gold to the United States to pay for her heavy purchases of needed materials and supplies, owing to the costly war in China. Although gold production in Japan and Japan-controlled territory on the mainland of Asia aggregated not much over \$60,000,000, Japan's gold shipments to the United States exceeded \$160,000,000. As a result, gold holdings of the Japanese stabilization fund declined to an alarming extent, making necessary the imposition of additional import controls

which forced the curtailment of operations in some industries dependent upon foreign raw materials. Japanese nationals were compelled to register all personal gold holdings, but they were not required during the year to sell these to the government, although they were encouraged to do so voluntarily. By limiting the consumption of other textiles, through government restrictions, the demand for silk within Japan increased sharply and a shortage of this fiber developed which caused the price to rise above \$4 a pound by the end of the year, but this did not provide sufficient additional dollar exchange to relieve the foreign exchange shortage.

War Finance. The British authorities withdrew financial support of sterling on August 25, and the quotation in New York declined to \$4.42 on that day. Shortly after the declaration of war in September, the Bank of England fixed official buying and selling rates for the dollar, which were \$4.04 and \$4.02, respectively, during the final months of the year. These rates were available, however, only for approved transactions, the British authorities permitting sterling to find its own level in other markets. An active free market for pounds which the Bank of England would not purchase, or which were not offered for sale in London for other reasons, developed in New York, where the rate fell as low as \$3.75 in September, but fluctuated between \$3.90 and \$4.00 for the balance of the year.

Currencies of most British Empire countries, France, Paraguay, Uruguay, and Japan declined with sterling. Canada, as usual, held her currency between the American dollar and the British

pound, as did Denmark and Finland. On the other hand, Holland, Belgium, Switzerland, and Argentina, as well as Norway and Sweden, ceased to base their currencies on sterling, and tied their monetary units more closely to the dollar. Japan also, near the close of the year, indicated that she would seek to tie the yen to the dollar rather than to sterling thereafter.

The belligerent countries, confronted with the task of raising huge sums to finance the war, imposed a large number of new financial controls. Capital exports were prohibited, and those who owned balances or securities abroad were compelled to register them so that the government was in position to take these resources over if needed to finance war-time imports. Very strict foreign exchange and foreign trade control was put into effect, and a number of commodities were subject to rationing. Every effort was made to prevent domestic commodity price inflation by increasing taxes and by selling bonds to small as well as large investors in order to reduce their purchasing power for consumption goods. In Great Britain, a special series of government obligations was created for sale to wage and salary earners, and the government from the start held that "business as usual," the motto of the early years of the World War, was inadmissible this time. The magnitude of the financial task before the allied governments was indicated when, before the Finance Committee of the French Senate, it was estimated in December that total government expenditures during 1940 would aggregate some 300,000,000,000 francs, of which about 220,000,000,000 francs would have to be borrowed. By comparison, it

may be noted that at the beginning of 1939 the French national debt was 549,000,000,000 francs.

Neutral countries imposed similar restrictions of their own in varying measure, especially those near the theater of war. The outbreak of war was less disturbing to totalitarian nations, since they already had such restrictive measures in effect before the beginning of hostilities. Latin American countries were confronted with a difficult exchange problem at the outbreak of the war, since they had been obtaining a considerable part of their manufactured goods requirements under clearing agreements with Germany, in exchange for raw materials that they produced. It proved necessary to tighten exchange restrictions in most of these countries to prevent a disturbing increase in imports from the United States, which would have to be paid for with dollars.

The highly significant Franco-British currency agreement, to remain in effect during the war and for six months thereafter, was made public on December 12. This fixed the quotation of the French franc at 176½ francs to the pound, and provided for the clearing of transactions between Great Britain and France so as to avoid gold shipments between the two countries. In addition, it was provided that neither nation would borrow abroad without the approval of the other, and that foreign loans obtained would be divided on the basis of 60 per cent to Great Britain and 40 per cent to France. Furthermore, they agreed to share equally between themselves all outlays in dollars and gold required because of the war, and to keep in close contact with each other in the formulation of their internal price policies.

The movement of foreign exchange rates during 1939 is shown in the table on p. 369.

Central Banking Policies. Central banks in belligerent countries were chiefly concerned with making available to their governments their gold reserves to facilitate the purchase of needed supplies abroad. On Sept. 6, 1939, the Bank of England transferred virtually all its gold stock of £279,000,000 to the Exchange Equalization Account, which thus came into possession for the first time of the entire monetary gold reserve of the country. When supplemented by the gold already held by the Equalization Account and foreign bank balances and securities registered with the British government, Great Britain was found to possess some \$3,500,000,000 of readily available assets to pay for purchases abroad. France, it was estimated, possessed a somewhat larger total that could be used similarly, and all British and French Empire countries some \$8,500,000,000. Needless

to say, the Allies planned to utilize these balances freely only in case of real need, as they constituted a reserve that could not be replenished readily, since loans from the United States are barred by both the Johnson Act and the Neutrality Act.

The Bank of France was much less affected by the outbreak of the war than the Bank of England, since it retained possession of its gold reserve. Advances to the French government, however, increased by 50 per cent to over 30,000,000,000 francs during the first three months of the conflict. In Germany, the chief change in the statement of the Reichsbank due to the war was a sharp rise in note circulation to almost 11,000,000,000 marks by the end of November, which corresponded with a sharp increase in holdings of Treasury bills of that institution.

Interest rates rose in virtually all countries with the outbreak of the war, but central banks sought to keep their money markets easy, and by the close of the year the trend of interest rates once again was generally downward. The Bank of England raised its discount rate on August 24 to 4 per cent, but on October 26 it was reduced from 3 to 2 per cent and remained at that level for the rest of the year. The Bank of France kept its discount rate at 2 per cent during the year and the Netherlands Bank, which raised its rate from 2 to 3 per cent on August 29, kept it at that level for the balance of the year. High interest rates were not regarded as needed to check inflationary tendencies, since direct economic control measures were preferred as being more effective.

Fluctuations in the gold reserves of central banks and governments during 1939 were as shown in the table below.

For par value of foreign currencies, see CURRENCIES, VALUE OF FOREIGN.

JULES I. BOGEN

INTERNATIONAL CHAMBER OF COMMERCE. An international federation of business organizations and business men, established in 1920 as a successor to the more loosely organized International Congress of Chambers of Commerce, which had met at intervals of two years for a considerable period before the World War. It has a membership of industrial, trade, financial, and insurance associations, chambers of commerce, shipping and transportation organizations, as well as an associate membership of individual business companies and business men in 54 countries.

Through 1939 the organization has held ten general congresses—London, Rome, Brussels,

* Data reported monthly incomplete since certain central banks and governments, and stabilization funds of France, Netherlands, Switzerland, and Japan, hold gold that is not reported. ^b Transferred: from Bank to Account, \$1,648,000,000 on January 6, and \$1,162,000,000 on Sept. 6, 1939; from Account to Bank, \$26,000,000 on March 1, and \$94,000,000 on July 12, 1939. Figure shows Bank of England only. ^p Preliminary.

Stockholm, Amsterdam, Washington, Vienna, Paris, Berlin, and Copenhagen, the Copenhagen Congress in June, 1939, being attended by more than 1000 delegates. The congresses declared policies relating to trade barriers, and the urgent need of sound commercial policies and adequate facilities for carrying on international business. The recent program has dealt primarily with governmental trade restrictions, and advocacy of international monetary stabilization. On these subjects the Chamber and the Carnegie Endowment in 1936 and 1937 collaborated in a comprehensive series of studies by experts.

The Chamber voted to continue its work when war broke out in Europe in 1939—its most important committee being one of "Inquiry for Economic Peace." There are committees covering industry, distribution, many aspects of foreign commerce, transportation, communications, finance, and various legal questions.

The President for 1939-41 is J. Sigfrid Edstrom, Swedish industrialist, Stockholm. Though certain activities are carried on at the Chamber's building in Paris, 38 Cours Albert Premier, the official headquarters address for duration of the war was designated as 9 Vastra Tradgardsgatan, Stockholm, Sweden. Eliot Wadsworth of Boston is Chairman of the American Committee; Winthrop W. Aldrich of New York is American Vice President. The office of the American Section is at 1615 H Street, N.W., Washington, D. C., Chauncey D. Snow, Manager.

INTERNATIONAL GEOLOGICAL CONGRESS. See GEOLOGY.

INTERNATIONALISM. See INTERNATIONAL LABOR ORGANIZATION; INTERNATIONAL RELIGIOUS MOVEMENTS; PEACE.

INTERNATIONAL LABOR ORGANIZATION. A permanent diplomatic and administrative association, having in its membership 56 nations of the world, including the United States.

The objectives of the Organization are the improvement of labor conditions within the member countries. The machinery of the Organization consists of an annual *Conference* of representatives of the member nations, and an *International Labor Office* controlled by a *Governing Body*, the latter consisting of 32 persons, 16 of whom represent the governments, 8 the employers, and 8 the workers, meeting quarterly.

The annual Conferences draw up *draft conventions* and *recommendations* affecting industrial conditions which are presented to the competent authorities in each member nation for ratification or adoption. Up to December, 1939, the Conference had adopted 67 Draft Conventions, and 865 ratifications had been registered. The International Labor Office, which is situated at Geneva, Switzerland, acts as a secretariat for the annual conference and as a bureau for the collection and dissemination of information bearing on the problems of labor and industry.

Four Draft Conventions were adopted by the International Labor Conference in June, 1939. These relate to the protection of native laborers in the matter of contracts of employment; arrangements for the eventual abolition of penal sanctions for breaches of contract of employment by indigenous workers; the protection of migratory workers with respect to recruiting, placing and conditions of labor; and regulation of hours of work and rest periods in road transport. The last mentioned Convention establishes a basic 8-hour day and 48-hour week for all persons who

are employed in commercial motor transport.

From December, 1938 to December, 1939 member countries registered 30 ratifications of I.L.O. Conventions. The United States in 1938 ratified 5 maritime Conventions relating to officers' competency certificates, intended to promote safety at sea;—minimum age of 15 years for employment of young persons at sea; liability of shipowners for the care of sick and injured sailors, representing a form of sickness and accident insurance for seamen; and hours of work and manning, establishing, with certain exceptions, a basic 8-hour day for seamen. Legislation to implement the legislation on officers' certificates of competency was enacted by Congress in 1939.

Since the United States joined the International Labor Organization, full tripartite delegations—representing government, employers, and workers—have been sent to every I.L.O. Conference. A Technical Conference to inquire into problems of the textile industry was held in Washington, D. C. in 1937. Regional Conferences of American States Members of the International Labor Organization were held in Santiago, Chile in 1936 and in Havana, Cuba in 1939. A citizen of the United States, Honorable John G. Winant, was elected the Director of the International Labor Organization in 1938, taking office January, 1939. Three other United States' citizens are at the present time on the Governing Body:—Honorable Carter Goodrich, U.S. Government representative, chairman; Henry I. Harriman and Robert J. Watt, elected by the employer and worker delegates respectively. Acting Director of the Washington Office is Ethel M. Johnson, 734 Jackson Place, Washington, D. C. See LABOR CONDITIONS.

INTERNATIONAL LAW. (See also LAW; LEAGUE OF NATIONS; WORLD COURT.)

GENERAL

In view of the widespread upheaval and tension of the year, it is not strange that articles in this field are in a pessimistic vein. Such are:

"The Rule of Law and the Disintegration of International Society," *Am. J. of Int. L.*, XXXIII, 56 (Georg Schwarzenberger); "The Outlook for International Law," *ib.* 105; (C. G. Fenwick); "International Law and Lawless Nations," *ib.* 743 (id.). Others are: "International Law and 'Public Order,'" *ib.* 545 (C. Eagleton); "*L'Idée d'Évolution, la Société internationale et le Droit des Gens*," *Revue Générale de Droit International Public*, XIII, 9 (G. Vedel); "*Les Bases idéologiques de la Nouvelle Conception de Droit International de M. A. Verdross*," *ib.* 37 (E. Engelberg); "What of International Law?" *U.S. L. Rev.*, LXXIII, 437 (R. E. Ireton); "*Traité sur les Fonctions Internationales des Consuls*," (Paris, 1937), by J. Irizarry y Puente. ("Nothing comparable since the Mülwitz treatise of over a century ago," *Am. J. of Int. L.*, XXX, 411). Consuls are also discussed in *L. Soc. Jnl.*, VIII, 427 (E. R. Sachs).

Conferences, Congresses, etc. Echoes of the Lima Conference (1938 YEAR BOOK, 565) are noted in *World Affairs Interpreter*, X, 9 (G. Stuart); "*Revue Internationale Française, au Droit des Gens*," VII, 133 (J. M. Yelves); "*Revista de la Facultad de Ciencias (etc.) de Guatemala*," I, 430; *Am. J. of Int. Law*, XXXIII, 257 (C. G. Fenwick); *A.B.A. Jnl.*, XXV, 210 (B. Colby). The Cairo Telecommunication Conferences are discussed in *Air L. Rev.*, X, 298 (F. C. De Wolf). On February 20-22, representatives of the Balkan nations at Bucharest and of the Scandinavian states at Helsinki, considered subjects of mutual interest. Bulgaria and Hungary were not represented at the former, but their territorial demands were on the agenda . . . The 11th Universal Postal Union Congress opened at Buenos Aires on

April 1 and sat for seven weeks. Among its results was a new postal convention (treaty) to replace that of Cairo which expired July 1. Meanwhile Argentina had promulgated, and Siam adhered to, the old treaty. Germany, Italy (with San Marino), Hungary, and Spain withheld adhesion to the new treaty because it retains Czechoslovakia as a member of the Union. The 25th session of the International Labor Conference opened at Geneva on June 8 under the Presidency of Dr. Edmond Schulthess, Swiss Federal Councillor. Countries represented numbered 45, with 154 delegates and 198 advisers. On the agenda were six questions, upon four of which recommendations were adopted and conventions drafted.

On July 18, anniversary of Uruguayan independence, and in the semi-centennial year of the first Pan-American Conference, which marked a new era for the hemisphere, delegates from the six southernmost and westernmost South American nations met at Montevideo to revise the treaty framed there a half century earlier. On September 23 a Pan-American Neutrality Conference, composed mainly of the foreign ministers or their representatives of the 21 American nations, opened at Panama City (thus realizing a dream of Bolívar) and sat until October 3 (see PAN-AMERICANISM). Some delegates considered the "Declaration" which resulted, a complement of the Monroe Doctrine (see *Am. J. of Int. L.*, XXXIII, 257).

PUBLIC

Territory. "The Aaland Islands Question" is treated exhaustively in *Am. J. of Int. L.*, XXXIII, 465 (Padelford & Anderson of the Fletcher School of Law and Diplomacy). Soviet demands concerning the islands have been asserted since. "Arctic Sectors" are discussed (*ib.* 518) by J. S. Reeves, who urges prompt assertion of the American claim "upon the basis of Byrd and Ellsworth's work." Byrd's latest expedition is equipped for something approaching colonization, which the State Department considers indispensable to support the claim. Ellsworth suggests "American Highland" as a name for the 81,000 square miles which he surveyed from a plane. A formal agreement (*ib.* 522) for 50 years of joint occupation by the United States and Britain of the two coral isles in the South Pacific, previously occupied under a provisional arrangement (1938 YEAR BOOK, 344) was effected on April 6. Nicaragua's new constitution, reaffirming the colonial boundary of 1821 instead of that fixed by the King of Spain in 1906, upon which Honduras insists, has revived a controversy which is being considered by the mediation boundary commission. Chinese sovereignty over Outer Mongolia is claimed in *Am. J. of Int. L.*, *ib.* 452 (L. Nemzer). "Extraterritoriality in China," is discussed in 89 *China Weekly Rev.*, 292 (C. S. Lobingier); *Cal. State Bar Jnl.*, XIII, 5 (H. D. Hoover). In *Chung Chi Cheung v. The King*, 55 *Law Times Rep.*, 184 (*Am. J. of Int. L.*, *ib.* 376), the British Privy Council rejected the view that a ship is a "floating island," held that "a public ship in foreign waters is not . . . territory of her own nation" and affirmed the conviction by a Hong Kong court of a British subject for murder committed on a Chinese customs vessel in British waters. A noteworthy feature of the opinion is its adoption of the discussion "by that great jurist, Ch. J. Marshall, in *Schooner Exchange v. M'Fadden*, 7 Cranch, 116 (1812), a judgment which illumined

the jurisprudence of the world." The British decision is criticised by Th. Baty (*Am. J. of Int. L.*, *ib.* 662) for having gone "beyond the necessities of the case."

Waters. Waters have acquired a new importance in the present European war, owing to the far-flung activities of submarines and the desire of neutrals to keep them from their coasts.

"Extending the Marine Zone" is discussed in *Columbia L. Rev.*, XXXIX, 317; "Fishery Control Beyond Three Miles," *Wash. L. Rev.*, XIV, 91; "Louisiana's Maritime Belt," *Tulane L. Rev.*, XVIII, 253 (J. A. Loret); "Diversification of Waters Affecting the United States and Mexico," *Tex. L. Rev.*, XVII, 27 (J. Simsarian).

Treaties. In the "Changing Field of International Law," *Am. J. of Int. L.*, *ib.* 337 (G. G. Wilson), the increasingly specific nature of treaties is noted and their extension "to novel, related topics." "Executive Agreements," as distinguished from treaties, are considered in *la. L. Rev.*, XXIV, 67; *Detroit L. Rev.*, VIII, 23 (W. H. Simpson). "Treaty Relations of the British Commonwealth of Nations," (N. Y., 1939) by Robert B. Stewart, "gives the *coup de grace* . . . to the doctrine that there still remain matters in which the United Kingdom may, by treaty, bind a Dominion without its consent." (P. E. Corbett in *Am. J. of Int. L.*, *ib.* 807.) Cf. *De la Compétence du Canada pour conclure les Traités internationaux*, *Revue Générale de Droit International Public*, XII, 658 (A. B. Elkin).

Commercial Pacts. On November 6 a trade agreement between the United States and Venezuela, the twenty-second under the Reciprocal Trade Act (1937 YEAR BOOK, 344) and the eleventh with a Latin American nation, was signed at Caracas. It reduces by 50 per cent the duties on 35 items exported to Venezuela and the tax on oil imported from there. Negotiations with Uruguay, Argentina, and Chile are also announced, which would leave but six Latin American nations without such treaties. A movement to prevent extension of the Trade Act, which expires on June 12, 1940, was under way. Other trade pacts were signed as follows: Germany-Turkey, January 15; Italy-Soviet Russia, February 7; France-Yugoslavia, February 10; Germany-Italy, February 13; France-Germany, February 15; Germany-Uruguay, February 21; Brazil-United States, March 8-9; France-Rumania, April 1; France-Poland, April 21; Germany-Rumania, April 23; Slovakia-Poland, April 25; Germany-Lithuania, May 20; France-Poland, May 24; China-Soviet Russia, June 16; Bulgaria-Italy, June 20; Britain-Rumania, July 12; Germany-Japan, July 28.

The United States-Japan treaty (chiefly commercial) of 1911 authorizes either power to terminate it upon six months notice. That option was exercised by the United States on July 25. It was expected that negotiations for a new treaty would open in January, 1940 and meanwhile the U.S. Ambassador to Japan has notified the latter that no such treaty will be accepted by the former which fails to safeguard American rights in China and prevent repetition of the frequent violations thereof.

Non-aggression Pacts: Denmark-Germany, June 2; Estonia-Germany, June 8; Germany-Latvia, June 8; Colombia-Venezuela, December 17.

War. The year closed with International wars waged on a colossal scale on two continents and naval warfare throughout "the seven seas." See EUROPEAN WAR. Naturally the "law of war" became a favorite topic for the publicists.

A "Bibliography on Aggression" by Clyde Eagleton, covers 13 pages of the *Am. J. of Int. L.* (XXXIII, 831-843); "Evolution of the Concept of the Just War," *ib.*, 665 (J. von Elbe); "Précis de droit maritime pour le temps de guerre," (Paris, 1937), by Raoul Genet, "an avowed positivist," is pronounced a "valuable addition to the extensive literature of the subject" (*Am. J. of Int. L.*, *ib.*, 794).

Neutrality. Under date of May 1, the Harvard Law School Research in International Law released for publication its draft conventions on three subjects, one of which was Neutrality, covering 114 articles and making a bulky volume (*Am. J. of Int. L.*, *ib.* sec. 2, No. 3) of over 600 pages. Little attention seems to have been paid to this elaborate instrument by Congress. (See NEUTRALITY.) Neutrality is discussed in *Yale L. Jnl.*, XLVIII, 37 (E. M. Borchard); *U. of Kan. Cy. L. Rev.*, VII, 109 (H. J. Morgenthau); "The Neutrality Bill," *Georgetown L. J.*, XXVIII, 82 (W. J. Deem).

Prize Law. On October 11, the U.S. freighter, *City of Flint*, en route to Glasgow, was seized in the Atlantic by a German warship, alleging contraband cargo (which the captain denied) and taken, ultimately to the Soviet port of Murmansk. The United States government, on the authority of *The Appam*, 243 U.S. 124 (1917) demanded its release by the Soviet government, which, instead, allowed the Germans to convoy her to Haugesund, Norway, where the German crew was interned and the ship returned to her American owners, who continued to Bergen, unloaded and sold her cargo. A protest by the German government was formally rejected by Norway, but the former later announced that the ship would be unmolested in returning, which she planned to do early in 1940. Argentina and Uruguay interned several German ships, including the *Graf Spee* (destroyed by its crew on December 17) found in neutral waters.

The *German Prize Court* held its first session at Hamburg on December 14. President Rothenberger claimed for it independence and impartiality in applying international law. Of the ships involved in cases heard the first day, one (Estonian) was released and two (Swedish) were confiscated. "Visit, Search and Seizure on the High Seas" (N. Y. 1938) by J. L. Frasconá, proposing "a new code of prize law," is critically reviewed in *Am. J. of Int. L.*, XXXIII, 624 (T. Baty).

PRIVATE

Niboyet, *Traité de Droit International Privé Français* (Paris, 1938), vols. i, ii, treats this branch under (1) Nationality and Domicil, (2) Status of Aliens (Natural and Juridical), (3) Conflict of Laws. *Domicil* is the underlying subject of both prevailing and dissenting opinion in *Texas v. Florida*, 306 U.S. 398, involving the *situs* for taxation of the estate of the late Col. E. H. R. Green (1938 YEAR BOOK, 401) where, though he had various "residences," his domicil was found to be in Massachusetts.

Claims. In *United States* (on behalf of others) v. *Germany* ("Black Tom" and Kingsland cases), *Am. J. of Int. L.*, XXXIII, 770, the Mixed Claims Commission, by its Umpire (Supreme Court Justice Roberts) and the U.S. Commissioner (Garnett), on June 15, set aside its decision of 1930 (which absolved Germany upon the "industrial accident" theory) as having been obtained by fraud and perjury, and rendered awards in favor of the American claimants. The German Commissioner had written a letter to the Umpire accusing

him of bias and withdrawing from the case, and it was later announced that Germany would not "recognize" the award; but the U.S. Treasury has a German deposit account of about \$20,000,000, besides bonds, which however are of doubtful collectibility, and a substantial percentage of the original claims, aggregating \$22,500,000, with more than 20 years' accrued interest, may thus be paid. In a history of the cases (*A. B. A. Jnl.*, XXV, 845), J. C. Fehr, once counsel before the Commission, declares this "the greatest arbitration . . . of pecuniary claims."

The new Salvadorean Constitution provides that an alien who appeals against the government, through diplomatic channels except for "denial of justice," may lose his right of residence in the country and that such denial may not be inferred from the rendition of an unfavorable judgment.

International Claims are discussed in *Federal Bar Ass'n. Jnl.*, III, 205 (G. S. Knight); "Against the Soviets," *N. Y. U. L. Quar. Rev.*, XVI, 253 (A. N. Sack); "Evidence Before International Tribunals," *Arbitration Jnl.*, III, 155 (L. D. Egbert); Sandifer, "Evidence Before International Tribunals," (Chicago, 1939).

Conflict of Laws. In General: Power of Appointment and, *U. of Pa. L. Rev.*, LXXXVII, 403 (J. Mulford); The Characterization Problem, *Harv. L. Rev.*, LII, 747 (A. H. Robertson); Public Policy (Pa.), *Temple U. L. Quar.*, XIII, 216 (S. S. Asher, Jr.); *Va. L. Rev.*, XXV, 37 (G. Husserl).

RENVOI, *U. of Pa. L. Rev.*, LXXXII, 34 (T. A. Cowan); *ib.* 257 (E. N. Griswold); *Canadian Bar Rev.*, XVII, 369 (J. D. Falconbridge); *Revue de Droit International*, etc., XX, 167 (J. Donnedieu de Vabres).

CONTRACTS (International). The Choice of Law by Parties to, *U. S. L. Rev.*, LXXIII, 203 (M. Wolff); *La. L. Rev.*, I, 695 (C. W. Taintor); *S. Cal. L. Rev.*, XII, 335 (J. M. Cormack).

DIVORCE, *Ky. L. Jnl.*, XXVII, 106 (J. H. Goad); *ib.* 109 (B. T. Moynahan, Jr.); *G. W. L. Rev.*, VII, 648 (L. Fletcher, Jr.); *Mo. L. Rev.*, IV, 268 (R. A. Leflar); *Fordham L. Rev.*, VIII, 80 (New Trends); *V. Vreeland, Jr.*; *Ill. L. Rev.*, XXXII, 412 (J. S. Strahorn, Jr.).

PROOF, *Mo. L. Rev.*, IV, 299 (J. P. Hamshaw).

PROPERTY, *Harv. L. Rev.*, LII, 1246 (W. W. Cook); *U. of Pa. L. Rev.*, LXXXVII, 700 (C. P. Hine); *Georgetown L. Jnl.*, XXVII, 968 (A. P. Crenshaw); "Succession of Personality," *Yale L. J.*, XLVIII, 1443.

COPYRIGHT, "International Protection of Literary and Artistic Property," (2 vols., 1938, by Stephen P. Ladas); "a complete treatise on American copyright law is set forth in less than 200 pp." and it is shown to be "an integral part of copyright law throughout the world," *A.B.A. Jnl.*, XXV, 572 (L. D. Taggart); "Copyright Protection: The Battle over *Mein Kampf*," *Neb. Law Bull.*, XVIII, 257; "A Consideration of Copyright," *U. of Pa. L. Rev.*, LXXXVII, 932 (H. B. Umbreit); "Copyright" *Notre Dame Lawyer*, XIV, 343 (symposium of three papers, Messrs. Solberg, Spencer & Stone and O'Malley); "Statutory Restriction on Copyright Enforcement," *Air L. Rev.*, 206 (reprinted, *The Lawyer*, III, 17), E. E. Nobleman.

Copyright was discussed at the Montevideo Conference (*ante* p. 372). A majority of the delegates approved the practice of "lifting" material from any publication without payment, and merely by naming it. Delegates from Argentina and Paraguay opposed this; one of them declared it "legalizing literary piracy."

Property. On March 10 the Bolivian *Tribunal Supremo* sustained a two-year-old decree of the La Paz *de facto* government, forfeiting the \$17,000,000 investment of the New Jersey Standard Oil Company, and on December 2, the Mexican *Tribunal Supremo*, in an unanimous decision, upheld the constitutionality of the Presidential decree of Mar. 18, 1938 (1938 YEAR BOOK, 453,

5649), expropriating the properties of 17 oil companies (American, British, and Netherlands), valued at some \$400,000,000. The Court denied company ownership of the subsoil, or the right to reimbursement for future profits; but recognized the right to compensation "within 10 years," from *proceeds of the government's operation of the company properties*, and the return of papers and money seized during the proceedings. The United States State Department had previously demanded full indemnity. Three days after the decision, it was reported that some 5000 acres of the Taylor estates (American) in Jalisco had been similarly expropriated. The general subject is discussed in *A.B.A. Jnl.*, XXIV, 813 (F. R. Coudert); *Cal. St. Bar Jnl.*, XIII, 27 (J. M. Sheridan); *Nat. Lawyers' Guild Quarterly*, I, 367, II, 32 (A. C. Weinfeld).

C. SUMNER LOBINGIER.

INTERNATIONAL PENAL AND PENITENTIARY CONGRESS. See PRISONS, PAROLE, AND CRIME CONTROL.

INTERNATIONAL RELIGIOUS MOVEMENTS. Because of the somewhat complex organizational relationships of the American Section of the Life and Work Movement—usually spoken of as the Universal Christian Council—it is necessary to point out that it is now a transitional period in that the Council will become a commission of the World Council of Churches at the time of the first world assembly in 1941 of that newly formed organization, which likewise embraces the present World Conference on Faith and Order.

In January the Archbishop of York, as chairman of the Provisional Committee of the World Council, called a meeting in Paris for the furtherance of the work. Drs. Stevenson, Cavert, Leiper, Mott, and Van Dusen were representatives from America. The Paris meeting decided to call the first Assembly of the World Council in 1941; projected a special conference of experts on the European crisis, to see if anything could be done to avert the impending war; approved plans for a world preaching mission; set up committees of consultation and co-operation jointly with the World Alliance for Friendship Through the Churches and the International Missionary Council; arranged for the opening of a London office under the care of Dr. William Paton; reviewed the program of study for the research department of the Universal Christian Council at Geneva and the Theological Commission of the Faith and Order conference at Oxford; reviewed arrangements for the World Conference of Christian Youth at Amsterdam (held under the joint auspices of the World Council and other ecumenical bodies), and appointed a new secretary to deal particularly with the problem of co-ordinating Church efforts to care for Christian refugees from Germany, in particular pastors (more than forty of whom subsequently got out of Germany, many from concentration camps, through the untiring efforts of the Bishop of Chichester, chairman of the Executive Committee of the Universal Christian Council).

The Conference of Christian Youth, held at Amsterdam was made up of youth averaging about 25 years of age, and demonstrated in many ways the growing of at least a nucleus of a consciously universal Christian fellowship. The organizing secretary of that gathering of 1700 from over 70 nations was Edwin Espy, youth executive

jointly of the Universal Christian Council and the World Alliance for International Friendship Through the Churches. The chairman of the conference committee was Dr. Henriod, former General Secretary of the U.C.C. and the conference chairman was Dr. Bissert 't Hooft, General Secretary of the World Council's Provisional Committee.

The report of the Geneva Conference on "The Churches and the International Crisis" has been characterized as the most valuable report produced by the joint work of ecumenical leaders in modern times. To its making statesmen, economists, international experts, theologians, and educators contributed. It outlines the causes of war, the continuing responsibilities of the Churches, the immediate task of the Churches, and the duties of Churches in times of war. Since Chinese and Japanese, French and German, Orthodox and Roman Catholic, Europeans and Americans participated, it took on a universal character not hitherto attained in any similar study.

In July, the Administrative Committee of the World Council met in Zeist, Holland. It approved for circulation to the churches of the world the report of the experts' conference in Geneva on the Churches and the International Crisis, authorized the holding of the first World Assembly in the United States, if possible in 1941, elaborated plans for the World Preaching Mission, selected the theme of *The Church's Witness to the Modern World* as the one to be featured by the first World Assembly, heard reports of the favorable action of more than 50 denominations on the invitation to join the Council, and discussed certain procedures to be followed in keeping the churches in contact with one another, if war should come, as then appeared inevitable.

Following the European meetings there was held in New York City on October 4 a joint meeting of the American Sections of Life and Work and Faith and Order, at which Dr. William Adams Brown (for some time chairman of the Universal Christian Council) was elected as successor of the late Dr. J. Ross Stevenson as Chairman of the Joint Executive Committee which carried on the American Sections during the year. The meeting approved the continuation of the administration of the work on the joint basis and discussed the work of the ecumenical movement in wartime, although at that juncture it was too soon to make final decisions as to the form our co-operation must take.

At Geneva the Information Service has been expanding through recent years and now reaches a very large number of papers throughout the world with reliable and comprehensive news concerning the churches and their various activities. Service for refugees is carried on by the central organization and its branches. Four hundred scholars have been enlisted in the development of studies growing out of recent ecumenical conferences, and the quarterly *Christendom*, owned by the Joint Executive Committee in New York and which circulates among church leaders throughout the world. In July, a statement of religious principles in world affairs adopted by 290 Protestant, Roman Catholic and Jewish leaders and released by the Rt. Rev. G. Ashton Oldham, President of the American Council of the World Alliance embodied six principles of peace. The tasks for religious action were declared to be:

First, there is the task of opposing war as an instrument of national policy. Men and women of goodwill in

all countries should reaffirm the conviction that international problems can be solved by peaceful methods alone. The aftermath of war is economic, social, and moral disintegration.

Second, the religious man can make an immediate expression of goodwill in a world of conflict by giving humanitarian aid to the victims of oppression and aggression.

Third, it is necessary to oppose the hatreds and prejudices which breed wars. Religious people should reaffirm the solidarity of all peoples. Racial or religious discrimination and intolerance are incompatible with genuine goodwill.

Fourth, there is need to oppose injustice to nations and to groups within nations, for injustice is directly or indirectly a major cause of war. The claims of individual states must be settled in accordance with the rights of all peoples. They should be adjusted on the basis of needs, not on the basis of power. Peace is a by-product of righteousness.

Fifth, men of goodwill should work for adequate peace machinery as the prerequisite to the pacific settlement of disputes. There will be anarchy just so long as sovereign states claim to be the sole judges of disputes in which they are involved.

Finally, being concerned with the welfare of all peoples, we need to oppose direct or indirect support of those governments which do engage in war as an instrument of national policy. Aggression must be opposed wherever it is threatened or manifested. To furnish the sinews of war to aggressor states is a grave injustice, not only to the immediate victim of aggression, but to all peoples, because such aid encourages new aggressions and the spread of war. Religious groups should, we believe, urge upon their peoples and governments that the price of peace includes the refusal to profit from war by economic participation in aggression.

The twenty-fourth Annual Meeting of the World Alliance for International Friendship through the Churches was held in New York, November 10. The Rt. Rev. G. Ashton Oldham, Bishop of Albany and President of the American Council of the World Alliance, presided and gave the opening address. The other speakers were Mr. Thomas J. Watson, President of the International Business Machines Corporation; Dr. Ralph W. Sockman, Pastor of Christ Church, New York, and Vice-President of the Church Peace Union; Mrs. Vera Micheles Dean, Research Director and Editor of the Foreign Policy Association, and Dr. William Pierson Merrill, President of the Church Peace Union.

CLINTON ROGERS WOODRUFF.

INTERSTATE COMMERCE COMMISSION (ICC). The Interstate Commerce Commission, established by act of Congress in 1887, is the oldest regulatory agency of the Federal Government. The carriers subject to its jurisdiction transport the greater part of the freight and commercial passenger traffic in the United States. Created originally for the purpose of improving conditions affecting railroad transportation, it has also for many years exercised certain powers over water carriers engaged in rail-water transportation in connection with railroads as well as pipe lines. Since 1935 the Commission has been charged with the regulation of motor carriers.

The changed conditions which have almost revolutionized land transportation in the past quarter of a century have had an important effect on the Commission's work. Railroad mileage in the United States increased steadily until 1916 and since that year has slowly declined. The figure for 1938 was almost exactly the same as that for 1909. In 1939 the Commission authorized the abandonment of about 2000 miles of line, offset by authorized new construction of only 29 miles. Since 1935 nearly 100,000 motor-carrier operators have sought operating authority

under the motor-carrier act, and the Commission's identification plate appears on 234,215 motor vehicles. Of these 32,498 were issued in 1939.

A considerable part of the Commission's routine work in 1939, as in former years, had to do with the regulation of railroad rates, the authorization of securities issued by railroads, the collection and publication of statistics relating to railroads and other carriers, enforcement of statutes for the promotion of safety in railroad operation, and the discovery of violations of criminal and penal statutes intended to prevent illegal practices on the part of shippers and carriers.

The extraordinary number of bankrupt railroads in recent years has added to the work of the Commission, which under the bankruptcy act must approve plans for the financial reorganization of such railroads. In 1939 the Commission approved reorganization plans for seven class I railroads and a similar number of railroads of other classes.

The Commission's work in the regulation of motor carriers has passed beyond the initial stage, which was occupied chiefly with applications for operating rights. The emphasis has now shifted to safety, enforcement, and rates. Rules have been prescribed concerning safety and insurance, and revised tariff rules to facilitate ascertainment of applicable rates have been prepared and are under consideration. Safety inspectors have been added to the field staff, who, in co-operation with representatives of State governments, are engaged in educating motor carriers in methods of operation designed to reduce highway accidents and secure compliance with the Commission's safety regulations. In 1938 the number of motor-carrier accidents reported by carriers subject to the Commission's jurisdiction was 30 per cent less than that in 1937, and fatalities decreased 39 per cent.

To promote more effective performance of its expanding and changing duties the Commission in 1939 put into effect a new plan of organization under which its membership was divided largely along functional lines into five divisions. The term of the chairman, who is chosen by the Commission, was made three years instead of one year, as it had been for many years previously.

JOSEPH B. EASTMAN.

INVESTIGATION, FEDERAL BUREAU OF. See FEDERAL BUREAU OF INVESTIGATION.

INVESTMENTS. See BANKS AND BANKING; FINANCIAL REVIEW.

"INVISIBLE" GLASS. See GLASS.

IOWA. Area and Population. Area, 56,147 square miles; included (1930) water, 561 square miles. Population: Apr. 1, 1930 (census), 2,470,939; July 1, 1937 (Federal estimate), 2,552,000; 1920 (census), 2,404,021. Des Moines, the capital, had (1930), 142,559 inhabitants.

Agriculture. Iowa's harvest of principal crops of 1939 comprised 20,475,800 acres. For the second year in succession the area of corn fell short of half of the whole harvested area. Corn, on 9,688,000 acres, yielding 52 bu. an acre, made 503,776,000 bu. (in approximate value on the farm, \$267,001,000). Oats, on 5,076,000 acres, gave 154,818,000 bu. (\$41,801,000); tame hay, 3,498,000 acres, 4,814,000 tons (\$26,958,000); soybeans, their fast-rising yearly harvested acreage attaining 487,000, yielded 10,227,000 bu. (\$7,670,000); barley, on 563,000 acres, 13,794,000

bu. (\$5,242,000); potatoes, 56,000 acres, 5,600,000 bu. (\$4,200,000); wheat, 390,000 acres, 6,490,000 bu. (\$4,218,000).

Manufacturing. Establishments engaged in manufacturing in Iowa numbered in 1937, 2454 (in 1935, 2457); they employed 67,878 wage earners (in 1935, 56,541) and paid them \$76,193,244 (in 1935, \$55,482,989). The value of these establishments' output was \$709,458,428 for 1937 (for 1935, \$575,370,868); the sum contributed thereto by manufacture, \$236,063,603 (for 1935, \$176,563,091). Meat-packing was the foremost of the manufactures: 24 packing establishments employed 9521 wage earners in 1937, paid them \$12,317,882 in wages, and produced goods to the value of \$223,884,903, to which they had contributed by manufacture, the value of \$28,700,046. This did not include establishments dressing poultry, whose output was \$19,135,427. Butter made in 459 establishments had the value of \$67,865,558, of which manufacture contributed \$6,971,493. Products of Indian corn, such as starch and syrup, were made to the value of \$25,929,265. Grain mills produced flour and other goods to the value of \$11,155,198. The output of planing mills was \$17,309,710. Despite the production of a variety of mechanical articles, manufacturing bore for the most part a fairly close relation to the State's agriculture and animal husbandry.

The city of Waterloo had 67 manufacturing establishments, employing 8128 wage-earners, that produced goods to the total value, in 1937, of \$104,803,951. The output of manufactures in 1937 at Cedar Rapids totaled \$81,162,837.

Mineral Production. The latest estimate from the U.S. Bureau of Mines stated the yearly value of the production of native minerals in Iowa as \$26,941,350 for 1937. Coal made up more than one-third of this figure; cement, over one-fourth; stone output and clay products came next. The yearly production of coal diminished to some 3,250,000 net tons for 1938, from 3,637,000 tons (value, \$9,529,000), for 1937. Cement-makers shipped a total, for 1938, of 4,759,390 barrels of portland cement, as against 4,598,453 for 1937; by value, \$7,327,048 (1938) and \$7,046,021 (1937). Of the production of stone—\$3,782,480 for 1938 and \$4,276,891 for 1937, more than three-fourths was for concrete, road metal and railroad ballast. Clay products (exclusive of pottery) attained for 1937 the value of \$2,731,810. The important yearly production of gypsum, 364,920 short tons, value \$495,856, for 1938 was worth rather more than this amount to the State's economy, as much of the gypsum was calcined before shipment and thus attained a higher value.

Education. For the academic year 1938-39 Iowa's inhabitants of school age (from 5 years to 21) were reckoned as 681,299; The year's enrollments of pupils in the public schools numbered 511,326; this comprised 369,304 in elementary study, 138,041 in high schools, and 3981 otherwise classified. The year's expenditures for public-school education totaled \$52,960,542. The 25,205 teachers were paid at the average, for the year, of \$943.

Legislation. The regular biennial session of the Legislature convened January 9 and continued until late in April. It enacted a general appropriation bill allowing \$21,161,863 a year for the next two years' operation of the State government. Both houses having lately come under Republican control, the time was seasonable for the passage of laws changing the governmental organization

inherited from the Democratic era. The session abolished the existing Board of Assessment and Review, ended the system of paying, for the collection of the taxes on sales and on incomes, allowance of 3 per cent of the receipts, and created a new Tax Commission and subsidiary personnel, charged with the collection of the State taxes in general. Similarly, a Public Safety Act that was sent to the Governor created a new Department of Public Safety and put in its charge the State Highway Patrol, the bureau of criminal investigation and other such services. An act to hinder the introduction into Iowa of cigarettes bought elsewhere, without paying the Iowa tax, attempted to stop a conspicuous leak in the gathering of revenue. Another reorganizing act changed the makeup of the Board of Social Welfare, adding to this board's duties the administration of the State's functions in poor-aid. Still another act centralized authority over the State's several libraries in a new ex-officio board.

The Legislature voted expenses to a delegation that was to return to Alabama a Secessionist flag taken from the State House at Montgomery during the Civil War and long kept in the Iowa Historical Museum.

Political and Other Events. Gov. George A. Wilson, who took office January 12, brought the State under Republican administration for the first time in six years. His inaugural speech put stress on the desirability of consolidating or of giving up some of the bureaus of Iowa's administrative government; he advocated better financing of the public schools and their removal from partisan politics; further development of the "farm-to-market" roads; laws to help farmers individually to buy lands held by corporations; and more laboratory work at the State colleges, for the finding of new means of using the surplus of products from the farms.

The State Supreme Court in a decision rendered on January 10 terminated the State's moratorium on the foreclosure of mortgages, by applying the idea of departing emergency. Without denying that the Legislature had possessed the power to pass the moratorium of 1933 and its subsequent modifications, the decision followed the formula that as the emergency that warranted these acts diminished their constitutional validity tended also to lose its virtue, which was now extinguished. An aftermath of the Maytag Washing Machine Company strike of May, 1938, a sentence of fine and imprisonment given by the lower court to three officers of the striking workers' union, for violating an injunction not to continue picketing in mass, was affirmed by the State Supreme Court (April 4), but the prison sentence was suspended, leaving the defendants obliged only to pay fines of \$500; another of the strike leaders, William Sentner, was convicted of criminal syndicalism (October 6) and fined \$2500, in a State court.

Governor Wilson, by order of April 26, removed from office the three members of the State Board of Control, the authority over the State's 15 institutions of care and custody. In stating reasons for this action the order acquitted the three of dishonesty and of maladministration but blamed them for "deplorable conditions which due diligence on their part would have prevented or remedied"; the removal came soon after the publication of accounts of unchecked misbehavior among inmates of some State institutions.

North of Clinton, Dam No. 13, part of the U.S.

Engineer Corps' yet incomplete task of canalizing the upper Mississippi River by means of successive dams and locks, was dedicated June 18. This dam, 14,076 feet long, was a faced earthen dike and had cost an estimated \$5,000,000.

Officers. Iowa's chief officers, serving in 1939, were: Governor, George A. Wilson (Rep.); Lieutenant-Governor, Bourke B. Hickenlooper; Secretary of State, Earl G. Miller; Auditor, C. B. Akers; Treasurer, Willis G. C. Bagley; Attorney-General, Fred D. Everett; Secretary of Agriculture, Mark G. Thornburg; Superintendent of Public Instruction, Jessie M. Parker.

IOWA, THE STATE UNIVERSITY OF. A co-educational State institution of higher learning in Iowa City, founded in 1847. The enrollment for 1938-39 was 10,432. For the autumn of 1939 the enrollment was 8665, including 1861 correspondence students not also registered in residence. The 1939 summer session registration totaled 3936, including 954 correspondence students not also registered in residence. There were approximately 500 members on the faculty. The income for 1938-39 was \$5,192,963. The libraries contained 624,600 volumes. President, Eugene Allen Gilmore, A.B., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the fall quarter of 1939 was 6475. The registration for the first half of the 1939 summer session was 1470, and for the second half, 657. The faculty numbered 592 members. The endowment funds amounted to \$824,270 and the income for the year was \$4,453,000. The library contained approximately 280,000 volumes. A new dormitory for women, \$272,640; a new dormitory for men, \$206,700; new radio antenna and equipment, \$50,000; and Service Building, \$110,000, were all built within the year 1938-39. President, Charles Edwin Friley, LL.D.

IRAN (PERSIA). A kingdom of southwestern Asia. Capital, Tehran (Teheran); sovereign in 1939, Shah Riza Khan Pahlevi, who was crowned Apr. 25, 1926.

Area and Population. Area, about 628,000 square miles; population, estimated at 15,000,000 on Dec. 31, 1937, including besides the dominant Iranians large minority groups of Turks, Kurds, Leks, Baluchis, and Gipsies. About 3,000,000 inhabitants are nomads. Estimated populations of the chief cities: Tehran and district, 360,000; Tabriz, 219,000; Meshed, 139,000; Shiraz, 119,000; Isfahan, 100,000; Hamadan, 99,000.

Education and Religion. The bulk of the population remains illiterate, but education has made rapid strides in recent years. Schools of all kinds in 1937 numbered 4939, with 273,680 pupils. About 900 Iranians were studying in foreign universities in 1938, most of them on government subsidies. The people are mainly Moslems of the Shiite sect; there are also about 50,000 Armenians, 40,000 Jews, 30,000 Nestorians, and some native Christians, Bahais and others.

Production. While agriculture and stock raising support the bulk of the population, the oil industry is the principal source of government revenue. Production of the chief crops in 1936-37 was estimated as follows (in metric tons): Wheat, 2,159,600; barley, 882,600; rice, 398,500; beet sugar (1937-38), 26,100; tobacco (1937-38), 15,900; cotton, 37,200; dates (1935-36), 105,158; raisins, 52,191 (1935-36). The wool and mohair

clip in 1937 was estimated at 17,000 metric tons. Oil production in 1938 was 10,359,000 metric tons (see *History*). The government is pushing industrialization of the country through state-owned factories and subsidy of private industries. Cement, cotton and woolen yarns and fabrics, matches, refined sugar, silk textiles, and iron and steel are the principal new industrial products. The carpet and rug industry, however, is still the most important. The Anglo-Iranian Oil Co. has a great oil refinery at Abadan.

Foreign Trade. Merchandise imports in the calendar year 1938 were approximately 1,508,760,000 rials (1,258,800,000 in 1937); exports, 2,560,000,000 (2,582,040,000). Trade is mainly with the Soviet Union, Great Britain, Germany and the United States. Petroleum accounts for nearly three-fourths of the value of all exports. The chief imports are cotton piece goods, machinery and tools, sugar, vehicles. See **IMPORTS AND EXPORTS** for U.S. Trade.

Finance. The regular budget for the Iranian year 1318 (Mar. 22, 1939 to Mar. 21, 1940) placed receipts at 1,930,096,700 rials (\$110,884,055) and expenditures at 2,613,418,987 rials (\$150,144,540).

Royalties from oil, which amounted to £3,545,313 in 1937, are kept in the reserve fund and omitted from the budget. Actual results of budget operations were not available. The recognized foreign debt outstanding as of Apr. 8, 1938, was £991,060. On Dec. 31, 1935, there was an unfunded foreign debt of about £2,000,000 and an internal floating debt of 6,661,428 rials. The rial was officially quoted at about \$0.057 in 1939. Effective Dec. 21, 1939, the National Bank of Iran was authorized to fix the value of the rial in relation to foreign currencies at 40 per cent less than the gold value of the rial.

Communications. The 866-mile Trans-Iranian railway from Bandar Shahpur on the Persian Gulf to Bandar Shah on the Caspian Sea was completed Aug. 26, 1938, and freight service was started in December, 1938. A new railway line between Tehran and Semnan was opened to traffic in September, 1939. Two other lines were under construction from Tehran to Tabriz and Yezd, respectively. Total railway mileage, 981; highways, 14,402. An air line connects Tehran and Kermanshah with Baghdad in Iraq. In 1936-37, 6,608,600 tons of shipping entered the Persian Gulf ports. See **ROADS AND STREETS**.

Government. Executive power is exercised by the Shah, acting through his cabinet appointees. The parliament (Medjliss) of 136 members, elected for two years, sanctions measures proposed by the Shah and his cabinet. Premier in 1939, Mahmoud Djam, appointed Dec. 4, 1935.

History. The government extended its modernization program in 1939 to include agriculture as well as industry. To increase agricultural production, plans were formulated for the distribution to peasants of public domains in the southern part of the country. A decline in oil exports of 200,000 tons in 1938 as compared to 1937 led the official press to attack the Anglo-Iranian Oil Co. in 1939 on the ground that it was not carrying out its promise to expand the country's oil output. In his report for 1938 to the general meeting of the company in London June 26, 1939, Lord Cadman, the chairman, reported the net production of its Iran field at 10,195,000 tons, the profit £6,109,477, and the dividend 20 per cent. He stated that the Gach Saran field, discovered two years before, was in the early stages of development, and that

oil had been struck in another new structure that promised to be of major importance. He announced that the company had received permission to establish a refinery and port near Bandar Mashur on the Khor Musa waterway.

A marriage contract between Crown Prince Mohammed Riza Pahlevi of Iran and Princess Fawzia, 17-year-old sister of King Farouk of Egypt, was signed in Cairo Mar. 15, 1939. The wedding took place in Tehran in April. It was the first alliance by marriage in modern times of the two leading Islamic countries and of two leading Moslem sects, according to the *New York Times*. The Crown Prince and his bride belonged to the antagonistic Shiite and Sunni sects, respectively, and the union was viewed as another step toward a united Islam.

Diplomatic relations between the United States and Iran, severed by the Shah in 1936 in protest against allegedly slighting references to Iran in the American press, were resumed in 1939. Soviet pressure on Iran for oil concessions and control of its rice production was reported in October. This aroused fear in Iran and abroad that Moscow planned to seize the opportunity afforded by Britain's absorption in war in Europe to establish political control over Iran and possibly secure a naval base on the Persian Gulf.

IRAQ (IRAK). An Arab kingdom occupying the basin of the Tigris and Euphrates Rivers in Mesopotamia. Capital, Baghdad. King, Feisal II, who succeeded to the throne upon the death of his father, Ghazi I (q.v.), Apr. 4, 1939.

Area and Population. Area, 116,600 square miles; population, estimated at 3,670,000 on Jan. 1, 1938. Chief cities, with estimated populations (1938): Baghdad, 340,000; Mosul, 98,000; Basra, the chief port, 62,000. Language, Arabic.

Education and Religion. Despite free primary education, illiteracy remains high. Latest available education statistics show 717 state and 79 private elementary schools, with 106,034 pupils; 40 intermediate schools (9039 pupils); 12 secondary schools (1362); 16 vocational and professional schools (2046 students). In 1935 there were 3,136,632 Moslems, 101,375 Christians, 90,970 Jews.

Defense. The standing army and air force on June 30, 1938, comprised 28,000 officers and men. Compulsory military service for males between 19 and 25 was introduced in 1936. The police force numbered 10,192 men in 1938.

Production. Agriculture, stock raising and petroleum mining are the chief occupations. The petroleum output, most of which goes by pipeline to Haifa, Palestine, and Tripoli, Syria, for transport to Europe, was 4,272,000 metric tons in 1938 (4,255,000 in 1937). The chief crops are (production in metric tons): Dates, 160,572 tons (exports, 1935-36); wheat, 600,000 (1938); barley, 570,000 (1937); rough rice, 360,000 (1938); tobacco, 4000 (1938); cotton, 2900 (1938). Wool and mohair production in 1937 was about 7400 metric tons.

Foreign Trade. Merchandise imports in 1938 totaled 9,192,000 dinars (9,612,000 in 1937); exports, excluding crude oil shipped by Iraq Petroleum Co., 3,492,000 dinars (5,568,000). Trade is mainly with the United Kingdom, Japan and the United States. See IMPORTS AND EXPORTS.

Finance. For the fiscal year ended Mar. 31, 1939, budget accounts showed a surplus of 193,000 dinars in the ordinary budget and a deficit of 213,000 dinars in the capital works budget. The accu-

mulated deficit as of Apr. 1, 1939, was estimated at over 850,000 dinars. General budget estimates for 1939-40 placed receipts at 5,860,000 dinars and expenditures at 5,875,630. At the beginning of 1939 the government received royalties from oil companies totaling 1,250,400 pounds sterling (gold). The public debt was unofficially estimated in May, 1939, at 2,752,000 dinars (dinar equals one pound sterling). In August a loan of £3,000,000 was obtained from the British Oil Development Co., in return for an amended concession; the loan was to be repaid, without interest, from excess annual oil royalties.

Communications. Completion in 1939 of the government railway from Mosul, Iraq, to Tel Kotchek, Syria, gave Iraq direct connections with Europe via Syria and Turkey. Construction of the Baiji-Mosul link was nearing completion. Total railway mileage (1938), 757 (excluding sidings); highways, 3885. A permanent bridge across the Tigris at Baghdad was opened in July, 1939, and another was under construction. Iraq's first national air service was opened in 1939. In addition Imperial Airways, Royal Dutch Air Lines, Air France, Lufthansa, Misr Air Lines (Egyptian), and the Iranian State Air Lines all crossed or entered Iraq; Baghdad and Basra are the chief airports.

History. King Ghazi (q.v.) was fatally injured in Baghdad on Apr. 3, 1939, when the automobile he was driving left the road and crashed into an electric light pole. He died on April 4. The cabinet immediately proclaimed the accession of Ghazi's infant son Feisal (born May 2, 1935) and named the boy's uncle, the Emir Abdul Ilah, as provisional regent. The Chamber of Deputies, which had been dissolved on February 23, was convoked in accordance with the Constitution and the Emir Abdul was confirmed as Regent by a joint session of the Chamber and Senate.

The death of the popular young King caused manifestations of great sorrow throughout the kingdom. In Mosul several hundred persons gathered for a public memorial service on April 4 were harangued by agitators who accused the British of assassinating the King. The infuriated mob stormed the British Consulate, killing the Consul, G. E. A. C. Monck-Mason, and burning the building. The Iraq Government made full reparation. In accordance with its treaty of alliance with Great Britain, Iraq severed diplomatic relations with Germany early in September. All Germans in Iraq were deported and the Regent in a telegram to King George expressed Iraq's "unshakable attachment" to the British alliance.

A conspiracy to overthrow the government formed on Dec. 26, 1938, by Gen. Nuri es-Said, was crushed early in March, 1939, by the arrest of former Premier Hikmet Beg Sulaiman and 50 army officers who participated in a barracks revolt. Death sentences were imposed on Hikmet and three of the officers, but they were commuted on March 18.

With the aid of an additional loan (see *Finance*), the government carried forward its modernization and development program. The Kut irrigation barrage, 300 miles up the Tigris from Basra, was completed in March after six years' work by a British firm. Work on other flood control and irrigation projects continued. Bids were issued for a government oil refinery. Further legislation was passed to encourage industrial development. Trade balancing measures were adopted with regard to countries having a favorable bal-

ance of trade with Iraq. A British firm was awarded a five-year monopoly on the exportation of dates. The metric system was introduced in Baghdad and the other chief centers July 24. A national bank, with the government owning 20 per cent of the stock, was provided for by law. Additional taxes were imposed on incomes, livestock and animal byproducts. Fifteen planes for the Iraq Air Force were ordered in the United States in August. On December 4 a £885,035 contract for construction of the "Habbaniyah escape," another barrage across the Euphrates, was signed by the Iraq Government and a British firm. On December 21 the Iraq Government contracted to sell Great Britain 200,000 tons of barley at a fixed price of 90s. a ton.

See PALESTINE under *History*.

IRELAND (EIRE). A self-governing unit of the British Commonwealth of Nations comprising 26 counties of southern Ireland. Capital, Dublin. Under the Anglo-Irish treaty of Dec. 6, 1921, the country was officially designated the Irish Free State. By virtue of the new Irish Constitution of 1937, the name was officially changed to "Ireland" in the English language and to "Eire" in the Irish language, effective Dec. 29, 1937. As used in the official sense in this article, Ireland excludes the six counties comprising Northern Ireland (q.v.).

Area and Population. The area is 26,601 square miles and the population was estimated at 2,934,000 on June 30, 1939, as compared with 2,965,854 at the 1936 census. The decline in population was attributed mainly to emigration to the United Kingdom. Living births in 1938 numbered 56,753 (19.3 per 1000); deaths, 40,066 (13.6 per 1000); marriages, 14,934 (5.1 per 1000). Overseas emigration declined from 20,802 in 1929 to 1751 in 1938. Populations of the chief cities in 1936 were: Dublin (Baile Atha Cliath) with suburbs, 467,691; Cork, 80,713; Limerick, 41,395; Waterford, 27,962.

National Defense. Military service is voluntary. The defense budget for the fiscal year ending Mar. 31, 1940, provided for expenditures of £3,252,199 (£1,718,565 in 1938-39). Standing army (1939): 724 officers, 7262 men.

Religion and Education. School attendance is compulsory and there is practically no illiteracy. Attendance at elementary schools (1937-38) was 474,113; at secondary schools (1938-39), 36,676; university enrollment (1937-38) was 5408. The institutions of higher education are Trinity College, Dublin, and the University of Ireland, with constituent colleges at Dublin, Cork, and Galway. According to the 1936 religious census, there were 2,773,920 Roman Catholics, 145,030 Episcopalians, 28,067 Presbyterians, 9649 Methodists, and 11,754 others.

Production. Agriculture, stock raising, manufacturing and fishing are the principal occupations. There were 3,605,000 acres of crops in 1938; 7,950,000 acres of grass and grazing; and 252,000 acres of forests. The value of agricultural production in 1936-37 was £47,318,000. Yields of the chief crops in 1938 were: Wheat, 7,398,000 bu.; rye, 53,000 bu.; barley, 5,142,000 bu.; oats, 39,133,000 bu.; potatoes, 91,872,000 bu.; turnips, 2,506,000 long tons; sugar beets, 416,000 long tons; beet sugar (1938-39), 60,000 long tons; mangels, 1,544,000 long tons; hay, 4,593,000 long tons; flax, 1,460,000 lb. In 1938 there were 4,056,000 cattle; 3,196,000 sheep; 958,000 swine; 442,000 horses; 161,000 mules and asses. The sea

fisheries yielded 17,880,240 lb. of fish, valued at £127,831, in 1938; value of shellfish, £24,898. The net value of industrial products in 1937 was £34,381,546. Production of electric power in the year ending Mar. 31, 1938, was 244,460,000 kilowatt-hours; malt liquor, 1,403,000 bbl.; distilled spirits, 2,225,000 proof gal.

Foreign Trade. General merchandise imports in 1938 were valued at £41,404,903 (£44,108,332 in 1937) and exports of Irish products were valued at £23,878,720 (£22,241,180 in 1937). Live-stock and foodstuffs accounted for 90 per cent of the exports. Of the exports, the United Kingdom took 93 per cent; Germany, 4 per cent. The United Kingdom led as a source of imports, supplying 50 per cent; the United States was second with £4,704,559, followed by India, Canada, Germany, Argentina, Belgium, and Australia in order, each of whom furnished goods valued at between £1,000,000 and £1,500,000. See IMPORTS AND EXPORTS.

Finance. For the fiscal year ending Mar. 31, 1939, actual revenues were £31,883,864 and expenditures £33,110,247, leaving a deficit of £1,226,383. Budget estimates for 1939-40 placed receipts at £32,454,000 and expenditures at £34,448,000. On Nov. 8, 1939, the Minister of Finance stated in the Dail that in consequence of the war in Europe, revenue would be lower by £1,620,000 than the original estimates. The gross debt on Mar. 31, 1939, was £61,438,000; net debt, £30,876,000. The Irish pound is convertible into the pound sterling. The average exchange value of the Irish £ was \$4.9440 in 1937, \$4.8894 in 1938, and \$4.4354 in 1939.

Transportation. The Irish railway system, including extensions into Northern Ireland, had 3774 miles of line and siding in 1938. During that year it carried 20,475,850 passengers and 3,299,762 tons of freight. Motor highways extended 5278 miles on Dec. 31, 1938 (see ROADS AND STREETS). During the calendar year 1938 Irish bus companies transported a total of 106,252,000 passengers (95,438,000 in 1937). In 1939 airlines linked Dublin with the Isle of Man, Bristol, Liverpool, and London. Navigable rivers and canals extended 650 miles. During 1938, 12,102 vessels of 9,774,000 net registered tons entered Ireland's ports in the foreign trade.

Government. Under the constitution proclaimed on Dec. 29, 1937, the government formerly called the Irish Free State took the name of Ireland (in Gaelic, Eire). The chief officer under this constitution is a President (in 1939, Dr. Douglas Hyde), elected by popular vote for a term of seven years; he summons and dissolves the Parliament, signs and promulgates laws, appoints judges, appoints a Prime Minister (in 1939, Eamon de Valera) nominated by the Dail and other ministers nominated by the Prime Minister, commands the armed forces, and may under certain conditions refer bills to the Supreme Court for opinion on their constitutionality, or to the popular vote for a referendum. Ireland is declared to be sovereign, free, and independent. The Oireachtas (Parliament) includes two houses: the Dail or House of Representatives (138 members) elected by adult suffrage in the respective constituencies; and the Seanad or Senate (60 members), chosen partly by the universities, chiefly by election on a vocational basis, and (to the number of 11) by nomination of the Prime Minister. The Senate may amend but not veto legislative proposals. The ministers, exercising the executive power, are responsible to the Dail. For other particulars see YEAR BOOK, 1938.

HISTORY

The Government's Course. Politically independent, responsive in some degree to a traditional antipathy toward Great Britain, Ireland remained dependent on the neighboring island for the greater part of its external commerce. A strong popular sentiment wished the annexation, by Ireland, of the northern counties that had, by the preference of a great part of their population, remained united with Great Britain, under the name of NORTHERN IRELAND (q.v.). A hidden association of unknown strength, the Irish Republican Army (I.R.A.) sought opportunity to bring about its purposes, not clearly known, by the use of violence against Northern Ireland, Great Britain, and the authorities of Ireland itself. Finally, at the outset of September, the entry of Great Britain into war with Germany further affected Irish-British relations. The general policy of the de Valera Government under these various circumstances was: to pursue, but by peaceable means only, the effort for the acquisition of Northern Ireland; to suppress lawlessness on the part of the I.R.A.; to maintain neutrality in the war between Great Britain and Germany; and to maintain the integrity of its coasts against belligerents' possible efforts to make use of them.

Conflict with the I.R.A. Trouble with the I.R.A. was an intermittent but chronic disturbance that kept up throughout the year. On May 31 the Parliament, at the instance of Premier de Valera, voted an Offenses Against the State Act, making treasonable actions or their concealment punishable by death, and allowing the detention of persons engaged in activities against the State. About 70 persons were taken into custody within the next few months; several of them, while confined, started hunger strikes in protest against their treatment. On December 1 and 2, in accordance with a decision of Justice Gavan Duffy of the High Court, denying the State's right to hold the men without arraignment, most of those under arrest were released. The Government, although liberating the prisoners, carried an appeal against the High Court's decision to the Supreme Court.

Soon after the liberation of the suspects the I.R.A. carried out its most ambitious enterprise of the year, a raid on the fortified and guarded magazine of the Irish Army, in Phoenix Park, Dublin. On the evening of December 23 a man in the uniform of the Irish army approached a sentry at the magazine; he carried a parcel addressed to the officer in command, purportedly a Christmas present. The gate was opened to admit the seeming messenger. Thereupon a party rushed in, out of the darkness, and overpowered the soldiers inside. Telephone wires from the magazine had been cut. The raiders brought up trucks and filled them with ammunition; several of these trucks got safely away. Outposts of the raiding party encountered a policeman in the park and fired at him, thus giving the alarm. Soldiers were brought up and captured four of the party.

The raiders took away 1,098,099 rounds of ammunition for small arms. They had less success at hiding them. Within the next week or so, according to an official statement, about 851,000 rounds of the ammunition were recovered by an active search. The finds were in a number of places scattered among counties between Dublin and the northern border. The government lost no time in preparing for passage, by the Parliament, of a new bill, to grant to the ministry, in somewhat

amended form, the power of detaining suspected terrorists.

Other offenses, apparently all committed by the I.R.A., in 1939 included a great number of bombings in England. Bombs were exploded in English public buildings, on bridges, and in the Christmas mails, without regard for who would suffer. A bomb explosion in Coventry, August 25, took the lives of five persons. Two men arrested for this act were tried at Birmingham, found guilty, and were sentenced to death, December 15; one of them, a laborer named Richards, avowed himself a member of the I.R.A. The sentence passed on the pair caused new agitations and anti-British acts both in Ireland and in Great Britain. Within independent Ireland evidence was found, October 1, of a plot to seize the six counties of Northern Ireland and of an alleged visit of Sean Russell, reputed head of the I.R.A., to the United States to get cash and arms. An effort was made, October 22, to blow up part of Mountjoy prison in Dublin, supposedly in order to help persons there confined to escape.

Relations with Great Britain. De Valera's Ministry, during the alarm over prospect of a British war with Germany because of the German invasion of Czecho-Slovakia, undertook to strengthen the means of defending Irish territory. Cannon received from Great Britain were placed for use against attack by air or by sea. De Valera, speaking at Ennis in April, declared the government's intention to make immediate preparations for defense, within the limits of the State's resources. The policy thus expressed implied, though it avoided stating, that Ireland would not lend itself to use by Germany against Great Britain. When war came at the outset of September, the government exchanged with the German diplomatic representative mutual assurances of neutrality, and diplomatic relations with Germany continued. The British naval forces received no special rights to use the Irish coast and were therefore to some extent handicapped in operating against German submarines.

The neutral position of Ireland appeared to some observers as an anomaly, in relation to its diminished but by no means wholly vacated place in the British "family of nations." War shut out Ireland from most of its trade with the United States and with Germany; the country thus became more than ever dependent on commerce with Great Britain. The British Government appointed its first representative to Ireland (as now constituted) at the end of September. It chose for the post Sir John Maffey, a veteran of the Indian civil service. He was to hold the rank of high commissioner.

The position of neutrality brought Ireland into strong contrast with the Union of South Africa, which ranged itself on the British side. The idea was expressed in current comment, however, that popular sentiment in favor of the British cause was far more general than the official position would indicate. It remained easy for citizens of Ireland to go to England and volunteer for military service, and considerable volunteering was thought by some to have occurred, the Irish Government raising no obstacle so long as British recruiting was not done on Irish soil.

The chief difficulty between Great Britain and Ireland in 1939 was that over the operations of the I.R.A. in England, already mentioned. De Valera was put in danger of seeming to foster a nest of unlawful, covert, and active hostility to the British nation. In England the Irish worker in-

curred suspicion and had difficulty in getting work. Numbers of the Irish in England were deported as suspects, many more came home having lost their livelihood, and all these swelled the rising number of the unemployed. The Cosgrave minority taxed de Valera with lack of real purpose to put down the I.R.A., while the sympathizers with the I.R.A. went so far as to threaten his life for his activity against suspected members.

Legislation. In addition to the act for suppression of offenses against the State, the Parliament approved the Ministry's policy of neutrality toward belligerents in the war with Germany and, September 9, granted emergency powers to the Minister of Finance to control matters relating to transactions in gold, securities, foreign exchange, and kindred dealings affecting exterior payments.

See CANADA and GREAT BRITAIN under *History*.

IRELAND, NORTHERN. An area, largely corresponding with the region of Ulster, in the north of Ireland; consists of six counties and two parliamentary boroughs; is integrally united with Great Britain. Capital, Belfast.

Area and Population. The area is 5237 square miles; population (census of Feb. 28, 1937) 1,279,753. Living births (1937) numbered 25,412 (19.8 per 1000); deaths, 19,282 (15.1 per 1000); marriages, 8623 (6.7 per 1000). The population of Belfast (1937) was 438,112; that of Londonderry, 47,804. A religious census taken in 1926 showed 420,428 Roman Catholics, 393,374 Presbyterians, 338,724 Protestant Episcopalians, 49,554 Methodists, and 54,481 of other faiths. Public elementary schools, at the end of 1937, numbered 1727 and had 194,347 pupils; preparatory, intermediate, and secondary schools, in the year 1937-38, numbered 73 and had 13,683 pupils. In 1936-37, 125 centers of technical instruction had 22,368 students. Queen's University at Belfast (1937-38) had 1592.

Production. The raising of livestock and the production from dairies contributed materially to the proceeds of agriculture. Livestock, Jan. 1, 1939, included 700,564 cattle, 551,262 sheep, 565,726 pigs, and 6,038,001 poultry. The harvest of potatoes, the chief food crop, yielded (1937) 867,979 tons. The crop of flax, in 1938, was 4036 tons. Other agricultural production (1937), in tons, included oats, 242,758; turnips, 482,307; hay, 833,396. The two principal manufacturing industries, linen-making and shipbuilding, employed respectively about 70,000 and 15,000 persons. Almost all the linen (value, 1937, £7,792,621) exported from the United Kingdom comes from Northern Ireland. The shipyards of Belfast can build more than 200,000 tons of ships a year. Statistics for the foreign trade of Northern Ireland are included in those for the United Kingdom.

Finance. The budget, as estimated for the fiscal year that ended with Mar. 31, 1939, included revenues of £15,922,000 and expenditures of £14,662,000. The greater part of taxation is imposed and collected by the British Imperial authority, but Northern Ireland had and exercises certain powers of taxation on its own account. Taxes collected in Northern Ireland contributed, in the fiscal year 1939, over £1,000,000 to the expenses of defense and other Imperial services.

Transportation. The total length of railway line is 741 miles. Canals total 180 miles. Highways, 13,043 miles. Shipping lines operate regularly between ports in Great Britain and those of Belfast and Londonderry. Other ports affording communication by sea are Newry, Larne, and Coleraine.

Government. Although an integral part of the United Kingdom and represented by 13 members in the British House of Commons, Northern Ireland exercises a degree of local autonomy, through a Parliament of its own and a cabinet responsible thereto. The Senate of this Parliament has 24 elected and 2 ex-officio members; the House of Commons has 52 members, all elected. The chief permanent officer is a Governor (since 1922, the Duke of Abercorn). The head of the cabinet is a Prime Minister (since 1931, Viscount Craigavon of Stormont).

History. The state of sentiment in Northern Ireland, toward the union sought by the neighboring state of Ireland, became increasingly adverse. The fact that the I.R.A. (see IRELAND, under *History*), carried out no acts of violence comparable to the attempts made against Northern Ireland in 1938, did nothing to mollify the opposition. The government of Northern Ireland held and exercised throughout 1939 the power of detaining without trial and of excluding from its territory persons accused of unlawful or subversive activity. Thirty-four men had been seized in December, 1938, on indication of their complicity in a plot against prominent members of the government. About 30 of them remained in confinement throughout 1939, and others apparently were arrested from time to time. Popular sentiment, or at least the audible part of it, was further antagonized by the I.R.A.'s bombings in England. Economic aspects also bore unfavorably on the idea of a union. The shipbuilding industry stood to gain considerably, at first from the British policy of rearmament and later from the need to replace vessels sunk by Germany after the start of the war. Agriculture enjoyed British subsidies that it would lose by Northern Ireland's parting company with Great Britain. Violence in the Londonderry jail on December 25—some 60 suspected members of the I.R.A. overcame jailers and held the jail for several hours against the police—afforded a reminder that the I.R.A. was but biding its time in Ulster. The government, during the year, increased the strength of the Royal Ulster Constabulary, of which the reserve force, subject to immediate call, was brought to 12,000. Five newspapers published in independent Ireland, the *Republican Congress*, *Wolfe Tone Weekly*, *Irish Freedom*, *Republic*, and *Sentry*, were excluded by government order at the end of the year.

Northern Ireland's part with Great Britain in the effort called forth by the advent of another war with Germany was subject to a peculiar circumstance. The British conscription act of 1939 specifically excepted the Province from liability to the military draft. Protests on behalf of the considerable part of the population thought to be disaffected to British sovereignty appeared to have brought about this exception; but all in Northern Ireland remained exempt, whatever their preferred allegiance. In the absence of a draft, recruiting was actively carried on in the six counties. The Duke of Abercorn, addressing the Parliament of Northern Ireland late in December, complimented the people on the number of the young men who had volunteered for service.

IRISH FREE STATE. See IRELAND (EIRE).
IRON AND STEEL. World production of steel ingots and castings in 1939, according to the annual review of the magazine *Steel*, is estimated at 134,983,000 gross tons, compared with 107,687,000 in 1938, a gain of 25 per cent. World production of pig iron and ferro-alloys was 100,-

418,000 gross tons. The corresponding production in 1938 was only 80,728,000 tons, indicating a gain of 24 per cent.

World steel production was undoubtedly spurred by war demands in Europe, and apparently rose to an all-time high. The accompanying table, compiled by *Steel*, gives the record.

WORLD IRON AND STEEL PRODUCTION

[Thousands of Gross Tons]

| Country | Ingots and Castings | | Pig Iron & Ferro-alloys | |
|--------------------------|---------------------|---------|-------------------------|--------|
| | 1939 | 1938 | 1939 | 1938 |
| United States..... | 47,533 | 28,693 | 31,943 | 19,161 |
| Canada..... | 1,300 | 1,156 | 800 | 758 |
| Great Britain..... | 13,500 | 10,398 | 8,200 | 6,761 |

| World total..... | 134,983 | 107,687 | 100,418 | 80,728 |

* Includes Austria and Saar. * Includes Manchuria and Korea.

Steel ingot production in the United States rose to an all-time high rate in the fourth quarter of 1939, according to statistics compiled by the American Iron & Steel Institute. The average rate of operations, in terms of per cent of capacity, for the four quarters of the year was: 54.5, 50.8, 62.2, and 91.2. The highest rate for any week in the history of the industry was 94.4 per cent for the week beginning November 27. Output for 1939 was estimated at 46,800,000 tons, compared with 28,200,000 in 1938 and 50,318,000 tons in 1937. The share of the United States in world production of steel was about 35 per cent as against 27 per cent in 1938.

Iron and steel exports from the United States, exclusive of scrap, rose in 1939, according to *Steel*, to 2,250,000 gross tons, compared with 2,149,000 tons in 1938, but still far below the record of 3,472,000 tons in 1937.

Principal causes for the sharp rise in domestic production were: replenishment of producers' stocks of steel which had become subnormal; increased volume of automobile production in the last quarter of the year; and the unexpectedly large increase in demand from railroads. The European war exerted only an indirect and minor influence on domestic production. See BUSINESS REVIEW.

Average employment for 1939 was 482,000 with a peak of 545,000. Average weekly earnings rose to \$32 in October, a gain of \$8 over mid-summer. Average working hours were 38, with hourly earnings of 84 cents, highest in the history of the industry. Payrolls in 1939 totalled \$810,000,000 compared with \$600,000,000 in 1938.

Thirty-three steel rolling mills were completed in the United States in 1939; one new open-hearth furnace was built; three iron blast furnaces were remodeled, and four dismantled.

The domestic iron and steel scrap industry in 1939 had the fourth best year in its history with respect to domestic consumption and second best in export. Domestic consumption, estimated by *Iron Age* at 34,800,000 gross tons, was exceeded

only in 1937, 1936, and 1929. It showed an increase of 62 per cent over 1938. Of the 1939 domestic consumption about 70 per cent went into the production of new steel, 20 per cent into castings, and 10 per cent for miscellaneous uses. Exports were about 3,500,000 tons, compared with 2,998,591 tons in 1938, and the record of 4,092,590 tons in 1937.

IRON AND STEEL INSTITUTE, AMERICAN. Prominent among the Institute's activities in 1939 was the publication of books and pamphlets. Most of the publications, such as the statistics of iron and steel production, the account of the general meeting of the Institute, sections of the *Steel Products Manual*, and the periodical, *Steel Facts*, represented continuations of series. New publications included booklets relating to the investment and corporate earnings of the industry and to the use of steel in agriculture.

The Institute likewise continued during the year its work of compiling and publishing a series of freight tariffs showing freight rates on iron and steel products from important origin points to principal destinations. Another important activity was the providing of accurate information relative to the industry. Thousands of inquiries from editors, writers, students and the public generally were answered by members of the Institute staff during the course of the year.

Officers of the Institute currently are: E. T. Weir, President; B. F. Fairless and Frank Purnell, Vice Presidents; H. L. Hughes, Treasurer; and Walter S. Tower, Executive Secretary. Headquarters are at 350 Fifth Avenue, New York City.

IRON ORE. Shipments of Lake Superior iron ore from upper Lake ports in 1939 aggregated 45,072,724 gross tons, of which 45,002,085 tons were delivered at U.S. ports and the remainder to Canada, according to the Lake Superior Iron Ore Association. Increase over 1938 shipments was 134 per cent, but the tonnage fell far below the all-time high record of 65,205,000 tons in 1929, and the next peak of 62,598,836 tons in 1937. Furnace consumption of iron ore was estimated at 44,000,000 tons, compared with 19,512,277 tons for 1938. Stocks on hand, gross tons, were as follows:

| | At furnaces | Lake Erie docks | Total |
|-------------------|-------------|-----------------|------------|
| Nov. 1, 1939..... | 33,943,773 | 5,120,884 | 39,064,657 |
| Nov. 1, 1938..... | 33,172,565 | 5,421,004 | 38,593,569 |

Total output of iron ore in the United States in 1939 is estimated by the Bureau of Mines at 51,830,000 gross tons, an increase of 82 per cent over mined production of 1938. Total shipments for 1939 are estimated at 54,825,000 gross tons, valued at \$159,066,000, representing an increase of 107 per cent in quantity and 114 per cent in total value compared with 1938.

ITALIAN EAST AFRICA. An Italian Colony in East Africa established by the decree of June 1, 1936, which merged the colonies of Eritrea and Italian Somaliland with the newly conquered empire of Ethiopia. Capital, Addis Ababa. The

area and population of Italian East Africa by provinces, according to official Italian estimates of May, 1939, are shown in the accompanying table.

ITALIAN EAST AFRICA: AREA AND POPULATION

| Province (Capital) | Sq. Miles | Population |
|---------------------------|-----------|------------|
| Eritrea * (Asmara) | 89,300 | 1,500,000 |
| Somaliland * (Mogadiscio) | 247,040 | 1,150,000 |
| Harar (Harar) | 79,865 | 1,600,000 |
| Shoa * (Addis Ababa) | 224,790 | 7,850,000 |
| Total | 640,995 | 12,100,000 |

* Eritrea and Somaliland are not co-terminous with the former colonies; they include parts of Ethiopia (see map in 1936 YEAR BOOK, p. 240, for the former provincial boundaries). * By a decree of Sept. 1, 1938, the Italian Government merged the provinces (governments) of Amhara, and of Galla and Sidamo with the administrative district of Addis Ababa to form the province of Shoa.

Estimated populations of the chief cities in 1937 were: Addis Ababa, 150,000; Harar, 50,000; Dire Dawa, 30,000; Asmara, 23,000; Mogadiscio, 21,000; Massaua, 15,000; Gondar, 6000; Dessye, 5000. The number of Italians in Italian East Africa in 1939 was reported at 200,000, chiefly road workers, troops, and officials. The native population includes some 2,000,000 Amharas, the former rulers of Ethiopia, who are Coptic Christians; more than 3,000,000 Gallas, who are part Christian, part Mohammedan, and part pagan; and the Danakil, Somalis, and numerous other tribes, mostly Mohammedan or pagan. The official languages are Italian, Amharic, Arabic, and Tigrinish.

Religion and Education. The ancient connection between the Ethiopian and Egyptian Coptic churches was broken on Dec. 1, 1937, when the Viceroy declared the Ethiopian Church autocephalous and appointed the Abuna (patriarch) and bishops for all of Italian East Africa. The Italian authorities have adopted a policy favorable to both Roman Catholic and Mohammedan religious activities and adverse to Protestant missionary projects in Ethiopia at the time of the conquest.

Education was entrusted to the Italian Fascist party, which established primary schools in the principal occupied cities. In 1938-39 there were 157 elementary schools, with 15,668 pupils (11,623 natives, 3908 Italians, 137 others), and 9 secondary schools, with 1515 pupils (1497 Italians).

Production. Stock raising and primitive agriculture are the chief occupations. Cultivated and wild coffee (exports, 13,000 metric tons in 1937-38), cotton, sugar, flax, bananas, dates, grapes, cereals, tobacco, fruits, and vegetables are grown in small quantities. Agricultural produce is grown for export on some foreign plantations using native labor. Gold, platinum and potash are the only minerals produced in commercial quantities. A 1939 census showed 4007 industrial firms in Italian East Africa with an invested capital of about 2,700,000,000 lire, and 4785 commercial firms (capital, 1,100,000,000 lire), most of them in Eritrea. The Rome Government placed the total Italian investment in Ethiopia at 5,000,000,000 lire in October, 1939.

Foreign Trade. Imports in 1938 totaled 2,447,057,000 lire (2,062,038,000 from Italy) and exports were 191,877,000 lire (114,845,000 to Italy). The lire exchanged at \$0.0526 in 1938.

Finance. The budget for the fiscal year ended June 30, 1939, balanced at 1,591,128,542 lire. Estimated revenues included 402,000,000 lire of ordinary receipts, 1,000,000,000 lire contributed by

Italian treasury, and 179,128,000 lire of special receipts. Total military expenditures were placed at 632,967,000 lire. These budget figures exclude an extraordinary contribution of 12,000,000,000 lire made by the Italian Government, beginning in 1938, for public works and equipment.

Communications. The chief railway is the narrow-gauge French-owned line from Djibouti in French Somaliland to Addis Ababa (486 miles). Another line links Massaua-Asmara-Cheren-Agordat-Bisceia. Roads of all kinds totaled about 12,297 miles (1938), of which about 2200 miles were newly built motor highways. Air lines link Asmara, the chief aviation center, with Addis Ababa, Mogadiscio, Jimma, and Gondar; and with Rome via Cairo. Another line links Assab, Djibouti, and Dire Dawa. Early in 1939, it was reported that military planes in Italian East Africa were making 34 flights weekly to maintain communication with distant outposts. Three plants for the rebuilding and alteration of airplanes and motors were in operation. The chief ports are Massaua and Assab on the Red Sea and Mogadiscio, Merca, and Chisimaio on the Indian Ocean. Port facilities at all these points have recently been improved. Four fast steamship lines connect them with Italy.

Government. The colony is administered by a Viceroy and Governor-General at Addis Ababa, assisted by a Vice Governor General, a Chief of Staff, a consultative Council of Government composed of high government officials, and the governors of the four provinces (governments). There is also a Board of Consultants representing the white colonists and native chieftains. Viceroy in 1939, the Duke of Aosta (appointed Nov. 20, 1937).

History. Little news as to actual conditions in the former Ethiopian Empire seeped through the Italian censorship in 1939. Italian authorities at Addis Ababa reported steady progress in consolidating Italian control and the construction of highways and other public works essential to the economic exploitation of the conquest. In March they announced that in connection with the general reconstruction of Addis Ababa about \$5,260,000 had been appropriated for new residences and office buildings, \$2,104,000 for streets and other works, and additional funds for 2000 workmen's apartments. Other public works announced as under way were a new hospital for Europeans, an aqueduct, and the Giren-Addis Ababa highway, etc.

However the French writer, Jerome Thauraud, who returned to Paris early in 1939 from a visit to Djibouti, reported that the Italian venture in Ethiopia was not prospering, that the Italians had alienated the natives by their administrative and other methods, and had not been able to extend their control beyond the principal cities and a few strategic centers. Guerrilla bands were still active in various parts of the country. In April reports reached Djibouti that the Mojo station of the Djibouti-Addis Ababa railway, 45 miles from the capital, had been raided and plundered by a native band, which killed members of the Italian garrison.

Few Italian colonists entered Ethiopia during the year, but in September and October the foreign colony was expelled by the Italian authorities. Among those leaving were the staff of the American hospital at Addis Ababa, which was confiscated. Plans announced during the first part of the year for the establishment of extensive plantations with Dutch capital and for the settle-

ment of numerous Jewish refugees in the Lake Tana region were set back by the outbreak of the European war. In August the Duke of Aosta went to Rome to confer with Premier Mussolini concerning Ethiopian military problems, and particularly the defense of the empire in the event of Italy's involvement in a European conflict.

Negotiations for the delimitation of the Italian East African frontiers with the Anglo-Egyptian Sudan and with the British colonies in East Africa were opened with the Italian Foreign Office by British and Egyptian representatives in Rome on March 22.

ITALIAN LITERATURE. The literary season, in view of extraordinary European events, feverishness, nerves, and finally the war, had to be relegated, perforce, to a remote background. In Italy particularly the past few seasons have kept professional men in a constant state of excitement, indecision, and, to an extent, unproductiveness. In consequence, the past few years may not go down as ones of literary achievements and innovations. Rather they are doomed to forfeit their place to the department of history. The Ethiopian campaign of several seasons back pre-saged a calming down of national emotions, and it seemed that our Italian literati could look again to meditation and creation. Not so, however, as the Albanian episode came like flash and thunderbolt to occupy the Italian mind. The past season, culminating with the second World War, seemed destined to strike a fatal blow to all creative ability. And yet Italy produced, if not in quantity, at least in quality. Despite all these disturbing factors our Italian authors, admirably, and with Olympian calm, contributed sizably to the European literary output of 1939.

A new political, literary, and artistic review made its appearance in Rome in the early part of 1939. *Panorama* came out on the 12th and 27th of each month. The editors' plans called for 3300 pages on varied and pertinent subjects, interspersed generously with 4000 illustrations. Though the review is not comparable artistically and otherwise with the now defunct *Pegaso*, it bids fair to take its place. Let us hope that the vitality and freshness which accompanies the first issues of these reviews will continue, and especially let us augur its survival.

Fiction. A novel of importance was produced by Giuseppe Grio, a newcomer in the field of literature. The author has not yet been included in contemporary bibliographies. *La morte di un uomo* (*The Death of a Man*; Vallecchi, Florence) is a novel worked out on large canvas and broad strokes. The subject matter is concerned almost exclusively with a court trial—692 pages in all; yet let no one say that a single chapter lags in interest and intensity! In straightforward language the author has depicted the intricacies of the function of a court of justice. It is a trial for murder, and the life of a precociously intelligent young man hangs in a balance. Gino, the accused, is also the protagonist of the novel. Though evidence is heavily against him, Gino defends himself admirably. Whether he is guilty or not, the author has deftly hidden from us. The greatest criminal lawyer of Italy comes to Gino's defense, and before the lucidity and adroitness of his client it would have been well to take a few lessons in logic, for Gino possessed an orderly and philosophic mind. It must be recalled that this young man had literary aspirations and had already given evidence of genius. Gino, after setting forth an

eloquent and courageous defense, succumbs in despair before the sluggish and hopeless function of his trial. He confesses the guilt as put forth by the prosecution, but there lurks more than ever in the reader's mind the possibility and plausibility of his innocence. The author has bewitched everyone, judge, barrister, and the spectator. Though this novel has not presented a new theme, it contains a powerful and convincing thesis on the pitfalls and the uncertainty of law decisions. In conclusion, let it be said that this novel, if not on a great literary plane, offers much material for reflection.

The simplicity and directness of the foregoing narrative is in sharp contrast with Bino Sanminiati's *Fiamme a Monteluce* (*Flames at Monteluce*; Vallecchi, Florence), his third novel. It is a creation couched in finesse and stylistic idiom. Sanminiati bids fair to occupy an enviable place in contemporary Italian letters. This novel, as the editors' notes indicate, covers a period of twenty years and three generations. The heroines are several ladyships of Monteluce, residing in an old palace near Siena. Several heroes take part in the novel. One, the marquis, Giulio Ardighi, is a sceptic and vitriolic soul, though not devoid of fine qualities and cultured in the humanities. The other is his son, whose ideas, ambitions, and moral convictions are in sharp contrast with those of his father. It is a struggle of two epochs: the father in fear of reality hides behind his scepticism and paradox; the son emerges victoriously from ideals too vast and scattered and finds orientation in the love of his lady and that of the hearth. New life and a revitalized family arise from this luxury and decadent culture. Such is the theme of the novel. Let it be recalled that Bino Sanminiati made considerable success in the past seasons with his volumes of short stories, *Crazy Sheep* (*Pecore Pazze*), *Bocca Mariana*, *Il mondo dei Mustafà*, and *Notte di baldoria* (*Nights of Revelry*).

Lucio D'Ambra continued in debonair entertainment his trilogies. This time it was a novel dedicated to Italian aviation, *La guardia del cielo* (*The Sentinel of the Sky*; Mondadori, Milan). Presenting a rather exhaustive review of aviation with a romanticized treatment, the novel borders on a quasi-nationalistic theme. The moral lesson to be derived lies in the transformation of human beings into heroes of the fatherland: "Ed ecco l'alto insegnamento morale del romanzo, dove lo spirito riesce a piegare la materia e a trasformare il mortale nell'eroe che è eterno nel cielo della gloria. In questo particolare momento storico, nessuno poteva colla penna portare un più alto servizio alla Patria nostra."

Piero Genovesi published his second novel, *Capelli rossi* (*Red Hair*; Ceschina). He treats here the adolescence of Daniele in a psychological and illuminating fashion. It is the story of a post-war orphan who all but "messes up" his life for the lack of guidance, family affection, and understanding. The author sees only pessimism and futility for this type of youth, who sooner or later must fall into delinquency. There is an interlineal appeal for a *mens sana in corpore sano*, proper education, and upbringing to offset the inevitable tragedy preying on this sort of youngster. For a history of the Italian novel one can look to Astaldi Maria Luisa's *Nascità e vicende del romanzo italiano* (*The Birth and Vicissitudes of the Italian Novel* brought out by the publisher, Aldo Garzanti, successor to the time-honored house of Fratelli Treves of Milan.

Two volumes of short stories could be recorded—*La Terra (The Earth)*; Mondadori, Milan) by Angelo Gatti of the Italian Academy, and *Il Taciturno* (Mondadori, Milan) by Raffaele Calzini. Both volumes are by two men distinguished in Italian literature. The first volume "represents peasants of a district in Piedmont. There are not many left of this sturdy stock who are off the beaten path, toiling all day long and frequently also the nights. There are no gentlemen tourists about them, not even in summer time. They are depicted as tenaciously retaining the simple and potent characteristics of their primitive origin. Among them can be found some who live and speak with the sagacity of Socrates, who fight and die as Ajax. They give one a sense of indestructibility and eternity." Calzini's volume reaches over the international horizon for its subject matter, for in these stories of human interest are to be found the Chinaman, Koo, Old Mr. Berder, and corporal Gaffuri.

Poetry. Aldo Capasso has continued his productivity in poetry since his volume *Passo del Cigno* gained the Fracchia Prize in 1931. His fame is shared along with Govoni, Montale, Ungaretti, among the foremost Italian poets of today. His recent volume, *Diciassette Poesie (Seventeen Poems)*; Colezione Poeti d'oggi received considerable comment, and in this regard the critic, Ferdinando Garibaldi, has stated succinctly that Capasso is essentially a classicist as regards form, though is imbued with subtle and rich romantic sensibilities. His poetry is powerful and dramatic, containing a strange admixture of pessimism and optimism at the same time. In France he has been mentioned on the plane of Vigny, Valéry, and Claudel. Incidentally, Capasso found time to bring forth two studies, *Tre saggi sulla poesia italiana del Rinascimento* (Emiliano degli Orfini, Genoa), three essays on Boiardo, Lorenzo, and Ariosto, and *Il Tassino-L'aurora di Torquato Tasso 1544-1565* (Ed. Dante Alighieri, Genoa).

Four volumes of poetry were all published by the editors Guanda of Modena. In this collection the first was Ornella Puglisi's *La fiamma consuma (The Flame Consumes)*. Contrary to what the title may suggest all these poems are couched in suave and peaceful moods. There is a dominant melodic line throughout and the coloration is that of an eternal aurora of spring. Franco Allegretti's small volume, *Avevo scoperto il fuoco* are poems in stylistic language over the grief of a lost love. "His feeling for nature is strong; his pictorial sense is sufficiently developed, and yet he has not attained a poetic attitude and essence." Cesare Fabrizi called the third volume of this series, *Ebe*. The theme of his verse is his restless and dreamy soul. There is a certain amount of vitality and freshness that accompanies these compositions. The fourth volume in this same collection was Mariano Rosati's *Liriche* poems along the traditional path: his preference lies in the images that nature furnishes to the eye and to the soul. His verse is sound and frequently attains the grandiose.

Among the comparatively new names in contemporary Italian poetry appeared that of Ferdinando Visconti. His volume, *Incontro all'estate (Encounter with the Summer)*; Ed. Testa, Bologna was discussed at length in the columns of *Meridiano di Roma*. Praise and encouragement went to the author. He was congratulated for his art and dignity. His only preoccupation seemed to be to compose verse for the joy of poetry and let art and esthetics take care of themselves! Mean-

while, one will await his next volume before formulating a more conclusive opinion of his work. The editor, Nicola Zanichelli of Bologna brought forth several volumes in his Collection of the Poets of Rome, the *Satires and Epistles of Horace* translated and annotated by Ettore Romagnoli, and *The Metamorphosis of Ovid* translated in two volumes by Ferruccio Bernini. The collection includes the poetry of Catullo, Lucrezio, Marziale, Orazio, Ovidio, Plauto, Terenzio, Tibullo, and Virgilio. An especial feature of the texts is the translation which accompanies each page. The editor is to be congratulated for having enlisted the services of the leading scholars of Italy for the preparation of these volumes.

Criticism and Varia. The publishing house of Paravia (Turin) brought out five volumes in the series *Scrittori italiani (Italian Writers)*. The minor works of Dante, *Le opere minori* were prepared by Teresio Grossi. Umberto Renda prepared essays on Boccaccio. Carducci was treated by Antonio Lantrua. Foscolo was entrusted to Alberto Viviani. The texts are copiously annotated. The volumes which sell for five lire should have a wide circulation and should be of utmost benefit to students of history and literature. Giuseppe Guido Ferrero re-edited *L'anima e la poesia di Vittorio Alfieri* (Paravia, Turin), a volume of some 370 pages which treats the great dramatist from the historic and philosophic point of view. A romanticized biography of history's fascinating blond, Lucrezia Borgia, the daughter of the pope, Rodrigo Borgia, was prepared by Maria Bellonci. In historic vein, the biography attains literary qualities beyond the ordinary. While we are on the premise of history, mention could be made of Gino Damerini's volume, *Settecento veneziano (Eighteenth Century Venice)*; Mondadori, Milan), an admirable study with over a hundred unedited letters of Caterina Dolfin Tron. The much discussed biography of Giorgio Pini's *Benito Mussolini*, which appeared several seasons ago and was subsequently used as a text in schools, was brought up to date and republished by the author (Licinio Cappelli, Bologna). Lastly, could be recorded two volumes in English, *Leonardo da Vinci, An Account of his Development as an Artist* by Sir Kenneth Clark, published by Macmillan Co., a book of 201 pages and 68 illustrations. The other volume is Richard Winston's translation of Valeriu Marcu's *Accent on Power, The Life and Times of Machiavelli* (Farrar & Rinehart, New York). (Acknowledgment is hereby made to the *Meridiano di Roma* for notes and bibliographical information.)

ITALIAN SOMALILAND. See ITALIAN EAST AFRICA.

ITALY. A kingdom of southern Europe, upon which a Fascist dictatorship is superimposed. Capital, Rome. Sovereign in 1939, King Victor Emmanuel III, who ascended the throne July 29, 1900.

Area and Population. Excluding Libya (q.v.), which became part of Italian national territory in 1938 and Albania (q.v.), which was annexed in 1939, Italy has an area of 119,714 square miles and a population estimated at 44,304,000 on Sept. 30, 1939 (42,444,588 at the 1936 census, which did not include 528,542 workers and soldiers in Africa). The 1936 census showed 31,735,027 urban and 11,258,575 rural residents. Of the population 10 years old or over, 47.7 per cent was agricul-

tural. Living births in 1938 numbered 1,037,180 (23.6 per 1000); deaths, 612,223 (13.9 per 1000); marriages, 324,843 (7.4 per 1000). Emigrants in 1937 numbered 59,945; emigrants who returned to Italy totaled 35,741. Foreigners in Italy at the 1936 census numbered 108,597 as compared with an estimated 9,600,000 Italians living in other countries.

The city of Rome had an estimated population of 1,327,126 on Dec. 31, 1939. Other chief cities with the estimated number of inhabitants on Dec. 31, 1938 (not including workmen and soldiers absent in Africa and the Dodecanese), were: Milan (Milano), 1,205,542; Naples (Napoli), 920,460; Turin (Torino), 690,015; Genoa (Genova), 654,211; Palermo, 431,666; Florence (Firenze), 351,055; Bologna, 315,158; Venice (Venezia), 283,926; Trieste, 258,612; Catania, 251,978; Bari, 210,777; Messina, 202,375; Verona, 166,315; Padua (Padova), 150,203; Taranto, 151,150; Leghorn (Livorno), 134,545; Brescia, 134,340; Ferrara, 122,913; Reggio di Calabria, 121,876; Cagliari, 119,934; La Spezia, 119,067.

National Defense. Service in the army (or navy) is compulsory and universal. The active army on Nov. 1, 1939 (according to the Adjutant General's Office, Washington, D. C.), numbered 2,240,000 men, with 5,175,000 trained reserves. The air force comprised 116,000 men plus 102,000 reservists and 3000 aircraft. The Office of Chief of Naval Operations, Washington, D. C., reported that on Oct. 1, 1939, the Italian navy consisted of 4 battleships aggregating 94,488 tons, 1 old armored cruiser, 5 monitors, 19 cruisers, 98 destroyers, 1 patrol gunboat, 1 submarine chaser, and 98 submarines. At the beginning of 1939 the personnel of the navy was 4143 officers and 70,500 men. See MILITARY PROGRESS; NAVAL PROGRESS.

Colonial Empire. The total area of Italy's colonies and dependencies (including Albania and all of Libya) is 1,279,589 square miles; total population (1938 estimate), 9,711,000. They are treated elsewhere in the YEAR BOOK under the following individual headings: AEGEAN ISLANDS, ITALIAN; ALBANIA; ITALIAN EAST AFRICA and LIBYA.

Education and Religion. School enrollment in 1936-37 was: Elementary, 5,163,596; secondary, 1,038,238; higher education, 72,944. According to the 1931 census 79 per cent of persons over six years of age were able to read. There were 41,014,096 Roman Catholics (99.6 per cent of the population), 83,618 Protestants, and 47,825 Jews in the 1931 census. See EDUCATION.

Production. About 46.3 per cent of the working population is engaged in agriculture and fishing, 30.4 per cent in mining, quarrying and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. Yields of the chief cereals in 1939 (in metric tons) were: Barley, 245,400; rye, 151,500; oats, 586,800; wheat (1938), 8,091,800; corn (1938), 2,934,300. The production of other leading crops in 1938 was: Rice, 37,822,000 bu.; potatoes, 108,356,000 bu.; sugar beets, 3,253,000 metric tons; beet sugar (1938-39), 398,000 metric tons; olive oil (1938-39), 47,684,000 gal.; wine, 1,093,703,000 gal.; citrus fruits, 835,000 metric tons; tobacco, 90,451,000 lb.; tomatoes, 2,086,654,000 lb.; cocoons, 44,028,000 lb. The 1938 livestock statistics showed 7,667,000 cattle; 9,467,000 sheep; 2,940,000 swine; 1,828,000 goats; 791,000 horses; 1,228,000 mules and asses.

Mineral production in 1938 was valued at 895,259,000 lire (775,184,000 in 1937); quarry output, 424,600,000 lire (394,380,000 in 1937). Mineral and

metallurgical production in 1938 was (in metric tons): Iron ore, 990,043; lead ore, 67,493; zinc ore, 200,848; iron pyrites, 930,312; lignite, 1,348,031; sulphur (crude) 397,155; asphaltic and bituminous rock, 258,047; marble, 457,222; marine salt, 883,420; bauxite, 360,837; metallic mercury, 2301; aluminum, 25,767; lead, 48,412; tin, 486; pig iron, 864,536; steel ingots and castings, 2,307,403; ferro-alloys, 64,311; metallurgical coke, 1,739,417; cement, 4,607,554. The capitalization of Italian manufacturing industries on Dec. 31, 1938, was 53,129,000,000 lire. The output of raw silk in 1938 was 6,029,000 lb.; rayon and other artificial fibers, 278,913,000 lb.; cotton yarn, 393,395,000 lb.; cotton cloth, 969,274,000 yd. The hydro-electric plant capacity in January, 1939, was 3,961,000 kilowatts; the output in 1938 was 14,298,000,000 kilowatt-hours. Motor vehicles manufactured in 1938 totaled 58,974 automobiles and 10,144 trucks and buses. Woolen textiles, chemicals, sulphuric acid, superphosphate, copper sulphate, cheese, and macaroni are other important manufactures.

Foreign Trade. Total imports for 1938 (excluding precious metals) were valued at 10,918,000,000 lire (13,942,100,000 in 1937) and exports at 7,959,000,000 (10,433,600,000 in 1937). Imports were chiefly from the following countries: Germany, 2,981,010,000 lire; the United States, 1,315,712,000; Great Britain, 703,047,000; Switzerland, 373,325,000; Poland, 313,573,000; Rumania, 251,970,000; France, 247,571,000. The distribution of exports was: Germany, 1,983,312,000 lire; United States, 773,518,000; Great Britain, 580,180,000; Switzerland, 489,348,000; France, 321,783,000; Yugoslavia, 219,186,000. The chief exports were cotton fabrics, automobiles, rayon and other artificial fibers, wool fabrics, chemicals, medicines, paints, lemons. See IMPORTS AND EXPORTS.

Finance. Actual receipts for the fiscal year ending June 30, 1938, were 28,362,000,000 lire; expenditures were 40,923,000,000 lire. Budget estimates for 1938-39 showed revenue of 25,072,000,000 and expenditure of 25,035,000,000 lire (24,561,000,000 and 29,319,000,000, respectively, for 1939-40). A decree published Dec. 4, 1939, appropriated an additional 1,000,000,000 lire for expenses growing out of the international situation. There were also supplementary appropriations in October totaling 358,700,000 lire. These added expenditures increased the probable deficit for 1939-40 to 4,755,000,000 lire.

No statement of the public debt has been published since that of Aug. 31, 1935, showed a total debt of 107,185,000,000 lire (funded, 93,827,000,000; floating, 13,358,000,000). Governmental deficits totaled about 54,879,000,000 for the fiscal years from 1935 to 1939 inclusive. To meet the deficiencies the government (up to Mar. 31, 1939) had obtained 14,182,000,000 lire through 5 per cent loans; and 12,803,000,000 through the issuance of new treasury notes. Central monetary gold reserves on Sept. 30, 1939, totaled approximately \$114,000,000 (old gold dollars). The average exchange value of the lira was \$0.0526 in both 1937 and 1938, \$0.0520 in 1939.

Transportation. At the beginning of 1939, Italy had 14,448 miles of railway line (state, 10,551; private, 3897). For the year ended June 30, 1938, the government lines carried 71,109,000 passengers and 50,285,000 metric tons of freight, the gross receipts totaling 4,181,000,000 lire. The mileage of roads and highways in 1939 was 113,906 (See ROADS AND STREETS). Statistics of civil aviation

for 1938 were: Miles flown, 8,447,000; passengers carried, 142,604; mail carried, 1,059,000 lb.; newspapers, 659,000 lb.; baggage, 4,645,000 lb.; merchandise, 1,258,000 lb. A new transatlantic air service between Rome and Rio de Janeiro, Brazil, was inaugurated on Dec. 21, 1939. The Italian merchant marine on June 30, 1938, comprised 1293 vessels of 3,290,484 gross tons. The gross tonnage launched in the year ending June 30, 1939, totaled 89,300. During 1939, 12,119 vessels of 22,816,000 net register tons entered Italian ports in the foreign trade.

Government. The Fascist regime has been superimposed upon the constitutional monarchy established by the Constitution of Mar. 4, 1848. Under the law of Dec. 9, 1928, the Fascist Grand Council, consisting of (1) life, (2) ex-officio, and (3) extraordinary members, acts as "the supreme organ co-ordinating and uniting all the activities of the regime." The life members (three in 1939) are the Quadrumvirs of the March on Rome. Members in the other two categories are all appointed by the Head of the Government (Benito Mussolini).

Parliament consists of a Senate (535 members in 1939), all appointed for life by the King on nomination by the Head of the Government, and a Chamber of Fasci and Corporations, which on Mar. 23, 1939, replaced the Chamber of Deputies provided for in the 1848 Constitution. The Chamber of Fasci and Corporations is composed of about 700 National Councillors, who hold their seats by virtue of membership in The Fascist Grand Council, the National Council of the Fascist party, and the National Council of Corporations. By the law of Oct. 7, 1938, both the new Chamber and Senate were restricted to voting by a show of hands or by acclamation, instead of the former secret ballot, on measures presented to them by the Head of the Government or on measures the discussion of which had been previously authorized by him. For the cabinet as constituted at the beginning of 1939, see 1938 YEAR BOOK, p. 359. For changes in 1939, see below under *History*.

HISTORY

Foreign Relations. Under Benito Mussolini's resolute guidance, Italy during 1939 pressed steadily toward her goal of domination of the Mediterranean, the breaking of the Anglo-French stranglehold on the Straits of Gibraltar and the Suez Canal, territorial expansion in Africa, and the defense of her economic and diplomatic position in the Balkans and the Danube basin. With Hitler's collaboration, this campaign registered substantial progress. Italo-German intervention in Spain (q.v.) made possible the victory of Gen. Francisco Franco's insurgent government and opened the way for a possible alliance between the Fascist governments of Italy and Spain. The conquest of Albania (q.v.) in April gave Italy a base of operations in the Balkans, and made the Adriatic more than ever an Italian lake.

On May 22 the Rome-Berlin axis of 1936 was converted into an offensive and defensive military alliance, designed to overturn the European *status quo* established by the Versailles and other World War peace treaties and to provide additional "living space" for the two allies. But the fruits that Mussolini expected from this alliance were not immediately forthcoming. France and Britain were not intimidated by the joint German-Italian threat. They firmly refused to grant Italian demands for Malta, Tunisia, Djibouti, and a dominant voice in

the management of the Suez Canal (see FRANCE under *History*). At the same time they constructed a powerful coalition of anti-axis powers, which, together with their own rapidly increasing armaments, placed Italy in a dangerously exposed position.

Italy and Spain. Physical exhaustion in Spain, coupled with the power of the Anglo-French coalition, balked Mussolini's efforts to bind Spain to Italy through a military alliance. Count Ciano, Mussolini's son-in-law and Foreign Minister, returned empty-handed from his visit to Spain in July, despite the claims on General Franco's gratitude made by the Italian press in June. It was then officially proclaimed that Mussolini had intervened in Spain with naval, air, and military forces from the outset of the Franco revolt beginning in July, 1936. The final Italian casualty lists in Spain, published October 2, placed the killed at about 4000 and the wounded at 15,000.

Non-belligerency. Meanwhile the rapid expansion of German military power and of Nazi political and economic influence in the Balkans, the Danubian basin and Spain confronted Italy with the danger that she would be left at Germany's mercy in the event of a German-Italian military victory over Britain and France. Consequently Mussolini refused to follow Hitler into the European War (q.v.), which broke out on September 3 as a result of the German invasion of Poland. Il Duce adopted a policy of "non-belligerency" which gave Italy, as the greatest European power not involved in hostilities, greater bargaining powers than at any time previous to the conflict.

There was some evidence that Mussolini used this strategic position to exact extensive concessions from Britain and France. The Rome correspondent of the *New York Times* reported on November 18:

... There are good reasons to believe Italy has already won important concessions with regard to the (Suez) canal and Jibuti (Djibouti) and has pledged concerning Tunisia —without fighting. But they are not legalized yet and the problems, therefore, remain open.

A week later France removed all war restrictions from the French side of the Italian border and the Italian High Command extended "winter leave" to an estimated 300,000 men called to the colors during the European summer crisis. These events coincided with a growing agitation in the Italian press against the spread of Soviet influence in the Balkans, resulting from the Soviet-German rapprochement. They followed Mussolini's sweeping reorganization of his government on October 31 in which six ministers closely identified with the Rome-Berlin axis policy were replaced.

Italo-German Relations. These developments led many observers to conclude that Italy was reversing her foreign policy and would eventually join the Anglo-French alliance. On December 7, however, the Fascist Grand Council issued a declaration reaffirming both the Italo-German military alliance and the policy of non-belligerency. It warned the Soviet Union to stay out of the Balkans and warned the Allies that Italy intended to safeguard its overseas traffic "in the most explicit manner, both for its prestige and for the indispensable necessities of life."

Further important light on Italy's policy was shed by Count Ciano before the Chamber of Fasci and Corporations on December 16. His speech bristled with hostility toward Britain and France, who were charged with responsibility for the European War. He defended German policy, including the pact with the Soviet Union, and "re-af-

firmed the Italo-German alliance. Nevertheless in explaining Italy's non-belligerency in the war, Count Ciano revealed substantial divergences in Italian and German foreign policies. He asserted that the Italian occupation of Albania was "absolutely independent" of the German seizure of Bohemia and Moravia, thus strengthening the belief that Mussolini took Albania to block a German advance into the Balkans rather than to support Hitler. He stated that the alliance with the Reich concluded in May aimed to consolidate their respective positions while both powers completed their military preparations.

"The duration of this period was set by us at three years; on Germany's part at four or five," he said. "The Reich agreed with us not to raise any question that would be likely to arouse new polemics before this lapse of time had passed."

Ciano revealed that as early as August 11, when he commenced a three-day conference with the German Chancellor and Foreign Minister on the issues raised by the Polish-German crisis, he submitted a suggestion from Mussolini for arbitration of Polish-German problems. Hitler and von Ribbentrop rejected the proposal on the ground that incidents had already "brought the dispute . . . away from the diplomatic field into the military sphere." Since the German determination to force a military solution of the Polish controversy violated the understanding regarding a three-year period of peace, the Italian Government took the position that it was under no obligation to support the Reich in the subsequent war. Count Ciano declared that Germany had gone farther than Italy expected in her rapprochement with the Soviet Union, and informed Italy of the accord less than 48 hours before its conclusion. However he reiterated Mussolini's statement of March 26 that Italy would not repeat her World War performance of shifting from the German to the Allied side.

Tirol Settlement. As part of the Italo-German understanding, Mussolini obtained from Hitler a settlement of the German minority problem in the South Tirol (Upper Adige), which was annexed by Italy from Austria after the World War, and in adjacent Italian provinces. The intensive Italianization campaign carried on for 20 years by the Fascist regime among the Germans living south of the Brenner Pass had failed. Moreover the advance of the German frontier to the Brenner in March of 1938 raised the probability of an eventual German demand for the return of the South Tirol, controlling the historic passage way across the Alps into northeastern Italy.

In mid-July the Italian police suddenly ordered the expulsion of all foreign tourists and residents from the South Tirol, and it was announced that an Italo-German accord had been reached for the transfer of the German-speaking inhabitants to the Reich. The attempt at summary expulsion of foreigners and the German-speaking minority encountered stubborn resistance, however, and on October 21 a German-Italian treaty was signed which regulated and moderated the transfer measures. All German citizens residing in the Italian frontier provinces (about 10,000) were forced to leave before December 31. The German-speaking inhabitants having Italian citizenship were given the choice of staying in Italy and accepting Italianization or moving to Germany. Those voting to leave were granted three years to dispose of their properties and migrate. See SWITZERLAND, *History*.

A plebiscite among the German-speaking inhabitants, completed by the end of 1939, showed 185,-

365 opting for Germany and 82,542 for Italy out of 267,907 in the South Tirol; 166,488 for Germany and 63,012 for Italy out of 229,500 in the Province of Bolzano; and 16,572 for Germany and 19,530 for Italy out of 36,102 in the Provinces of Trento, Udine, and Pelluno.

Balkan Policy. Although the Italian Government approved the German policy of neutralizing Soviet Russia, the concentration of German forces against Britain and France left the Danube basin and the Balkans open to Soviet penetration. This lessened Italian hopes of obtaining compensation in that region for Mussolini's collaboration with Hitler. Consequently the independent policy adopted toward the Reich after the outbreak of the European War was accompanied by increasing hostility toward Soviet intervention in the affairs of southeastern Europe.

In this stand Mussolini found himself on common ground with Turkey, Greece, Rumania, and Yugoslavia—all active or potential allies of Britain and France—as well as with the anti-Communist governments of Bulgaria and Hungary. The Italian attitude was reflected in the Fascist Grand Council's warning of December 7 and in the active sympathy and aid extended to the Finns by the Italian people and government after the Soviet invasion of that country. A new Soviet Ambassador to Rome was hastily recalled to Moscow on December 13 before he could present his credentials.

The Soviet threat led Mussolini to revise his former policy of promoting dissension among the countries of southeastern Europe by supporting Bulgarian and Hungarian revisionist claims. On September 20 Italy reached an agreement with Greece for mutual withdrawal of troops concentrated along the Albanian-Greek frontier. On September 23 Rome announced reduction of its garrisons in the Dodecanese Islands, taken from Turkey in 1923 and regarded by the Turks as a potential base for an Italian attack upon Anatolia. Mussolini also supported Yugoslav efforts for a peaceful settlement of the Hungarian-Rumanian and Bulgarian-Rumanian territorial disputes.

At the same time he promoted Italy's economic interests in the Balkans by concluding trade pacts with Hungary on September 15, Bulgaria on November 4, and a revised trade agreement with Yugoslavia on October 24. Italy thus entered into competition for the supplies on which Germany was vitally dependent for waging war against Britain and France. Moreover on November 3 important conversations were initiated with the Turkish Government for an adjustment of Italo-Turkish relations. Despite these moves, Count Ciano stated in his speech of December 16 that Italy saw no utility in attempting to establish a Balkan or Danubian bloc. Thus at the end of 1939, Italian foreign policy appeared to be following an independent and opportunist line in Europe; its future course would be determined solely on the basis of Mussolini's conception of Italian national interests.

Internal Affairs. Meanwhile the Fascist Government speeded up the process of mobilizing Italy militarily, economically, and spiritually for possible future entry into the European conflict. There were successive increases in armament appropriations, in the number of conscripts called for training, in the strength of fortifications along the German and French frontiers, and in the colonial defense forces. On October 27, 17th anniversary of the Fascist regime, a communiqué announced that Italy under fascism had spent 133,281,000,000 lire (about \$6,930,612,000) for military preparations,

and that another 17,476,000,000 lire were to be appropriated in future budgets (see *National Defense* above). However Count Ciano in his speech of December 16 made the significant admission that there had been "huge wear and tear" on Italy's arms and equipment as a result of the Ethiopian and Spanish wars and the occupation of Albania.

The Autarchy Campaign. Aided somewhat by the annexation of Albania, Italy increased the tempo of its drive for economic self-sufficiency. Early in the year Count Volpi, head of the Fascist Confederation of Industrialists, estimated that 30,000,000,000 lire of capital investments would be required to carry out the national self-sufficiency program during the period 1938-41. On November 18 Mussolini declared that there could be no such thing as a peace economy for the European peoples since armed warfare was the "normal state of the people." "Therefore," he continued, "it is the fact, or rather the imminent fatality, of armed warfare that ought to dominate and that does dominate economy."

Yet with all the efforts of 1939 and preceding years to render the kingdom more independent of foreign sources of supply, Italy at the end of 1939 was able to furnish only 19 per cent of the mineral raw materials needed to supply her industries. Britain, France, and Turkey were in a position to paralyze Italian industry in a short time by blocking the three entrances to the Mediterranean. Even though Italy profited as a transshipment point for German and other trade after the outbreak of the war, the Rome Government was compelled before the year end to curtail consumption of such imports as gasoline, coal, coffee, cacao, sugar, iron, and steel. The shortage of foreign exchange, need for conserving vital supplies, and dislocation of normal trade necessitated this action.

Other Economic Measures. The year witnessed a further concentration of Italian industry into large privately-owned but government-controlled monopolies. The work of breaking up the large feudal estates of Sicily and redistributing some 1,235,000 acres of land into 20,000 farms at a cost of about \$125,000,000 was begun on October 21. This program called for the construction of public buildings, new roads and reservoirs, irrigation projects, and new farm buildings. Large-scale public works and reclamation projects were initiated or carried forward in other parts of Italy, and in Albania, Libya, and Italian East Africa. Reclamation of the Pontine marshes was completed on October 29 when Mussolini dedicated Pomezia, the last of a series of towns constructed in this former waste area. Work was speeded up, despite the war, on the construction of the Rome Universal Exhibition of 1942, to cost \$200,000,000 (see the last paragraph of the article on FAIRS AND EXPOSITIONS page 254 of this YEAR BOOK.).

Other economic developments of the year included a wage-rate increase of from 6 to 10 per cent on March 23 to conform to the rising cost of living. With the outbreak of the European War, the government on September 4 made exports of 58 products subject to license. These measures were followed by the progressive extension of rationing, of control over imports, exports and exchange transactions, of war taxes, anti-hoarding and anti-profiteering measures, and controls over prices and virtually all forms of economic activity. All transportation services were reduced, effective September 5. By the end of the year, however, industry had adjusted itself to wartime dislocations and was

working at or near capacity, largely on orders from Great Britain, France, and Belgium.

Politics. The year served to demonstrate the fact—questioned in 1938—that Mussolini was still the undisputed master of Italy's destinies. On his tour of northern Italy in May he was greeted with unbounded enthusiasm. A significant event was the publication on July 1 of the new Civil Code, replacing that of 1865 and substituting the Fascist concept of the relation of the individual to the state for the previous concept embodied in the Napoleonic Code.

On October 31 Mussolini announced one of the most drastic cabinet shake-ups in Fascist history. Six cabinet ministers, the chiefs of staff of the Army and Air Force, and Achille Starace, secretary of the Fascist party, were replaced. The composition of the new cabinet was as follows: Premier and Minister of War, Navy, Air, Interior and Land Reclamation, Benito Mussolini; Under-Secretary of War, Gen. Ubaldo Soddu; Under-Secretary of the Navy, Admiral Domenico Cavagnari; Under-Secretary for Air, Gen. Francesco Pricolo; Foreign Affairs, Count Galeazzo Ciano; Justice and President of the Chamber of Fasci and Corporations, Count Dino Grandi; Finance, Count Paolo Thaon de Revel; National Education, Giuseppe Bottai; Propaganda, Alessandro Pavolini; Corporations, Renato Ricci; Trade, Raffaele Riccardi; Italian East Africa, Gen. Attilio Teruzzi; Agriculture, Giuseppe Tassinari; Communications, Giovanni Host Venturi; Public Works, Adelchi Serena; Under-Secretary for Land Reform, Sergio Nannini; Under-Secretary of the Premiership, Lieut. Gen. Luigi Russo. Of these only Admiral Cavagnari, Counts Ciano, Grandi and Thaon de Revel, and Bottai were holdovers from the previous ministry.

In addition, Marshal Rodolfo Graziani, veteran of the Libyan and Ethiopian wars, replaced Gen. Alberto Pariani as head of the Army general staff. Ettore Muti succeeded Starace as secretary of the Fascist party. Marshal Pietro Badoglio, who led the main Italian army to victory in Ethiopia, remained as commander-in-chief of all armed forces.

This shake-up was followed by an extensive reorganization of the Fascist party on November 22, designed to increase centralization of control, strengthen discipline, and stimulate local enthusiasm. Several hundred party officials were replaced. At the same time it was announced that the Fascist press would be reformed to make it less stereotyped and more independent of party financing and control.

Relations with Vatican. The severe friction between the Italian state and the Vatican that broke out again in 1938 as a result of Mussolini's new racist, pro-German and other extremist policies (see 1938 YEAR BOOK, p. 360), continued during the first months of 1939. The election of Pius XI's Secretary of State as the new Pope on March 2 by the College of Cardinals was interpreted as a rebuff to these extremist tendencies in Italy. The Fascist Government, however, proceeded with the application of its anti-Jewish measures (see JEWS), described by an official spokesman on May 11 as inspired by "biological, political, and even religious necessity to defend the Italian race."

The new constitution of Italian Catholic Action, published August 1, marked the victory of the Fascist party in a three-year struggle to restrict Catholic Action to strictly religious affairs. Lay leaders of the organization were superseded by ecclesiastical leaders and it was forbidden to take part in

politics or secular public affairs. A week later the Italian press, in reporting the letter sent to French-Canadian Catholics by the Papal Secretary of State on behalf of Pius XII, omitted mention of passages referring to the inadequacy of Fascist tenets.

Mussolini's non-belligerency in the European War and his anti-Soviet policy gratified the Pope and relations between state and church thereafter showed a marked increase in cordiality. This trend culminated in the formal visit paid by King Victor Emmanuel and Queen Elena to the Pope on December 21, and the return visit which Pius XII made to the Italian sovereigns at the Quirinal Palace on December 28.

IVORY COAST. See FRENCH WEST AFRICA.

JAMAICA, ja-mā'ka. A British West Indian crown colony. Area, 4540¼ square miles; population (Jan. 1, 1939 estimate), 1,173,645 compared with (1921 census) 858,818. CAYMAN ISLANDS (see below), TURKS AND CAICOS ISLANDS (see below), Morant Cays, and Pedro Cays are dependencies of Jamaica. Chief towns (with 1921 census figures): Kingston (the capital), including Port Royal (63,711), Spanish Town (8694), Montego Bay (6580), Port Antonio (6272), Savanna-la-Mar (3442), Port Maria (2481), Falmouth (2136). During 1938 there were 37,970 births (32.35 per 1000), 19,124 deaths (16.29 per 1000), and 5416 marriages (4.61 per 1000). The school system in 1938 included 664 grant-aided elementary schools with an aggregate of 158,418 pupils enrolled, 26 grant-aided secondary schools, and various other industrial and private schools.

Production and Trade. Bananas, sugar, coffee, rum, coconuts, pimento, grapefruit, logwood extract, ginger, cacao, oranges, tobacco, and logwood were the principal products. The sugar crop for 1938-39 amounted to 117,879 long tons all of which has been shipped, except that required for local consumption. In 1938 approximately 24,000,000 stems of bananas were produced. Live-stock in the colony (1937-38): 126,263 cattle, 8859 sheep, and 21,432 horses, mules, and asses. Trade (1938): Imports, £6,485,221 (chief items—foodstuffs, cotton piece goods, wearing apparel, automobiles, gasoline, fuel oil, and hardware); exports (including re-exports), £5,032,740 (chief items—bananas £2,916,956, sugar £859,500, rum £247,892, spices £207,070, coffee £132,907, coconuts £84,155). The vessels clearing the ports during 1938 aggregated 4,242,295 net tons. Some 62,690 tourists visited Jamaica in the same year. Jamaica had 6895 miles of roads in 1938.

Government. For the fiscal year ended Mar. 31, 1938, total revenue amounted to £2,476,136; total expenditure, £2,271,174. On March 31, 1938, the public debt amounted to £4,604,477 against which the sinking fund for its redemption was £605,492. Budget (1938-39): Revenue, £2,449,517; expenditure, £2,535,507. The government is headed by a governor who is assisted by a privy council (having the usual functions of an executive council) of 8 members, and a legislative council

of 30 members (the governor as president, 5 ex-officio, 10 nominated, and 14 elected). Unless previously dissolved the duration of the legislative council is for five years from the last preceding general election. Captain-General and Commander-in-Chief, Sir A. F. Richards (appointed June 5, 1938).

History. Early in 1939 the call for a general strike issued by the trade unions of Jamaica did not meet with a general response. As a result there was some disorder. The governor promised to introduce legislation providing for the arbitration of labor disputes but he said he would not stand aside and watch any section of the people using force to impose its will upon others. Later, the strike orders were cancelled. Consult *Labour Conditions in the West Indies* by Major Orde Brown (H.M. Stationery Office, London) for a review of the circumstances which have been responsible for the depressed condition of the labor market. Recommendations dealing with a particular colony are made in separate chapters.

The legislative council unanimously accepted the report of the Smith Committee on the new political constitution for Jamaica. The report proposed a legislative council (upper house) of 10 members (officials and others, nominated by the government) and a house of assembly (lower house) of 14 elected members.

The advent of the European war in September, 1939, directly affected the economic and industrial situation in Jamaica. Wartime regulations were put into force for the strict control of foreign currencies, proscription of exports except under permit, and a similar limitation upon the imports of certain goods—mainly foodstuffs. According to government estimates, at least 75 per cent of the banana-bearing trees were damaged by the prolonged rain and high wind which struck Jamaica early in November, 1939. The legislative council adopted proposals for lending £100,000 to storm-stricken agriculturists, and to fishermen, and for lending £100,000 to agriculturists for cultivation of food crops under the food-production scheme.

Cayman Islands. A dependency of Jamaica, consisting of the islands of Grand Cayman, Little Cayman, and Cayman Brac. Area, 104 square miles; population (1937), 6800. Georgetown (capital) had 1321 inhabitants in 1934. The chief products are coconuts, green turtle, thatch rope, and turtle shell. In 1937 imports totaled £27,321; exports, £10,478; revenue, £17,410; expenditure, £16,649. The government is administered by a commissioner under the direction of the Governor of Jamaica.

Turks and Caicos (kī'kōs) Islands. A dependency of Jamaica. Area, 166 square miles; population (1937), 5300. The principal products are salt (1,400,840 bu. exported in 1937), conchs, turtle shell, sponges, and sisal. In 1937 imports were valued at £25,654; exports, £30,061 (including re-exports); revenue, £21,148; expenditure, £10,955. There is a cable station at Grand Turk. The government is administered by a commissioner (with headquarters on Grand Turk) aided by a legislative board of seven members (appointed by the Crown), subject to the supervision of the Governor of Jamaica.

JAPAN. A Far Eastern empire, comprising (1) Japan proper, or the five main islands of Honshu, Kyushu, Shikoku, Hokkaido, and Ryukyu, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); (4) Karafuto (southern Sakhalin); and (5) Pescadores (Boko-

to) Islands. In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. During 1931-33 it established a protectorate over three Chinese provinces (Liaoning, Kirin, and Heilungkiang) in Manchuria and Jehol Province in Inner Mongolia, forming them into the new state of Manchoukuo. Capital of Japan, Tokyo; Emperor in 1939, Hirohito, who ascended the throne Dec. 25, 1926. See separate articles on FORMOSA, KOREA, KARAFUTO, JAPANESE PACIFIC ISLANDS, KWANTUNG, and MANCHOUKUO.

Area and Population. The area and population of the empire at the censuses of 1930 and 1935 are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

| Island | Area sq miles | Population, 1930 census | Population, 1935 census |
|-----------------------|------------------|----------------------------|----------------------------|
| Japan proper | 147,593 | 64,450,005 | 69,254,148 |
| Korea | 85,228 | 21,058,305 | 22,899,038 |
| Formosa* | 13,889 | 4,592,537 | 5,212,426 |
| Karafuto | 13,934 | 295,196 | 331,943 |
| Japanese Empire | 260,644 | 90,396,043 | 97,697,555 |
| Kwantung ^b | 1,438 | 1,328,011 | 1,656,726 |
| Mandated Pacific Is. | 830 | 69,626 | 102,537 |

* Including Pescadores (Bokoto) Islands; area, 49 square miles.

^b Including South Manchuria Railway Zone.

The population of Japan proper was estimated at 72,222,700 on Oct. 1, 1938. Births in Japan proper in 1937 numbered 2,180,734 (30.6 per 1000); deaths, 1,207,899 (17.0 per 1000); marriages, 674,500 (9.5 per 1000). With more than a million men in China, the Japanese birth rate dropped to 9.26 in 1938; the death rate in Japan proper was 17.44. On Oct. 1, 1937, there were 1,376,916 Japanese residing abroad (405,701 men and 297,762 women in the Americas). The number of foreigners in Japan on Jan. 1, 1938, was 29,406 (2069 U.S. citizens). The estimated populations of the chief cities on Oct. 1, 1938, were: Tokyo, 6,457,600; Osaka, 3,221,200; Nagoya, 1,224,100; Kyoto, 1,159,800; Kobe, 989,100; and Yokohama, 777,500. Populations of other important cities on Oct. 1, 1937, were: Hiroshima, 326,600; Fukuoka, 308,200; Kure, 248,400; Yawata, 229,600; Sendai, 229,400; Nagasaki, 214,600; Hakodate, 211,700; Shizuoka, 211,600; Sapporo, 205,900; Yokosuka, 203,800.

National Defense. Military training is compulsory. Estimates of Japan's land, air, and sea strength vary. According to the Adjutant General's Office, Washington, D. C., the army consisted of 1,500,000 active soldiers and 4,771,000 trained reserves on Nov. 1, 1939. The air force comprised 37,000 men and 3000 craft. Naval units on July 1, 1939, included 11 battleships; 11 aircraft carriers; 20 cruisers; 111 destroyers; and 59 submarines. See MILITARY PROGRESS; NAVAL PROGRESS.

Education and Religion. Approximately 8.3 per cent of persons over 10 years of age are illiterate, but illiteracy is confined largely to people over 50 years of age. The school enrollment in 1936 was: Elementary, 11,425,628; secondary, 770,681; university, 71,607. There is no state religion and religious freedom prevails. Shintoism, with 13 different sects, and Buddhism, with 12 sects, are the principal religions. The Roman Catholic, Greek Catholic, and Protestant churches have a relatively small following.

Production. Manufacturing normally accounts for about 32.7 per cent of the national income, commerce for 25.4 per cent, and agriculture for about 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper. The rice

yield in 1939 was 331,264,000 bu. The output of other principal products (in metric tons and in 1939 unless otherwise specified) was: Wheat, 1,621,000; barley, 1,620,700; oats, 152,700 (1937); maize, 86,200 (1937); potatoes, 2,066,900 (1937); tobacco, 65,600 (1938); tea, 54,700 (1938); soybeans, 366,700 (1937); beet sugar, 45,700 (1938); cane sugar, 134,100 (1938); silk, 41,875 (1937); rayon, 96,500 (1938); beer, 74,628,307 gal. (year ended June 30, 1938). The fisheries catch of Japanese fishermen in Japanese and colonial waters totaled 3,622,000 metric tons in 1936. The total value of industrial production in 1937 was 16,173,000,000 yen, of which textiles accounted for 24.9 per cent; metals and metal products, 20.9 per cent; machinery and tools, 15.3 per cent; ceramics, 1.8 per cent; chemicals, 18.9 per cent; lumber and wood, 2.4 per cent; printing and book-binding, 1.6 per cent; foodstuffs, etc., 10.0 per cent.

Mineral and metallurgical production of Japan proper (in metric tons and in 1938 unless otherwise specified) was: Crude petroleum, 356,000 (including Formosa); copper ore, 100,000; tin, 2200; aluminum (smelter), 20,000; superphosphates of lime, 1,400,000; coal (1937), 46,000; lead (1937), 10,200; zinc (1937), 20,000; gold, 760,000 fine oz.; silver, 10,100,000 fine oz.

Foreign Trade. Preliminary estimates of Japan's trade in 1939 placed imports at 2,917,000,000 yen and exports at 3,576,000,000 yen. (These figures include commerce of Japan with other parts of the Japanese empire; trade with foreign currency countries showed an import excess of 405,000,000 yen.) In 1938 imports were valued at 2,663,337,000 yen; exports at 2,689,677,000 yen. The principal imports (in the order of their value) were cotton, beans, wool, coal, oil cake, crude rubber, and wood pulp. Leading exports were cotton tissues, raw silk, machinery, rayon cloth, canned goods, wheat flour, paper, wrought iron, silk tissues. For distribution of trade, see 1938 YEAR BOOK, page 364. Consult also article on IMPORTS AND EXPORTS in current volume.

Finance. The official budget statement for the fiscal year ended Mar. 31, 1939, showed total revenue of 3,595,000,000 yen (ordinary, 2,332,000,000; extraordinary, 1,263,000,000); and total expenditures of 3,289,000,000 yen (ordinary, 1,600,000,000; extraordinary, 1,689,000,000). Extraordinary receipts included proceeds of sales of deficit bonds; expenditures excluded the cost of the war in China, estimated at 5,000,000,000 yen, accounts for which were kept in a special military expenditures budget. The basic budget for the year ending Mar. 31, 1940, estimated receipts and expenditures at 3,694,666,976 yen, which were increased by supplementary budgets to 4,804,542,627 yen, exclusive of special appropriations of 4,605,000,000 yen to defray the cost of the war in China. The 1940-41 general accounts budget anticipated revenue and expenditures of 5,900,000,000 yen; the cost of the war in China was estimated at 4,469,000,000 yen.

The public debt on Nov. 30, 1939, was 20,859,000,000 yen (15,522,000,000 on Nov. 30, 1938). Government bonds floated during 1939 aggregated 5,280,000,000 yen. The Japanese yen, which had been linked to the pound sterling, was cut loose from the British currency on Oct. 24, 1939, and pegged to the American dollar at the rate of \$0.23 $\frac{1}{16}$ to one yen. The average exchange value of the yen was \$0.2845 in 1938 and \$0.2596 in 1939.

Transportation. On Mar. 31, 1938, there were 11,144 miles of government and 4240 miles of private railway line. For the year ended Mar. 31,

1938, state railways carried 1,156,266,000 passengers and 98,170,440 tons of freight, the gross receipts totaling 670,164,000 yen. There were 594,749 miles of highways of all kinds in 1939 (see *ROADS AND STREETS*). Regular air services connect the principal cities of Japan proper with Formosa, Korea, Manchuria, China proper, and the Japanese mandated islands in the Pacific. In August, 1939, there were 21 air services covering 9598 route miles and flying a total of 134,102 miles per week. The merchant marine in 1938 consisted of 2187 vessels with a gross tonnage of 5,006,712. During 1938, the net tonnage of ships entering Japanese ports (with cargo and ballast) was 59,220,000.

Government. Under the Constitution of Feb. 11, 1889, executive power is vested in the emperor, who acts with the advice and aid of a ministry appointed by and responsible to him, but every law normally requires the approval of the Imperial Diet of two chambers. The Upper Chamber (House of Peers) consisted in 1939 of 408 members, of whom 192 were chosen for life on the basis of rank, wealth, and other qualifications and the remainder were elected from and by special groups for seven years. The House of Representatives consisted of 466 members elected for four years. The elections of Apr. 30, 1937, divided the House into two major parties (Minseito, with 175 seats, and Seiyukai, with 172), three minor parties and various independents. The military-fascist groups gradually extended their control over the government after the invasion of Manchuria in 1931 and won a complete victory with the installation of the cabinet headed by Baron Kiichiro Hiranuma on Jan. 4, 1939 (see 1938 *YEAR BOOK*, p. 365). For political changes in 1939, see *History*.

HISTORY

Domestic Affairs. Internal developments in Japan during 1939, like the foreign policies of the Tokyo Government, were all influenced or determined by the imperialist and expansionist program of the dominant military-fascist groups.

Their primary objective was the political and economic domination of China and the destruction of all foreign rights and interests obstructing Japanese exploitation of China's people and resources. They planned, in addition, to bring the other independent states and European colonies in Eastern Asia under Japanese control and to correlate their resources and markets with the Japanese national economy.

In pursuit of this objective, the Japanese nation sank steadily deeper into the military, economic and diplomatic morass of the Chino-Japanese war (see *CHINA* under *History* for a full account). Unable to crush the Chinese armies, to win Gen. Chiang Kai-shek's consent to a compromise settlement, or to overcome the resistance offered by the Western Powers and the Soviet Union, the Japanese leaders by the end of 1939 were talking of the necessity for a 10-year struggle to achieve their ambitions in China. But this prospect found little favor among Japanese civilians and politicians. There was growing complaint at the hardships imposed upon the nation, apprehension at the increasing hostility aroused in the United States and elsewhere by Japanese policy, and more outspoken criticism of the military leaders responsible for the nation's dilemma. Yet there was little or no evidence at the year end that this discontent would suffice to change Japan's course, or terminate military-fascist control of the government.

Economic Trends. The financial-economic cri-

sis that had been developing since the beginning of the war with China became more acute during 1939. Under the wartime economy set up to prosecute the struggle, Japan's export trade declined. Dwindling foreign exchange and gold reserves forced the government to curtail imports of raw cotton and other commodities vital to the maintenance of the export industries. Capital resources were increasingly strained to meet huge war loans and the growing demand for non-military financing. Heavy casualties in China and the maintenance of more than a million men under arms, spread over an extensive front on the mainland, caused severe shortages of both labor and shipping for non-military economic activities.

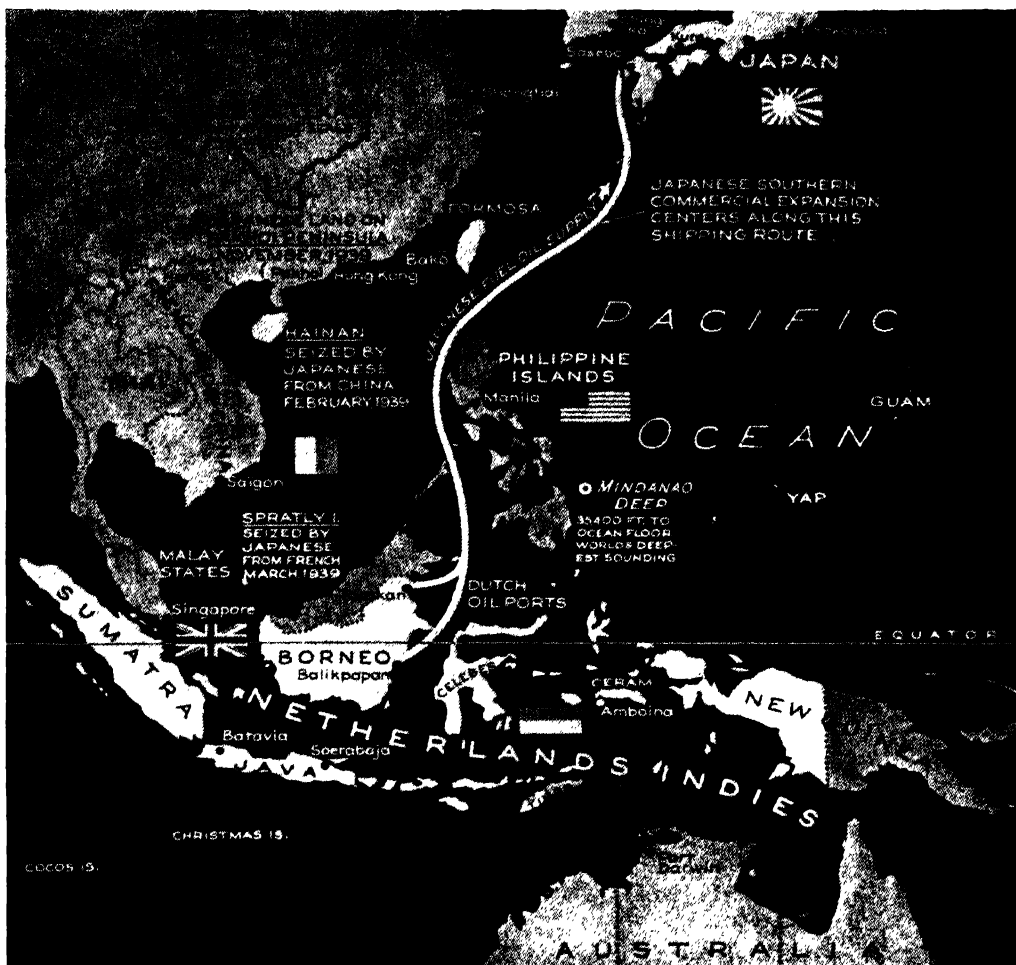

The economic difficulties attributable directly to the war were aggravated by a drought of unprecedented severity. This contributed to the shortage of electric power that hampered Japanese industries throughout 1939, and to the rice shortage that led to a near crisis in December. On May 16 the president of the Cotton Spinners Association declared that the cotton industry was in a desperate condition. There was a growing scarcity of other necessities, such as coal for industries and charcoal for heating homes.

Notwithstanding government price-control measures, prices of staple commodities continued to rise. The cost of living for laborers rose 14.3 in the year ended in December, 1939; of salaried classes, 12.8 per cent. The note issue of the Bank of Japan increased from 1,580,000,000 yen in July, 1937, to 3,818,000,000 yen on Dec. 31, 1939, exceeding the legal limit by 1,118,000,000 yen. The rapid development of inflationary trends forecast application of the remaining controls over social and economic life vested in the army-dominated Cabinet Planning Board under the National Mobilization Law of 1938 (see 1938 *YEAR BOOK*, p. 365).

Before passing this law, the Diet had exacted a pledge from the Konoye Government that it would not be applied during the Chino-Japanese war, but reserved for use in the event of a conflict with some other foreign power. However some of the controls provided for in the law were applied during 1938 and more drastic ones followed in 1939. Toward the end of April the Central Price Commission initiated a far-reaching price control program for fixing commodity prices at international levels and extending more rigid control over costs of raw materials, freight, labor wages, and other export costs.

Shortly afterward the Cabinet Planning Board announced a three-year program for the expansion of production of essential basic commodities in Japan, Manchuria and North China. The objective was to make the yen-bloc territories independent of foreign sources of supply for iron and steel materials, nonferrous metals, gasoline and heavy oils, chemicals, etc., by the spring of 1942. However shortages of skilled labor and of capital in Japan prevented the expected progress along these lines. Another set-back resulted from the cutting off by the European War of machinery and other equipment ordered in Germany and Japan on a barter basis for the industrialization of Manchuria and North China. The war also made it harder than ever for Japanese industry to obtain needed raw materials.

In consequence the Cabinet Planning Board on September 19 enforced additional articles of the National Mobilization Law to curb commodity prices. On September 25 exports of various food products to yen-bloc areas were restricted. The

Life Magazine

JAPAN'S SOUTHWARD EXPANSION

After their attack upon Central China in 1937 the Japanese moved steadily southward along the sea route to Malayan markets and to the Borneo oil fields where their navy obtains its fuel. Canton was seized on Oct. 21, 1938, Hainan Island in February, 1939, the Spratly Islands (near Singapore) in March and the Pakhoi Peninsula in South China in November December, 1939

JAPAN'S ANTI-BRITISH DRIVE IN CHINA

Japanese sentries and the barricade erected in connection with the blockade of the British and French Concessions in Tientsin, China, instituted June 14, 1939

coal ration was cut again on October 1. On October 20 six additional ordinances were issued under the Mobilization Law covering price control, salary adjustment, land and house rental control, electric power adjustment and inspection of munition factories. Anti-profiteering and compulsory cultivation regulations were strengthened. In December the Cabinet decided upon sweeping changes in national and local taxation, increasing the tax burden on all classes.

Armament Program. While prosecuting the war in China at such tremendous cost, the Japanese Government also undertook to speed the mechanization of the army and to further expand the navy. Mechanization of the army was deemed essential after mechanized Soviet forces in August and September inflicted a severe defeat upon the cream of the Japanese military forces in the undeclared hostilities along the Mongolian-Manchoukuo frontier (see MANCHOUKUO under *History*). As for the naval program, Admiral Yonai, the Navy Minister, stated on March 6 that a six-year building program had been decided upon which would give Japan a sea force second to none and having "sufficient power to deal with any international friction arising over the construction of the new order in East Asia." See NAVAL PROGRESS.

Political Developments. The growing financial-economic crisis and the increasing foreign dangers resulting from the effort to establish Japanese domination in Eastern Asia were reflected in governmental developments of the year. The political crisis that led to resignation of the Konoye Ministry on Jan. 4, 1939, hinged mainly on the army's demand for greater control of the Japanese economic system. The new cabinet formed January 5 was headed by Baron Hiranuma, Japan's outstanding military-fascist leader. Most of the other members were holdovers, with the notable exception of Sotaro Ishiwatari, who replaced Finance Minister Ikeda, opponent of the army's economic control program.

The Hiranuma Government supported the attacks by Japanese army leaders in China upon foreign interests, but it split over their demand for transformation of the anti-Comintern pact into a hard-and-fast military alliance uniting Japan with Germany and Italy against the democratic powers and the Soviet Union. After weeks of tense discussion, the cabinet on May 20 advised the Emperor to reject the German alliance offer. The resentful army leaders now determined to push the Tokyo Government into the alliance by creating situations that would make it necessary. They provoked incidents along the Mongolian-Manchoukuo frontier that led to the disastrous test collision with well-armed Soviet troops in August. A first-class diplomatic crisis with Great Britain was precipitated by the army's action in blockading the Tientsin concession (see CHINA under *History*).

The army's adventurous game, which several times appeared certain to succeed in its purpose, was balked by the opposition of the Emperor and by three developments that played into the hands of those Japanese circles opposing an alliance with Germany and Italy. The first of these was the abrogation by the Washington Government on July 26 of the Japanese-American treaty of commerce and navigation of 1911. The second was the conclusion of the German-Soviet non-aggression pact on August 24. The third was the outbreak of the European War on September 3.

The German-Soviet pact in particular discredited the alliance policy of the army extremists, and

caused them to switch to the opposite program of isolation from European affairs and concentration upon prosecution of the Chinese war and the East Asia policy. The shift from extremism to a more moderate foreign course was marked by the resignation of the Hiranuma Cabinet on August 28; establishment of a new government headed by Gen. Nobuyuki Abe on August 29; the conclusion of Soviet-Japanese hostilities on the Mongolian border through the truce of September 15; and the initiation of negotiations for a compromise arrangement with Britain, France, and the United States covering their interests in China. At the same time another unsuccessful offensive was launched against Changsha in China to retrieve Japanese military prestige. On September 4 the Cabinet announced that it intended to stay out of the European War and concentrate on "settlement of the China affair." This stand was later made conditional upon non-interference and non-obstruction of Japan's China policy by the belligerents.

The Civilian Revolt. The hardships suffered in Japan as a result of extremist military-fascist policies, the growing foreign dangers provoked by the expansionist program, and the domination of the Tokyo Government by the army leaders precipitated a civilian political revolt toward the end of the year. In October the government announced the merging of the commercial bureau of the Foreign Office with the newly established Trade Ministry. Taking exception to this as another example of army interference with the operation of Japan's foreign affairs, 113 secretaries and section chiefs of the Foreign Office presented their resignations on October 11. Some 50 ambassadors, ministers and consuls-general followed suit. At great injury to its prestige, the government on October 13 capitulated to the strikers' demands for revocation of the order.

To strengthen the government's admittedly weak position in advance of the new session of the Diet, Premier Abe on November 29 added two additional Ministers—Railways and Welfare—to his cabinet. He also indicated that he had sought and obtained a promise of support for the government in the forthcoming session from the Minseito party. The reviving confidence of the political parties, who had long been ignored by the government and the military leaders, was shown when the Diet convened on December 26. The same day 240 of the 466 members in the House of Representatives signed a petition expressing non-confidence in the government and calling upon it to resign.

This action was interpreted as a spontaneous expression of national discontent at the regimentation and scarcities imposed by the war. It was not considered a symptom of dissatisfaction with the Japanese objectives in China, which still appeared to enjoy wide support among the people. The Abe Cabinet on December 28 decided not to resign but to continue its efforts to settle the "China Incident," as the war was called, and to adjust relations with third powers on Japan's terms.

Foreign Relations. Japan's foreign relations during the year dealt mainly with the Chinese problem and are discussed in some detail in the article on CHINA under *History*. The following brief survey is complementary to that description.

The neutrality of the Soviet Union and the United States in the European War, and the strong line taken by the Washington Government in resisting Japanese attacks upon American Far Eastern interests, prevented Japan from exploiting to the full the greater freedom she obtained through

the embroilment of Britain and France in Europe. On September 23 Premier Abe named Admiral Kichisaburo Nomura as Foreign Minister in an effort to improve Japanese-American relations. The government also indicated its readiness to make some concessions to British and French interests in the "occupied" areas of China.

After concentrating the American fleet in the Pacific at the outbreak of the European War, the Roosevelt Administration notified the Japanese Government through Ambassador Grew's frank speech of October 19 in Tokyo that it was not prepared to sacrifice American interests to the extent demanded by the Japanese program for a "new order" in Eastern Asia. Civilian and moderate army and navy officers hesitated to risk the danger of an American embargo and possible war created by this clash of national interests. But the extremist military leaders again asserted their control of Japanese policy. From the end of October the efforts of the Abe Government to conciliate the United States were largely frustrated by army demands that the negotiations be based upon prior American acceptance of the "new order" in East Asia. At the same time further pressure was brought upon Britain and France to surrender what was left of their positions in China. The year ended with Britain and France slowly retreating and with Japanese-American relations in a dangerous state of tension.

Expansion Toward South Seas. Not content with their progress on the Chinese mainland, the Japanese during 1939 continued their gradual political advance and economic penetration into southeastern Asia. Hainan Island was seized February 9 and the Spratly Islands in the South China Sea between Borneo and Indo-China on March 31, although the Spratly group had been formally annexed by France in 1933. In November leading organs of Japanese opinion expressed the opinion that the European War presented Japan with an opportunity to establish a "preferential position" in the European colonies in the Pacific, particularly in exploiting the oil of the Netherlands Indies (q.v.). The United States was said to be the major obstacle to Japanese expansion toward the southwest.

Relations with Soviet Union. Toward the U.S.S.R. the Japanese military leaders displayed a far more conciliatory attitude following the sharp reverse inflicted by Russian arms in August. The Soviet-Japanese truce of September 13 constituted a retreat from the position previously adopted by the army extremists. Some extremist groups who had previously advocated war upon the Russians began in November to advocate a Soviet-German non-aggression pact. Japan avoided taking a stand on the Soviet invasion of Finland, although Moscow's involvement on that front weakened its hand in dealing with Japan.

The negotiations that began in mid-November for a settlement of the most pressing Soviet-Japanese problems were carried to a successful conclusion on December 31. The perennial dispute over the Kamchatka fisheries question was tided over by Moscow's renewal of the existing fisheries *modus vivendi* for one year. The Soviet Government also agreed to start immediate negotiations for a long-term fisheries treaty. At the same time Japan agreed to the immediate payment by Manchoukuo (q.v.) of 5,900,000 yen still due the U.S.S.R. for the Chinese Eastern Railway. Another agreement was reached for the demarcation of all frontiers where Japanese and Russian inter-

ests were in conflict, and for establishment of a mixed commission to deal with border disputes.

JAPANESE PACIFIC ISLANDS

(NANYO). Under the Treaty of Versailles, Japan was given a mandate to rule the former German South Sea Islands north of the Equator. They include (1) the Marianas (or Ladrone) group of 14 islands, the main ones being Saipan, Tinian, Rota; (2) Caroline group of 549 islands, the main ones being Yap, Palau, Angaur, Spring, Summer, Wednesday, Ponape, Kusaie; (3) Marshall group of 60 islands, the most important being Jaluit. Total area, 830 square miles; total population (April 1, 1937 estimate), 109,847.

Production. Cane sugar (1935-36, 49,100 metric tons), maize (1936, 200 metric tons), phosphates (1936, 70,000 metric tons), tapioca, bananas, coffee, yams, taro, alcohol, and copra (1936 exports, 12,200 metric tons) are the main products. In 1937 the estimated value of merchandise imports (in old U.S. gold dollars) was \$3,200,000 (1936, \$2,500,000); exports, \$4,300,000 (1936, \$3,500,000).

Government. The budget for the year ending Mar. 31, 1939, was balanced at 9,674,669 yen (yen averaged \$0.2845 in 1938). A governor, with headquarters in Koror in the Caroline group, administers the islands under the Japanese Minister of Overseas Affairs.

JEWISH AUTONOMOUS REGION. A Jewish colony (formerly called Birobidjan) in the far eastern territory of Khabarovsk of the Russian Soviet Federated Socialist Republic of the Soviet Union. Area, 14,200 square miles; population (1935), 50,000. Capital, Birobidjan.

JEWISH WELFARE BOARD. The Board has a twofold purpose. It is the parent body for Y.M.H.A.'s, Y.W.H.A.'s and Jewish Community Centers in the United States and Canada. It also provides for the religious and welfare needs of men in the service of the U.S. Army, Navy, Marine Corps, disabled veterans, young men in CCC camps, and C.M.T.C.

The Board is composed of 324 constituent societies in the United States and Canada, which have 380,000 members, and own 242 buildings.

Seven regional organizations are affiliated in the work of the Board: Associated Young Men's and Young Women's Hebrew Associations of New England; New York State Federation of Young Men's Hebrew Associations, Young Women's Hebrew Associations and Jewish Community Centers; New York Metropolitan Section, Jewish Welfare Board, Inc.; New Jersey Federation of Young Men's Hebrew Associations and Young Women's Hebrew Associations; Pennsylvania-Middle Atlantic Federation of Young Men's and Young Women's Hebrew As-

sociations and Kindred Associations; Midwest Section of the Jewish Welfare Board; and Pacific Coast Federation of Jewish Community Centers.

The Board works in the fields of Jewish Center problems relating to programmes of activities and administration, vocational guidance, educational and recreational activities, cultural and social adjustment of immigrants, community surveys and institutional studies, club leadership training, summer and day camps, health and physical education, extension education, forums and lectures, and maintains a field service in contact with its affiliate organizations.

The Army and Navy Committee, Dr. Cyrus Adler, Chairman, serves approximately 5000 men of the Jewish faith in the Army, Navy, and Marine Corps, 1200 disabled veterans in government hospitals and soldiers' homes, and about 1600 young men in the Civilian Conservation Corps. The Board is in contact with 285 army posts, naval stations, and veterans' institutions in the United States and outlying territories. In 1938 the Committee expended \$40,275 in this work. The Board expended a total of \$150,907 in 1938. The Board was organized Apr. 9, 1917, to provide religious and welfare services for the men in the military forces in the World War.

The officers of the Board were: Irving Lehman, President; Jacob M. Loeb, M. C. Sloss, and Mrs. Felix M. Warburg, Vice Presidents; Frederick L. Ehrman, Treasurer; Joseph Rosenzweig, Secretary; and Louis Kraft, Executive Director. The headquarters are at 220 Fifth Avenue, New York City.

JEWS. Although the greatest disaster, at least for magnitude, which the Jewish people have suffered since ancient times befell the Jews of Poland in 1939, the disaster itself is but an incident and a step in a standing policy pursued by the German government under Hitler, and a link in a world-wide anti-Semitic movement sponsored by Germany. Neither the fate of the Polish Jews nor the blows or threats directed against Jewry in other lands can be properly accounted for unless this policy is kept in mind. Once again, as in the past six years, responsible German authorities have voiced their intention of waging war upon all Jews. In his Wilhelms-haven speech of Mar. 30, 1939, Chancellor Hitler declared that the Jewish people must be combatted "on a world-wide scale." Dr. Alfred Rosenberg, political philosopher of National Socialism, announced (May 24) that the Reich's war on Jewry will be pushed "until there is not a single Jew left on European soil." When the German army marched into Poland, Hitler's appeal to the German nation (September 3) placed the responsibility for world war upon "the Jewish plutocratic and democratic upper crust which in all peoples desires to see only obedient slaves"; and this view has been sedulously echoed by pro-German or fascist spokesmen in England, France, Italy, and many neutral lands. The Anti-Comintern Bureau of Germany, hitherto a fountain-head of anti-communist propaganda, announced (September 17) that hereafter it will devote all its energies to fighting not the communists but the Jews, whom it asserted to be the world's Public Enemy No. 1. In November, Julius Streicher of *Stürmer* fame gave a series of speeches throughout Franconia under the rubric: "Germany's victory will spell the death of the Jewish people."

Aside from its economic returns in the way of robbery and spoils, the purpose of this policy is apparent. It seeks to place the guilt for a world at war upon the shoulders of an immemorial scapegoat; and it is calculated to demoralize enemy nations, paralyze prospective victims, weaken neutrals, and attract friends through awakening whatever latent anti-Semitism the local conditions will provide. And more than any other factor it has shaped Jewish destiny during the past year.

Poland. When the 3,200,000 Jews of Poland entered upon what may prove to be their final martyrdom they were already a stricken people. As a result of the economic misery common to the majority of Poland's inhabitants and in further consequence of governmental, educational, and business restrictions and discriminations, coupled with widespread boycott, anti-Semitic agitation, and violence, three-fourths of the Jews did not earn enough to make both ends meet, and managed to survive only through the aid of local and foreign Jewish charities. Of this impoverished mass, almost one million were totally destitute.

Up to the very outbreak of the war, anti-Semitism was rampant. It sprang chiefly from Polish nationalist forces bent on thwarting democratic movements among the peasants and workers, and from German propaganda aimed at keeping the country divided and impotent. A Nationalist Party campaign to "rid the towns and cities of Jewish control" reached its climax in the spring in connection with the drive for an Air Defense Loan. Typically, the nationalist and pro-government press accused the Jews of failing to support the loan, although the final figures disclosed that they had subscribed 35 per cent of the amount raised among the urban population. Typically too, the Ministry of Justice admitted no Jewish lawyers to the bar in 1939. The Warsaw Municipal Council decided (May 16) to dismiss "as far as possible" Jewish municipal employees and granted special subsidies to promote "Christian" trade and industry. Business and professional associations continued their customary drive to expel Jewish members and induce the authorities to deprive them of licenses to trade or practice. In the universities, "ghetto benches" continued to be the rule; and the number of Jewish students allowed to enter schools of higher learning was limited to 10 per cent of the total enrollment, except in such schools where it was zero per cent. Violence and terror continued in both universities and the country at large. And the government continued its efforts, in collaboration with Rumania, through appeals to the Intergovernmental Refugee Committee and *démarches* in London and Paris, to solve the whole problem by eliminating the Jews through mass emigration. Meanwhile, all along the Polish-German border—the town of Zbaszyn with its 3500 victims was merely notorious—thousands of Polish-Jewish refugees from Germany lived in a no-man's land, a prey to starvation and disease. The entire policy of Poland toward its Jews can be summarized and thrown into relief by the promise of the present government-in-exile, now seated in France; the promise is at once a confession and a source of hope. In a radio address (November 27) the new premier, Wladislaw Sikorski, pledged that in a re-born Poland "Jews will enjoy equal rights granted to all citizens" and that his own energy "will be devoted to see-

ing to it that the Jews are treated differently from hitherto."

The conquest of Poland and its subsequent partition inflicted terrible suffering upon the entire population. Yet in every respect, as the special target of German wrath and policy, the Jews suffered most. The military attack on the large cities by air and land was concentrated upon their Jewish sections. In Warsaw alone, out of 330,000 Jews (nearly one-third of the city's population) some 200,000 were rendered homeless, and casualties numbered 20,000. Here as elsewhere, the Jews defended their fatherland stubbornly—"they fought," said the new foreign minister Zaleski, "as heroically as the Poles"—to no avail; 60,000 were, it is estimated, killed in the war. Half the Jewish centers throughout the country were wrecked or, as in the case of Siedlice, completely destroyed. The German soldiery, trained for years in Jew-hating, were merciless in seizing Jewish property, imprisoning and executing communal leaders, and drafting men and women for hard labor. The army refused the Jews food or medical supplies, the Poles either were in no position to aid or were themselves Jew-haters; and both hunger and disease took their heaviest toll from Jewry. William MacDonald, Quaker relief representative, said of Warsaw in late October: "The worst famine occurred in the Jewish quarter, where thousands still are buried beneath the ruins." Reports are conflicting on the prevalence of typhus; but the official German news-service (D.N.B., November 19), defending the erection of ghetto barricades in Warsaw, said that its Jews "constitute one of the most dangerous sources of disease," and other reports (Jewish Telegraph Agency) told of 800 deaths from typhus for November and 1200 cases in the Warsaw Jewish hospital in early January, 1940. The general disaster may be gauged by the flight of over a half-million Jewish refugees to Soviet Poland and to the border states of Lithuania and Rumania. Themselves the embodiment of misery, the refugees inflicted additional hardships on the communities which aided them to flee or gave them shelter.

The victory of the German army merely substituted for war the horrors of a German peace. A reliable first-hand summary of what this meant was furnished by Isaac Giterman, director of the American Jewish Joint Distribution Committee's relief activities in Warsaw during the past twenty years. "There were 18,000 Jews in Jaroslaw," he reported on November 28, "more than 20,000 in Wloclawek, 15,000 in Zamosc, and 10,000 in Ostrolenka who were given only a few hours—in some cases minutes—to leave their home towns. The fact that the Jews of Pultusk were ordered to leave on 20 minutes' notice was not the worst calamity that befell them. No less than 50 smaller towns could be added to this list. Within a few hours 75 communities were burned down completely, 150,000 Jews were evicted from their homes, and the houses of more than 100,000 Jews destroyed by fire." The allusion to Pultusk is no doubt explained by referring to the New York Times report (November 6) that in this town one male from every Jewish household was shot. In some localities, such as Bendzin and Fallenica, the Jewish sections were set on fire and their inhabitants shot down while attempting to escape from the flames. Through November and December massacres were re-

ported in Przemyśl (800 victims), Blowie, Lodz, Konskie, Shmielnik, Dynow (200 victims), and a number of other towns, particularly in west Galicia. "The moral and physical sufferings," concludes Giterman, "of those who remain under German rule are indescribable."

With the establishment of "peace," however, something like a coherent picture has emerged. Poland has been divided into three parts: the western provinces have been incorporated into Germany proper; the central provinces constitute a Gouvernement-General occupied by Germany; and the eastern provinces have been annexed by Soviet Russia, exclusive of the territory around Wilna which has been given to Lithuania.

Approximately 1,300,000 Polish Jews remain in the territory annexed or occupied by Germany. They are being ruthlessly evacuated from the western provinces and concentrated in Warsaw (which despite its losses through war and flight now contains 500,000 Jews), and in a small district centering around Lublin. The Lublin district, termed a "Jewish reservation," has likewise received some 50,000 Jews expelled from Austria and the Czech protectorate. According to its present plans, the German government intends to crowd into this barren region—Oswald G. Villard (N. Y. Times, Jan. 6, 1940) calls it "the greatest concentration camp in history"—the entire 600,000 Jews of Germany, Austria, Czechia, and Western Poland by the spring of 1940. The victims arrive in cattle cars, nearly penniless and without adequate winter clothing or blankets. They are housed in barns, stables, and war-ruined Polish homes. Men and women are compelled to work in the open 12 hours a day under prison discipline. They possess neither food, crops, funds, nor means of making a living. "For deliberate wholesale murder," writes Mr. Villard, "I know nothing in history to surpass this atrocity." If the present policy continues, he is convinced the Jewish reservation "will become one vast charnel house."

Elsewhere in German-controlled Poland the war against the Jews was relentlessly pursued. It followed the pattern familiar in Nazi Germany for the past seven years, except that its methods were more brutal and humiliating. Its object was similar—the elimination of the Jewish population, difficult as it might appear in view of the million and more victims involved and the impossibility of mass emigration. But starvation, disease, and massacre were calculated to take the place of emigration. Reports from various regions in western and central Poland (too numerous and detailed for citation) confirmed that the Jews were systematically robbed of their property and personal belongings. Community fines, state requisitions, pillage, and the declaration of possessions beyond a total value of \$400 have facilitated this process. Concentration camps, mass arrests, mass evictions, beatings, tortures, and killings have been used as means of collection. Suicides, too, have helped. Next, the Jews were systematically deprived of all opportunity to earn a livelihood. Where they continue to live by their own means, it is through the sale of existent stocks of merchandise (at derisory prices) which they are forbidden to replenish. Thousands have been drafted for compulsory hard labor under cruel discipline. Self-aid institutions, such as free-loan associations, trade schools, health camps, and orphanages, have been destroyed. Ghetto barricades, a rigorous

curfew, and the compulsory display of a yellow badge have been inaugurated to humiliate and degrade the Jews. Their religion has been desecrated by the destruction of synagogues, often to the accompaniment of sacrilegious and sometimes murderous mockery. The Poles, although companions in misery, have been encouraged to badger and rob their Jewish compatriots.

At the outset of the winter it was conservatively estimated that 80 per cent of the Jews were in dire need of food, clothing, fuel, shelter, or medical supplies. The German authorities have themselves refused, and forbidden the Poles, to give any aid; the German Red Cross in fact broadcast an attack upon the Jews. Adequate help from abroad was prevented by this refusal. Just after the close of the year, Clarence Pickett, director of the American Friends Service Committee, stated that Quaker relief for Poland had been blocked by the inability to secure proper supervision that would guarantee the distribution of supplies among the Jewish population. The American Red Cross was frustrated by the same obstacle. Writing in the *December Survey Graphic*, John F. Rich, secretary to the Quaker committee in Poland, foretold despondently: "If this attitude toward the Jews [by the German authorities] is applied throughout German-held Poland, an appalling story of mass starvation will be recorded." So far, the sole relief available has come through the American Jewish Joint Distribution Committee which has managed to dispense 50,000 free meals daily. In sum, the outlook for the 1,300,000 Polish Jews in German Poland and the scores of thousands more who have been or are slated to be driven there is merciless extermination. Their only hope, slim enough, lies in sufficient foreign relief to tide over some considerable number of them until an Allied victory gives a reborn Polish government the opportunity to make good its word and assure them of a future.

In Soviet Poland, over 500,000 refugees from across the German line have joined the 1,500,000 native Jews of the eastern provinces. At times the rush of émigrés was so great the border was closed, and thousands were stranded destitute in a no-man's land. Reports up to the end of the year indicated that 300,000 homeless were massed in Lwow, 120,000 in Galicia at large, 60,000 in Bialystok, 60,000 in Rovno, 40,000 in Lutzk and Kovel, and 40,000 on the Soviet side of Przemyśl. The Soviet authorities permitted local relief activities, including the raising of funds and the assistance of the American Jewish relief agency. Insufficient clothing, shelter, and fuel have made terrible inroads upon their numbers, despite the government's endeavor to provide one meal daily. Although detailed news is lacking, it may be presumed that the Jewish population, old and new, of Soviet Poland has been treated on a parity with other Soviet inhabitants. They have lost, or will lose, ownership of all private enterprises and productive property; they are submitted to the same liberty in the use of their native language and the same shackles in the practice of their religion and conscience as Soviet citizens elsewhere. In accordance with Soviet usage, numbers of Zionists, Socialists, liberals, and businessmen have been imprisoned or despatched to unknown destinations in the interior of Russia. In general, however, for any Jew who valued his life, Soviet "freedom" was preferable to German "peace."

The last fragment of dismembered Polish Jewry, the 85,000 Jews of Wilno and environs, were consigned to Lithuania on October 10. Its number has been increased by about 50,000 refugees. During the early weeks of their flight and the Lithuanian government's efforts to absorb and tranquilize its newly acquired territory, suffering was widespread. The newcomers were ragged and penniless; the residents had insufficient means to take care of even themselves; and administrative chaos led to shortages of food, fuel, housing, and other necessities. Local Polish patriots, particularly the reactionary Endeks, eased their sense of defeat by attacking, robbing, and killing the Jews. Food riots likewise ended in fatalities. But by December order was firmly established and relief work was functioning. Isaac Giterman (cited above) reported on November 29: "Nobody suffers any longer from hunger in the Wilno region, nor will anybody—we hope—suffer cold after the distribution of warm clothing. Our relief work is being partially extended to other areas." That is to say, so long as foreign aid is forthcoming, this portion of what may now be termed a vanished *Polish Jewry* will survive.

Germany (including Austria and Czechoslovakia). Since Jan. 1, 1939 the Jews of Greater Germany have been forbidden, with negligible exceptions, to earn a living in any way. The loss of economic resources through physical damage, fines, levies, forced sales, and depreciation, has reduced the vast majority to the brink of destitution. In order to control relief work and use it as an auxiliary thumbscrew, the government seized title to all Jewish communal funds and property. At the end of the year the Reich Organization of German Jews reported that of the 185,000 Jews remaining in the old Reich, only 16 per cent possessed property worth \$2000 or more, and that most of the remainder had to be supported by local and foreign Jewish charities. The scope of similar relief work in Austria indicated that the percentage of property owners among its 65,000 Jewish inhabitants and the value of their possessions were considerably less.

Virtual ghettos were formed through wholesale evictions from the better quarters of German cities and mass huddling into the cheapest tenements, both actions rendered obligatory by mounting poverty when not by law. Personal liberties sank below the degrading minimum enjoyed by the remainder of the German people. Jews were forbidden access to all places of public diversion. They were barred from certain of the main streets and squares of the larger cities. Most hotels, cafés, and restaurants refused to serve them. They were constantly subject to arrest and imprisonment on trivial or no charges. Concentration camps and the issuance of passports were employed as instruments for the extortion of ransom, surrender of property, or pledge to emigrate.

After the outbreak of the war, these stringent conditions were tightened. A curfew was ordained, forbidding Jews to appear on the streets after 8 p.m. In most cities, food was sold to Jews only at a few specified stores and for a couple of hours late in the day when the better items in stock were exhausted. Ration cards for clothing were denied them. They were forbidden to possess radios or overhear broadcasts. An extra 5 per cent was levied upon their possessions toward the "atonement" fine of \$400,000,000 of the previous

year. Numbers of Jews were despatched to unknown destinations, presumably for compulsory labor service.

Emigration before the war proceeded at the rate of about 3000 a month, and since the war at 2000 monthly. Basing its calculations on the maintenance of the latter figure and reckoning the Jewish population of Germany and Austria at 250,000, the Reich Organization of German Jews concluded in November that the resources of Jewry would last 18 months longer. "By that time," its leaders are quoted in the *N. Y. Times* (November 5) as saying, "the fate of the German Jews will be definitely settled one way or another." Apart from emigration, the alternatives they foresaw were (a) starvation if the blockade leads to a curtailment of food; (b) pogroms if Germany suffers a severe setback; (c) eventual shipment to the slow death of the Lublin "reservation" in Poland.

Upon the seizure and dismemberment of Czecho-Slovakia in March, its 350,000 Jews were doomed to the fate Germany has threatened to inflict upon all European Jewry. The measures which have comprised German-Jewish history since 1933 were enforced within a few months in the protectorate of Bohemia-Moravia, with the result that the 90,000 Jews who remained there at the end of the year were reduced to poverty or beggarmdom. Several fortunate thousands managed to emigrate. Other thousands were consigned to hard labor and compelled to pay for their own upkeep. Further thousands—about 50,000 in all, including the victims from Vienna—were packed into cattle trains, with \$12 and 110 lb. of baggage as their fortunes, and were shipped to the Lublin "reservation." According to the latest reports, the last Czech Jew will be despatched there by Feb. 1, 1940.

In Slovakia, a puppet of Germany, the "independence" achieved in March inaugurated a reign of terror and violence against the Jews which continued with little respite throughout the year. Bratislava alone was the scene of 11 pogroms within 25 summer days. Anti-Jewish laws, patterned on German precedent, were quickly introduced. By mid-October almost all Jewish enterprises were confiscated and every male between the ages of 18 and 50 condemned to labor camps. On November 26, according to the *Frankfurter Zeitung*, the Slovakian government presented to Parliament a declaration that Jews were to be eliminated from the national life as "alien bodies"—a parliamentary mode of saying that 100,000 human beings were to be starved to death.

Elsewhere in Europe. Although overshadowed by the Polish catastrophe and German doom, developments with respect to the Jews in several other lands were grave enough.

As in previous years, the 800,000 Jews of Rumania lived under a regime of discriminations, restrictions, and extortions, and in terror of life and limb. The severest blow in 1938 was their exclusion from the minorities guarantees under the new Nationalities Statute. Thereafter the government merely "tolerated" Jewish religious, educational, and social institutions. As a further result, 225,000 Jews in 1939 were deprived of their citizenship. Under existing regulations for trades and professions, this measure likewise deprived them of earning a living; and they now face deportation, if and when the opportunity arises.

In Hungary, the law excluding Jews from all

state employment and restricting their numbers in the liberal professions to 6 per cent and in private business enterprises to 12 per cent was passed in its final form on May 3. It was originally estimated that, as a result, at least 250,000 out of the 600,000 Jews would lose their livelihoods within five years. But under cover of the war, the government has speeded up this pace. No business may now employ Jews. In the territories newly acquired from the former Czecho-Slovakia, almost the entire Jewish population of 150,000 have been reduced to beggary. It may be conservatively reckoned that one half of the Jews of Hungary now have no means of earning their bread.

Italy's attitude toward its official anti-Semitic policy has not been unlike its attitude toward the Rome-Berlin axis: loyal but ambiguous. Orthodox anti-Semitic decrees were passed. Commercial enterprises were included in the confiscatory measures already applied to industry and real estate, and the liquidation of Jewish property proceeded apace; March 12 was set as the deadline for the expulsion of all alien and denaturalized Jews; Jews were barred from journalism and restricted in other professions. On the other hand, some 3000 Jews were exempted from the restrictions of the racial legislation; while thousands of alien Jews were expelled, other thousands won reprieves and new refugees were admitted; many Jewish officers who had been dismissed from the army were allowed to rejoin. The truth appears to be that anti-Semitism did not "take" among the populace; this may be deduced from numerous expulsions from the Fascist party on the grounds of sympathy for the Jews, and from expressions of disapproval by such varied figures as poet Marinetti, Prof. Nicola Pende (an original signer of the racist manifesto), and Marshal Italo Balbo. But neither the ambiguity of the government's behavior nor the lack of popular support altered the fact that over half of Italy's 50,000 native Jews were economically ruined, that 4500 have been driven to baptism, and that the entire 20,000 Jews of Libya have lost their citizenship and 5000 of them have been conscripted for hard labor.

Palestine. The British White Paper, published on May 17, attempted to end the impasse between Jew and Arab in Palestine by severely restricting Jewish immigration and putting a term to British support of a Jewish homeland. The essentials of the document (full text in *Contemporary Jewish Record*, vol. ii, No. 3) are compressed in the following extracts:

Jewish immigration during the next five years will be at a rate which . . . will bring the Jewish population up to approximately one-third of the total population. For each of [these] five years a quota of 10,000 Jewish immigrants will be allowed. In addition . . . 25,000 refugees will be admitted. After the period of five years no further Jewish immigration will be allowed unless the Arabs of Palestine . . . acquiesce in it. The number of any Jewish illegal immigration who . . . may succeed in coming into the country . . . will be deducted from the yearly quotas. His Majesty's Government are satisfied that, when the immigration over the five years . . . has taken place, they will not be justified in facilitating the further development of the Jewish National Home by immigration regardless of the wishes of the Arab population.

The Jewish reaction to the document found voice in a declaration of the Jewish Agency for Palestine. "The new policy," it read in part, "denies to the Jewish people the right to rebuild their National Home in their ancestral country. It transfers the authority over Palestine to the

present Arab majority. It puts up a territorial ghetto for Jews in their own homeland." Arab opinion quite the contrary expressed dissatisfaction that immigration was not entirely banned at once.

Despite an unfavorable reception by the British press and denunciation by numerous leaders of British opinion, the House of Commons approved the policy by a vote of 268 to 179—with 110 deliberate abstentions by Conservative party members. On May 17 the Mandate Commission of the League of Nations declared the White Paper contrary to the Palestine Mandate. Nevertheless, three of its seven members felt that the Paper's interpretation of the mandate would be justified if unopposed by the League Council.

Since the outbreak of the war, however, the enforcement of the White Paper's immigration measures was largely held in abeyance. In the year ending Sept. 30, 1939, a total of 35,000 Jews settled in Palestine, and after that date the flow of immigration averaged about 3000 a month. Both Jews and Arabs have heartily supported Great Britain in its struggle against Germany, and conceivably this loyalty to a common cause may pave the way for better relations between the two parties most concerned in the future of the land.

Refugees. The number of Jews who fled from Greater Germany during 1939 may be estimated at nearly 120,000. It is largely these unfortunates who have been added to the ranks familiar to the world as "Jewish refugees" and who in this one year alone were dispersed among 44 countries. Joined to their number, before the outbreak of the war, were several thousand Jews from Czechoslovakia, Poland, and Italy. Thereafter, the number of Polish-Jewish refugees, chiefly sheltered in the Baltic states, the Balkans, and Palestine, has become as yet a matter of guesswork. Altogether, at the end of 1939 there were probably 340,000 Jewish refugees at large, that is to say, resident in temporary havens and dependent on Jewish relief.

Of this total number, 150,000 were stranded in the hospitable democracies of western Europe, 15,000 were sheltered in Shanghai, approximately 100,000 in eastern Europe, and 75,000 in South and Central America. The economic and military readjustments due to the war have to a great extent deprived them of assistance from the local Jewries.

Unemployment greatly enhanced by the first shock of war, repatriation of natives for war duty, the creation of internment camps (as in England, France, and Holland) have aggravated their plight. Moreover, the anti-Semitism which their presence has often awakened (and which Germany counted on, as a part of its foreign policy) served to magnify their numbers and increase their difficulties. Next to Palestine, the United States has received the largest number of refugees on a basis of permanent settlement. Yet in seven years, 1932-39, the net immigration from Germany, including non-Jews, was less than 50,000—in a country that contains a total of over 130 million inhabitants.

See INTERGOVERNMENTAL COMMITTEE ON POLITICAL REFUGEES; and ARABIA, AUSTRIA, BELGIUM, COLOMBIA, CZECHOSLOVAKIA, GERMANY, HUNGARY, ITALIAN EAST AFRICA, ITALY, PALESTINE, PARAGUAY, POLAND, RUMANIA, and URUGUAY under *History*.

MARVIN LOWENTHAL.

JOHNS HOPKINS UNIVERSITY. A nonsectarian institution of higher education in Baltimore, Md., founded in 1876, some divisions being for men only, others for men and women. The enrollment for the autumn of 1939 was distributed as follows: School of higher studies of the faculty of philosophy, 316; school of engineering, 56 (graduate), 315 (undergraduate); college of arts and sciences, 439; school of business economics, 100; school of medicine, 305; school of hygiene and public health, 152; afternoon and evening courses, 3078. The enrollment in the 1939 summer session was 946. The faculty numbered 736. The endowment amounted to \$30,387,195.78 and the income from all sources for 1938-39 was \$2,691,014.09. The main library contained 552,850 bound volumes. President, Isaiah Bowman, Ph.D., LL.D.

JOHNSTON ISLAND. An island in the central Pacific (16° 13' N. and 169° 50' W.), southwest of Hawaii, belonging to the United States. In accordance with the naval appropriations bill passed by Congress in 1939, the island was to be converted into an advance U.S. naval base, with facilities for air, submarine, destroyer, and mine operations.

JURIES. See LAW under *Administration*.

JUSTICE, U.S. DEPARTMENT OF. Officials of the Department in 1939 included Frank Murphy of Michigan, Attorney General; Robert H. Jackson, Solicitor General; J. Edgar Hoover, Director of the Federal Bureau of Investigation, and James V. Bennett, Director of the Bureau of Prisons. The National Training School for Boys and Federal Prison Industries, Inc., were placed under the jurisdiction of the Department on July 1, 1939. At the end of August, Attorney General Murphy announced that, because of the critical situation abroad, the Department of Justice had already started a campaign against foreign spies. Subsequently, a larger force was ordered to curb foreign propaganda and sabotage, and renewed protection was placed around large airplane plants. Several new offices were opened by the Bureau of Investigation. On Jan. 4, 1940, Attorney General Frank Murphy, who was nominated by President Roosevelt as associate justice of the U.S. Supreme Court, was succeeded as Attorney General by Solicitor General Robert H. Jackson; Judge Francis Biddle of Pennsylvania was appointed Solicitor General. See FEDERAL BUREAU OF INVESTIGATION; PRISONS. For expenditures, see the table under PUBLIC FINANCE.

KALMYK AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

KANSAS. Area and Population. Area, 82,158 square miles; included (1930) water, 384 square miles. Population: Apr. 1, 1930 (census), 1,880,999; July 1, 1937 (Federal estimate), 1,864,000; 1920 (census), 1,769,257. Kansas City had (1930) 121,857 inhabitants; Wichita, 111,110; Topeka, the capital, 64,120.

Agriculture. The Kansas farmers harvested, in 1939, 18,684,600 acres of the principal crops; this was about 85 per cent of the average harvested acreage for the decade 1928-37. Wheat, on 9,713,000 acres, yielded 111,657,000 bu. (\$72,557,-

000 in estimated value on the farm). Corn, on 2,757,000 acres, gave 37,220,000 bu. (\$21,215,000); oats, on 1,366,000 acres, 21,173,000 bu. (\$6,775,000); grain sorghums, 1,316,000 acres, 11,186,000 bu. (\$6,264,000); tame hay, 739,000 acres, 994,000 tons (\$5,865,000); barley, 680,000 acres, 7,480,000 bu. (\$2,992,000); potatoes, 28,000 acres, 2,128,000 bu. (\$1,192,000).

Manufacturing. Kansas had, in 1937, 1526 manufacturing establishments (in 1935, 1492), which employed 34,128 wage earners (in 1935, 30,481), paid them \$40,513,398 (in 1935, \$31,517,670), and produced goods to the value of \$543,807,190 (for 1935, \$457,674,618), to which sum manufacture contributed \$127,347,836 (in 1935, \$108,370,655). Except for the refining of petroleum the chief manufacturing industries belonged to the group connected with the State's agriculture. Meat-packing establishments attained for 1937 an output of \$161,004,070, to which sum their processes contributed \$19,683,212. Grain mills' output of flour and other products totaled \$98,994,751. Butter-making establishments produced goods to the value of \$24,070,971. Dressers of poultry and makers of condensed and evaporated milk, of cheese, and of prepared feeds added materially to the manufacturing production. The 18 refineries of petroleum produced, in goods, \$102,490,429, to which sum their processes contributed \$15,931,388. The making of cement and of salt and the widespread types of manufacturing, such as baking and printing, accounted for much of the remaining production.

Apart from Kansas City and some other centers on which the U.S. Bureau of the Census was not at liberty to publish figures for 1937, Wichita showed the highest local total of manufactures for 1937, \$53,910,346.

Mineral Production. According to the latest data from the Bureau of Mines the yearly production of the native minerals of Kansas totaled \$154,376,403 for 1937; of this amount, petroleum made up four-sevenths, natural gas one-fifth, and zinc, coal, cement, and lead accounted for most of the remainder.

The petroleum yield fell off to some 59,587,000 barrels for 1938, from 70,761,000, in value \$88,100,000, for 1937. The decline was attributed rather to unfavorable markets for the petroleum than to any general running out of the supply in the ground. Fewer wells were completed in 1938 than in 1937, yet what exploratory drilling was done in new areas succeeded so well as to open nearly 60 new pools of various potentiality, in more than 20 counties. The output of natural gas rose to 83,890 million cu. ft. for 1937, a total great enough to prompt a considerable falling off in drilling for natural gas thereafter, since consumption had not kept pace with output; the value of natural gas produced in 1937 was estimated as \$30,376,000. The yearly shipments from mines of lead and zinc, in the form of concentrates, carried 73,024 short tons of zinc (1938), as against 80,300 tons (1937); in value, \$7,010,304 (1938), and \$10,439,000 (1937); of lead, the shipments carried 15,239 short tons (1938) and 16,008 tons (1937), or by value \$1,401,988 (1938) and \$1,888,944 (1937). The output of coal in the State diminished to about 2,560,000 net tons (1938), from 2,892,560 tons (1937), valued at \$5,612,000. Makers of portland cement, less active in 1938, shipped 3,217,497 barrels, as against 3,500,684 barrels of cement shipped in 1937; by value the totals were \$4,949,018 (1938) and \$4,482,851 (1937). Pro-

ducers of salt sold or utilized 597,909 short tons (value, \$2,565,447) in 1938.

Education. For the latest year covered by the data that follow, the academic year 1937-38, the number of inhabitants of school age in Kansas (from 5 years to 21) was reckoned as 509,124. Enrollments of pupils in the public schools numbered 386,550, which comprised both the elementary group and the high schools. Other reported enrollment of pupils totaled 10,112 in kindergartens, 3710 in junior colleges, and 20,857 in private and parochial schools. The year's expenditures for public-school education totaled \$29,249,905. This included the year's salaries of 19,212 teachers, averaging \$715.36.

Legislation. A regular, biennial session of the Legislature convened in January and ended March 31. Its appropriations to cover the needs of the next two years fell below those of the previous biennium, according to Governor Ratner, by \$500,000; it did not raise the taxes. Preserving the sales tax, it made good Ratner's campaign promise to abolish the tokens issued by the State and current in retail trade as the means for meeting the tax to fractions of a cent; the act doing away with the tokens allowed the merchants to set up some other device instead, to aid collection.

Changes in the administrative scheme of organization accompanied the return of the State to Republican government. A new Department of Social Welfare was created and put in charge of the State's charitable institutions and unemployment compensation; the Board of Administration was limited to the control of the penal institutions and the parole board. For poor aid, the Legislature set up a fund out of the residue of receipts from the sales tax; from this fund the counties and cities might obtain means to relieve poverty in their respective areas. The State institutions of education went under the control of a newly created bipartisan Board of Regents. Forty or more different offices, engaged in collecting one or another of the State's taxes and fees were fused, grouped or reshaped, so as to operate within a new Department of Revenue and Finance. To open a way for a protected civil service, the session passed a resolution offering for disposal at a popular election in 1940 a constitutional amendment to strike out the existing limit of four years on State appointments. A new game law put control of fish and game under a bipartisan board of six; it was designed to free this field from political partisan sway. The requirement that people qualifying for old-age aid give liens on their property was repealed.

Fears that the State's provisions for road-building might be found inadequate and so cause the loss of Federal contribution to this purpose prompted an enactment to assure revenue from existing taxes for the support of plans for highways: two evasions of payment of the tax on gasoline were made cause for the loss of the guilty person's automobile license, and the enforcement of the ton-mile tax on trucks was strengthened.

Political and Other Events. Payne H. Ratner was inaugurated Governor January 9. Republicans held the Governorship and the control of the Legislature, while the State's more desirable appointive offices were largely held by Democrats, in consequence of the recent period of Democratic sway. The tendency to reorganize administrative offices was present, as in other States under similar circumstances. Governor Ratner had a

problem to face soon after entering office: the prospective cost of poor-aid and of public assistance for the aged caused the passage of measures putting a special charge on the receipts from the State's tax on sales; the Governor, however, had frequently advocated, during his campaign for election, that the tax on sales be removed from foods; now, in view of the apparent need for all the receipts from the sales tax, Ratner decided to change his policy on dropping the tax on foods in particular. He made his position clear in a special message on the subject, declaring that "additional research has revealed that our relief load will in all probability continue to increase" and proposing therefore to keep the sales-tax entire.

The State Supreme Court held, April 8, that laws enabling Kansas City, Kansas, to build public parking stations were unconstitutional, as being special legislation giving corporate powers not bestowed on other like municipalities. The State's payments of unemployment compensation, or temporary aid to persons who had lost employment, started in January, out of an accumulated fund of nearly \$11,000,000 collected since the adoption by the State of this kind of social aid in 1937.

Governor Ratner announced (February 2) an agreement for the disposal of petroleum from the "stripper" wells of Montgomery and Labette counties, which the pipe lines of the Sinclair Prairie Oil Marketing Company's pipe lines had (Dec. 31, 1938) stopped taking; the company now agreed to renew its practise of receiving the small shipments made by old wells; Ratner's argument was that a pipe line, as a common carrier, owed an obligation to continue serving the shippers and could not withdraw the service at will. Kansas was reported to have more than 10,000 old wells that still produced in small quantity, and their aggregate output sufficed to make them a matter of some economic importance to the State. The newer wells, Ratner pointed out, were destined to become "strippers" in time. For these reasons he urged the need of establishing the practise of continued outlet for the old wells. Kansas took part in the concerted shutting down of the production of petroleum by the authorities in the greater number of the chief producing States east of the Rockies. The order stopping the flow of the wells in Kansas was issued August 17; permission for them to resume was given September 1. The purpose of the interruption was to strengthen the market for the product (see TEXAS).

Officers. The chief officers of Kansas, serving in 1939, were: Governor, Payne Ratner (Rep.); Lieutenant-Governor, Carl E. Friend; Secretary of State, Frank J. Ryan; Auditor, George Robb; Treasurer, Walter E. Wilson; Attorney-General, Jay S. Parker; Superintendent of Public Instruction, George L. McClenny.

KANSAS, UNIVERSITY OF. A State institution of higher education in Lawrence, Kans., founded in 1864. The enrollment in the autumn of 1939 numbered 4637, of whom 3099 were men and 1538 women. The 1939 summer session had an enrollment of 1266. The full-time teaching staff numbered 257. The endowment fund amounted to \$256,000 and the budget for the year was \$2,000,000, exclusive of buildings. There were 309,000 volumes in the library. The gift of a chancellor's residence (\$50,000) was received during the year. Chancellor, Deane W. Malott, M.B.A., inducted July 1, 1939.

KANSAS CITY. See KANSAS; MISSOURI. KANSAS WESLEYAN UNIVERSITY.

A coeducational institution in the city of Salina, Kans., and under the auspices of the Methodist Church, founded in 1885. The enrollment for the autumn of 1939 was 314, and in the summer school of 1939, 110. The faculty numbers 30. The University has successfully closed its endowment campaign, having added to its permanent endowment \$261,500. The University operates on a debt-free basis, and a pay-as-you-go plan. The library has 25,000 volumes. The new stadium project is rapidly nearing completion, and will be dedicated in the fall of 1940. President, E. K. Morrow.

KANSU. See CHINA under *Area and Population*.

KARAFUTO, kã'rã-fõõ'tõ. The Japanese part of the island of Sakhalin, south of 50° north latitude. Area, about 13,935 square miles; population (1936 estimate) 321,765. Chief towns: Toyohara, the capital, 35,849 inhabitants; Esutoru, 26,761; Shikka, 26,540; Otomari, 24,604. See SAKHALIN.

Production, etc. In 1937 fisheries production was valued at 19,108,000 yen. The value of farm production in 1937 was 9,415,000 yen (chief crops, wheat, barley, oats, potatoes). In 1937, 2,535,574 metric tons of coal were mined. The production of wood pulp in 1937 was estimated at 382,000 metric tons. Livestock (1937): 11,213 horses; 7323 cattle; 5820 pigs; 11,496 foxes. In 1936 imports from Japan Proper totaled 53,771,610 yen; exports were 173,270,406. The budget for the year ending Mar. 31, 1939, was balanced at 38,688,529 yen (the yen averaged \$0.2845 in 1938).

KATO, kã'tõ', ADMIRAL KANJI, RET. A Japanese naval expert, died near Atami, Japan, Feb. 9, 1939. Born in 1870, he was educated at the Naval Academy (1891) and saw service in the Russo-Japanese War. Subsequently, he was naval attaché at the London Embassy, director of the Naval Gunnery School, and president of the Naval Staff College. He headed the Japanese technical delegation to the Washington Conference of 1921-22 and opposed the suggestion of scrapping capital ships. He was given command of the Yokosuka Naval Station in 1924 and during 1926-29 commanded the 1st and 2d Squadrons, when he was appointed chief of the Naval General Staff. A leader of the "big navy" faction, he opposed attendance at the London Conference in 1929 and his bitter denunciation of the London Naval Treaty led to his resignation and transfer to the Supreme War Council. He was retired on account of the age limit in 1935.

At his death Admiral Kato was believed to have been at work upon a monumental analysis of Japan's naval position.

KAZAKH SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R. It is divided in the 11 regions of Alma Ata, Aktiubinsk, East Kazakhstan, Gourev, Karaganda, Kustanai, Kzyl-Ordinsk, North Kazakhstan, Pavlodar, South Kazakhstan, and West Kazakhstan. Total area, 1,059,500 square miles; population (Jan. 17, 1939), 6,145,937. Chief cities (with 1935 populations): Alma-Ata, the capital,

197,400; Semipalatinsk, 136,400; Karaganda, 118,900. The principal agricultural products are grain, cotton, sugar beets, and apples. Livestock raising is an important industry. There are rich mineral deposits of petroleum, gold, coal, lead, zinc, chromo-nickel, copper, potassium, and borax which are being developed. The industrial plants are engaged in producing canned fruit, metals, sugar, cloth, flour, footwear, and electric power. See UNION OF SOVIET SOCIALIST REPUBLIC.

KENNELLY, ARTHUR EDWIN. An American electrical engineer, died in Boston, Mass., June 18, 1939. Born in Bombay, India, Dec. 17, 1861, he was educated privately and at University College School in London. In 1876 he became a telegraph operator, and two years later was appointed an assistant electrician at Malta. Subsequently he was chief electrician of a cable repairing steamer (1881) and senior ship's electrician for the Eastern Telegraph Cable Co. (1886).

In 1887, Kennelly came to the United States as principal electrical assistant to Thomas A. Edison, and in 1894 he joined with Edwin J. Houston in forming the firm of Houston & Kennelly, Philadelphia. During this partnership, they were co-authors of several authoritative works, including *Elementary Electro-Technical Series* (1897), *Electro-Dynamic Machinery* (1898), *Recent Types of Electro-Dynamic Machinery* (1899), *Electricity Made Easy* (1899), and *The Interpretation of Mathematical Formulae* (1899).

The partnership was dissolved in 1901, and in the following year, Kennelly went to Harvard University as professor of electrical engineering, and in this same year he was the engineer in charge of the laying of the Vera Cruz-Frontera-Campeche cables for the Mexican Government. In 1913 he took on the additional duties of professor of electrical engineering at the Massachusetts Institute of Technology, where during 1917-19 he was director of electrical engineering research and chairman of the faculty. He was retired as emeritus in 1924. Dr. Kennelly was the first exchange professor to French universities in applied science (1921-22), and during 1924-30 was a research associate of the Carnegie Institution. In 1930 he was retired as professor emeritus at Harvard.

Interested in his profession, Dr. Kennelly was president of the American Institute of Electrical Engineers (1898-1900), of the Illuminating Engineering Society (1911), and of the Institute of Radio Engineers (1916), and held membership in many scientific societies here and abroad, including the National Research Council and the National Academy of Science. He attended the International Electrical Congresses in Paris (1900, 1932), and St. Louis (1904), the Radio Conference, Paris (1921), and the International Radio Conference, Washington (1927) as a delegate. Besides several honorary degrees, Dr. Kennelly received the Howard Potts gold medal and the Edward Longstreth silver medal of the Franklin Institute, the gold medal of the Institute of Radio Engineers (1932), and the Edison gold medal of the American Institute of Electrical Engineers (1933) for "meritorious achievement in electrical

science, electrical engineering, and electrical arts." In 1936, he received the Mascart Medal.

Regarded as an authority, especially on the use of magnetism in engineering and on alternating electric currents, he wrote *Theoretical Elements of Electro-Dynamic Machinery* (1893), *Wireless Telegraphy* (1907), *The Application of Hyperbolic Functions to Electrical Engineering Problems* (1911), *Tables and Atlas of Complex Hyperbolic Functions* (1914), *Artificial Electric Lines* (1917), *Les Applications élémentaires des Fonctions hyperboliques* (1922), *Electrical Vibration Instruments* (1923), *Vestiges of Premetric Weights and Measures Persisting in Metric-System Europe* (1926-27), and *Electric Lines and Nets* (1928).

KENTUCKY. Area and Population. Area, 40,598 square miles; included (1930) water, 417 square miles. Population: Apr. 1, 1930 (census), 2,614,589; July 1, 1937 (Federal estimate), 2,920,000; 1920 (census), 2,416,630. Louisville had (1930) 307,745 inhabitants; Frankfort, the capital, 11,626.

Agriculture. Kentucky harvested, in 1939, 5,219,600 acres bearing principal crops. More than half of this total was in corn. On 2,816,000 acres, corn yielded 70,400,000 bu. (estimated farm value, \$42,944,000); tobacco, on 373,600 acres, 320,668,000 lb. (\$45,807,000); tame hay, 1,367,000 acres, 1,582,000 tons (\$14,080,000); wheat, 354,000 acres, 4,071,000 bu. (\$2,972,000); potatoes, 46,000 acres, 3,864,000 bu. (\$3,168,000); sweet potatoes, 24,000 acres, 1,968,000 bu. (\$1,673,000).

Manufacturing. Kentucky had, in 1937, 1624 manufacturing establishments (in 1935, 1621), which employed 68,998 wage-earners (in 1935, 60,809), paying them wages to the sum of \$66,248,664 (in 1935, \$53,058,233), and producing goods to the value of \$504,897,342 (in 1935, \$450,675,686), to which amount the processes of manufacture contributed \$181,895,666 (in 1935, \$166,386,487). Among the classifications, covering somewhat over one-half of the total of manufactures for 1937, published by the U.S. Bureau of the Census, the making of distilled liquor held the lead: 52 establishments, employing 2070 wage-earners, attained an output of the value of \$40,314,833, to which amount the processes of manufacture contributed \$12,644,674. The product of the meat-packing establishments totaled \$22,876,134. The output of refineries of petroleum amounted to \$20,954,056. The important production of cigarettes and of tobacco for smoking and other use was not totaled for the State. Louisville, the chief industrial center and the home of many of the leading lines of manufacture, produced manufactured goods in 1937 totaling \$294,210,542, or 58 per cent of all the State's production of such goods in that year: its 536 manufacturing establishments employed 32,986 or nearly half of the wage-earners in the manufacturing industries of Kentucky, and paid them \$33,917,510, or more than half of the total pay of such wage-earners throughout the State.

Mineral Production. Of the \$127,403,680 that formed the yearly total, for 1937, of the production of native minerals of Kentucky, coal furnished more than two-thirds, and natural gas provided the greater part of the rest. The mining of coal declined thereafter, the quantity produced falling to some 38,496,000 net tons (1938) from the 47,086,444, in value \$86,639,000, of 1937. The natural-gas wells in the State delivered for customers' use 55,719 million cu. ft. in 1937; in value,

at points of consumption, \$22,904,000. The wells of eastern Kentucky, situated in a region of high demand for gas, regulated their yield to match the customers' demand. In western Kentucky, on the contrary, for lack of local customers, natural gas when discovered found no ready market; though not sought, natural gas was discovered in the western counties from time to time in the search for petroleum. The production of fluorspar, dependent chiefly on demand from steel-makers, fell sharply to 43,000 short tons for 1938, from 87,000 tons, in value \$1,710,122, for 1937; the mines' sales dropped more sharply still.

Political and Other Events. The application of a recent law of the State, regulating wages and hours of employment for women and children, led to the making of a set of rules affecting industries of an intrastate character. The minimum rate for wages was set at 25 cents an hour, applicable to 48 hours a week, and at 37½ cents an hour for additional weekly time, by an order of January 14; but a later order set different minima for the basic rate in each of three zones, into which the State was divided for this purpose, the three rates being 20, 22½, and 25 cents.

Governor Chandler, who had lost a campaign in 1938 to obtain the Democratic nomination for U.S. Senator, obtained the State's other Senate seat after the death of the incumbent, M. M. Logan (Oct. 3). To this end, Chandler resigned as Governor, October 9, and was immediately appointed Senator by his own successor, the former Lieutenant-Governor. The new Governor, Keen Johnson, had lately won the Democratic nomination as candidate for Governor, at a primary election held on August 5, defeating U.S. Representative J. Y. Brown, whom the CIO supported. See also *Elections*, below.

The strike of the United Mine Workers (affiliate of the CIO) in the Eastern bituminous-coal mines in April and May included the coal fields of Kentucky, interfering for several weeks with the flow of wages and shipments. Harlan County again became the scene of shootings and beatings; on this occasion the trouble was attributed to the United Mine Workers' insistence on a closed shop and the employers' consequent yet unwelcome demand for contracts to protect them from strikes: a proposal suspected of masking schemes for introducing workers hostile to this union. The disagreement lasted much longer in Harlan County than elsewhere in the coal regions and was finally settled, July 19, by agreement on a different sort of contract, not requiring all miners to be members of the union and not carrying the "strike-penalty" clause that owners had wanted. In the intervening months troops of the National Guard, sent in by the Governor, kept down the outcrop of violence as far as possible; a grand jury of the county indicted 420 persons in connection with disorders in the course of the strike and, particularly with an encounter between the soldiers and a band of strikers' pickets; and the Federal Government prepared to renew the prosecution of mine-owners and their guards. After the strike had ended in agreement, the county's circuit court dismissed the 420 indictments (October 1), and the Federal indictments against 52 remaining defendants were dropped.

The State Court of Appeals' decision (see *YEAR BOOK*, 1937, p. 379) against the validity of the State's ratification of the proposed Federal Amendment to control the labor of the young was reversed, June 5, by the U.S. Supreme Court.

The State Court of Appeals held (March 21) that the State's tax on chain stores, producing \$276,000 a year of revenue, was invalid, as imposing, as between different sorts of stores, discriminations baseless in the absence of any declaration in the law of a purpose to tax for other objects than revenue. Another decision of the same court, in January, restricted further borrowing by cities and counties, requiring them to use the actual revenue from their taxes, instead of possible revenue to come, in finding constitutional limits of power to borrow. At Hopkinsville ten indictments were brought, charging mistreatment of inmates at the Western State Hospital. See *PRISONS*.

Efforts of Negroes to establish a right to use the means of education offered to the whites by the colleges were discussed (March 11) by Governor Chandler at a conference in Frankfort; he declared that the constitution of the State prohibited Negroes' attending the white schools and asserted that his administration had led the way in providing money to pay for educating Kentuckian Negroes in other States' schools.

A mountain flood in Eastern Kentucky took 63 lives on the night of August 4, among settlements at the bottoms of narrow hollows that were suddenly filled by their streams; about a thousand families' homes were carried away.

Elections. Keen Johnson (Dem.), Chandler's successor as Governor, was elected Governor for the next term, November 7, easily defeating King Swope (Rep.). He was inaugurated, as elected Governor, December 12.

Officers. Kentucky's chief officers, serving in 1939, were: Governor, A. B. Chandler (Dem.; resigned October 9); Lieutenant-Governor and (succeeding Chandler October 9) Governor, Keen Johnson (Dem.); Secretary of State, Charles D. Arnett; Treasurer, John E. Buckingham; Attorney-General, Hubert Meredith; Auditor, Ernest E. Shannon; Commissioner of Agriculture, Labor, and Statistics, Garth Ferguson; Superintendent of Public Instruction, Harry W. Peters.

KENTUCKY, UNIVERSITY OF. A coeducational State institution of higher learning in Lexington, Ky., founded in 1866. The enrollment in the autumn of 1939 was 3800. There were 2370 students registered in the 1939 summer session. The faculty numbered 332. The productive funds amounted to \$184,075, and the income for the year was \$1,560,724. The library contained 254,227 volumes. New buildings completed or nearing completion were the Biological Sciences, Home Economics, the Women's Residence Halls, and the Army. President, Frank LeRond McVey, Ph.D., LL.D., L.H.D.

KENYA, kē-nyā' or kēn'ya. A British East African colony and protectorate. Area, 224,960 square miles. Total population (Jan. 1, 1939, estimate), 3,365,888 including 3,280,774 natives, 20,894 Europeans, 44,635 Indians, 14,077 Arabs, and 3734 Goans. Chief towns: Nairobi, the capital, 61,000 inhabitants; Mombasa, 50,000. Education (1938): 1977 schools (exclusive of some Koran schools at the coast) and 141,417 pupils.

Production and Trade. Coffee, wheat, maize, tea, sugar, hides and skins, cotton, coconuts, wattle bark, sodium carbonate, timber, and gold are the principal products. The output of gold in 1938 was valued at £499,601. For customs purposes, Kenya and Uganda are a single administrative unit—the chief imports being cotton piece goods and manufactures, motor vehicles, oils, machinery,

and building materials. Coffee, gold, cotton, tea, carbonate of soda, and sisal were the main exports. In 1938, imports (Kenya and Uganda combined) were valued at £9,667,030; exports (Kenya only), £3,835,684. In addition to the above mentioned external trade there is an interchange of imported and locally produced goods among Kenya, Tanganyika, and Uganda.

Communications. The harbors and railways of Uganda and Kenya are state-owned. A total of 1625 miles of meter gauge railway line was in operation during 1938, and 1,050,881 tons of freight and 892,471 passengers were carried. The government operates a marine service on lakes Victoria, Kioga, and Albert, and on the river Nile. There were, in 1938, over 10,814 miles of roads. Shipping entered and cleared the ports of Kenya during 1938 aggregated 4,697,252 net registered tons. Kenya is served by the air services between Great Britain and South Africa operated by Imperial Airways. Other air services link the chief towns of Kenya and other East African towns.

Finance. For 1938, gross revenue totaled £3,776,030; gross expenditure, £3,876,952. Net figures are obtained by deducting reimbursements from neighboring territories in respect of joint services from Kenya and Uganda railways and harbors for loan interest and from other sources on account of services which are not a charge against the colony's local revenues. Therefore, the 1938 accounts show a net revenue of £2,545,775 and a net expenditure of £2,646,697. The figures for 1938 are not strictly comparable with 1937, owing to a change in accounting procedure in which certain non-liquid assets were charged to expenditure. Total public debt amounted to £17,580,600 of which £13,251,808 represented the capital debt of Kenya and Uganda railways and harbors.

Government. The supreme executive power for the whole country is in the hands of a governor who is advised by an executive council. There is a legislative council of 41 members (the governor as president, 11 ex-officio, 9 nominated official, 11 European elected, 5 Indian elected, 1 Arab elected, 1 nominated unofficial to represent the Arab community, and 2 nominated unofficial to represent the African community). Any measure passed by the legislative council may be vetoed by the governor. Sir Robert Brooke-Popham, the governor, resigned during September, 1939, in order to take up duties with the British Royal Air Force. He was succeeded by Sir Henry Monck-Mason Moore.

History. At the opening of the legislature during April, 1939, the governor, Sir Robert Brooke-Popham, in his speech reviewed defense measures and stressed the position of Kenya as a part of the Middle East area of operations. He said that a complete scheme for a supply of reinforcements to Kenya in time of need had been worked out. It was announced during August, 1939, that the British Colonial Secretary had approved an application from the government of Kenya to include among the next government loans a sum of £250,000 for the purpose of establishing British settlers in Kenya. A sum of £30,000 was provided from the Colonial Development Fund for a mineralogical and geological survey of 16,000 square miles of Kenya in which traces of minerals have been reported.

KENYON COLLEGE. A college of arts and sciences for men in Gambier, Ohio, established in

1824 by the Protestant Episcopal Church. The enrollment for the autumn term of 1939 was 312 students and 4 special students. The faculty numbered 38 members. The endowment funds amounted to \$1,757,273, and the income for the year was \$259,414. The library contained 59,910 volumes and 50,000 government pamphlets. During 1939 the theological faculty and curriculum were expanded. President, Gordon Keith Chalmers, M.A. (Oxon.), Ph.D., Litt.D.

KINDERGARTEN ASSOCIATION, NATIONAL. An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The Association is supported entirely by voluntary gifts. The money is used for the purpose of promoting a knowledge of and an interest in the value of the kindergarten as an integral part of the public school system. Field Secretaries are employed in every State to keep this matter before the public and assist parents in having classes organized for their children.

The Association has been instrumental in securing the establishment to date of 2302 kindergartens, which have enrolled over 920,780 children. Where no adequate provision has been made in the State school laws for the maintenance of kindergartens, the Association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 17 instances.

Early in 1939 Senator Wagner of New York (Dem.) and Senator Davis of Pennsylvania (Rep.), at the request of the Association, jointly introduced a kindergarten amendment to the Harrison-Thomas-Larrabee Bill. Later, Senator Pepper of Florida and Congresswoman O'Day of New York, also at the Association's request, introduced the Kindergarten Bill, S.2510-H.R.6474. The Bill was voted out favorably by the Senate Committee on Education and Labor and will be on the Senate Calendar when Congress reconvenes in 1940.

The officers of the Association are: Maj. Bradley Martin, president; Hon. P. P. Claxton, honorary president; Miss Lena Madesin Phillips, vice-president; Mrs. Roger C. Aldrich, secretary; Miss Bessie Locke, executive secretary; and Julian M. Gerard, treasurer. Headquarters are at 8 West Fortieth Street, New York City.

KINGMAN REEF. See NEW INTERNATIONAL YEAR BOOK, 1938, p. 376.

KIRGHIZ SOVIET SOCIALIST REPUBLIC. One of the 11 constituent republics of the U.S.S.R. Area, 75,950 square miles; population (Jan. 17, 1939), 1,459,301. Capital, Frunze (86,300 inhabitants in 1936). A considerable portion of the country is mountainous so that livestock raising in the mountain pastures is the main branch of agriculture. The fertile fields at the base of the mountains are cultivated and irrigated, the chief crops being wheat, sugar beets, hemp, tobacco, and cotton. Petroleum, coal, and lead are mined, and important deposits of radium, anti-

mony, mercury, and indium have been found. See UNION OF SOVIET SOCIALIST REPUBLICS.

KIRIN. See CHINA under *Area and Population*.

KIWANIS INTERNATIONAL. An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civic and social service to the community. The first club was organized in Detroit, Mich., in 1915; by 1917 the organization had spread into Canada. At the close of 1939 the international organization consisted of over 2060 clubs with a membership of over 104,000. The objectives for the year 1939-40 were: 1. Service to under-privileged children; 2. Boys' and girls' work; 3. Vocational guidance; 4. Establishing closer relations between rural and urban communities; 5. Encouragement of intelligent, aggressive and serviceable citizenship.

Citizenship activities were: 1. Support of churches in their spiritual aims; 2. Initiation and support of constructive policies of conservation; 3. Co-operation in law observance and enforcement; 4. Continued interest in public safety; 5. Furnishing a broader knowledge of the fundamentals of popular government and the responsibilities of citizenship; 6. Maintenance of the international good will existing between the Dominion of Canada and the United States of America.

The 1940 convention will be held in Minneapolis, Minn., June 16 to 20. The officers for 1939-40 are: President, Bennett O. Knudson, Albert Lea, Minn.; Immediate Past President, H. G. Hatfield, Oklahoma City, Okla.; Vice-Presidents, Charles S. Donley, Pittsburgh, Pa., and Robert J. Prittie, Winnipeg, Manitoba; Treasurer, Dr. W. Eugene Wolcott, Des Moines, Ia.; Secretary, Fred. C. W. Parker, Chicago. Headquarters are at 520 North Michigan Avenue, Chicago, Ill.

KNIGHTS OF COLUMBUS. A society of Roman Catholic men organized under a special charter, granted by the Connecticut General Assembly in 1882, permitting it to do business as a fraternal benefit society and to promote and conduct education, charitable, religious, and social welfare work. The four principles of the order are charity, unity, fraternity, and patriotism.

The order is composed of a supreme council, the governing body and highest authority; a supreme board of directors, the executive body; 64 state councils; and 2465 subordinate councils. The total membership as of June 30, 1939, was 427,344, which represented an associate membership of 206,164 and an insurance membership of 221,180. In the 56 years of its existence the Society has paid out more than \$55,000,000 to the beneficiaries of its members. Death claims paid during the fiscal year amounted to \$2,874,368.27.

The annual convention was held in Seattle, Wash., August 15-17, 1939. The officers were Francis P. Matthews, of Omaha, Neb., supreme knight; Joseph F. Lamb, of New York, supreme secretary; and D. J. Callahan, of Washington, D. C., supreme treasurer. The order publishes *Columbia*, a monthly magazine. Headquarters of the supreme council are in New Haven, Conn.

KNIGHTS OF PYTHIAS. A North American fraternal order founded in Washington, D. C., in 1864 on the basic principles of Friendship, Charity, and Benevolence. The order is comprehended in 56 grand lodges or grand domains with about 5000 subordinate lodges, of which 4800 are in the United States. Its total assets are estimated

at upwards of \$30,000,000. During 1939 the Knights of Pythias expended approximately \$2,000,000 for relief purposes, exclusive of the maintenance of sixteen Pythian homes for aged members, their wives, widows, and children. The Supreme Chancellor is E. Lee Stapp, Miami, Fla.; Keeper of Records and Seal, Harry M. Love, 1054 Midland Bank Bldg., Minneapolis, Minn.

KOMI AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

KOREA (CHOSEN). A former empire of eastern Asia, annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo (Seoul).

Area and Population. Area, 85,228 square miles; population on Dec. 31, 1936, 22,047,836 (natives, 21,373,572; Japanese, 608,989; foreigners, 65,275). Populations of the chief cities on Dec. 31, 1936, were: Keijo (Seoul), 677,241; Fusan, 206,386; Heijo (Pyongyang), 180,421; Taikyu, 108,669; Jinsen (Chemulpo), 100,303.

Education and Religion. About 60 per cent of the adult inhabitants are illiterate. School enrollment figures for May, 1937, were: Elementary, 988,993; secondary, 42,479; vocational, technical and special, 22,928; collegiate, 5252; university, normal and preparatory, 4735. Korean students studying in Japan numbered 6397 on Oct. 1, 1936. Buddhism and Confucianism are the chief religions. There were 4752 Christian missions, with 3195 missionaries and 498,626 adherents at the end of 1936.

Production. Of the total population, 16,542,735 are engaged in agriculture and forestry. Production of the chief crops in 1938 was (in metric tons): Rough rice, 4,515,500; wheat, 285,300; barley, 1,121,300; oats, 37,200; corn, 95,600; potatoes, 802,400 (1937); tobacco, 28,000; cotton-seed, 91,100; soybeans, 506,900; cotton, 40,600; hemp, 18,000 (1937); raw silk, 1253 (1936). Fisheries' production in 1936 was valued at 77,900,000 yen; minerals, 100,429,655 yen (gold, 59,353,700; coal, 13,301,000; pig iron, 7,866,600; steel, 6,533,000). Copper, silver, lead, and tungsten are other minerals produced. Manufacturing production in 1936 was valued at 730,807,000 yen.

Foreign Trade. Merchandise trade with other parts of the Japanese Empire in 1938 was: Imports, 921,300,000 yen; exports, 710,500,000 yen. Merchandise imports from foreign countries were 132,700,000 yen; exports, 169,100,000 yen. Over three-fourths of all trade was with Japan proper. Rice, fertilizers, heavy iron, and other minerals were the chief exports.

Finance. Budget estimates for the fiscal year ended Mar. 31, 1939, placed total revenue at 505,159,000 yen and expenditure at 518,915,000 yen. The public debt on Mar. 31, 1937, was 549,731,000 yen. The yen exchanged at \$0.2845 in 1938 and \$0.2596 in 1939.

Communications. With 2220 miles of line, the state railways in 1936-37 carried 33,708,178 passengers and 9,980,227 metric tons of freight. Roads and highways (1939) extended 14,414 miles. The entire length of the Heijo-Manpochin railway, built since 1935 at a cost of 8,500,000 yen, was opened to traffic Feb. 1, 1939. Airlines connected Keijo (Seoul) with the other chief cities of Korea, Japan, Manchoukuo, and North China. During 1937 14,231 steamships of 13,008,990 tons entered Korean ports from Japan and the Empire and 1289 ships of 1,728,972 tons from

foreign countries. With completion of the first stage of the Tashito harbor works at the mouth of the Yalu River, the government in June, 1939, proclaimed it an independent port. Work had been under way since 1936.

History. The Oriental Consolidated Mining Co., the last big U.S. concession in Korea, sold its gold mining interests early in September, 1939, to the Japanese-owned Nippon Mining Co. for \$8,174,500. The Japanese army was opened to Korean volunteers for the first time in 1939 and 600 responded, according to Governor-General Jiro Minami. In an interview with an American writer, in August, 1939, General Minami declared his aim was the complete Japanizing of Korea and its people. He estimated that it would be about 30 years before the Japanizing process would reach the point where the Koreans could be entrusted with representation in the Imperial Diet on the same basis as the Japanese.

KRESS COLLECTION. See ART MUSEUMS; BENEFRACTIONS.

KRUPSKAYA, NADEJDA K. A Soviet educationalist and the widow of Nicolai Lenin, died in Moscow, Feb. 27, 1939. Born in St. Petersburg, Feb. 26, 1869, she was educated at the Woman's College there. Attracted first to the philosophy of Tolstoi and then to that of Marx, she taught her revolutionary ideals during 1891-96 under the guise of geography. Participating in a strike in 1896 as a member of the Social Democratic Party she was arrested and exiled to Siberia where she was married (1898) to Lenin, whom she had met in 1893.

After her release she went to Munich where she was later joined by her husband. She served as secretary of *Iskra* (1901) and later of the Central (Foreign) Organization. After the revolution of 1905 they returned to Russia and Mme. Krupskaya became secretary to the Central Committee of Bolsheviks, but the next year saw them again in exile, and it was not until the overthrow of the Czar in 1917 that they were able to return to Russia.

After Lenin came into power, she drew up the Party plan for education, became a member of the People's Commissariat of Education and founded the Bureau for Political Training. After Lenin's death in 1924 she went into partial retirement, but on Jan. 28, 1938 she was given membership in the Presidium of the Supreme Soviet (Parliament). At her death she was a member of the central committee of the Communist Party, and vice commissar of Education of the Union of Soviet Socialist Republics.

KU KLUX KLAN, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, Gentile persons, native-born American citizens, 16 years of age. They must be of sound mind, good character, commendable reputation, and of the Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, their allegiance, loyalty, and devotion to the government of the United States of America being unquestionable." At the biennial legislative meeting held in June, 1939, James Arnold Colescott was elected president to succeed Dr. Hiram Wesley Evans, and J. M. George was elected treasurer to succeed Sam H.

Venable, deceased. National headquarters are in Atlanta, Ga.

KWANTUNG, kwän'dōōng'. The territory at the southern extremity of the Liaotung Peninsula, Manchuria, leased from China by Japan. Area, including adjacent islands, about 1337 square miles; population, 1,680,627 (Dec. 31, 1936), of whom 1,273,503 were Manchoukuanans and 369,744 were Japanese, with 34,812 Koreans and 2568 foreigners. Chief towns (with Oct. 31, 1937, populations): Dairen, the capital, 551,160; Pulantien, 187,166; Port Arthur (Ryojun), 143,782; Chinchou, 136,319.

Production, etc. The production of chief crops in 1937 in metric tons was: Groundnuts, 79,000; soybeans (1936), 17,700; maize, 132,100; potatoes, 4300; rice, 2700; wheat, 1300. The sea-fisheries catch in 1936 was valued at Y5,800,000. The salt output for 1936 amounted to 413,084 metric tons. In 1936 imports were valued at Y680,061,785; exports, Y451,798,860. Japan supplied Y515,261,975 of the imports and received Y183,943,117 of the exports. The ordinary budget for the year ending Mar. 31, 1939, showed receipts of Y17,590,514 and expenditures of Y15,409,481 (yen averaged \$0.2845 in 1938). Governor-General, Gen. Kenkichi Uyeda. See JAPAN and MANCHOUKUO.

LABOR. See AMERICAN FEDERATION OF LABOR; CHILDREN'S BUREAU; CONGRESS OF INDUSTRIAL ORGANIZATIONS; LABOR CONDITIONS; LABOR LEGISLATION; NATIONAL LABOR RELATIONS BOARD; OLD-AGE PENSIONS; RELIEF; SHIPPING; SOCIAL SECURITY BOARD; UNITED STATES CONCILIATION SERVICE; UNITED STATES EMPLOYMENT SERVICE; WAGE AND HOUR DIVISION; WOMEN'S BUREAU; also, MICHIGAN, NEW YORK, AND OREGON; UNITED STATES under *Departments and Agencies*.

LABOR, AMERICAN FEDERATION OF. See AMERICAN FEDERATION OF LABOR.

LABOR, U.S. DEPARTMENT OF. Frances Perkins of New York was Secretary of Labor during 1939. On July 1, the United States Employment Service (q.v.) was removed from the jurisdiction of the Department and transferred to the Federal Security Agency. For expenditures, see the table under PUBLIC FINANCE. Activities of the Department are covered in the following articles on separate divisions: CHILDREN'S BUREAU; UNITED STATES CONCILIATION SERVICE; WAGE AND HOUR DIVISION; and WOMEN'S BUREAU. See also IMMIGRATION and EMIGRATION for the Immigration and Naturalization Service. The Department includes also the Bureau of Labor Statistics under the direction of Isador Lubin, the Division of Labor Standards, and the Division of Public Contracts.

LABOR CONDITIONS. Despite the disturbing effects of chaotic international politics, labor conditions throughout the world were relatively stable in 1939. No general strikes were reported. In those countries where organized labor had not been destroyed in previous years by dic-

tatorships, trade unions successfully defended their memberships and even made organizational advances. Levels of employment and wages rose slightly. Toward the end of the year war destroyed labor standards in some of the belligerent countries. In other countries restrictions against overtime and employment of women and children were relaxed or discarded. Considered as a whole, however, the year brought no serious setbacks in the movement for improved working conditions in most of the great industrial nations of the world. In the United States the most important developments were the operation of the Fair Labor Standards Act for its first full year and the steady growth of trade agreements in the newly organized mass production industries.

Employment and Unemployment. The general level of employment throughout the world rose perceptibly in 1939 in line with the upswing which began in the years immediately following the depth of the business depression in 1932 and 1933. The gains can be attributed in part to industrial mobilization for war or preparation for war. Except for a few industries, however, statistics do not reflect any sudden spurt in employment which is commonly expected to accompany the outbreak of hostilities. To the contrary, the dislocation of industry during the transition from a peacetime to a wartime economy threw many men out of work in several countries.

Reports of the International Labor Office show that in Great Britain the total number of unemployed persons on Sept. 11, 1939, was 1,331,000 as compared with 1,232,000 on Aug. 14, 1939, an increase of 99,000. In France the number of unemployed increased from 302,479 on August 26 to 316,552 on September 23. In Belgium the number unemployed rose from 168,865 during the week ended August 26 to 235,018 in three weeks. Denmark, Greece, and The Netherlands had similar increases in unemployment. The United States, Switzerland, and a few other countries had decreases in unemployment from August to September. There was little change in the unemployment situation in Sweden.

Considering the year as a whole, the level of employment in the United States, Canada, and France was higher in 1939 than it was in 1938 but lower than it was in 1929. Employment in Germany, Denmark, Great Britain, Hungary, Italy, and the Union of South Africa in 1939 appeared not only to have surpassed 1938 levels but 1929 levels as well. The absence of reliable statistics in some countries and the wide variety of statistical methods among most of the countries make international comparisons impossible and estimates of the gains difficult, but some idea of the long-range changes in conditions are indicated in the table below.

Unemployment was a controversial political problem in Great Britain during the early part of 1939. The Labour Party moved for a vote of censure in the House of Commons in February, but the motion was rejected. The Labour Party spokesman said the number of unemployed in 1939 stood at almost the same figure as in January, 1936, although it had fallen in the interval, and added: "We are getting to a position now where we shall always have, in good times as well, a standing army of two million unemployed." He urged adoption of a policy by which workers would enter industry later and retire earlier, a shorter working week and working day, holidays with pay, and elimination of overtime. The Minister of Labour answered by stating that of the total of 2,039,000 unemployed in January, only 289,000 had been without work for more than twelve months, while 1,436,000 had been without work for less than six months, 1,187,000 for less than three months, and 906,000 for less than six weeks.

As war preparations progressed during the year, labor shortages were experienced in certain industries and regions of Great Britain. From 2,039,000 in January the registered unemployed declined to 1,256,000 in July, the lowest in ten years. Labor reserves in branches of industry, such as scientific and photographic instruments and apparatus, motor vehicles, cycles, and aircraft, had practically vanished in July. Pressure

STATISTICS OF EMPLOYMENT

Condensed from tables of *International Labour Review*, International Labor Office, Geneva, 1939, 1940.
Indexes of numbers employed (1929 = 100 except for France and Denmark, as indicated)

| | Great Britain ¹ | France ² | Germany ³ | Canada ⁴ | Australia ⁵ | Denmark ⁶ | Hungary ⁷ | Italy ⁸ | Union of South Africa ⁹ | United States ¹⁰ |

was exerted to recruit masses of new workers for the engineering industry, but the Amalgamated Engineering Union and other labor organizations opposed all such dilution of labor until all the available engineering staff had full-time employment. The gains continued until the slump which set in when war was declared.

In Germany the state control of labor recruitment became more stringent in 1939. Forced labor appeared to be established as a permanent policy. A decree of Feb. 13, 1939, made more stringent the decree of 1938 which required all Germans to perform certain urgent State tasks or to undergo vocational training. The 1938 decree provided for recruitment for a definite period and regarded the recruited worker as being on leave from his previous workplace, but the 1939 decree provided that workers might be conscripted for indefinite periods and might leave their assigned occupation and workplace only with the permission of the State local labor office. It was also provided that other workers could leave or change their workplaces only with the permission of the Government.

France increased its governmental supervision over employment in 1939. The Minister of Labor took control over all employment exchanges, municipal and private included. To stabilize the labor supply in undertakings working for national defence, official decrees prohibited employers from hiring employees of other companies without permission from labor inspectors. Unemployment in France steadily declined from January until the declaration of war in September. The increase in unemployment in the fall is attributed in part to the mobilization which caused the closing of a large number of small shops when the proprietors were enlisted.

In Japan compulsory labor was introduced for the first time by an Imperial Order on July 8, 1939, to increase the output of munitions and to meet a growing scarcity of workers which resulted in some industries from the mobilization of armed forces.

Employment in the United States gained fairly consistently throughout 1939 after a considerable seasonal slump in January. The Bureau of Labor Statistics reported a decrease of approximately 880,000 workers in all nonagricultural employment from December, 1938, to January, 1939, and about 100 fewer persons were employed in January, 1939, than in January, 1938. Employment increased by approximately 45,000 workers from January to February, and 100,000 more persons were employed in February, 1939, than in February, 1938. In March and April the strike of approximately 280,000 workers in bituminous coal mining caused a drop in the level of employment, but in May, 1939, approximately 680,000 more workers were employed than in May, 1938. Employment showed a further gain of nearly 400,000 in June. There were approximately 1,110,000 more persons at work in August, 1939, than in August, 1938.

Increased attention was given in 1939 to employment problems of older workers. A special committee appointed by the Secretary of Labor made a report on the matter, finding that "while older workers are on the whole favored by seniority rules and general personnel policy, nevertheless when once they are displaced—whether by lay-off, technological unemployment, mergers, shut-downs, or other impersonal causes—they find real difficulty in securing reemployment." The

committee said its examination of factual data on productivity, accident sickness, group insurance, and pension plans, leads to the conclusion that there is little significant relationship between age and costs, and that the prejudice against hiring workers older than 40 rests largely on inadequate and erroneous impressions.

Wages. The Director of the International Labor Organization reported to the 25th annual session at Geneva in June that in every country, with the exception of Germany and recently of Japan, real hourly wages had been maintained at a figure above the 1929 level.

The effects of war upon wage levels and wage systems have not yet been reported. An important early development, however, was the reduction or elimination of overtime rates in several countries. In France, for example, the Hours of Work Decree of September 1 stipulated that hours in excess of 45 per week would be paid for at three-quarters of the normal hourly wages calculated at one-forty-fifth of the weekly wages previously paid for 40 hours of work.

Several different forces affected wage systems in the United States during 1939, although they have not yet brought substantial changes in the level of wages. The Fair Labor Standards Act was in force for its first full year, providing a minimum wage for workers in interstate commerce of 25 cents per hour until October 23, when the minimum was raised to 30 cents. The first minimum-wage order for an individual industry under the Act became effective in September. It established 40 cents an hour as the minimum wage for full-fashioned hosiery manufacture and 32.5 cents as the minimum in the seamless branch of the hosiery industry. State minimum wage laws for women raised wages in some industries. Increased collective bargaining, defining wages in agreements for the first time in several industries, was

* Preliminary estimates

a stabilizing influence. General economic conditions also contributed to more stable wages.

Meanwhile, there was considerable public interest in systems of wage payments. Newspaper editorials and a variety of writers and speakers urged adoption of annual wages. A subcommittee of the Senate Finance Committee issued a report advocating profit-sharing.

Hours of Work. No important changes in the average number of hours worked per worker throughout the world appeared during 1939. The demand for labor, indicated by the rising level of employment, tended to lengthen the working days, but this tendency was offset to some extent by governmental restrictions. In the United States, for example, increased industrial production tended to increase the number of employees working the maximum hours, but the operation of the Fair Labor Standards Act tended to reduce the average by limiting the hours per week to 44 until October, when the maximum became 42.

International comparisons cannot be made because of the different statistical methods employed in various countries. Some countries compile their records on the basis of days, while others use weeks, fortnights, or months. The various periods cannot be transformed into a uniform period because of the varying number of days in different months, fluctuations in the labor turnover, holidays, etc. An indication of the changes in hours actually worked within each of several countries is presented in the accompanying table.

STATISTICS OF THE GENERAL LEVEL OF HOURS ACTUALLY WORKED IN INDUSTRY

¹ Mines included with industries.

² Monthly figures relate to first week of month.

Approximately half the recommendations and proposed draft conventions presented to the 25th conference of the International Labor Organization held in Geneva in June, 1939, related to the regulation or reduction of hours of work. A convention regulating hours of work in road transport was adopted. Other draft conventions designed to reduce hours of work in industry, commerce, and offices were considered, but formal action by the I.L.O. was delayed. The abnormal conditions which developed wartime economic systems in several countries were blamed for the failure to act on the matter. Typical was the statement of the French workers' delegate, Mr. Leon Jouhaux. "We are driven to suspend discussion of the 40-hour week," he said, "because a certain policy has developed in the world, be-

cause that policy has caused great anxiety in every nation, because it has led the nations to hasten the production of armaments to ensure their national safety and to defend their freedom."

In almost all belligerent countries and in neutral countries which have mobilized, wartime measures increased the power granted to the national administrative authorities to suspend or to modify regulations affecting hours of work and rest periods.

Germany created a National Defence Council in August with power to promulgate orders having the force of law during the emergency period. It immediately suspended old regulations imposing limitations on the hours of work and ruled that workers should not be entitled to extra pay for overtime, night, Sunday, or public holiday work.

Over the protest of organized labor, the French Government in 1939 issued decrees which allowed working hours to be increased from 40 to 60 per week in industries and undertakings working for national defence. The term "national defence" was defined to apply to mining, power, motor fuel, transport, state building undertakings, private concerns holding government contracts, and the great bulk of employers in France. The General Confederation of Labor resisted the measures, stressing fears that employers would abuse their privileges and aggravate the unemployment situation.

In Belgium the Eight Hour Day Act adopted in 1921 was kept in force generally, but in September it was announced that the Cabinet had approved a draft order restricting its application in undertakings executing urgent work for national defence.

The Minister of Transport in Great Britain ordered that maximum hours regulations should not apply to drivers of vehicles used for hauling defence supplies. Negotiations began in other industries for the adaptation of hours regulations to war conditions. Representatives of the British Federation of Master Printers, the Newspaper Society, and the Printing and Kindred Trades Federation reached an agreement effective in September creating a war emergency committee to deal with hours problems. The Confederation of Shipbuilding and Engineering Trade Unions and other labor organizations also began discussions of the possibility of revising hours in order to expedite the output of necessary war materials.

Union Movements. War put organized labor on the defensive throughout the world in 1939. As peacetime labor standards were shattered in some countries and seriously menaced in others, trade unions directed their efforts mainly toward protecting standards established in previous years.

The Seventy-first Annual Congress of British Trade Unions, held in September, dealt principally with the crisis in European affairs. The election continued the same General Council in office. Membership of unions affiliated with the Congress was reported to total 4,669,186, representing an increase of 208,000 over the previous year. The main resolutions and reports adopted stressed that organized labor in Great Britain directed efforts solely against the destroyers of freedom and enemies of peace and called for the reconstitution and regeneration of the League of Nations.

The General Confederation of Labor in France condemned the German-Soviet agreement and declared its sympathy with the French Govern-

ment's plans for industrial mobilization, but simultaneously it resisted several Government measures which it felt encroached on workers' freedom, principally the lengthening of the legal working hours. Several individual unions pursued plans intended to assist in increasing production. The Federation of Metal Workers, the Chemical Workers' Union, and the Regional Committee of Building Workers of the Paris Area offered to draw up lists of persons qualified for employment in different undertakings for submission to the employment exchange; they also suggested that where necessary the system of three shifts of eight hours each should be put into effect to enable work to continue throughout the 24 hours. The Federation of Electric Lighting Workers asked a guarantee that members mobilized shall receive throughout the war their salaries and allowances under the same conditions as civil servants and that workers mobilized shall be reinstated in their employment when the war ends. French workers, employers, and the Minister of Labor entered into an agreement in October providing for collaboration between employers' and workers' associations and the public authorities in regulating conditions in munition factories.

Trade Unions in the Netherlands asked and secured weekly meetings with employers in order to discuss difficulties arising out of the war. In a meeting on September 2 between the trade unions and the employers' federations, the latter announced they would make an appeal to all employers to reinstate after demobilization their workers who had been mobilized; to continue to pay to the heads of families the usual wages, after deduction of the allowances paid by the military authorities; to delay dismissal of their workers as long as possible and when such dismissal becomes inevitable to consult the parties concerned before taking action.

Union movements in the United States were somewhat restricted by state legislation in 1939. A law was enacted in Florida requiring the registration of labor organizations. Several states adopted mediation and arbitration statutes providing that notice must be given before a strike or lockout may legally take place. Michigan's mediation law forbids participation in sit-down strikes, intimidation of other employees for the purpose of inducing them to join a union or of preventing them from working. Minnesota's new labor relations act has similar provisions and also forbids picketing where there is no strike or where the majority of pickets are not employees of the concern picketed. Wisconsin and Pennsylvania amended their anti-injunction laws to facilitate the granting of injunctions in labor disputes.

Probably the most significant development affecting union activities in 1939 was the application of the antitrust laws to labor organizations. In the midst of a Department of Justice inquiry into monopolistic practices in the building trades, Asst. Atty. Gen. Thurman Arnold released a statement listing types of unreasonable restraint "which in our opinion are unquestionable violations of the Sherman Act." The practices against which the Department of Justice has proceeded, the statement said, are unreasonable restraints designed to destroy an established and legitimate system of collective bargaining, to enforce illegally fixed prices, to enforce systems of graft and extortion, to compel the hiring of useless and unnecessary labor, and to prevent the use of

cheaper material, improved equipment, or more efficient methods. The statement explained that the principle applicable to unions is the same as that applicable to other groups specially protected by law. Mr. Arnold made it clear that the Department of Justice would prosecute only such boycotts, strikes, or coercion by labor unions as have no reasonable connection with wages, hours, health, safety, the speed-up system, or the establishment and maintenance of the right of collective bargaining.

Despite these complications, unionism and collective bargaining were extended to more workers in 1939 than in any previous year, for the American Federation of Labor and the Congress of Industrial Organizations both claimed membership gains.

Activities of the two federations in 1939 increased the prevalence of dual unionism. The Building Trades Department of the A. F. of L. formerly had the field to itself, but on August 1 the C.I.O. established the United Construction Workers Organizing Committee. Following the split within the United Automobile Workers, the faction led by R. J. Thomas continued its affiliation with the C.I.O., while the faction led by Homer Martin received an A. F. of L. charter. A faction of the C.I.O.'s United Textile Workers also withdrew and received an A. F. of L. charter. Meanwhile, within the C.I.O. the Textile Workers Organizing Committee and the United Textile Workers merged into a new organization known as the Textile Workers Union of America.

The C.I.O. also merged the National Leather Workers Association with the Fur Workers International Union to form the Fur and Leather Workers International Union and consolidated three units of the United Fishermen's Union of the Pacific to become the International Union of Fishermen and Allied Workers of America.

The A. F. of L. also gave a charter to the United Cement, Lime and Gypsum Workers' International Union and extended the jurisdiction of the International Molders Union of North America by ordering the International Brotherhood of Foundry Employees to merge with the Molders.

See the articles on AMERICAN FEDERATION OF LABOR and CONGRESS OF INDUSTRIAL ORGANIZATIONS for statements by William L. Green and John L. Lewis on the respective positions of the two organizations during 1939.

Collective Bargaining. Industrial mobilization for war offered severe threats to collective bargaining in several countries during 1939, but no serious setbacks were recorded. To the contrary, in those countries not subject to dictatorship, there appeared to be considerable willingness to submit wartime labor problems to negotiation. The first serious disputes arose from demands by seamen for war risk bonuses, and such disputes were settled by agreements in Great Britain, Belgium, the United States, Denmark, the Netherlands, Norway, Sweden, Finland, and Italy.

Probably the most conspicuous example of successful collective bargaining under the stress of war appeared in France, where employers and workers in October reached an agreement providing for collaboration between employers' and workers' associations and the public authorities in regulating conditions in munition factories.

In the United States the prevalence of collective bargaining increased as a natural consequence

of further unionization. The National Labor Relations Board states in its Fourth Annual Report:

The development has been really spectacular in the mass-production industries, where before 1937 there were almost no agreements. Prior to 1937 there were few agreements in iron and steel; in that year more than 350 were reported. By 1938 the number had increased to 500; and three-fourths of the basic iron, steel, and tin-producing industry and varying proportions of allied metal fabricating and processing were covered by agreement. The number continues to grow. In contrast with the small number (roughly 100) of rubber workers covered by agreement in 1932, there are now more than 40,000; more than 80 per cent of this coverage has been effected since the Supreme Court decisions validating the National Labor Relations Act. Other examples of recent agreements in mass production include flat glass (more than 21,000 workers), aluminum (6 plants employing 17,000 workers), automobile (more than 500 agreements in 1938), electrical equipment (more than 400 agreements covering companies like Philco, General Electric, Radio Corporation of America), and rayon yarn (American Viscose employing 20,000). These examples provide only meager illustration of a growth in written trade agreements that is unprecedented.

Refinements in collective agreements also developed in 1939. The Research Division of the National Industrial Conference Board analyzed in detail 90 representative contracts in the middle of 1937 and 114 representative contracts in the middle of 1939. Comparisons of these studies led the Conference Board to the following conclusions:

In general, recent union agreements seem to indicate a more serious acceptance of collective bargaining than former ones. The character and wording of the various provisions give the impression of an attempt to construct practical and workable agreements to cover situations that arise in day-to-day plant operation rather than of contracts entered into under duress and couched in such vague terms as to make misunderstanding inevitable and amicable administration difficult.

Either as a result of this acceptance of collective bargaining or because both parties recognize the drawbacks of too great rigidity, there is a tendency to make these instruments more flexible, allowing a greater leeway in their administration and leaving more matters subject to joint negotiation. Since such a development can only be possible if each of the parties respects and has confidence in the other, the implication is that in some companies, at least, collective bargaining has progressed beyond the preliminary stage of instinctive combativeness. Efforts toward genuine co-operation appear in such provisions as the following: "To promote the welfare of the company, the union offers to assist the company in the enforcement of the reasonable discipline now being practiced by the company and otherwise to promote the success of the company in every reasonable manner." If this is becoming the spirit actuating union-management relations, then a new stage in collective bargaining is in process of development in the United States.

More specifically, the Conference Board found that the newer agreements showed a considerably greater prevalence of closed-shop provisions than older agreements, more prohibitions against time studies and incentive systems, more complete seniority rules, and improvements in procedures for handling grievances. Another important finding was that whereas a majority of the 1937 agreements ran for definite periods, usually a year, the prevailing practice in 1939 was to make the duration of the agreements indefinite, with provisions for modification upon due notice by either party.

Closed-shop proposals were perhaps the most highly controversial subject in negotiations during the year, but the Bureau of Labor Statistics confirmed the Conference Board's finding regarding the prevalence of closed shops. It reported in October that more than half of the 7000 current union agreements on file contained provisions requiring that all employees be members of the union. It is estimated that about three million organized workers in the United States are working under closed-shop conditions.

Collective bargaining with employers' associations or bargaining for an entire industry or trade within a geographic area appeared to become more prevalent in 1939. The Industrial Relations Division of the Bureau of Labor Statistics reported in August that about 3,500,000 workers were covered by agreements negotiated with national, regional, or city-wide employers' associations.

Probably the most important case of industry-wide negotiation was in the bituminous coal industry, where 150 representatives of 21 associations met with 150 representatives of the United Mine Workers. Six of the owners' associations refused to accept the agreement when it finally was reached and withdrew, but later signed agreements substantially the same as the ones signed by the majority of the associations. Most of the trucking firms in Southern New England designated a committee with full authority to negotiate for the entire group when the Teamsters' Union called its members out on strike. In the Middle West an Operators Area Committee representing more than a dozen interstate trucking lines negotiated a renewal of an old agreement, which now will run until November, 1941. In the maritime industry, the needle trades, and several other industries, collective bargaining continued on a coast-wide, city-wide, or trade-wide basis. In August the Building Trades Department of the A. F. of L. made its first national agreement with the Building Trades Employers Association; this agreement related only to the handling of jurisdictional disputes and did not deal with conditions of employment, but it is significant because of its country-wide scope.

Strikes. Few strikes of importance occurred in Europe or Great Britain in 1939. National appeals in several countries for co-operation from organized labor in increasing industrial output apparently were effective. Great Britain's monthly reports of strike statistics showed decreases per month of from 10 to 25 per cent in the frequency and intensity of strikes. Strike statistics from European countries are not available, but no outstanding stoppages of work were reported. In France a decree empowered the Minister of Labor to introduce a system of conciliation and arbitration applicable throughout the war.

Sweden successfully completed its first year under a "General Agreement" by which the Employers' Federation and the Confederation of Trade Unions bound themselves not to resort to strikes or lockouts without having first tried methods of peaceful negotiation in accordance with rules stipulated in the agreement. The pact was signed on Dec. 20, 1938, as the outcome of negotiations carried on since 1936.

In the United States strikes were less frequent in 1939 than in 1938, but the prolonged mining and automobile strikes brought an increase in the man-days lost. The so-called "sit-down" strikes which became common about four years ago practically vanished from American industry after the Supreme Court in February, 1939, held them to be illegal. "Quickies" or "job-action" strikes also became less frequent, as adjustment machinery created by collective bargaining agreements provided procedures for the orderly handling of grievances.

Coal mining and automobile manufacturing were the two most turbulent industries in 1939.

Bituminous Coal Strike. The contract between the United Mine Workers of America

(C.I.O.) and operators of bituminous coal mines in the Appalachian fields expired on March 31. Negotiations had been carried on during March, the U.M.W. asking a raise of 50 cents per day, a 30-hour week, a guarantee of 200 working days per year, two weeks vacation with pay, and the closed shop. Operators offered a contract similar to the old one with a 50 cents per day reduction in pay and continuing the 35-hour week. The strike started April 3, with about 340,000 men quitting work. Early in May other bituminous miners outside the Appalachian region struck, bringing the total to about 420,000.

The most difficult issue in dispute was the union's demand for the closed shop. Although in effect the U.M.W. had the closed shop by the check-off system for many years, it was no serious problem because no other organization in the field was strong enough to challenge the U.M.W.'s right to represent the miners. In recent years, however, the Progressive Mine Workers of America (A. F. of L.) engaged in vigorous organizational campaigns, challenging the U.M.W. priority.

Agreement on questions of wages and hours was reached early in the negotiations, both sides agreeing to continue the rates and schedules of the agreement which expired on March 31. The operators resisted the demand for the closed shop but offered to make the U.M.W. the sole bargaining agency and proposed to check off dues for union members. The U.M.W. held out for the closed shop or alternatively the elimination of the penalty clause in the old agreement against unauthorized strikes. The union claimed that failing to obtain a closed-shop agreement, they should have the right to strike or the Progressive Mine Workers might, by obtaining as members the majority of workers in any one mine, go before the National Labor Relations Board and get a certification.

The dispute was finally settled on May 13, the operators agreeing to a union shop arrangement under which all new employees would be required to join the U.M.W. Operators in Harlan County, Kentucky, held out against union demands longer than the other employers and thereby threatened the entire arrangement for stabilizing labor relations in the bituminous coal industry, but they yielded in a few weeks.

Chrysler Strike. Strife in the automobile industry began in February when more than 10,000 workers in the Plymouth plant of the Chrysler Corporation at Detroit were idle for about two days as the result of a dispute between the two factions of the United Automobile Workers. The strike was called off when a petition was filed with the National Labor Relations Board for an election to determine the representatives of the employees.

Unrest continued throughout the year, culminating in the dispute between the Chrysler Corporation and the United Automobile Workers (C.I.O.), lasting 54 days and involving a total of more than 58,000 Chrysler employees. Company officials called it a "slow-down strike"; union leaders called it a lockout. More than 100 men were dismissed at the Dodge plant, a key unit of Chrysler operations, on October 6. The U.A.W. charged that the men were unable to keep pace with what it termed a "speed-up" of production standards, while the company said those discharged had "refused to do their work and flouted discipline." For several days Dodge work-

ers reported for work daily but were sent home, as the management said "slow-downs" made continued operation impossible. In a few weeks the union formally called a strike and set up picket lines.

Constant negotiation and early mediation by the United States Department of Labor and the Michigan State Mediation Board occurred, but no basis for settlement appeared until the end of November. The agreement finally signed provided a blanket increase of three cents an hour with a higher rise for some classifications, rejection of the union shop demand, creation of a joint appeals board for handling grievances, company control of production standards, and a union pledge not to permit its men to participate in sit-down, stay-in or slow-down strikes.

Other Strikes. Among other labor disputes in 1939, many of the most severe strikes resulted in collective bargaining agreements promising a reasonable degree of industrial peace. The strike of 8000 truck drivers against trucking firms in Rhode Island, Connecticut, and part of Massachusetts, called by the International Brotherhood of Teamsters, Chauffeurs, Stablemen & Helpers on March 19, ended in a contract which will remain in effect until April, 1943. Wage rates are stipulated with increases varying in amount for most of the men during each of the successive years the contract is in force. It is provided that the rates in 1942 shall be uniform in all the areas covered by the contract. To administer the provisions and adopt such measures and regulations as will eliminate unfair practices from the industry, the agreement created a Fair Trade Practice Board of the Trucking Industry of New England.

Records of the major issues in dispute, the relationship of strikes to industrial production, and the frequency and intensity of strikes are presented in the accompanying statistical tables.

TREND OF STRIKES IN THE UNITED STATES*

| Year or month | No. of strikes beginning in year or month | Workers involved in strikes beginning in year or month | Man-days idle during year or month |

* Condensed from tables of *Monthly Labor Review*, U. S. Department of Labor, 1939, 1940.

Safety Commission to prepare draft administrative regulations and to advise the Minister of Labor on any question relating to industrial safety.

Italy set up a national center for the training of factory doctors and instituted a system of bi-monthly medical examination of workers employed in glass works.

In the United States, Arkansas adopted a workmen's compensation law covering occupational diseases as well as accidents, leaving Mississippi as the only state without compensation legislation. Several other state legislatures in 1939 enacted new occupational disease laws or extended the scope of old laws.

An experiment was started in Wisconsin with pre-employment medical examinations in an effort to find a way to check the indiscriminate screening out of employees and applicants for employment on the basis of physical considerations. The plan is to provide examinations by a physician designated by the employer. Neither the employer nor the worker is to receive a copy of the physician's report, but both are advised of the findings. If a worker is dismissed or rejected on the basis of such findings, he may have another examination by a physician appointed by the state industrial commission, whose findings are to be conclusive.

The Bureau of Labor Statistics in October, 1939, published its annual statistics of industrial injuries, showing that accidents in industry during 1938 resulted in the death of 16,400 persons, caused permanent injuries to 98,900 persons, and temporarily disabled 1,260,300. The total of all types of injuries was 1,375,600. The figures indicated a substantial decrease from those of the preceding year, for which 19,600 fatalities, 126,700 permanent and 1,691,700 temporary injuries were estimated.

Women in Industry. The use of women in almost every branch of economic activity increased during the year, essentially because of dwindling labor reserves which developed in some countries owing to the rearmament programs.

In Switzerland an order made women from 16 to 60 years subject to compulsory labor. Germany included women in its compulsory labor system at first but later modified its regulations to provide numerous exceptions. In the Soviet Union an organized campaign was started to increase the number of women wage earners; an appeal was made to women to take up mining work, and measures were undertaken for the training of more than 100,000 women tractor drivers. In France the Minister of Labor issued an appeal

for women to work as riveters, screw cutters, drillers, and metal pressers, on jobs left vacant by male workers who were mobilized.

Without objection from the Confederation of Trade Unions, the Swedish government moved to change its regulations to allow women to do night work in munition factories. The Swedish Riksdag in May adopted a law which prohibits the dismissal of women from work in any industry on grounds of betrothal, marriage, pregnancy, or confinement if they have been employed for two years. The Act also prohibits any reduction of wages on the same grounds except where a woman is called upon to suspend her activity on account of the nature of the work.

In Great Britain a number of women's organizations formed voluntarily during the last war to encourage women to replace men in various fields were revived in 1939. Among these are the Women's Land Army, to provide training for women in agriculture; the Women's Engineering Society, to train women for munition work, and the Women's Employment Federation, to enroll women for various occupations. The National Joint Industrial Council for the Road Passenger Transport Industry and the London Passenger Transport Board considered the possible substitution of female for male labor but found such substitution unnecessary. Furthermore, the Transport, and General Workers' Union made it clear that it could consent to the employment of women only when suitable men were not available.

Child Labor. The outbreak of war brought increased use of young persons and children in industries of mobilized nations, but otherwise no important changes in child labor conditions abroad occurred during 1939. In the United States the first year of Federal restrictions on child labor under the Fair Labor Standards Act was completed in October. The Act, which went into effect on Oct. 24, 1938, prohibits shipment in interstate commerce of goods made in establishments in which children under 16 are employed. In addition, the Children's Bureau is authorized to declare occupations especially hazardous for the employment of minors between the ages of 16 and 18 and to prohibit their employment. The Children's Bureau is also authorized to exempt children 14 to 16 years from provisions of the Act for work outside manufacturing or mining occupations which does not interfere with their schooling, health, or well-being. Already approximately 50,000 children under 16 years have been removed from industry under the Act.

West Virginia and Massachusetts in 1939 established 16 years as the minimum age for work during school hours, and eight other state legislatures considered bills to the same effect. California prohibited the issuance of home workers' certificates to persons under 16 years of age.

Meanwhile, no further action was taken on the child-labor amendment to the United States Constitution, approved by Congressional resolution in 1924. Before the amendment becomes law it must be ratified by the legislatures of eight states in addition to the 28 which had ratified it by 1937.

The subjects of LABOR LEGISLATION and OLD-AGE PENSIONS are discussed in separate articles in this volume. See also CHILDREN'S BUREAU; CONCILIATION SERVICE, U.S.; EMPLOYMENT SERVICE, U.S.; FEDERAL SECURITY AGENCY; NATIONAL LABOR RELATIONS BOARD; SOCIAL SECURITY BOARD; WAGE AND HOUR DIVISION; WOMEN'S

BUREAU. For the Maritime Labor Board, see **SHIPPING.**

WILLIAM M. LEISERSON.

LABOR LEGISLATION. The far-reaching changes made in the Social Security Act by Congress stand out as the most important labor legislation of 1939. This one enactment directly affects more than 40 million workers and their families, as well as other millions including the needy aged, the crippled, the blind, and underprivileged mothers and children.

In the 44 state legislatures which met in regular session the most notable accomplishments were the adoption of workmen's compensation in Arkansas; abolition of forced worker contributions under unemployment compensation in Massachusetts; adoption of occupational disease compensation in Idaho and Maryland, and of all-inclusive in place of limited-list coverage of occupational diseases in Ohio; adoption of a minimum wage law for women in Alaska, and extension of the Connecticut law to cover men; and adoption of a vocational rehabilitation law in Delaware.

The movement for progressive laws, however, suffered severe reversals in several states, particularly in Pennsylvania but even in such customarily progressive states as Wisconsin.

Social Security. Sweeping revisions of the old age insurance provisions of the Federal Social Security Act not only advance to January, 1940, the date on which benefits become payable, but also provide benefits for dependents and survivors of insured individuals. Coverage has been extended to include maritime employments and national banks. Eligibility requirements are reduced and benefits raised for workers now at or near the retirement age which is 65; but for younger workers, especially those without wives or other dependents, these provisions are less liberal than formerly. Supplementary benefits are provided for wives and widows over 65 years of age, and dependent children under 18 years of age, of fully insured persons. Moreover, if an insured worker dies before reaching age 65, benefits will be paid to his children under 18 years of age and to his widow while caring for such minor children, or to dependent parents. Monthly benefits will vary from \$10 to \$85, depending on average monthly wages and length of covered employment. Taxes on employers and workers for old age insurance will remain at 1 per cent each until 1943. Provision is made for a continuing study and reports on actuarial needs of the system.

Other amendments to the Social Security Act substantially increase authorized appropriations for vocational rehabilitation, maternal and child health, crippled children, and public health services; and provide for reimbursement of one-half of state pensions for the aged and the blind up to \$40 instead of \$30 a month. Puerto Rico is now covered by the vocational rehabilitation, maternal and child welfare, and public health provisions. Authorized Federal appropriations for state unemployment compensation administration are increased from 49 million to 80 million dollars annually. Of outstanding significance also are the new requirements of state personnel selection through approved merit systems as a condition of Federal aid under the Act.

Unemployment Compensation. Among amendments to state unemployment compensation laws, the abolition of worker contributions

in Massachusetts leaves only six states which still retain this requirement. Massachusetts and North Carolina adopted experience rating of employer contributions, but Alabama, Montana, and Washington substituted provision for study of the subject in place of former experience rating provisions. Of the eleven states without experience rating, all but Pennsylvania now provide for study of this device. Among other important changes are: Shortening of the "base period" to one year in 29 states; substitution of highest quarterly earnings in place of full-time weekly wages in computing benefits in a score of states; provision of benefit amounts rounded to 50-cent or dollar intervals in most states; fixing a \$5 minimum benefit in half of the states; adoption of a uniform duration for benefit payments in nine states; increase in earnings requirement for eligibility in 15 states; and requirement of only one two-week waiting period in a benefit year in a score of states.

Old-Age Pension. Old-age pension or assistance laws were amended in many states. Citizenship requirements were repealed in Oregon, South Dakota, Oklahoma, and West Virginia, but were added in Florida and Maine. The age requirement was lowered from 70 to 65 in Missouri. West Virginia reduced and Kansas raised residence requirements. Florida repealed provision for relatives' responsibility. The Connecticut maximum pension was raised from \$7 to \$9 weekly; and Iowa and Maryland now permit limited additional aid where the recipient's physical condition or need for medical care warrants. Vermont and Washington, however, further restricted maximum pensions by providing that income and resources, respectively, must be taken into account. Requirement of a lien on the recipient's property was repealed in Florida, Kansas, Louisiana, and Oregon, but was added by Minnesota and Nebraska. Florida also repealed provision for recovery from the pensioner's estate.

Labor Relations. Although a drive in Congress to amend the National Labor Relations Act was blocked, similar movements to restrict union activities succeeded in four states—Michigan, Minnesota, Pennsylvania, and Wisconsin.

While asserting labor's right to organize and bargain collectively, all four of these new laws include restrictions on the nature of the bargaining unit, the conduct of strikes including picketing, and the maintenance of the union shop. Moreover, they do not fully outlaw employer interference with employee organizations. The Michigan and Minnesota acts require that state mediation agencies be notified five and ten days, respectively, before a strike or lockout begins, and in industries affected with a public interest there must be a 30-day investigation by a commission before a strike may occur legally. In these two states, no state board is provided to enforce collective bargaining rights, this being left to the courts which may issue injunctions.

In Connecticut and New Mexico, laws were enacted this year limiting the use of injunctions in labor disputes; and in California and Vermont, labor departments were authorized to mediate and promote voluntary arbitration of labor disputes.

Workmen's Compensation. Adoption of a workmen's compensation law in Arkansas this year leaves only Mississippi without such a law. The Arkansas law, however, remains inoperative pending a referendum.

The new occupational disease compensation

provisions in Idaho and Maryland and also in Arkansas are of the limited-list type and also place restrictions on benefits to silicosis victims. Ohio, on the other hand, after experience with a limited-list law extended compensation to cover all occupational diseases and at the same time repealed the restrictive silicosis provision copied from the New York law in 1937.

Montana this year made her compensation law compulsory instead of elective; and California and Pennsylvania added to the penalties for failure of employers to insure their risk. Compensation benefits were liberalized in a number of states, notably California, Connecticut, Illinois, Kansas, New Hampshire, and Wyoming. California broadened her law to cover household domestic employees working 52 or more hours a week. Nevada and Oregon extended the employers' right to merit rating under the exclusive fund laws of these states.

The Pennsylvania legislature wiped out most of the advances made in that state in 1937 and 1938, going so far as to restore some of the common law defenses to employers who elect not to be covered by the compensation law. Benefit limits, both cash and medical, were lowered in amount and duration, although the percentage of wages paid was raised from 65 to 66%. Special provisions for second injuries were abolished, as was the assessment of administrative costs on insurance carriers.

Railway workers not yet protected by workmen's compensation are under the Federal Employers' Liability Act which was amended in 1939 to cover any employee of a common carrier any part of whose duties are in furtherance of interstate or foreign commerce, or which directly or closely and substantially affect such commerce. Senator Wagner reintroduced his bill in Congress this year to provide for interstate workmen's compensation.

Delaware, the final state in this matter, adopted for the first time a law providing vocational rehabilitation of cripples; and Arizona provided special compensation benefits out of the rehabilitation fund in certain cases where special care is needed.

Wages and Hours. Extension of minimum wage regulation to cover men in Connecticut, and adoption of a minimum wage law for women (\$18 flat rate) in Alaska, and for women and minors in the fish-canning industry in Maine, were the leading developments in wage regulation this year. Surprisingly, no state adopted a wage-hour law on the Federal model, but co-operation in enforcement of the Federal act was authorized in California, Montana, New Hampshire, North Carolina, Oregon, South Carolina, Vermont, and Hawaii.

Connecticut made all minimum wage orders immediately mandatory; New York raised the penalty for minimum wage violations; and Nevada fixed minimum rates for learners. In Illinois, a prevailing wage law for public works was enacted.

Noteworthy among new hour laws are those of Montana, providing an 8-hour day, 48-hour week for restaurant workers; and of California, Massachusetts, and Utah, extending coverage of women's hour limits. Backward steps were taken in New Mexico which now permits a 7-day week for women; and in Pennsylvania which relaxed its women's night-work law. While Massachusetts broadened the coverage of her one-day-of-

rest-in-seven law, New Hampshire added to the exemptions from her law.

Child Labor. Legal protection for working children was extended this year in Hawaii where a 16-year age minimum for factory work was established, together with a 40-hour, 6-day week and prohibition of nightwork. Alaska fixed a 16-year age minimum for girls in factories and mercantile establishments. West Virginia reduced children's weekly hours from 48 to 40 and raised to 18 the minimum age for employment in an extended list of hazardous occupations. California and Massachusetts excluded children under age 16 from industrial homework. While Maryland strengthened her provision of extra-compensation for minors injured while illegally employed, reactionary Pennsylvania reduced the amount from double compensation to an additional 10 per cent. Modern apprenticeship laws were adopted in California, Minnesota, Nevada, and North Carolina, making twelve states with such laws. No new states ratified the Child Labor Amendment this year.

Health and Safety. Provision for research in occupational disease control by health departments was made in Arkansas, Idaho, Maryland, Minnesota, Montana, and Rhode Island. Illinois adopted a safety code for work in compressed air, and Arkansas extended coverage of mine safety laws to all mines. Montana strengthened her law on mine ventilation, but Indiana exempted from ventilation provisions mines employing fewer than ten workers.

Miscellaneous. By definition, California extended her fee-charging employment agency law to include labor contractors and provided for their licensing; but Missouri weakened her employment agency law by removing the one-dollar limit on registration fees. California, West Virginia, and Puerto Rico adopted industrial homework laws of the modern restrictive type. Wage-payment laws were enacted or strengthened in a dozen states. Utah made it a misdemeanor for an employer to charge a worker for pre-employment physical examination.

Administration. Unified labor law administration was achieved this year in Alabama which combined in a Department of Industrial Relations the functions of four independent agencies including mine inspection. Vermont created a new Department of Industrial Relations replacing the office of Commissioner of Industries; and Hawaii, whose population is little larger than Vermont's, set up a Department of Labor and Industry headed by a five-member board and including also a three-member appeal board and three five-member accident boards.

Unemployment compensation administration was separated from existing labor departments in Colorado, Minnesota, and Rhode Island, and from the Social Security Department in Washington. Workmen's compensation administration was made independent of the newly reorganized state labor department in Kansas. A Labor Mediation Board in Michigan and an Employment Relations Board in Wisconsin were created as independent agencies. Single-headed authority was substituted for commission administration of unemployment compensation in Alabama, Colorado, Massachusetts, Minnesota, Ohio, and South Dakota; and of workmen's compensation in Kansas. The new Arkansas workmen's compensation law provides for an independent three-member commission. A Federal Social Security Agency was created,

combining under one Administrator the Social Security Board, the U.S. Employment Service, the Public Health Service, the Office of Education with its vocational rehabilitation service, the Civilian Conservation Corps, and the National Youth Administration.

Puerto Rico created a Board of Industrial Safety with administrative rule-making power in her labor department. Rule-making power was also delegated to the new Hawaii and Alabama labor departments, and to industrial hygiene bureaus in Idaho, Maryland, and Montana.

Investigations. The numerous special investigations authorized by legislatures this year deal with the following subjects: occupational diseases and their compensation in New Hampshire, Oregon, and Utah; workmen's compensation in Michigan, Oregon, and Texas; wage-hour legislation in Maine, Massachusetts, and North Carolina; woman and child labor in hospitals in Massachusetts; labor relations in New York; and the National Labor Relations Board in Congress. Rhode Island created a representative seven-member committee to study and to report from time to time on labor legislation.

JOHN B. ANDREWS.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, consistently attacking needless industrial evils from the general welfare viewpoint. It continued its work as the American arm of the International Association for Social Progress formed in 1925 by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*. A cumulative index to the first 20 volumes of this *Review* was published in 1931.

The Association from the beginning has given special attention to social insurance legislation, and to laws for the prevention of industrial and mine accidents and occupational diseases, the mitigation of the evil effects of unemployment through long-range planning of public works, the regulation of fee-charging employment agencies, and the development of public employment offices, and for the provision of one day of rest in seven. It places special stress upon effective administration of the laws and has published a number of substantial reports of its surveys.

The Association's 33rd Annual Meeting was held in Philadelphia, December 27-29, several sessions being held jointly with the American Economic Association, the American Statistical Association, and the American Sociological Society.

The president in 1939 was Joseph P. Chamberlain; the treasurer, Eustace Seligman; the secretary, John B. Andrews. Headquarters are at 131 East 23rd Street, New York City. See **LABOR LEGISLATION**.

LABOR UNIONS. See **CALIFORNIA**; **AMERICAN FEDERATION OF LABOR**; **CONGRESS OF INDUSTRIAL ORGANIZATIONS**; **LABOR CONDITIONS**.

LABRADOR. A dependency of Newfoundland, occupying the most easterly part of British North America. Area, 118,400 square miles; population (1935), 4716. Chief settlement, Battle Harbor. During 1938, two large iron-ore deposits were discovered. Crop failures in 1939 caused a

food shortage and the declaration of war in Europe, in September, foreshadowed the possible commandeering of the fishing fleet and the disruption of the market for fish. See **NEWFOUNDLAND**.

LACROSSE. See **SPORTS**.

LAEMMLE, lēm'le, CARL. An American motion picture executive, died in Hollywood, Calif., Sept. 24, 1939. Born in Laupheim, Germany, Jan. 17, 1867, he came to the United States when 17, and became a citizen in 1889. After clerking in New York and in Chicago, in 1894 he entered the employ of the Continental Clothing House, Oshkosh, Wis. He left this organization in 1906 and went to Chicago where he intended to start a five-and-ten cent store. While there he saw his first motion picture and became so interested that he decided to invest his savings of about \$3000 in that industry, then in its infancy. His first theater was a small store which he painted white and named the "White Front." Successful, he established other nickelodeons throughout the City, but difficulty in getting pictures to show led him to establish the Laemmle Film Service, a wholesale motion-picture exchange business.

Again successful, he established the Imp Film Co. in 1909, and in a small studio in New York produced his first picture—*Hiawatha*, released Oct. 25, 1909. Among the original members of this company were Mary Pickford, Jack Pickford, Tom Ince, and Owen Moore. Because of the monopoly of the industry by the Motion Picture Patents Co., independent dealers were forced to deal with it, and in 1909 Mr. Laemmle entered into litigation with this organization. It was not until 1912 that he was successful in breaking the monopoly. In that year he formed, with several others, the Universal Film Manufacturing Co., which in the same year produced the first "feature" picture in five reels—*Traffic in Souls*. In 1920 Mr. Laemmle gained control of the company and reorganized it as Universal Pictures Corporation. In 1936 he retired as president of the company and sold his interests for the reputed sum of \$5,500,000.

Universal Pictures was the owner of Universal City, California. They produced one of the first million-dollar pictures, *The Hunchback of Notre Dame* featuring Lon Chaney, and had under contract such stars as Rudolph Valentino, Wallace Reid, Pearl White, Lon Chaney, and Ben Turpin. A biography of Mr. Laemmle by John Drinkwater was published in 1931.

LAFAYETTE COLLEGE. An institution for the higher education of men in Easton, Pa., founded in 1826. The registration in the autumn of 1939 was 963. The faculty numbered 99. The productive funds amounted to \$3,933,580 in 1939, and the income was \$160,774. The number of volumes in the library was 100,000. President, William Mather Lewis, A.M., LL.D., Litt.D., L.H.D.

LATIMER, REAR ADMIRAL JULIAN LANE, U.S.N., RET. An American naval officer, died in New York, June 4, 1939. Born at Shepherdstown,

W. Va., Oct. 10, 1868, he was graduated from the U.S. Naval Academy in 1890, being appointed an ensign on July 1, 1892. He saw service during the Spanish-American War, with the Bureau of Ordnance (1903-06), on the *Virginia* (1906-07), as commander of the *Vesuvius* (1907), as executive officer and navigator of the *Montgomery* (1907-09), as inspector of ordnance and in charge of the Naval Magazine at Hingham, Mass. (1909-10), as commander of the *Culgoa* (1911-12), as executive officer of the *Vermont* (1912-13), as commander of the *Alabama* (1913-14), and as inspector of engineering material for the Massachusetts District (1914-16), and in command of the *Rhode Island* (1916-19).

After attending the Naval War College (1919-20), he was given command of the 7th Naval District and Naval Station at Key West (1920-21), and then became judge advocate of the Navy (1921-25), being promoted to rear admiral on Nov. 13, 1923. In 1925, Admiral Latimer was given command of the Special Service Squadron. Shortly afterwards, the Squadron was assigned to patrol duties in Nicaraguan waters and Admiral Latimer headed the U.S. Naval forces there during the revolutionary troubles of 1927. For his excellent work he received the Distinguished Service Medal. After 1927 he commanded the 4th Naval District and Navy Yard, Philadelphia, and retired in 1930.

LATIN AMERICA. See articles on the various countries of the Caribbean, Central America, and South America; also PAN AMERICANISM; PAN AMERICAN UNION.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body commonly known as the Mormon Church, organized in 1830 at Fayette, N. Y., by Joseph Smith. After the death of Joseph Smith in 1844, several factions developed, one of which became the Reorganized Church of Jesus Christ of Latter-Day Saints (Josephites). See RELIGIOUS ORGANIZATIONS.

LATVIA. A Baltic republic, established Nov. 18, 1918. Capital, Riga.

Area and Population. With an area of 25,402 square miles, Latvia had a population estimated at 1,981,000 on Jan. 1, 1939 (1,950,502 at the 1935 census). Of the total population, 35 per cent lived in communities of 2000 or more. Living births in 1938 numbered 36,386 (18.4 per 1000); deaths, 26,703 (13.5 per 1000); marriages, 15,971 (8.5 per 1000). The 1935 census populations of the chief cities were: Riga, 385,063; Liepaja (Libau), 57,098; Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099.

National Defense. Military service is compulsory. The active army on Nov. 1, 1939, numbered 22,350 men, with 200,000 in reserve, according to the Adjutant General's Office, Washington, D. C. The air force comprised 350 men and 80 aircraft. A coast defense squadron consisted of 2 submarines and 4 other ships.

Education and Religion. The school attendance in 1937-38 was 271,195 (elementary, 231,533; secondary, 23,797; university, 7302). According to the 1930 census, 13.6 per cent of the population 10 years of age and older were illiterate. At the 1935 census, 56.13 per cent of the inhabitants were Protestants, 24.45 per cent Roman Catholics, 14.4 per cent Greek Catholics and members of the Orthodox Church, and 4.79 per cent were Jews.

Production. Agriculture, stock raising, lumbering and manufacturing are the principal sources of the national income, which was estimated at

1,200,000,000 lats in 1938. The chief cereals produced in 1939 (in metric tons), with 1938 figures in parentheses, were: Wheat, 198,700 (191,900); barley, 209,000 (220,600); rye, 429,700 (378,700); oats, 450,300 (446,600). The potato harvest in 1938 was 64,351,000 bu.; linseed, 803,000 bu.; flax, 47,311,000 lb. Livestock in 1938 included 1,224,000 cattle; 814,000 hogs; 1,360,000 sheep; 400,000 horses. Chief manufacturing lines were metallurgy, textiles, foodstuffs, woodworking and chemicals. Production of electricity totaled 223,000,000 kilowatt-hours in 1938.

The national wealth of Latvia was estimated at 6,580,000,000 lats on Jan. 1, 1939, distributed as follows: Agriculture, 2,582,000,000; fisheries, 4,000,000; private and municipal real property, 750,000,000; industrial plant and products, 347,000,000; communal property, 456,000,000; private commercial inventories, 500,000,000; household equipment, 431,000,000; and State property, 1,510,000,000.

Foreign Trade. Total imports in 1938 were valued at 227,336,000 lats (231,200,000 in 1937) and total exports at 227,204,000 lats (260,900,000 in 1937). See IMPORTS AND EXPORTS.

Finance. Budget estimates for the fiscal year ending Mar. 31, 1940, provided for receipts of 198,852,000 lats and expenditures of 198,696,000 lats. For the 1938-39 budget, revenue was estimated at 190,878,000 lats and expenditures at 190,481,000 lats. Actual receipts in 1937-38 aggregated 188,700,000 lats; expenditures, 173,800,000 lats. (Beginning Jan. 1, 1940, governmental budgets were to be computed on a calendar year basis.) The public debt on Mar. 31, 1938, was 156,596,000 lats (\$30,943,000 at the prevailing rate of exchange). The per capita debt was about \$15.60. The average value of the lat was about \$0.1939.

Transportation. Railway lines in operation at the end of 1939 aggregated some 2075 miles; highways and roads, 58,730 miles; inland waterways (1938), 2775 (see ROADS AND STREETS). The net tonnage of vessels entering Latvian ports with cargo and in ballast in 1938 was 1,344,000 (1,584,000 in 1937). The Latvian merchant marine in 1939 comprised 194,000 gross tons.

Government. A dictatorship was maintained throughout 1939 by Karlis Ulmanis, self-declared President since 1936, *de-facto* dictator since 1934, and previously Premier in accordance with the Constitution of 1922. The Minister of War, Gen. J. Balodis, in virtue of a law promulgated at the time of the Presidential coup of 1936, was authorized to take the post of President in the absence of Ulmanis. Political parties were forbidden.

History. Latvia's great concern in 1939 was to preserve as much as possible of the country's independence from domination by great powers, Germany and Russia, then engaged in acquiring territory from less powerful neighbors in the Baltic area. On June 7, impelled by the recent compulsory consent of Lithuania to the German acquisition of Memel, Latvia readily signed an agreement offered by Germany; it bound each party not to commit aggression against the other. The 1,905,330 Latvian citizens, as counted in 1935; included persons of German origin, to the proportion of nearly 3 per cent—a total of some 56,400 persons, not to mention German citizens in Latvia. The agreement signed in June gave Latvia reason to expect that these Germans would not become the basis of an irredentist campaign on the part of the Reich.

Within a few months Latvia, like Estonia (q.v.), found itself compelled to make an agreement of

very different import, this time with Russia. Signed October 5, it was ratified and took effect a few days later. The text of the important articles of this agreement follows:

Article I.—Both contracting parties undertake to render each other every assistance, including military, in the event of a direct attack, or threat of attack, on the part of any European great power, with respect to the sea borders of the contracting parties on the Baltic Sea, or their land borders through the territory of the Estonian or Latvian Republics, or also the bases referred to in article III.

Article II.—The Soviet Union undertakes to render assistance on preferential conditions to the Latvian Army in the shape of armaments and other war materials.

Article III.—In order to insure the safety of the U.S.S.R. and to consolidate her own independence, the Latvian Republic grants to the Union the right to maintain in the cities of Līpāja (Libava) and Ventspils (Vindava) naval bases and several air fields for aviation at a reasonable rental. The locations of the bases and air fields shall be exactly specified and their boundaries determined by mutual agreement. For the purpose of protecting the Straits of Irbe, the Soviet Union is given the right to establish on the same conditions a coast artillery base between Ventspils and Pitrags. For the purpose of protecting the naval bases, the air fields, and the coast artillery base, the Soviet Union has the right to maintain at its own expense on the areas set aside for bases and air fields a strictly limited number of Soviet land and air forces, the maximum number of which is to be fixed by special agreement.

Article V.—The carrying into effect of the present pact must in no way affect the sovereign rights of the contracting parties, in particular their political structure, their economic and social system, and their military measures. The areas set aside for the bases and air fields (Article III) remain the territory of the Latvian Republic.

Quite evidently the agreement of June with Germany and that with Russia in October could not both be observed by Latvia in every eventuality. The one, for instance bound her to help Russia if Russia were attacked by Germany; the other, to commit no aggression on Germany even if Germany should attack Russia. Latvia's change of stand obeyed a change of pressure. In June Germany had been the conspicuous disturber of the Baltic status. In October, Germany was engaged in a major war, and Russia improved the opportunity to remake the Baltic world more to its desire. At the beginning of October the Latvian Government was simply invited to send representatives to Moscow, which it promptly did, and these representatives were in turn invited to sign a fairly close counterpart of the document that Estonia's representatives had signed a few days before. There soon followed a commercial agreement, announced at Moscow October 18, promoting the transit of Russian commerce through Latvian ports and giving Latvian trade access to Russian ports on the Arctic and Black seas.

The German government had now to decide what to do about the small but capable minority of Germans living in Latvia. These included not only persons of German birth or recent German extraction but others, who had inhabited the present Latvia for several centuries—some, since 1224. All would have served the purpose of a German Government free to further the advance of German leadership in the Baltic area. But the German government, under Russian pressure, decided on a policy of "repatriation." Latvia and Germany signed, October 30, a treaty covering the particulars of the removal of Germans from Latvia: they might take their household goods but must sell most other possessions of value—must not take away gold, nor foreign currency, nor stocks-in-trade; and must sell out realty in three months if rural, in 14 if urban. Those who wished to stay were allowed to choose Latvian citizenship. All others were to have left by December 15, but subsequent extensions of time were allowed to some groups. The number that migrated to Germany

from Latvia by the end of 1939 was not definitely stated, but reports indicated that a considerable fraction had preferred to remain in Latvia and face the possibility of Russian domination there. About 17,000 Balts, persons of German origin from Latvia and other Baltic States, had been assigned by the end of the year to a projected German colony, Warthegau, in the Polish area of Posen.

See also EUROPEAN WAR under *The Eastern Front*; ESTONIA, GERMANY, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

LAVELLE, THE RT. REV. MGR., MICHAEL J. An American Roman Catholic priest, died in New York, Oct. 17, 1939, where he was born, May 30, 1856. Educated at Manhattan College (A.B., 1873), he entered St. Joseph's Seminary, Troy, N. Y., and was ordained to the priesthood in 1879, being assigned to the new St. Patrick's Cathedral. In 1886 he was appointed its pastor, a post he held at his death. In 1902, Cardinal Farley appointed him vicar general and diocesan consultor, to which he was reappointed by successive cardinals, and in 1903, Pope Pius X named him a Domestic Prelate with the title of Right Reverend Monsignor. In 1929, on the occasion of the 50th anniversary of his ordination, Pope Pius XI made him Prothonotary Apostolic, with certain privileges of a bishop.

Active in the life of the New York diocese until his death, among the many organizations in the foundation of which he was associated were the Cathedral Men's Club, the Catholic Young Women's Club, the Catholic Summer School of America (president, 1896-1903), the Catholic University of America, the Archdiocesan Union of Holy Name Societies, the Catholic Institute of the Blind, and the Catholic Theater Movement.

Monsignor Lavelle received the Order of St. Sebastian (1936) from the Catholic War Veterans, and was grand marshal of the St. Patrick's Day Parade in 1939. On June 7, 1939 he celebrated his golden jubilee and was the recipient of a citywide testimonial.

LAW. (See also PRISONS; INTERNATIONAL LAW; LABOR CONDITIONS; COURTS, FEDERAL; SUPREME COURT.

GENERAL

Comparative Law. Among the articles dealing with comparative law during the year were:

"The Task and Organization of Comparative Jurisprudence," *Juridical Rev.*, LI, 124 (E. J. Cohn); "The Comparative Method in Legal History and Philosophy," *Tulane L. Rev.*, XIII, 350 (A. K. Kuhn); "The Handbook of Latin-American Studies," (Cambridge, 1938; contains a section on law and procedure; Lewis Hanke) "Exterior Treason," *U. of Chicago L. Rev.*, VI, 77 (H. Stern); "Classical and Illinois Law," *Jno. Marshall L. Quar.*, V, 53.

Jurisprudence and Legal Philosophy. Current articles in this field included:

"Realistic, a Critique of," *Rocky Mt. L. Rev.*, XI, 31 (D. G. Bishop); "A Philosophy of Law," *Notre Dame Lawyer*, XIV, 145 (C. C. Miltner); "Natural Law Symposium," *ib.*, XV, No. 1 (Llewellyn, Brown, Lobingier); "Cardozo's Philosophy of Law," *U. of Pa. L. Rev.*, LXXXVIII, 71 (E. W. Patterson); "Judicial Decision; Limitations," *Cornell L. Quar.*, XXIV, 611 (S. H. Hirshman); "Public and Private Law," *ib.*, 469 (Pound); "Stare Decisis," *Cal. St. Bar Jnl.*, XIV, 175 (C. A. Sunderlin); *Va. L. Rev.*, XXV, 12 (R. Laun); "Petrazhitskii-Theory of Law," *Boston U. L. Rev.*, XVIII, 511 (H. W. Babb); "The Crisis in Marxian Theory of Law," *N. Y. U. L. Quar. Rev.*, XVI, 519 (N. S. Timasheff); "Involution in Law," *Georgetown L. J.*, XXVII, 732 (Giorgio del Vecchio); "Legal Classification," *A. B. A. Jnl.*, XXV, 383 (W. A. Lavery); "There is no Federal Common Law" is asserted by W. C. Wolfe in *Tenn. L. Rev.*, XV, 7 and "The Collapse of 'General Law' in the

Federal Courts. by McCormick & Hewins, *Ill. L. Rev.*, XXXIII, 126. These two last articles relate to the decision in *Erie R. Co., v. Tompkins* (1938 *NEW INTERNATIONAL YEAR BOOK*, 393) which has evoked numerous other comments, e.g. *Harv. L. Rev.*, LII, 102; *Columbia L. Rev.*, XXXVIII, 1472; *Mich. L. Rev.*, XXXVI, 1249, 1312; *Cornell L. Quar.*, XXIV, 54 (E. S. Stimson); *Kan. St. Bar Ass'n. Jnl.*, VII, 322; *Tex. L. Rev.*, XVI, 512 (B. Schmidt); *Temple L. Quar.*, XII, 486; *Ind. L. J.*, XIII, 564; *Oreg. L. Rev.*, XVIII, 304 (D. Ellis); *Mo. Bar Jnl.*, IX, 108; *U. of Cin. L. Rev.*, XIII, 469; *Dicta*, XV, 307; *Boston U. L. Rev.*, XVIII, 659 (H. M. Bowman); *Miss. L. Rev.*, XI, 3 (U. R. Miller); "The Doctrine Applied to International Law," *Am. J. of Int. L.*, XXXIII, 740 (P. C. Jessup).

Legal History. Many interesting phases of ancient law were involved during the year.

Roman: "Statute and Judge in Roman Criminal Law," *Wash. L. Rev.*, XIII, 291 (E. Levy); "Praetor and Chancellor," *Tulane L. Rev.*, XIII, 163 (W. W. Buckland); "Gaius and the Liber Singularis," *L. Quar. Rev.*, LIII, 508 (*id.*); "Nocere et Noxa," *Cambridge L. Jnl.*, VII, 23 (D. Daube); "Roman and English Law to the 16th Century," *U. of Toronto L. Jnl.*, III, 24 (F. T. Plucknett); "Roman Sources of English Legal Principles," *Am. L. Sch. Rev.*, VIII, 1233 (R. J. C. Dorsey); "Marriages in Hellenistic and Postclassical Roman Law," H. J. Wolf, (pp. vi + 128, Haverford, Pa., 1939); "Studies in the Glossators (12th cent.) of the Roman Law," (Cambridge, 1938; Kantorowicz & Buckland).

Anglican. The ancient doctrine of "treasure trove" (finds accruing to the King) was applied in connection with the valuable relics found recently in a buried ship of the Saxon period on an estate in Suffolk, England. A coroner's jury of 14 found that the owner had not intended to reclaim the relics which was, in effect, finding that they were not "treasure trove." Current articles are:

"Trial by Battle," *Cal. St. Bar Jnl.*, XIII, 43 (V. P. Lucas); "The Court of Chivalry," *Los Angeles Bar Bull.*, XIV, 113 (A. B. Bowman); "Benefit of Clergy," *Kan. St. Bar Ass'n. Jnl.*, VII, 362 (A. Blume); "The Legal Position of English Dissenters, 1767-1812," *Va. L. Rev.*, XXV, 671 (C. F. Mullett); "Luckless Duchess of Kingston (*Res Adjudicata*)," *Rocky Mt. L. Rev.*, XI, 159; "A Princely Judgment (Earl of Ormond's Case)," *Minn. L. Rev.*, XXIII, 925 (E. S. Blade); "Lawyers and Litigants in Stuart England," *Cornell L. Quar.*, XXIV, 533. **American:** "Connecticut's First Constitution," *Conn. Bar Jnl.*, XIII, 44 (E. C. Humphrey); "The Fundamental Orders," *ib.* 52 (P. McCook); "Colony Ordinance of 1641-47 and its Effect on Maine Law," *Peabody L. Rev.*, III, 77 (L. E. Norwood); "Admission to the Bar in Revolutionary America," *Comm'l. L. Jnl.*, XLIV, 52 (W. R. Blackard); "John Marshall and the Campaign of History," *Columbia L. Rev.*, XXIX, 396 (M. Lerner); "James Madison Not a Lawyer," *A.B.A. Jnl.*, XXV, 821 (E. S. Corwin); "Before Madison *v. Marbury*," *Okla. St. Bar Jnl.*, IX, 158 (J. H. Hill); "The Cycles of Government," *Oreg. L. Rev.*, XVIII, 12 (O. R. McGuire); "Legal Development During Industrial Growth," *U. of Cincinnati L. Rev.*, XII, 519 (F. R. Aumann); "Origin and Development of Quo Minus," *Yale L. Jnl.*, XLIX, 39 (H. Wurzel); "Three Centuries of American Litigation," *Temple U. L. Quar.*, XIII, 488 (A. S. Faught); "The Burr Trial," *Rocky Mt. L. Rev.*, XI, 233 (P. Hornbein).

Legislation. GENERAL. The A.B.A. (*Jnl.* XXV, 618) Com. on "Noteworthy Changes in Statute Law," reported trends toward centralization, government regulation, etc., but counter trends toward interstate co-operation and others toward competition.

"Some Implications of Recent Legislation" are discussed in *W. Va. L. Quar.*, XXIV, 205 (R. Pound); "The Legislative Process," *Cornell L. Quar.*, XXIV, 233 (A. L. Moffatt); "Scientific Legislation," *Peabody L. Rev.*, III, 100 (F. S. Sturgis); "Retrospective Effect of Repeal," *Ky. L. Jnl.*, XXVII, 75 (C. Seeman, Jr.); "Use of 'Shall' in Statutes," *John Marshall L. Quar.*, IV, 204 (D. E. Sutton); "Legislative Pardons," *Cal. St. Bar Jnl.*, XIV, 97 (C. M. Buford); *Cal. L. Rev.*, XXVII, 321 (Weihofen & Radin).

United States. Federal. The 76th Congress opened its first session on January 3 and closed it on August 5. Outstanding measures passed and

not mentioned below, include the "Hatch Bill" regulating the political activities of the government personnel and a civil service retirement act which applied to postmasters. (See *UNITED STATES*, and also the several States for legislative activities.)

Florida. Code Revision for, is discussed in *Fla. L. Jnl.*, XII, 211 (J. R. Wilson).

Nebraska. The Unicameral Legislature is reported as co-operating more effectively than its predecessor and as treating legislation "as something more than sport and politics." Out of 139 acts passed at the 1939 session, 107 included the emergency clause, (formerly rare), taking effect at passage.

New Jersey. Statutes of 1937 are discussed, *U. of Newark Rev.*, III, 173 (V. P. Biunno).

New York. 1938 legislation is reviewed, *Int. Jurid. Ass'n. Bull.*, II, 40; "A Law Revision Program," *Cornell Law Quar.*, XXIV, 139 (T. M. Nichols). In *People v. Tremain*, 281 N. Y., the court held invalid the legislative revision of the "executive budget, with 'lump sum cuts.'" A special session was called to rectify the error.

North Carolina. "A Survey of 1939 Statutory Changes," *N. Car. L. Rev.*, XVII, 327.

Pennsylvania. "Reasoning by Analogy from Statute," is discussed in *Dickinson L. Rev.*, XLIII, 234 (R. P. Shadde).

Utah Bar Bull., IX, 60 (P. S. Van Cise) discusses Code Revision.

Washington. 1939 legislation is reviewed in *Wash. L. Rev.*, XIV, 181 (Luccock & Kaminoff).

Interstate Compacts. "Law applicable to interstate Compacts" is discussed in *Utah Bar Bull.* VII, 147 (J. Chez). Compacts were approved by Congress as follows: Between Colorado, New Mexico, and Texas, regulating use of Rio Grande waters; between Colorado, Kansas, Oklahoma, Texas, New Mexico, and Michigan, regulating oil production (2 yrs.); between Missouri and Iowa, settling a 100-year boundary dispute. Virginia and Maryland police were authorized to pursue suspected criminals into the District of Columbia. On January 4 a compact for reciprocal motor bus registration was signed by representatives of New York, New Jersey, and Pennsylvania.

Interstate Competition. While certain States were thus co-operating in legislation on subjects of common interest, and while the Federal government was effecting international legislation in the form of treaties, to promote foreign trade, other States were moving in the opposite direction, with motor vehicle regulation, discriminating against outside States (upheld in *So. State Highway Dept. v. Barnwell Bros. Inc.*, 303 U.S. 176); "use or compensating taxes," designed to prevent evasion of the local sales tax (upheld in *Hanneford v. Silas Mason Co.*, 303 U.S. 176; *So. Pac. Co. v. Gallagher*, 306 U.S. 167); exclusion of intoxicating liquors from outside the state (upheld under Const. Amdt. XXI, 2 in *Ind. Brewing Co. v. Mich. Liquor Control Com.*, 305 U.S. 391). Bills introduced in various legislatures indicated a disposition to go much farther and practically to nullify the interstate commerce clause. The State Government Council has undertaken to seek a remedy and has enlisted the aid of certain members of Congress.

Abroad. (See also the various countries.)

England. The Law Revision Committee's 7th Annual Report recommends correction by statute of the rule announced in *Chandler v. Webster*, 1 K.B. (1904), 493 (See *A.B.A. Jnl.* XXV, 802).

Canada. 1939 legislation is reviewed in *Comparative Law Series* II, 397 (K. E. O'Connor).

Brasil. A revision of the Civil Code in 1052 articles, touching on procedure as well as substantive law, was announced in September.

Czecho-Slovakia. A Berlin decree, published in

Prague on June 27, authorizes the Reich "Protectorate" to modify the "Autonomy" law of March 16, when that "seems in the common interest," to enact laws when "delay seems dangerous" and to alter existing Czech law "when it conflicts with German interests." The Czech government is left with little more than nominal powers.

Italy. The second volume of the new Civil Code was deposited in the state archives on Capitoline Hill, by the Minister of Justice, pursuant to ancient Roman custom as revived by Fascist regime.

ADMINISTRATION

Courts. In General. Current reviews contain, "The Courts in a Modern Democracy," *Brooklyn L. Rev.*, VIII, 397 (M. Steinbrink); "Need of Efficient Court Structure," *Am. Jud. Soc. Int.*, XXII, 4 (P. D. Burns); "Inherent Power in Courts," *Comm'l. L. Int.*, XLIV, 37 (A. A. Begeaus); "The Fee System," *ib.* XLIII, 480 (L. B. Moore); "Types of Litigation and Social Data," *Columbia L. Rev.* XXXIX, 776 (Thorndyke & Jacoby); "Some Realism About Judicial Statistics," *Va. L. Rev.* XXV, 528 (S. B. Jacoby); "Maladjusted Features of the American Judiciary," *Okla. St. Bar Jnl.*, X, 5 (Moore & Hughes); "Overruling Decisions," *ib.* 210 (C. M. Dunaway); "Dissenting Opinions," *Comm'l. Law Jnl.*, XLIII, 468 (E. A. Evans); "Speeding up the Courts," *Tenn. L. Rev.* XV, 596 (E. R. Finch); "Exercise of Non-Judicial Functions by," *Kan. St. Bar Ass'n Jnl.*, VII, 172 (O. G. Vose).

Judicial Selection is discussed in the following current reviews: *Am. Jud. Soc. Int.*, XXII, 207 (J. H. Wigmore); *ib.* 199 (Mich., G. E. Brand); *Mo. Bar Jnl.* X, 13 (Mo., E. E. Silvers); *ib.* 197 (O., H. L. Barkdull). Appointment by Governor Moore to New Jersey's highest court of Frank Hague, Jr., "to make his father happy," brought a storm of protest, including an especially vigorous one from former Senator Clee, but was, nevertheless, confirmed by a Senate controlled by the opposition party. Jane Bolin, 31, Wellesley College and Yale Law School graduate, appointed to the New York City Domestic Relations Court by Mayor La Guardia, is said to be the first colored woman judge; colored Magistrate Paige was promoted to the Court of General Sessions, Jan. 1, 1940.

Discipline. The trials of ex-Judge Manton of the second Circuit Court of Appeals and of County Judge Martin of Brooklyn, the former being convicted and the latter acquitted, on charges of bribery by juries on the same day, disclosed a shocking state of affairs in these two important courts of the metropolitan area. In sentencing the former, Judge Chesnut declared that there had been "no such conspicuous parallel . . . since Francis Bacon"; but a letter to the New York *Times* called attention to the later English cases of Jeffreys and Macclesfield. Manton's appeal was heard in the court over which he once presided, but before a special panel of judges, including former Supreme Court Justice Sutherland, Justice Stone, and Circuit Judge Clark, who affirmed the conviction on December 5. Martin, notwithstanding acquittal by the Brooklyn jury on the criminal charge, was tried before the New York State Senate upon charges of malfeasance preferred by Governor Lehman and, on November 16 was absolved. Current articles on these cases appear in *Minn. L. Rev.* XXIII, 185 (J. Brock); *Los An-*

gles Bar Bull. XIV, 119; *N. Y. Times*, January (C. L. Griffin).

Territorial Jurisdiction. Federal Courts have exclusive jurisdiction over the Chickamauga and Chattanooga National Park (*Bowen v. Johnston*, 306 U.S. 19, 59 S. Ct. Rep. 442), but since Virginia retained concurrent jurisdiction over the George Washington Memorial Parkway, the State courts claim jurisdiction over those charged with capital offenses committed therein (*U.S. v. Gibson*, Dist. Ct.). Jurisdiction over government lands in Washington State is discussed in *Wash. L. Rev.* XIV, 1 (J. N. Rupp).

United States: Supreme Court. The October (1938) term ended on June 5, 1939. During it the court disposed of 923 cases, but opinions were filed in but 174, the average for each justice being about 19. Petitions for *certiorari* were denied in 676 cases. Justice Brandeis retired on February 13 and was the subject of many eulogies for his near quarter century of service, e.g. *Cal. St. Bar Jnl.*, XIII, 20 (M. O. Tobriner). Wm. O. Douglas, Chairman of the SEC, appointed to succeed him, took office on April 15.

An important Act of Congress affecting the Court was that of August 7 (now Ch. XV of the Judicial Code) creating the "Administrative Office of the U.S. Courts" under a Director and Assistant appointed by the Supreme Court (with employees subject to the civil service laws) who "shall have charge, under the supervision and direction of the conference of senior circuit judges, of all administrative matters relating to the offices of the clerks," etc.; inspection of dockets for statistical and other matter; disbursement of court appropriations; supply of equipment; examination and audit of accounts; "providing accommodations," and "such other matters as may be assigned to him." The purpose is to make the Federal judiciary financially independent of the executive branch, and it may lead to much more. The Director, with his intimate knowledge of the needs and operation of the courts, may displace the Attorney General as the adviser of Congress regarding them, even as to judicial appointments. The Supreme Court's 1939 term, opened on October 2, with all members present except Justice Butler, who had been ill for some time and who died November 16. On December 18, the Court recessed until January 2 with only 27 submitted cases undisposed of. Current articles include:

"The Genesis," *Va. L. Rev.*, XXV, 398 (S. Teiser); "Personnel," *Nat. Lawyers' Guild Quarterly*, II, 9 (M. Lerner); "Recent Changes," *Fed. Bar Ass'n Jnl.*, III, 337 (G. E. Moore); "Preview of a Justice," *Yale L. J.*, XLVIII, 819 (W. Hamilton); "Mr. Justice Black vs. the Supreme Court," *U. of N. Y. L. Rev.*, IV, 113 (R. F. Green). (Editors of the Yale Law Journal and Columbia L. Review wrote the *N. Y. Times* on February 11, commending Justice Black who was awarded the Thomas Jefferson Medal by the Southern Conference for Human Welfare); "In Our Highest Court," *L. Soc.*, VIII, 382 (W. F. Donovan); "Limiting the Voting Power," *O. St. U. L. Jnl.*, V, 54 (R. L. Hausser).

Articles on other Federal Courts were:

"Senior Judges Plan to Integrate Federal System," *Am. Jud. Soc. Int.*, XXII, 160; "Business of the U.S. District Courts," *U. of Kan. Cy. L. Rev.*, VII, 215 (M. E. Otis); "Jurisdiction by Removal," *La. L. Rev.*, I, 499 (I. S. Flory); *St. John's L. Rev.*, XIII, 71; "Fair Comment in," *ib.* 342 (J. L. Connors); "Divestment of Federal Jurisdiction," *Columbia L. Rev.*, XXXIX, 595 (Schlesinger & Strasburger).

Juries. Under the new Federal Rules of Procedure, a jury is waived if not demanded within 10 days after service of the last pleading (Rule 38 b, d); alternate jurors are provided (*ib.* 47 (b);

juries "of any number less than 12" and verdicts by "a stated majority" are permitted by consent of parties (*ib.* 48). How defective our jury system really is appears in three recent and notable criminal cases: (1) the conviction of a New York barber of attempting to tamper with a juror in the Hines Case (1938 YEAR BOOK, 397); see also on this case, *Boston Bar Bull.*, CXL, 3 (J. M. Maguire); *Cal. St. Bar Jnl.* XIII, 32 (P. S. Sommer); (2) the acquittal of Judge Martin (*ante* p. 420) by a Brooklyn jury; (3) conviction of an accused in an income tax prosecution of tampering with a prospective juror, Special Prosecutor Amen disclosed that out of 30 persons whose names were taken at random from a "blue ribbon" jury panel (1938 YEAR BOOK, 395), "eight had police records and one or two had even been convicted of felonies."

Current articles on juries include:

"Selection," *Am. Jud. Soc. Jnl.*, XXII, 209 (A. S. Osborn); "As Judges of Criminal Law," *Harv. L. Rev.*, LII, 582 (M. D. Howe); "Instructions to," *Kan. St. Bar Ass'n. Jnl.*, VII, 294 (J. A. Williams); *Los Angeles Bar Bull.*, XIV, 67; "Improving Jury Trials," *Ill. L. Rev.*, XXXIV, 236.

Administrative Tribunals. General. Administrative Law furnishes six columns of titles for articles listed in *Current Legal Thought's Index for 1939* (as it did for 1938). Answer to the question, "What is Administrative Law?" is essayed in *Geo. Wash. L. Rev.*, VII, 681 (J. F. Davison); "The Place of Administrative Law," *Conn. Bar Jnl.* XIII, 71 (J. M. Landis); "Court and Bureau Systems Contrasted," *Ia. L. Rev.*, XXIV, 25 (J. O. Boyd); "Administrative Law Problems," *N. Y. St. Bar Ass'n. Bull.*, XI, 38 (E. Gluck); *Fed. Bar Ass'n. Jnl.*, III, 239 (O. R. Maguire); "Comparative Administrative Law," *U. of Pa. L. Rev.* LXXXVII, 954 (F. M. Marx); In France, *Boston Univ. L. Rev.*, XVIII, 715 (S. Riesenfeld); In England, *Canadian Bar Review*, XVII, 166 (J. Finkelman); In Ohio, *U. of Cin. L. Rev.*, XIII, 191 (F. Woodbridge); In West Virginia, *L. Quar.*, XLIV, 270; XLV, 291 (K. C. Davis); "As Legislators and Judges," *A.B.A. Jnl.*, XXV, 923 (W. F. Dodd).

Federal Administrative Agencies. In *A.B.A. Jnl.* (XXV, 25) Dean Wigmore discusses the rules of practice and rulings, especially those relating to evidence, of 28 such agencies which "hold hearings, adopt regulations of procedure, make decisions," etc. Current articles relating to particular agencies are; "Board of Tax Appeals," *D. C. Bar Ass'n. Jnl.*, V, 391 (J. V. Morgan); "Federal Communications Commission," *Geo. Wash. L. Rev.*, VII, 740 (L. G. Caldwell); *ib.* 777 (W. J. Dempsey); *Georgetown L. Jnl.*, XXVII, 783 (M. Malin); *Air L. Rev.*, X, 88; "Judicial Control," *Harv. L. Rev.*, LIII, 131; "Federal Alcohol Administration," *W. L. Rev.*, VII, 844, 949; "Federal Trade Commission," *N.Y.U.L. Quar.*, XVI, 121; *G.W.L. Rev.*, VII, 283 (R. E. Freer); *D. C. Bar Ass'n. Jnl.*, V, 397 (W. N. Baughman); "Evidence," *Wash. L. Rev.*, XIV, 37 (W. F. Daniels); "Maritime Commission," *Fed. Bar Ass'n. Jnl.*, III, 315 (P. D. Page); "National Labor Relations Board," *A.B.A. Jnl.* XXV, 695 (Chas. Fahy); *W. Va. L. Quar.*, XLV, 93 (J. W. Madden); *Boston U. L. Rev.*, XIX, 32 (R. M. Goldstein).

The Securities and Exchange Commission has been the subject of many articles:

The Act of 1933, *U. of Chic. L. Rev.*, VI, 399; *Exemptions*, *Boston U. L. Rev.*, XVIII, 613 (G. D.

Bleicken); "Registration Requirements," *Los Angeles Bar Bull.*, XIV, 80 (H. A. Judy); "Accounting Practice," *Mich. L. Rev.*, XXXVII, 288 (P. R. Trigg); "Stop Order Proceedings," *ib.* 452 (B. H. Lebeis); "Withdrawal," *ib.* 1276 (F. C. Newman); "Further Developments in Disclosure," *Ill. L. Rev.*, XXXII, 145 (B. MacChesney); "Act of 1934 (Unlisted Trading Privileges)," *Mich. L. Rev.*, XXXVII, 98 (M. L. Plant).

Administrative Procedure. General: *Harvard L. Rev.*, LII, 259 (R. F. Fuchs); *U. of Pa. L. Rev.*, LXXXVII, 139, *A.B.A. Jnl.*, XXV, 543 (C. B. Stephens); *ib.* 453 (M. McDermott); *G.W.L. Review*, VII, 703 (C. B. Aitchison); *Los Angeles Bar Ass'n. Bull.*, XIV, 313; "The Trial Authority in Administrative Procedure," *Am. Jud. Soc. Jnl.*, XXIII, 112 (C. S. Lobingier).

Hearing. In *Shields v. R. Co.*, 305 U.S. 177 59 *Sup. Ct. Rep.* 160, the question of what constitutes a hearing is again discussed and the ICC's ruling is upheld as against that of the circuit and district courts. The original discussion was in *Morgan v. U.S.* 298 U.S. 463, 304 U.S. 1, which is reviewed in *Harvard L. Rev.*, LII, 509; *G.W.L. Rev.*, VII, 726 (K. C. Scars); *U. of Cin. L. Rev.*, XII, 598 (J. Wise). Requirements of a "full hearing" are also discussed in *Mich. L. Rev.*, XXXVII, 597 (C. E. Brooks); "Notice and hearing in Minimum Wage Regulation," in *Wash. U. L. Quar.*, XXIV, 233 (C. Anschuetz); "Administrative Contempt, Powers," *A.B.A. Jnl.* XXV, 954 (E. F. Albertsworth).

Evidence before administrative tribunals is the subject of articles in *Conn. Bar Jnl.*, XII, 278 (J. L. Collins); *Mo. L. Rev.*, III, 457 (Production); H. C. Lisle); *Rocky Mt. L. Rev.*, XI, 77 (Exclusion); F. Swancara); *D.C. Bar Ass'n. Jnl.*, V, 397 (Fed. Trade Com.; W. N. Baughman); *Minn. L. Rev.*, XXIII, 68; *Cornell L. Quar.*, XXIV, 583; *Harv. L. Rev.*, LIII, 105.

Review. In *Rochester Tel. Corp. v. F. C. Comm'n.*, 307 U.S. 125; 59 *Sup. Ct. Rep.* 754, the court discarded the phrase "negative orders" as a test of reviewability, considered upon its merits the order complained of, and upheld it. Such orders are discussed in:

Wash. U. L. Quar., XXIV, 591 (C. Anschuetz); *G. W. L. Rev.*, VII, 1014 (G. E. Moore); *U. of Chic. L. Rev.*, VI, 277. Other articles on review are found in *Am. Jud. Soc. Jnl.*, XXII, 237 (R. M. Hoyt); *Notre Dame Lawyer*, XIV, 233; *Mo. Bar Jnl.*, IX, 143 (I. L. Dulin); *Cornell L. Quar.*, XXIV, 235 (In N. Y.; A. E. Moscovitz); *Temple U. L. Quar.*, XIII, 30 (In Pa.; A. S. Faught); *W. Va. L. Rev.*, XIV, 270 (In W. Va.; K. C. Davis).

The Logan Bill for a special court to review the work of administrative tribunals, sponsored by the A.B.A. (*La. L. Rev.*, I, 550; O. R. McGuire), was passed by the Senate on July 18, but was later recalled and placed on the calendar. The author of it died on October 2. See also *Cal. L. Rev.*, XXVII, 738; *Chicago-Kent L. Rev.*, XVII, 342; *A.B.A. Jnl.* XXV, 770 (K. C. Davis); 838 (C. Duffy); 840 (W. Clay); *Air L. Rev.*, X, 271 (Radio); J. J. Hayden).

Stare Decisis. See *N.Y.U.L. Quar.* XVI, 618.

Causes Célèbres. The administrative hearing in proceedings for the deportation of Harry Bridges, Australian West Coast labor leader, was opened at Angel Island, San Francisco, on June 26, with Dean Landis of the Harvard Law School presiding as Trial Examiner, and continued until August. Dean Landis filed his Report on December 29, finding the evidence insufficient to justify deportation. See BRIDGES CASE.

On July 26, the Washington District Court dismissed an indictment of the American Medical

Ass'n. and certain subsidiaries under the anti-trust act, charging a conspiracy to restrain the Group Health Ass'n. Inc. (composed of government employees) and others from providing medical care. The court declined to treat the medical profession as a "trade" within the act's meaning. A direct review by the Supreme Court was denied, but an appeal by the government was heard by the Court of Appeals in December. See *MEDICINE AND SURGERY*.

On September 11, the Georgia Court of Appeals affirmed a Superior Court's order revoking a charter prematurely granted to the "M. E. Church South, Inc.," a schismatic body organized to defeat the recent merger of three branches of Methodism. Meanwhile various Methodist Protestant Churches in New Jersey and other northeastern States have resisted surrender of church property to the new body.

On October 24, in *Nazinitzky v. Sincoff*, 102 N. Y. L. Jnl. 1284, the Appellate Division of the New York Supreme Court in Brooklyn reversed a ruling of the trial justice and upheld a pedestrian's right to complete a crossing under a favorable light which changes before the opposite curb is reached.

Legal Education. The Roman law school at Berytus (now Beirut) in the second century A.D. afforded the subject of an attractive painting in the Lebanon Exhibit at the New York World's Fair. According to the latest information received, the list of American law schools had been reduced to 180 (as compared with 77 medical schools) of which 102, with two thirds of the country's total law student enrollment, have been approved by the A.B.A. Four Washington City law schools have announced their intention to seek such approval, which, if granted, will give that city 8 approved schools. Illinois has 8 law schools, California 19, while 8 States have none. William & Mary College (second oldest in the country) established in 1779 the first law professorship. Its Board of Trustees voted on May 27 to discontinue conferring law degrees, but upon protests of alumni and others rescinded that action on June 2. Of the list mentioned above, 9 require, as Delaware, Kansas, and Pennsylvania, the equivalent of a college degree for entrance; 32 and the Wisconsin statute require three years of college; 113 require two years, one requires one year, and 25 accept high school diplomas or less. South Dakota and Maryland have adopted the two-year college requirement, bringing the total number up to 41. Eight States are still without that requirement.

The law schools of Minnesota and Washington State Universities now require a full time four year course (*N. Car. L. Rev.*, XVII, 242); in 5 others, such a course is optional. On July 21, the U.S. Senate passed the Sheppard Bill, prohibiting discrimination in favor of certain law schools in selecting government attorneys (see *A.B.A. Jnl.*, XXV, 402 for adverse comment).

Current attitudes on legal education in general are found in:

Conn. Bar Jnl., XIII, 136 and *Fla. L. Jnl.*, XII, 378 (R. G. Storey); *A.B.A. Jnl.*, XXV, 559 (C. H. Kinnane; Standards); *Boston Bar Bull.*, No. 138, p. 4 (R. Pound); *ib. 6* (D. A. Dooley); *ib. No. 139*, p. 5 (Will Shafroth); *ib. XXX*, 9 (W. H. Hitchcock); *Wash. U. L. Quar.*, XXIV, 476 (B. Currie); *Mo. Bar Jnl.*, X, 11 (C. W. Wickersham); *Los Angeles Bar Ass'n. Bull.*, XIII, 373 (T. R. Sullner); *In England, Wis. L. Rev.*, 1938, p. 547 (C. C. Elbridge); *A.B.A. Jnl.*, XXIV, 603 (Lord MacMillan); *In Soviet Union, Wis. L. Rev.*, 1938, p. 562; *In France, ib.* (1939) 473 (F. Deak); *Pre-Legal, Cal. St. Bar Jnl.*, XIII, 6 (C. H. Kinnane); *ib. 39* (J. A. Hadaller); *Pre-Law and Post-Law, Am. L.*

School Rev., IX, 274; *Law Institutes (for Lawyers), Cal. St. Bar Jnl.*, XIII, 9; *Chicago Bar Record*, XX, 63; *Mich. St. Bar Jnl.*, XVIII, 59; *L. Soc. Jnl.*, VIII, 424; *In general, A.B.A. Jnl.*, XXIV, 829 (W. L. Flory); *La. L. Rev.*, I, 139 (J. H. Tucker); "A Generation of Law Teaching," *Mich. L. Rev.*, XXXVIII, 16 (R. Pound); "The Sponsor System Under Law School Auspices," *A.B.A. Jnl.*, XXV, 849; "Character Examination in Pennsylvania," *ib.* 873 (R. T. McCracken).

The Curriculum afforded the principal subject of discussion at the December (1938) meeting of the Association of American Law Schools (see *Am. Law Sch. Rev.*, IX, No. 3, where several of the papers appear). Dean Landis of the Harvard Law School has announced plans under consideration to integrate the curriculum with other social sciences—anthropology, psychology, medicine, economics, and government. A similar integration had already been announced by the Chicago Univ. Law School. The late Justice Cardozo's bequest for a chair of Jurisprudence and Legal Philosophy bears fruit in the requirement of those courses for future third-year students at Columbia University Law School. Articles in the following periodicals relate to the curriculum: *Duke Bar Ass'n. Jnl.*, VII, 73 (W. C. Lassiter); *Georgetown L. Jnl.*, XXVII, 884 (Wm. Moore; Fed. Rules); *O. St. Univ. L. Jnl.*, V, 344; *Kan. St. Bar Ass'n. Jnl.*, VII, 153 (F. J. Moreau). Legal writing has been made a required course in Western Reserve University Law School.

Personnel. Prof. E. Blythe Stason, specialist in administrative law, succeeded Dean Bates as head of the Michigan University Law School. Articles on Dean Bates appear in *Mich. L. Rev.* XXXVIII, 1, 3. At Yale, Prof. A. G. Gulliver was appointed acting Dean owing to the accession of Dean Clark to the U.S. Circuit Court of Appeals. Dean Arant of the Ohio State University Law School continued at his post for the balance of the year, notwithstanding his appointment to the 6th Circuit Court of Appeals.

Legal Profession. Bar Integration. (*cf.* 1938 YEAR BOOK, 396) moved steadily forward in 1939 and a nation-wide movement is discussed by Herbert Harley in *Am. Jud. Soc. Jnl.*, XXII, 211; *Fla. L. Jnl.*, XII, 296; XIII, 39; *Tenn. L. Rev.*, XV, 796. Its progress in the several States may be ascertained in the following: *California: St. Bar Jnl.*, XIII, 35 (S. M. Reinhaus) *ib.* XIV, 89 (E. D. Moore); *Los Angeles Bar Ass'n. Bull.* 354. *Indiana: "Does Indiana Need an Integrated Bar?" Ind. L. Jnl.*, XIV, 529; *Ind. L. Jnl.*, XIV, 235; *Michigan: St. Bar Jnl.*, XVII, 448 (G. E. Brand); XVIII, 150 (H. H. Platt); *Montana: The Supreme Court refused to order integration. In re unification, etc.*, 107 *Mont.* 559, 87 *Pac.* (2d), 172; *Ohio: An intensive movement for integration has been in progress during the year; Oklahoma: After the legislature had repealed the integration act, the Supreme Court entered an order defining who should be entitled to practice and creating an "executive council" for their government, thus virtually continuing the integrated bar.*

Conferences, Conventions, etc. The National Lawyers' Guild held its annual meeting at Chicago in February. The address of Justice Pecora, retiring President, condemned "tyranny of labor and capital" and was approved by the Executive Board for distribution to members but not to the public. That omission, while later rescinded, led to a number of resignations by prominent members. See "Liberalism and the National Lawyers' Guild" (Gutknecht), *Nat. Lawyers' Guild Quar.* II, 1; "Democracy and the Legal Profession," *ib.* 5 (Pecora).

American Law Institute held its 17th annual meeting in Washington, May 11-13. In the absence of Ch. J. Hughes, through illness, the judicial address was given by Justice Butler who told the body that it need not rewrite the Constitution since that was being done by the Supreme Court, of which he was then a minority member. The proposed final draft of the "Restatement of Torts," in preparation for sixteen years by 41 reporters and advisers who considered 145 preliminary drafts, was completed and found to "cover a much wider field than any of the others." Sharp debates occurred over rules affecting labor. Tentative drafts of Property and Security were also presented (and see *Proof*, *infra.*). Judge H. T. Lummis of the Massachusetts Supreme Judicial Court was elected to the Council and likewise a group of new members. It was reported that by the middle of 1939, the Institute's Restatements had been cited in 3904 cases. (See *A. B. A. Jnl.*, XXV, 469, 744).

American Bar Association held its sixty-second annual meeting at San Francisco, July 10-15. The Assembly and the House of Delegates had three sessions each and the latter held an adjourned session at Chicago in December. Charles A. Beardsley of California, was elected President and various administrative officers were re-elected. Achievements of the Association, afford the subject of a series of articles in its *Journal*, XXV, 903, XXVI, 19, 135 (M. Radin).

Economic Situation of lawyers is discussed in *Boston Bar Bull.* No. 145 p. 6 (P. Wallis); *Los Angeles Bar Ass'n. Bull.* XIV, 55 (E. D. Moore). **Fees:** *Conn. Bar Jnl.* XIII, 112 (J. L. Kotler); in stockholders' actions, *Columbia L. Rev.* XXXIX, 784 (G. D. Hornstein).

Ethics and Discipline:

In Maine, *Peabody L. Rev.*, III, 38 (B. G. Ward); In N. Car., *Duke Bar Ass'n. Jnl.*, VII, 22 (F. S. Hutchins); "The Lawyer and the Criminal Practice," *Boston Bar Bull.*, No. 146, p. 5 (W. G. Hollingsworth); "How Far May a Lawyer Go for His Client?" *ib.*, 14 (B. C. Tomlinson); "Advertising," *ib.* 18 (C. V. Renner); *Ky. St. Bar Jnl.* III, 20 (F. Robbins). Territorial Senator Charriez of Puerto Rico was fined \$5 and committed to jail for 15 days by District Judge Romani, on February 1, for defiantly refusing to sit down when ordered.

Penal Law. On February 9, armed white men took from the jail at Goldsboro, N. C., two Negro prisoners charged with assaulting the mayor, and flogged them severely. "Anti-Lynching Legislation in New York" is discussed in *St. John's L. Rev.* XIII, 209 (M. Friedman). A study published recently by the Columbia University Press discloses that in colonial New York, even after the Revolution, sixteen crimes were punished by hanging first time offenders, and a like number of felonies were similarly punished in case of second conviction. This, however, was moderate as compared with the situation then existing in England where 64 crimes were capital.

Double Jeopardy. In *Palko v. Connecticut*, 302 U.S. 319, the court upheld a State's right to authorize an appeal by the prosecution, though resulting in a new trial and conviction of a capital offense; which, it was held, did not impair the accused's "privileges and immunities" as a citizen. The earlier decision in *Kepner v. U.S.*, 195 U.S. 100, denying such recognition to Philippine prosecutors, was treated in such a way as to offer hope that it might eventually be overruled. Discussion of the first-named case may be found in *Mich. L. Rev.*, XXXVII, 103 (E. D. Ransom); *Notre Dame Lawyer*, XIV, 215 (J. Hynes); *Tex. L. Rev.*, XVII, 81 (L. U. Den-

man); *Oreg. L. Rev.* XVIII, 36 (S. R. Darling). On May 31 the Irish Senate passed the "Offenses Against the State Bill" designed to stop activities in Ireland leading to outrages in Britain. Current articles on Penal Law include:

"Pretense and Reality in our Criminal Law," *Oreg. L. Rev.*, XVIII, 134 (M. Radin); "The Falsely Convicted," *St. John's L. Rev.*, XIII, 45 (M. S. Moss); *id.*, "Indemnity to," *Harv. L. Rev.*, LII, 333; "Criminal Attempts," *Dickinson L. Rev.*, XLIII, 211 (W. H. Hichler); "Legislative Crimes," *Minn. L. Rev.*, XXIII, 135 (N. F. Baker); *U. of Pittsburgh L. Rev.*, V, 63 (J. J. Lawler); "Common Law Crimes," 1939 *Wis. L. Rev.*, 300 (F. F. Kaftan).

Books: Hall & Glueck's "Cases on Criminal Law" (1939) purport "to put the substantive criminal law in the entire field of criminology"; "Scottsboro: A Record of a Broken Promise," (1939) reviews a famous case (See 1937 *YEAR BOOK*, 306).

Penology. "Crime and Punishment in Early Maryland," (J. H. U. Press, Baltimore, 1938, R. Semmes); this is one of the two States which retains the whipping post (1938 *YEAR BOOK*, 399). According to the Columbia University Study above cited, larceny in colonial New York was punished by 39 lashes on the bare back, though women were sometimes exempted. "The Pillory, A Medieval Punishment," is discussed in *Rocky Mt. L. Rev.*, XI, 186 (H. V. Hentig); "Connecticut Institutions and Their Improvement," in *Conn. Bar Jnl.*, XIII, 122 (G. C. Erskine). "The Federal Prison System is the world's largest correctional plan," Warden Johnston of Alcatraz told members of the American Bar Association (*Jnl.* XXV, 755) on July 11 at San Francisco, with 20,000 inmates of its various institutions and 36,000 more in others or on probation.

Procedure. Some five columns of titles of articles on this topic appear in the latest *Index to Current Legal Thought*, more than half relating to the new Federal Rules. Among the most important are:

Those by Prof. E. R. Sunderland in *W. Va. L. Quar.*, XLV, 5; *La. L. Rev.*, I, 477; 146 *Boston Bar Bull.*, 10; and *Tenn. L. Rev.*, XV, 737; also in *ib.* 551, 579 (Judge C. E. Clark). Pre-trial procedure is discussed in *Am. Jud. Soc. Jnl.*, XXXIII, 11 (G. C. Sweeney); *Ill. L. Rev.*, XXXIII, 699; *So. Dak. Bar Jnl.*, VII, 18 (R. W. Bogue); *Dicta*, XVI, 215 (O. E. Garwood); *Boston Bar Bull.*, No. 145, p. 9 (J. E. Gilman); *Tenn. L. Rev.*, XV, 605 (E. R. Finch); *Fla. L. Jnl.*, XIII, 226 (Wm. Carver); "Deposition-Discovery," *Columbia L. Rev.*, XXXVIII, 1179 (Pike & Willis); *Oklahoma St. Bar Jnl.*, IX, 188 (J. S. Twyford); *Tenn. L. Rev.*, XV, 737 (E. R. Sunderland). Comparative, *Marquette L. Rev.*, XXIII, 159 (D. K. Hopkinson); *La. L. Rev.*, I, 45 (Flory & McMahon); *U. of Cin. L. Rev.*, XIII, 1; *Brooklyn L. Rev.*, VIII, 188 (A. Rotwein); *Trials, Tenn. L. Rev.*, XV, 570 (W. H. Wicker); *Ind. L. Jnl.*, XIV, 149; *Special Verdicts, Ill. L. Rev.*, XXXIV, 96; *Time Schedule, Mo. Bar Jnl.*, 10, 53.

Adoption of the Federal Rules by the States is urged in *A. B. A. Jnl.*, XXV, 367 (B. C. Gavitt); *ib.* XXIV, 981 (W. D. Mitchell). The Referee system in New York is criticised in recent letters to the *New York Times*. Civil Procedure in Quebec is discussed in *Ind. L. J.*, XIV, 44 (J. E. Ewing).

Proof. Two events of 1939 indicate the growing importance of this subject: (1) Its codification has been undertaken by the American Law Institute, with Prof. E. M. Morgan of Harvard Law School as Reporter, John H. Wigmore of N. W. University as consultant, and a corps of advisers. Completion is planned by 1942. (2) The subject of the Ross Prize Essay contest was announced as "The Extent to which Courts May, under the Rule-making Power, Prescribe Rules of Evidence." See "The Philosophy of Proof," *Los Angeles Bar Bull.* XIV, 108 (F. G. Tyrrell).

The Hearsay Rule and proposed changes therein occasioned much discussion in the reviews. The English Evidence of 1938 which renders admissible "any statement . . . in a document . . . if the maker had personal knowledge . . . and is unavailable as a witness" is discussed in *Harv. L. Rev.* LII, 539; and in *Canadian Bar Rev.* XVII, 302, where S. J. Helman contends that the limitation should not be confined to a document. A "Hearsay Statute" is suggested in *Wis. L. Rev.* (1938), 587 (Terwilliger & Efland); admissibility of medical treatises in *So. Cal. L. Rev.* XII, 424; (M. Freedman); of summaries of voluminous originals, *Mich. L. Rev.* XXXVII, 449 (B. H. Dewey); "Dying Declarations" (Ohio), *U. of Cin. L. Rev.*, XII, 370 (G. A. Warp); "Instructions in Weighing Hearsay," *Los Angeles Bar Ass'n Bull.* XIV, 270.

Scientific Evidence. See *St. John's L. Rev.*, XIII, 328 (H. Peller). Blood Tests were ordered for the first time in the District of Columbia on October 2 at the instance of defendant in *Beach v. Beach*, a suit for maintenance of a child whose paternity the husband denied. Legal attitudes toward such tests are discussed in *Duke Bar Ass'n Jnl.*, VII, 1 (Bogue & Moose); *cf. Fla. L. Jnl.*, XII, 251; *U. of Cin. L. Rev.* XIII, 446; *Marquette L. Rev.* XXIII, 126; for intoxication, *Id. L. Rev.*, XXIV, 191.

Fingerprints at the Federal Bureau of Investigation had reached 11,312,567 by the end of September and were being filed at the rate of 8000 a day; 300,000 army prints were turned over to the Bureau during the year, the aim being to establish a central identification division. Under instructions from the President, the members of the White House staff were fingerprinted. The Gallup poll showed 84 per cent favoring fingerprinting for aliens and 71 per cent favoring it for all. "Fingerprints in Evidence," *Fla. L. Jnl.* XIII, 43.

Lie Detector is discussed in *N. Y. U. L. Quar. Rev.* XVI, 202 (M. D. Forkosch); *Chicago-Kent Rev.* XVI, 269 (E. B. Nickel); "The Psychiatrist in Court," *G. W. L. Rev.*, VII, 31 (W. Overholser). New York has discarded as obsolete the Bertillon method of criminal identification in vogue for many years.

CONSTITUTIONAL AND PUBLIC LAW

United States. Interpretation by the Supreme Court of Federal Constitution clauses included:

Article I, § 3, (interstate commerce), affords a sufficient basis for the Agricultural Marketing Agreements Act of 1937, which does not unduly delegate legislative authority and Secretary's orders thereunder were upheld in *U. S. v. Royal Cooperative, Inc.* 307 U.S. 533, 59 S. Ct. Rep. 1933; also for the Tobacco Inspection Act of 1935, requiring certification of tobacco offered at designated auctions, *Currin v. Wallace*, 306 U.S. 1; also for Tit. III of the Agricultural Adjustment Act of 1938, penalizing the sale of tobacco in excess of the quota limits (Justice Butler dissenting), *Mulford v. Smith*, 307 U.S. 38, 59 Sup. Ct. Rep. 648. Loading and unloading livestock is a phase of interstate shipment which alone suffices to give the I.C.C. jurisdiction, *Union Stockyard etc. Co. v. U. S.* 84 Adv. Op. 188, 60 Sup. Ct. Rep. 193. In *B. & O. R. Co. v. U. S.* 305 U.S. 507, the court upheld an ICC order to desist from furnishing to certain shippers, at less than cost, storage and other facilities not available to all.

Article I, § 10, (obligation of contracts), held not infringed by a New York Statute limiting deficiency judgments in foreclosure to the amount of the debt plus interest, costs, and certain fees. *Honeyman v. Jacobs*, 306 U.S. 530.

Article IV, § 1, (interstate comity), held not infringed by a State workmen's compensation act, rendering its remedy exclusive, even as against another State with a

similar statute, *Pac. Employers' Ins. Co. v. Industrial Acc. Commission*, 306 U.S. 493.

Article V, (Amendments), construed in *Coleman v. Miller*, 307 U.S. 433, and *Chandler v. Wise*, 307 U.S. 474, 59 S. Ct. Rep. 972, involving ratification by the Kansas and Kentucky legislatures of the "Child Labor Amendment," after previous rejection and more than a dozen years after submission. The court held that the questions raised by the record were political and not judicial and dismissed both petitions.

Amendment V, (Property). In *Driscoll v. Edison Lt. & Pwr. Co.*, 307 U.S. 104, the court upheld the valuation fixed by the Pa. Public Utility Commission. *Frankfurter J.*, in a concurring opinion, speaks of "the mischievous formula for fixing utility rates in *Smyth v. Ames*, 169 U.S. 41. An injunction to prevent the T.V.A. from engaging in the sale of electric power from its dams was denied in *Tenn. El. Pwr. Co. v. T.V.A.*, 306 U.S. 118. Amendments IX and X were also considered. T.V.A. is discussed in *Oreg. L. Rev.* XVIII, 273 (H. Pinney).

Amendment XIV, § 1, (Citizenship). A child born in the United States of naturalized parents does not, merely by their subsequent repatriation, lose its American citizenship (*Perkins v. Elg*, 307 U.S. 325). Deportation is not authorized merely for past membership in the Communist party (*Kessler v. Strecker*, 307 U.S. 22). (McReynolds & Butler JJ's dissenting) Civil liberties held infringed by a municipal ordinance forbidding labor unions to hold meetings and excluding their members from the city's parks and streets (*Hague v. C.I.O.*, 307 U.S. 496). **Amendment XV** (Suffrage) held infringed by an Oklahoma statute exempting from registration those electors who had voted under the "grandfather clause," and requiring all others to register within a 12-day period (*Lane v. Wilson*, 307 U.S. 268).

Three of the original thirteen States (Massachusetts, Georgia, and Connecticut) waited until 1939 to ratify the "Federal Bill of Rights," (Amendments I-X), which meanwhile have been in force through their ratification by the other States, with most of the guarantees embodied in the State constitutions.

Reorganization of the Federal Government's 146 departmental bureaus and 48 independent agencies was made possible by the Act of Congress of Apr. 3, 1939 (Public Acts No. 19). Utilizing its provisions, the President, on April 25, sent to Congress *Plan No. 1*, creating three new agencies, viz. (1) *Federal Security*, (q.v.); (2) *Federal Works*, (q.v.); (3) *Federal Loan Agency*, (q.v.). Shifts of other units were made in the same order as follows: To Department of Agriculture, Farm Credit Administration, Federal Farm Mortgage Corporation, Community Credit Corporation. To the Executive, Budget Bureau and Central Statistical Board.

Plan No. 2, sent to Congress on May 9, created no new agencies but shifted the foreign activities of the Commerce and Agriculture Departments to the State Department; the Bureau of Insular affairs as a section of the Territorial Division, and Fisheries and Biological Survey to the Interior Department (which also continues the functions of the Bituminous Coal Commission, disappearing as a separate entity); the Inland Waterways Corporation to Commerce, and the Rural Electrification Administration to Agriculture. In contrast to the Act providing therefor, these Plans encountered little opposition in Congress, which even advanced the date of their effectiveness to July 1. Other shifts are promised later.

Merit System Extended. Executive Order No. 7916, June 24, 1938 (1938 YEAR BOOK, 447) was suspended on January 31, so far only as it applied to Class VI of the Federal Civil Service (Professional and Scientific), and a committee of distinguished members, with Supreme Court Justice Reed as Chairman, was appointed to investigate and report as to what, if any, modifications of the Order might be advisable for that Class. Aided by a subcommittee of government

experts, it conducted public hearings, commencing on November 3.

"The Controller General," by Prof. H. C. Mansfield of Yale, is an argument for separating auditing from control and is critical of the late McCarl administration. The Littauer Center of the Harvard Graduate School of Public Administration, at Cambridge, Mass., was dedicated on May 8. Besides President Conant and Dean Williams, Governor Saltonstall and others spoke. The school, which had been several months in temporary quarters, offers advanced graduate training, through research, seminars, and experienced consultants, to young government employees "with a distinguished record of University graduate study in the social sciences."

Territories. On March 24 President Martinez Nadal of the Puerto Rican Senate, launched a bitter attack before that body upon the Federal Government's policy toward that island. "The Chief of the Interior Department's Territorial Division" (Gruening), he declared, "really rules in Puerto Rico and our nominal governors must cable there for orders." Dr. Gruening was later appointed Governor of Alaska. On May 16 the Puerto Rican Senate adopted a resolution thanking President Roosevelt for creating a military department there, but also expressing hope for statehood. The U. S. Senate Committee Hawaii, recommended against statehood at present for that territory.

British Commonwealth and Empire. "The Constitutions of All Countries," (London, 1938), is a much needed work. Vol. i (just published) relates to the British Empire; vol. ii will contain continental instruments.

Canada. "The Struggle for the Recognition of Dominion Autonomy," *Am. J. of Int. L.*, XXXIII, 747 (L. H. Laing), is based mainly on Sir Robert Borden's Memoirs (N. Y., 1938), but traces the movement beyond the Statute of Westminster (1931). On May 20, Queen Elizabeth participated in the cornerstone ceremonies for the new Supreme Court building in Ottawa and delivered an address comparing the two legal systems (Civil and Common) prevailing in Canada.

Dominica, previously under Leeward Islands administration, became a separate colony on Jan. 1, 1940, pursuant to an Order in Council.

India. Two of the seven independence party provincial cabinets resigned in protest of the British Governors' veto of the immediate release of all political prisoners. Gandhi favors another civil disobedience campaign but without violence.

New Zealand. Applying the maxim that delegated power cannot be delegated, Justice Callan of the Supreme Court held invalid, on May 22, that feature of the Socialist Government's trade control plan which enabled the Governor General, besides issuing regulations, to authorize others to do so.

PRIVATE LAW

Contracts are treated in current articles as follows:

"Rationale of Agreement," *Ky. L. J.*, XXVII, 284 (H. E. Willis); "Rationale of Bargain Consideration," *Georgetown L. J.*, XXVII, 414 (*id.*); "Nature of Consideration," *Brooklyn L. Rev.*, VIII, 303 (R. E. Ireton); "Interpretation," *U. of Chicago L. Rev.*, VI, 374 (M. Greene); "In Modern European Law," *Tulane L. Rev.*, XIII, 592 (R. R. Kuhlwein); "Offer and Acceptance," *Yale L. J.*, XLVIII, 1, 799 (K. N. Llewellyn); *Minn. L. Rev.*, XXIII, 776 (E. S. Stimson); In Louisiana, *L. Rev.*, I, 182 (R. A. Pascal); "Mutuality," *Mo.*

L. Rev., IV, 306 (O. W. Watkins); *Tulane L. Rev.*, XIII, 362 (H. A. Holstein); "Beneficiary Contracts," In California, *L. Rev.*, XXVII, 497 (S. I. Langmaid); In Illinois, *U. of Chicago L. Rev.*, VI, 473; In Michigan, *Detroit L. Rev.*, VIII, 1; In Pennsylvania, *Temple U. L. Quar.*, XIII, 118 (W. W. Holmes), *Misc.*, "Cardozo and the Law of Contracts," (A. L. Corbin), *Harv. L. Rev.*, LII, 408; *Yale L. J.*, XLVIII, 426; *Columbia L. Rev.*, XXXIX, 56; "Legislative Contracts," *U. of Cincinnati L. Rev.*, XIII, 479 (D. L. Ziegel).

Insurance. State regulation was the subject of many articles. Among them were:

Tex. L. Rev., XVII, 182 (R. B. Cousins, Jr.); *Georgetown L. J.*, XXVII, 1051 (Mathias & Robison); *Ky. L. J.*, XXVII, 462; Massachusetts Life Insurance Law, *Boston U. L. Rev.*, XIX, 53, 244 (H. J. Taylor); Illinois Insurance Code, *Jno. Marshall L. Quar.*, IV, 146 (H. S. Moser). Other topics were: "Insurable Interest in Lives," *ib.*, 405 (A. M. Lewis); "Suicide in Presumption Against," *W. Va. L. Quar.*, XLV, 167 (H. G. Williamson); "Public Policy re Suicide," *Georgetown L. J.*, XXVI, 36, (Cramer & Rubin); "Incontestability," *W. Va. L. Quar.*, XLIV, 390, (E. H. Broh).

Mortgages and Pledges. "Antichresis: an Ancient Device Retained," *Tulane L. Rev.* XIII, 131 (L. Oppenheim); "Chattel Mortgage in Louisiana," *ib.* 19, 234 (H. S. Daggett); "The Proposed Uniform Mortgage Act," *Law & Contemporary Problems*, V, 564 (H. L. Reeve); "Assumption by Grantee," *St. John's L. Rev.* XIII, 215 (P. M. Lorber); In Virginia, *L. Rev.* XXV, 993 (P. J. Hartman); "Strict Foreclosure," In Virginia *L. Rev.* XXV, 947 (D. R. Owen); By Power of Sale, *Mo. L. Rev.* IV, 186 (G. W. Wise); *Cal. L. Rev.*, XXVII, 66 (D. B. White).

Negotiable Instruments. "Policy or Function of the Law of," *U. of Pa. L. Rev.*, LXXXVII, 662, 793 (J. S. Strahorn); "Negotiability of Goods Documents," *Dickinson L. Rev.*, XLIII, 224 (J. P. McKeenan); "Uniform Negotiable Instruments Law, sec. 40" (In Ill.), *Jno. Marshall L. Quar.*, IV, 401 (J. B. Lampe).

Sales. Current articles relating to this branch include:

In Louisiana, *La. Rev. I*, 800 (W. T. Pegues); Conditional, at Common Law, etc., *Va. L. Rev.*, XXV, 559 (G. Glenn); Uniform Legislation, re, *Cornell L. Quar.*, XXIV, 394 (R. N. Kleps); "Across Sales on Horseback," *Harv. L. Rev.*, LII, 725 (K. N. Llewellyn); "The First Struggle to Unhorse," *ib.* 873 (*id.*); "Passage of Title Under Co-operative Marketing Acts," *Org. L. Rev.*, XVIII, 157 (A. A. Goldsmith). Of Securities (Under Act of 1933), "Exempt Transactions," *Washington U. L. Quar.*, XXIV, 383 (B. Susman); *Boston U. L. Rev.*, XVIII, 613 (G. D. Bleicken); "Scope of Registration, etc.," *Los Angeles Bar Bull.* XIV, 80 (H. A. Judy); "Further Developments in 'Disclosure,'" *Ill. L. Rev.*, XXXIII, 145 (B. MacChesney); "Withdrawal of Registration Statement," *Mich. L. Rev.*, XXXVII, 1276 (F. C. Newman); "Materiality," *ib.* 452 (B. H. Lebeis); Under the Act of 1934, "Unlisted Trading Privileges," *ib.* 98 (M. L. Plant); "The Maloney Act," *Yale L. J.*, XLVIII, 633; *Georgetown L. J.*, 633 (W. S. Brown); "Accounting and Auditing," *Ill. L. Rev.*, XXXIII, 820; *Mich. L. Rev.* XXXVII, 288 (P. R. Trigg).

Bankruptcy. The Chandler Act (1938 Year Book, 399) is the subject of many articles listed in *Current Legal Thought Index*. Others are: "Acts of Bankruptcy—A Medieval Concept," *Harv. L. Rev.*, LII, 189 (I. Treiman); "The Bankrupt Under New Rules," *Commercial L. Jnl.* XLIV, 140 (H. U. Feibelman). A stockholder of a bankrupt corporation who seeks full priority against its assets must show a reasonably equivalent contribution in money or money's worth (*Case v. Lumber Co.* 308 U.S. 106, 84 Adv. Op. 22. Cf. *Pepper v. Litton*, U.S., 84 Adv. Op., 160).

Corporations. A connection between this topic and the preceding one is illustrated by an edi-

torial in *U. of Chicago L. Rev.* VI, 467 on "Corporations Amenable to the New Bankruptcy Act." Other articles are:

"New York Corporation History," *State Bar Ass'n. Jnl.*, X, 129 (W. D. O'Brien); *ib.* XI, 83 (M. G. Bogue); "The Modern Corporation and the Free Enterprise Theory," *U. of Chicago L. Rev.*, VI, 399; "The Legal Status of Corporate Directors," *Boston U. L. Rev.*, XIX, 12 (R. E. Uhlman); "Reports to Stockholders and the S.E.C.," *Yale L. Jnl.*, XLVIII, 935 (Kaplan & Reaugh); "When Dividends Vest," *Georgetown L. Jnl.*, XXVII, 74 (R. F. Graham); "Federal Incorporation," *Tulane L. Rev.*, XIII, 214 (J. J. Robbins); "Regulation of Proxies," *Ill. L. Rev.*, XXXIII, 914; *St. John's L. Rev.*, XIII, 297; *Georgetown L. J.*, XXVII, 109 (W. S. Brown); *Minn. L. Rev.*, XXIII, 710 (E. G. Jennings); "Illinois Business Corporation Act," *Jno. Marshall L. Quar.*, IV, 106 (A. E. Wilson).

The S.E.C. released the first of a new series of analyses of 25 corporate reorganizations during the first six months of the Chandler Act (*supra*) showing a book value of \$399,013,032 in all but one, as against a total indebtedness of \$222,584,895. On September 29 the S.E.C. released another of its Reports on "American Listed Corporations" (1938 YEAR BOOK, 399), this one on manufacturers of industrial machinery. The same agency is reported as planning to complete soon the integration of electric utility systems under the act of Congress of 1935.

Delicts (Torts) are discussed in current legal periodicals as follows: "Cardozo and the Law of Torts" (W. A. Seavey), *Harv. L. Rev.* LII, 372; *Yale L. Jnl.* XLVIII, 390; *Columbia L. Rev.* XXXIX, 20; "A New Tort (Mental Suffering Intentionally Caused)," *Mich. L. Rev.* XXXVII, 874 (W. L. Prosser); "Joint Torts and Several Liability," *Tex. L. Rev.*, XVII, 399 (R. D. Jackson); "Restatement," *N. Y. U. L. Quar. Rev.*, XVII, 1 (P. H. Winfield).

Defamation. "The English Law of, and Reform," *Ill. L. Rev.* XXXIII, 669 (G. W. Paton); "Damages" (In New Jersey), *U. of Newark L. Rev.*, III, 182 (A. Teich); "Retaliatory Insult," *Miss. L. Jnl.*, XI, 333 (W. S. Malone); "Fair Comment," *Notre Dame Lawyer*, XIV, 270 (J. L. C. Ford); "By Radio," *Air L. Rev.* IX, 328 (McDonald & Grimshaw); "By Testament," *Georgetown L. J.* XXVII, 478 (J. P. McCartney).

Misrepresentation. "The Ambit of Responsibility," *Tex. L. Rev.* XVII, 1 (W. P. Keeton); "In Accounting Practice," *N. Y. U. L. Quar.*, XVI, 436. Cf. *St. John's L. Rev.*, XIII, 310 (R. A. Klein).

Negligence. "Comparative," In Mississippi, *L. Jnl.* XL, 321 (G. H. Butler); In Wisconsin, *L. Rev.* (1939) 427 (G. Lamboley); "Proximate Cause," *U. of Chicago L. Rev.*, VI, 36 (C. O. Gregory); In Texas, *L. Rev.* XVII, 193 (T. T. Hutcheson); "Duty to Know," *Minn. L. Rev.*, XXIII, 638; "Rights of Licensees, etc.," *ib.* 502; "Effect of *Erie R. Co. v. Tompkins*," *U. of Newark L. Rev.* 85; "Contributory," In Pennsylvania, *Bar Ass'n. Quar.*, XXXVIII, 64 (L. H. Eldredge); In Virginia, *L. Rev.* XXV, 743 (J. M. Wilson, Jr.) Cf. *ib.* 250; "Last Clear Chance," *Harv. L. Rev.* LII, 1187.

Domestic Relations. Marriage. "An Institution," *L. Soc. Jnl.*, VIII, 501 (H. D. Johnson); "The 'Common Law' (Informal) Marriage," in Ohio, *State U. L. Jnl.*, V, 26, 175 (R. M. Moynihan); in New Jersey (prohibited after Dec. 1, 1939); "The Blood Test Law," in New York, *St. John's L. Rev.* XIII, 199 (L. G. Iasilli). Similar legislation has been enacted in

Arizona, Idaho, Oregon, and Alexandria, Va. (city ordinance). But in Oregon the examination fee is \$10, and applications for licenses fell off nearly two thirds after three months of operation, applicants apparently going to Washington where there is no such fee. A bill to abolish the fee was vetoed by the Oregon Governor because of the burden imposed on the board. A similar situation is reported in Maryland, whose new Marriage Age Law is discussed in *Md. L. Rev.* III, 340. Dr. J. E. Moore of the J. H. U. Medical School calls blood tests "Totalitarian rather than Utopian," unreliable and too late in their application. A youth of 23, under his father's guardianship as a spendthrift, was enjoined temporarily, at the latter's instance, along with the former's fiancée, on September 27, from intermarrying anywhere in Massachusetts. When the law sanctioning a widow's marriage with her deceased husband's brother was proclaimed in the British South African colony of Basutoland, natives protested to their tribal council, because of probable discrimination in favor of the second marriage children. The council declared the law applicable to Europeans only.

The Nationality of Married Women," by W. E. Waltz (Urbana, 1938) contains "not only an accurate history of U.S. laws . . . but an excellent résumé of (those) of the principal foreign states." *Am. J. of Int. L.*, XXXIII, 816).

Annulment of a marriage contracted in 1912, by Enrique de Paats, former Argentine Consul, was decreed by the (Catholic) ecclesiastical court of Paris in April, although the Consul had obtained a Mexican divorce in 1937 after an 18 day residence, which later the French Civil Court refused to recognize. From this decree, De Paats, who had meanwhile married another by both religious and civil ceremony, appealed. Annulment in New Jersey is discussed in *Temple U. L. Quar.*, XII, 507 (C. C. Thomas); in Pennsylvania *U. of Pittsburgh L. Rev.* IV, 251 (J. J. Lawler).

Husband and Wife. Obligation of Support, *St. John's L. Rev.* XIII, 105 (R. G. Margles); in Pennsylvania, *U. of Pittsburgh L. Rev.*, V, 145; in Iowa (separate maintenance), *Ia. L. Rev.*, XXIV, 137; "Alienation of Affections" in Louisiana, *L. Rev.* I, 204 (F. H. O'Neal); "Gifts of Chattels and Wife's Rights," *U. of Pittsburgh L. Rev.*, V, 78 (J. N. Sawyer).

Community Property. This is discussed in:

Bibliography, *Wash. L. Rev.*, XIV, 126 (A. S. Beardsley); in Cal., *L. Rev.*, XXVII, 49 (J. R. Johnston); in Washington, *L. Rev.*, XIV, 118 (Early Statutes; C. Hill); as applied to life insurance, *Tex. L. Rev.*, XVII, 121 (I. W. O. Huie); *Wash. L. Rev.*, XVII, 121 (R. V. Hokanson); as affected by mineral rights, *La. L. Rev.*, I, 17 (H. S. Daggett); as regards Federal taxation, *Cal. St. Bar Jnl.*, XIV, 9 (W. H. Nicholas); "Division of Property upon Dissolution," *Law & Contemporary Problems*, VI, 225 (H. S. Daggett); "Reestablishment of Community," *La. L. Rev.*, I, 422 (W. T. Pegues).

Divorce. "The Traffic in Divorce," *Fla. L. Jnl.* XII, 335 (T. Cobb); *ib.* XIII, 13 (M. L. Baker); "Collusion in Divorce," *Commercial L. Jnl.*, XLIV, 18 (N. Phillips); "Stalemate," *Dicta*, XVI, 107 (A. Heincke); *Los Angeles Bar Ass'n. Bull.* XIV, 232 (F. D. Tappan).

The Montana Governor's veto of the "quick divorce" law was upheld on February 24. Ch. J. Rowan-Hamilton, of Bermuda, opening the Hilary Assizes on February 6, stated that divorces obtained by those domiciled in the island

would not be recognized, and recommended divorce legislation for Bermudians.

Alimony. A comprehensive symposium on this subject appears in *Law & Contemporary Problems*, VI, as follows:

Foreword, 183 (J. S. Bradley); "The Historical Background," 197 (Vernier & Hurlbut); "In French Law," 293 (L. M. Mitchell); "In German Law," 301, (Mankiewicz & Fuller); "The Changing Social Setting," 186 (R. W. Kelso); "Judicial Discretion in Awards," 213 (E. W. Cooley); "Grounds for Modification," 236 (E. Desvermeine); "Problems of Enforcement," 274, (E. Pokorny); "Foreign Decrees of," 250, (A. C. Jacobs); "Social and Psychological Effects," 283 (C. G. Peele); "Assignability," *Ky. L. Jnl.*, XXVII, 458 (R. A. Woodall); "Separate Action After Divorce," *Ia. L. Rev.*, XXIV, 735.

Parent and Child. "Legitimation," *W. Va. L. Quar.* XLV, 370 (A. L. Blair); "Stepchildren, etc.," *Harv. L. Rev.*, LII, 515; "Adoption," in *Louisiana, L. Rev.* I, 196 (J. Buga); "Agreement to Adopt," *Tex. L. Rev.* XVII, 399 (B. H. Powell).

Guardianship. *Miss. L. Jnl.*, XI, 201 (G. B. Witherspoon); *Mass. L. Quar.* XXIV, 19 (E. E. Clark).

Property. The Institution of Property is discussed in *Temple U. L. Rev.* XIII, 182 (H. Pinney). Other articles were:

"Seisin and Possession as the Basis of Legal Title," *Ia. L. Rev.*, XXIV, 268 (F. S. Philbrick); "Adverse Possession," *N.Y.U.L. Quar. Rev.*, XVI, 532 (W. F. Walsh); "The Uniform Property Act," *Harv. L. Rev.*, LII, 993; cf. *U. of Cincinnati L. Rev.*, XII, (C. C. White); "Future Interests," (in California), *So. Cal. L. Rev.*, XII, 715, 772 (J. McIntyre); (in Illinois) *Chicago-Kent Rev.*, XVI, 213 (E. F. Tupes); "Common Law and Statutory Liens," *Mich. L. Rev.*, XXXVII, 273 (A. P. Boynton); "Amendments to Kansas Real Property Law," *Kan. State Bar Ass'n. Jnl.*, 377 (W. W. Harvey); "Alien Land Rights in Nebraska," *L. Bull.* XVII, 3; "The District of Columbia Real Estate Commission Act," *D. C. Bar Ass'n. Jnl.*, VI, 254 (A. Fisher).

In re Sidebotham 12 Cal. (2d) 434, 85 Pac. (2d) 453, upholds the Real Estate Act of 1937, requiring detailed notice to an official of the owner's intention to offer subdivided lands for sale or lease, reversing the District Court of Appeal and rejecting the claim that the act is class legislation. The long standing suit of *U.S. v. Nor. Pac. R. Co.*, involving a government land grant of nearly 3,000,000 acres, was terminated at Spokane on June 28 by a decree awarding 1,363,000 acres to the government (including 315,000 acres in the Crow reservation) and 1,350,000 to the company, which, according to the government's counsel, had realized \$200,000,000 from sales out of the grant after expending about \$68,000,000 on its railway.

Land Title Transfer. A claim to a "sole and several fishery" in tidal waters was recently upheld by the Chancery Division of the English High Court, upon a record of the inspection of two charters granted by "Lord Henry . . . formerly King of England," before the date of Magna Carta (1215). The manager of Munsey Park, Inc., at Manhasset, L. I., announced its recognition of the Torrens System's (1938 YEAR BOOK, 400) adoption as "inevitable and soon will be demanded by every home buyer." *Yale L. Jnl.* XLVIII, 1125 (McDougal & Brabner-Smith), contains a review and defense of that system in reply to T. R. Powell's "Registration of Title to Land in New York" (1938) *Cf. Cornell L. Quar.*, XXIV, 557 (Fairchild & Springer). A comparison of land and motor vehicle registration appears *ib.* 1238; "The Title Examiner's Burden," *Ia. L. Rev.* XXIV, 72 (L. L. Forbes); in *Kentucky, L. J.*, XXVII, 194.

Intangibles. "Air Space," *Harv. L. Rev.* LII, 335.

Copyright. See also INTERNATIONAL LAW (PRIVATE). Titles of articles on this topic fill more than three columns of *Current Legal Thought's* latest General Index. Although the Copyright Act of 1909 requires two copies of a work to be "promptly deposited," an author who published, with notice of copyright, on Dec. 10, 1931, but failed to deposit his copies until Feb. 21, 1933, was nevertheless allowed to maintain a suit for damages for infringement before deposit (*Washingtonian Pub. Co., v. Pearson*, 305 U. S. 583, 59 S. Ct. Rep., 397). In *Gibbs v. Buck*, 307 U. S. 66, 59 S. Ct. Rep., the District Court was upheld in enjoining, temporarily, enforcement of a Florida statute prohibiting owners of copyrighted musical compositions from combining to fix fees for use of their materials. State regulation of such copyrights is discussed in *Ill. L. Rev.*, XXXIII, 548 (M. Cohn); *Oreg. L. Rev.* XVIII, 173 (N. Cohen).

Patents. In *Mackey Radio & Tel. Co. v. R.C.A.*, 305 U. S. 58, 59 S. Ct. 427, the Supreme Court upheld the District Court's finding (later reversed by the Court of Appeals) that there had been no infringement of plaintiff's Carter patent by defendant's use of "antennae structures" for radio communication. Complaints of the excessive cost of obtaining patents and of antiquated methods therein led to the announcement on March 18, of a National Advisory Council of Experts to co-operate with Congress. Six measures, all but one of which had passed the House, designed to improve the system were adopted by the Senate on August 1. Current articles include: "Our Patent System," *Fed. Bar Ass'n. Jnl.*, III, 231 (J. W. Macklin); "Restrictions on the Use of Patented Articles," *G. W. L. Rev.*, VII, 657 (A. L. B. Richardson); *Harv. L. Rev.* LII, 308, *ib.* LIII, 145; *U. of Pittsburgh L. Rev.*, V, 247 (J. B. Brown); *Mich. L. Rev.* XXXVII, 1112 (C. E. Brooks).

Succession. See also INTERNATIONAL LAW (PRIVATE). "The Nature of Succession" is discussed in *Fordham L. Rev.* VIII, 151; "The Widow's Election" (from her husband's estate), *Mich. L. Rev.* XXXVII, 236, 401 (E. D. Phelps); *Mo. Bar Jnl.* X, 88 (G. Mohler); *Ia. L. Jnl.*, XXIV, 714. Applying a recent New York Statute (1939, Ch. 343), Surrogate Wingate of Brooklyn ordered the assets of a deceased German Jew's estate impounded for the benefit of his family who were said to have fled Germany; it was feared the German government would confiscate the fund if sent there. (*In re Weidberg*, *N. Y. Times*, Oct. 31, 1939). The Basuto (South Africa) tribal council has enacted a rule giving priority in succession to the elder widow, where a father and his minor son die simultaneously.

Testaments (Wills): Capacity. *Oreg. L. Rev.* XXVII, 45 (Wm. Lubersky); *Ky. L. Jnl.*, XXVII, 224 (P. L. Hall); "Irregularities of," *ib.*, 241.

Form. *In re Zaia*, 279 N. Y. 515 upheld the nuncupative (oral) will of a soldier, consisting of a remark, substantiated by two comrades, "If anything happens to me, my sister gets my property." The testament of Pope Pius XI was written on a few loose sheets and a number of cards; most of his belongings were left to the Holy See and, therefore, to his successor; but certain bequests of specific objects were made to the Vati-

can Library, the Christian Museum, etc. Joint and Mutual Wills (Ia.) are discussed in *Ia. L. Rev.* XXIV, 15 (H. J. Te Paske); "Attestation," *Ky. L. J.*, XXVII, 447 (S. W. White).

Interpretation, Mich. L. Rev., XXXVII, 630 (D. Hodgman); *A. B. A. Jnl.* XXV, 85 (R. R. Powell); *Per Stirpes or Per Capita, U. of Cincinnati L. Rev.*, XIII, 298 (C. C. White).

C. SUMNER LOBINGIER.

LAWRENCE COLLEGE. A coeducational institution in Appleton, Wis., founded in 1847. For the autumn term of 1939, 622 students were enrolled in the college of liberal arts, 82 in the Conservatory of Music, and 51 in the Institute of Paper Chemistry, a graduate school affiliated with the college. There were 55 members on the faculty of the college, 14 on that of the Conservatory, and 48 on that of the Institute. The endowment, exclusive of buildings and equipment, amounted to \$1,525,800; the income from endowments for 1939 was \$51,130. The college library contained 137,820 volumes, and the Institute, 9000 volumes. President, Thomas N. Barrows.

LEAD. Mine production of lead in the United States in 1939 appears to have been greater than in any year since 1930, according to a review in *Engineering and Mining Journal*. It is estimated at 460,000 tons, compared with 328,000 tons in 1938. Missouri, Utah, and Idaho were, as usual, the principal sources. Toward the end of 1939 most of the larger lead mining districts were operating at full capacity.

Domestic shipments of lead in 1939 were about 560,000 tons, compared with 422,000 tons in 1938. The increase was due principally to larger consumption in storage batteries and in pigment manufacture. In September sales reached the high record of 104,000 tons, or more than 2½ times the current output of the mines. As a result of the large demand, stocks of refined lead in the hands of shippers declined about one-half during 1939, opening the year at 116,000 tons and closing with 55,000 tons, only a little more than one month's production.

The domestic price of lead rose during 1939 from 4.75¢ per lb., New York, to 5.50¢. The average price for the year was 5.053¢, compared with 4.739¢ in 1938, and 6.009¢ in 1937.

When the war in Europe began British authorities set the price of lead at £17 5s per long ton, but on December 18 the British Ministry of Supply fixed the price at £25, duty paid, to cover the increased cost of transportation and delivery from Empire sources.

War in Europe had little effect on the domestic lead industry, except to cause consumers to accumulate large stocks in anticipation of a rise in price. The United States no longer holds the dominant position in World production that it held in 1914. At that time the domestic output was about 40 per cent of the world total, whereas in 1939 it was only about 25 per cent. British Empire sources have accounted for the change as a result of new developments in Canada, Australia, and Burma. Mexican production also has greatly increased in the last 25 years. Consequently the lead industry of the United States finds its market almost wholly at home, and domestic requirements govern the course of the home market.

Scrap lead is an unusually important factor in the domestic industry. Old battery plates alone accounted for the recovery of about 200,000 tons of lead in 1939.

The principal uses of lead in order of importance are: storage batteries, paints and pigments, alloys, and cable covering. See **METALLURGY**.

H. C. PARMELEE.

LEAGUE OF NATIONS. Political Activities. On January 16, the League Council met at Geneva for its 104th session among what were called "the most unfavorable world conditions that have yet existed," the Munich conference of 1938 being considered the most serious setback the League ever had. The agenda were mainly non-political, like Narcotics Control, Transit and Communications, Fiscal Affairs, Intellectual Co-operation. The only political questions were the withdrawal of non-Spanish combatants from Republican Spain and the appeal of China for arms and credits. The session opened with a speech by Council President Ricard J. Sandler of Sweden in memory of Emil Vandervelde.

The committee on Spanish volunteers reported 12,673 volunteers fighting in Republican Spain, none of whom were any longer in combatant units. At the time of the report 4640 men (representing twelve nations) had left Spain, and this number would soon be increased to 6490. The report of William J. Jordan (New Zealand) of the Health Committee on sending anti-cholera vaccine to China was received. Dr. V. K. Wellington Koo of China asked for economic sanctions against Japan; a recommendation to member states to extend financial and economic assistance; assurance of facilities for transportation of war materials to China, and the appointment of a co-ordination committee to supervise the application of sanctions. Julio Alvarez de Vayo of Loyalist Spain described bombings of civilians by Franco and placed the responsibility on the Italian "Legionary Air Force." This followed a report of the British commission on bombings in five air raids since the last Assembly session. Russia and China favored action on this report but the Council after noncommittal statements by France and Britain deferred discussion.

There was discussion in a secret meeting of China's demands against Japan, which were backed by Russia, opposed by France and Great Britain. A committee was appointed to decide whether the Danzig constitution had been violated and to report in May, the Danzig High Commissioner to continue on leave of absence. An evasive resolution was adopted on Spain, condemning bombardment of open towns and "the recourse to methods contrary to the conscience of mankind and the principles of international law." The Chinese resolution as adopted invited members to examine in consultation with other powers the statements of the Chinese representative. On the submission of a draft report making suggestions for aiding Spanish refugees, British and French representatives said the most practical course was to assist private organizations in the field.

In February, Switzerland warned the League that in case of war it might be required to leave Geneva on twenty-four hours notice; the Netherlands government announced that it would not allow free passage across its soil of troops acting against an aggressor under Article XVI of the Covenant; Great Britain and France notified the League that their adherence to the General Arbitration Act (complementing the Kellogg pact) would not apply after August 16 to any disputes

EUROPEAN POLITICAL FIGURES

arising from any war they might be involved in.

On April 8, Peru announced its withdrawal from the League, the tenth Latin-American nation to leave, withdrawals of Guatemala, Brazil, Costa Rica, Paraguay, Nicaragua, and Honduras, being already effective, that of El Salvador becoming effective in August and those of Chile and Venezuela in 1940. On April 11, Hungary announced its withdrawal effective at the end of the regular two-year period. Foreign Minister Count Stephen Csaky explained the step on the ground that Geneva had become a center of anti-totalitarian ideology and that Hungary needed to preserve freedom of action.

On May 22, at the 105th meeting of the League Council, a letter from King Zog of Albania protesting against Italy's seizure of Albania was referred to the next Assembly meeting. Dr. Koo again asked help for China and action against Japanese bombings of civilians. Lord Halifax of Great Britain expressed sympathy but doubted the effectiveness of any suggested measures. Eduard Beneš appealed to the League to take action against Germany's seizure of Czecho-Slovakia. Ivan Maisky, Russian Ambassador to London, was appointed Russian representative following Maxim Litvinoff's resignation as Russian Commissar for Foreign Affairs. The Council adjourned on May 27, taking no action on the proposed fortification of Åland Islands. The resolution on China expressed "concern," sympathy, and the desirability of helping. Nations with diplomatic representatives in China were asked to report on bombings.

The League Mandates Commission met on June 8 for its 36th session. Chaim Weizmann, President of the Jewish Agency for Palestine, attacked Britain's new Palestine policy as a "triumph of force over moderation." Three days were given to the study of the Palestine situation. Malcolm MacDonald, British Colonial Secretary, defended British policy as leading to an independent state in which Jews and Arabs can live together. French cession of Hatay (part of the Syria mandate) to Turkey was criticized as violating the terms of the mandate, and was defended by France as in the interest of world peace. The Commission examined reports from South-West Africa, Palestine and Trans-Jordan, Syria and Lebanon, Nauru, and New Guinea. The report of the Commission, published in August, found the British White Paper on Palestine not in accord with the Commission's interpretation of the convention. But the members disagreed as to whether a new interpretation might be possible. Zionist leaders called it "moral victory." The British reply published at the time expressed the belief that the Commission failed to take political factors into account. The British Government announced that it would go ahead with its plan. The August World Zionist Conference hailed the report, and asked the League Council to reject the British plan.

On September 11, France officially informed the League: "A state of war exists between France and Germany as from 5 p.m. September 3." Reasons set forth included German violation of the Kellogg pact.

German Chancellor Hitler in his Reichstag speech, October 6, said it had been planned that the League would revise faulty provisions of the Versailles Treaty; but with America out and others leaving, "the League degenerated more and more into a clique of parties interested in the

Versailles dictates." So "the League of Nations is not a living, but already a dead thing."

On November 21, Great Britain notified the League of the suspension of London Naval treaty of 1936 and the naval agreements with Russia of 1937, and with Poland of 1938.

The meetings of the Council and Assembly which had been set for September and then indefinitely postponed because of the outbreak of war, were held in December as a result of the Russo-Finnish situation. League Secretary Gen. J. A. C. Avenol called the Council to meet December 9. Assembly President Eamon de Valera, upon notice from Mr. Avenol, called the Assembly to meet December 11. Both meetings were called at the request of Finland to consider Finland's demand that Russia be named as an aggressor nation and that League machinery be set in motion to take necessary measures to check the aggression. A few days before the meetings Argentina, Uruguay, Bolivia, and Colombia demanded the expulsion of Russia under Article XVI of the League Covenant which provides that any League member guilty of violation of engagements under the Covenant may be excluded by unanimous vote of the other members of the Council. The joint Latin-American action suggested that the remaining Latin-American members might withdraw from the League, these being: Argentina, Uruguay, Bolivia, Colombia, Cuba, the Dominican Republic, Ecuador, Haiti, Mexico, Panama, Peru. On the meeting of the Assembly Carl J. Hambro of Norway was elected President. Russia refused to attend the Council sessions and denied the authority of the Finnish note to the League, saying that the "new Democratic" government of Finland had asked military assistance. Finland notified the League that it was fortifying the Åland Islands. Finland explained that it did not ask for the imposition of sanctions but did want the League to help settle the dispute with Russia. The League asked Russia to cease hostilities and to agree to peace negotiations through the League. Russia refused. Therefore on December 13, the committee of thirteen branded Russia as an aggressor against Finland and asked League members to extend all aid in their power to Finland, and authorized consultation with non-member states. The next day Council and Assembly decided that Russia by its own act "had placed itself outside the League of Nations and is no longer a member." This action was historic, being the first expulsion of a League member.

The League Secretariat, on orders from the Assembly, then planned technical assistance to Finland. Military, financial and medical experts were appointed. Many League members stated readiness to help, the League's job being co-ordination and organization. To quote a League official at Geneva, "all the assistance the League can assemble will be placed at Finland's disposal." Before the end of the year eight nations replied to the League note, including Union of South Africa, which released her own war planes to Finland. In general, the nations said they would help all they could. The United States informed the League that although as a non-member nation it could not co-operate with the League, assistance would be given independently to Finland.

Membership and Budgets. Due to withdrawals of members and Russia's expulsion at the end of the year the League was forced to cut its budget drastically during the year, with conse-

quent staff reductions. Between Jan. 1, 1938, and May, 1939, when Spain retired from the League, though retaining World Court membership, sixteen countries had withdrawn or given notice of withdrawal. Thirteen had actually withdrawn. In May it was announced that eighty-nine secretariat posts had been eliminated with an annual saving of 1,415,000 Swiss francs. In September the League cut its staff 80 per cent for the duration of the war, but announced it would remain at Geneva—despite rumors of moving to France—with a Swiss government official to be present at League headquarters to guard against any violation of Swiss neutrality. In October, Poland moved to re-establish its membership in the League. In November it was voted that the League 1940 budget, one-third less than that of 1939, included no provision for salary payment because Russia had contributed \$500,000 or more than one-tenth of the League budget for the preceding year. At the end of the year there were nominally 53 members, but only 42 holding active membership.

Relations with the United States. In February Leland Harrison, United States Minister to Switzerland, delivered a note from the Secretary of State of the United States promising co-operation in the League's technical and non-political activities and praising those activities. The United States sent delegates to the meeting of the ILO in Geneva in June and the Havana Regional Labor Conference in November. H. J. Anslinger, head of the U.S. Bureau of Narcotics, took a prominent part in the meeting of the League Committee on Drugs Traffic in June. A representative of the United States was present at the meeting of the League Committee on Social Questions at Geneva in June.

A notable event was the participation of the League in the New York World's Fair; a pentagonal building 100 feet high containing elaborate exhibits of various phases of the League's work, particularly the non-political activities, was visited by more than a million people. On October 21, League of Nations Day at the Fair, it was announced that the League Exhibit would remain at the Fair in 1940, the necessary funds being raised by a group of Americans.

Miscellaneous Activities. On March 30, priceless Spanish art treasures which had been in the custody of the League during the Spanish Civil War were turned over to a representative of the victorious Franco government. In June, the League turned over to the German Consul a Turkish tapestry presented by Austria which had been removed from the wall on the protest of Turkey on the ground that it pictured a Turkish defeat.

On May 10, Turkey ratified the 1936 convention for the suppression of illicit traffic in drugs. This being the tenth ratification, the convention became effective. Dr. Melville MacKenzie, of the League Health Service, reported increase of disease in China, and stated that the League had sent tons of chloride of lime to disinfect wells in cholera regions, also smallpox vaccines, quinine, and thirty field bacteriological laboratories. The League Advisory Committee on Traffic in Opium and Other Dangerous Drugs discussed drug addiction at its June meeting. (See NARCOTICS CONTROL.)

In June the London Loans Committee representing \$400,000,000 of League loans to Danzig, Hungary, Greece, and Bulgaria criticized Danzig

for suspension of loan service and Greece for failure to conclude a proposed settlement.

A committee of seven, appointed by the Council in May, with Stanley Bruce of Australia as Chairman, reported on measures for expansion of the League's non-political work and co-operation therewith on the part of non-member states. It recommended the setting up of a new central committee for economic and social questions. No action was taken on this report during the year.

The Advisory Committee on Social Questions met in June, Elsa Castendyck representing the United States. It continued its study of the legal position of illegitimate children. The League's Child Welfare Information Center has been gathering material on Child Welfare Work in various countries.

The Communications and Transit Organization held its 22nd meeting in Geneva in June. It has been concerned chiefly with co-ordination of highway, rail and air transport and with cost of transport, particularly of food.

See INTERNATIONAL LABOR ORGANIZATION; LABOR CONDITIONS; INTERGOVERNMENTAL REFUGEE COMMITTEE; REFUGEES.

B. P. ADAMS.

LEARNED SOCIETIES, AMERICAN COUNCIL OF. A Federation organized in 1919 and incorporated in 1924 for the purpose of (1) advancing the interests of the humanistic sciences in America, especially by encouraging, initiating, and promoting research in those studies, and by maintaining and strengthening the relations between the national societies devoted to them, and (2) serving as an agency for the conduct of continued relations between its constituent societies and other American organizations of scholars, on the one hand, and academies and analogous bodies in foreign countries, on the other, through its membership in the International Union of Academies (UAI).

The Council consists of two delegates from each of the following constituent societies: American Philosophical Society, American Academy of Arts and Sciences, American Antiquarian Society, American Oriental Society, American Numismatic Society, American Philological Association, Archaeological Institute of America (q.v.), Society of Biblical Literature and Exegesis, Modern Language Association of America (q.v.), American Historical Association (q.v.), American Economic Association (q.v.), American Philosophical Association, American Anthropological Association, American Political Science Association, Bibliographical Society of America, American Sociological Society, American Society of International Law, History of Science Society, Linguistic Society of America, and the Mediaeval Academy of America.

The Council maintains a large number of committees devoted to specific fields of study; it awards fellowships and grants in aid of publication. The 20th annual meeting of the Council was held in Washington, D. C., Jan. 27-28, 1939. Two Bulletins of the Council appeared during the year: No. 28, a special number devoted to *Indic Studies in America*, in May and No. 29, the *Proceedings Number*, in July. The receipts of the Council in 1939 amounted to \$290,225; its expenditures were \$175,531.

The officers for the year 1939 were: Chairman, William E. Lingelbach; Vice-chairman, William F. Albright, and secretary-treasurer, H. M.

Lydenber. Headquarters were at 907 Fifteenth Street, Washington, D. C.

LEATHER. The United States still holds its lead by an immense margin in leather manufacture. In 1939 it tanned approximately 25 million cattle hides, 46 million sheep and lamb skins, 45 million goat skins, 16 million calf skins and hundreds of thousands of skins of deer, kangaroos, horses, snakes, sharks, etc. But United States take-off of raw hides and skins is inadequate to meet domestic needs, making it necessary to import large quantities. The United States imports 10 to 15 per cent of its requirements of cattle hides, 20 to 25 per cent of its calf and kip skins, about 95 per cent of its goat and kidskins, and about 50 per cent of its sheep and lamb skins.

War accelerated the leather business in the four closing months of 1939, with greater emphasis on the manufacture of heavier leathers for work, walking, and war shoes. Leather is not only a war essential but a war contraband. In war economics it is actually in third position of importance to foodstuffs and minerals. Rationing and conservation of leather was put in effect in Germany, Russia, and England before the close of 1939. Leather enjoys a world free price level and is one of the few items of human use world priced. This served as a check against price speculation in late 1939.

Much scientific progress was made to speed up the time of tanning in 1939. The process of elastication of leather (only three years old) accounted for the production of 25 million pairs of shoes in 1939. This new method begins with tanning, giving more stretch to the finished leather which is then backed with a latex-thread batiste fabric, thus giving a play or stretch to the leather upper material, of considerable importance in both comfort and style. Printed or plated leather, particularly in an alligator or lizard finish, was another success of the year's tanning. A more flexible and durable coating to patent leather was developed by chemical skills as well as a "whiter" white leather for summer wear. Tanners also added a process of sanitization to lining leather as a deodorant and antiseptic. Practically all of these improvements in 1939 leather-making were of American origin, the rest of the tanning world being under economic pressure and thereby restricted in experimentation.

Leather prices moved within a narrow range for the first eight months of the year, ending that period lower than at the start, as shown by the price of cows (the standard index) at 12 cents per square foot in January and 10½ cents for better quality in August. Upon the invasion of Poland the price of light cows jumped to 14 cents during the first part of September. Speculation pushed the price up to 16½ cents and the year closed at 15 cents. Net gain—plus 3 cents from the year opening but 5 cents from April's low. The industry operated on a hand to mouth basis through the year and was more prudent than in many years, with little maladjustment between production and consumption.

As a result of the sharp upswing in shoe production (to approximately 419 million pairs), the consumption of hides in 1939 was the largest in more than twelve years. About 22,650,000 hides were consumed, a gain of 14 per cent compared with 1938 and slightly above the previous high of 22,628,000 in 1936. A feature of the year was the decline in visible stocks to the lowest level since 1890. At the close of 1939 domestic hide stocks

totalled about 12,500,000 hides, equal to six-months' supply. On Dec. 31, 1938, hide stocks were 14,023,000 hides, equivalent to about nine-months' supply.

JOHN F. W. ANDERSON.

LEBANON, REPUBLIC OF. See SYRIA AND LEBANON.

LEDERER, EMIL. A German economist, died in New York City, May 29, 1939. Born in Pilsen, Aug. 22, 1882, he was educated at the universities of Vienna, Berlin, and Munich, and during 1907-10 was secretary of the Netherland-Austrian Workingmen's Organization in Vienna. He was co-editor of *Archiv für Sozialwissenschaft und Sozialpolitik* after 1910. Appointed an instructor in economics at the University of Heidelberg in 1912, his first important publication was also released in that year under the title, *White Collar Workers in the Modern Economy*. After 1922 he was a visiting professor at Heidelberg and during 1923-25 he was visiting professor at the University of Tokyo. In 1931 he was appointed professor of political science at the University of Berlin.

In 1933, after the rise of the Nazis to power in Germany and their expulsion of scholars from the universities, Dr. Alvin Johnson, director of the New School for Social Research in New York, conceived the idea of the "University in Exile." He invited Dr. Lederer to join him as the first dean of the school, in which capacity he served until 1936. At his death he was professor of economics at the Graduate Faculty of Political and Social Science in the New School for Social Research.

His *Principles of Economic Theory*, published in 1922, aimed to show a synthesis of the psychological theory of the Austrian school of Böhm-Bawerk and the objective theory of Karl Marx. *Japan in Transition* (1938), written with his wife, was a study of Japan, and his *Technical Progress and Unemployment* (1938) was prepared for the International Labor Office. He was a contributor to *The Encyclopedia of the Social Sciences*.

LEE, FREDERIC SCHILLER. An American physiologist, died in Columbia, S. C., Dec. 14, 1939. Born in Canton, N. Y., June 16, 1859, he was educated at St. Lawrence University (A.B., 1878; A.M., 1881; LL.D., 1918); at Johns Hopkins University (Ph.D., 1885), and at the University of Leipzig (1885-86). Upon his return from abroad he joined the faculty of St. Lawrence as an instructor in biology, and in 1887 he transferred to Bryn Mawr College as an instructor and associate in physiology and histology. He remained there until 1891 when he went to Columbia University. Thereafter he was successively demonstrator in physiology (1891-95), adjunct professor (1895-1904), Dalton professor (1904-20), research professor (1920-28), and professor (1928-38) when he retired on June 30. He was also Jesup lecturer at Columbia in 1911 and served on the University Council during 1913-20. In addition, he was Cutter lecturer at Harvard Medical School in 1918 and Parker lecturer at Union Theological Seminary in 1922.

One of the world's leading physiologists, his talents were utilized by the United States Government during the World War. He was consulting physiologist to the U.S. Public Health Service during 1917-19, for which he made a special mission to Europe to investigate industrial conditions in 1918; and served as executive secretary of the committee on industrial fatigue of the

Council of National Defense and as chairman of the committee on fatigue in industrial pursuits of the National Research Council. From 1919 to 1924 he was senior physiologist with the rank of senior surgeon in the reserve corps of the Public Health Service.

Dr. Lee regarded physiology as primarily a biological science and urged its inclusion among scientific courses of universities. His researches dealt particularly with the physiological properties of muscles, the role of parts of the ear in maintaining bodily equilibrium, industrial physiology, and fatigue, and he was an early advocate of an eight-hour working day. He held membership in the leading scientific organizations: fellow of the American Association for the Advancement of Science; president of the Society of Experimental Biology and Medicine (1908-10), of the Harvey Society (1912-14), and of the American Physiological Society (1917-19). Also, he was president of the New York Botanical Garden during 1923-37 and inaugurated many scientific reforms.

An editor and translator of note, he served on the staff of the *American Journal of Physiology* (1898-1914) and the *Columbia University Quarterly* (1900-20). His own publications include: *Fatigue* (1906) and *The Human Machine in the Factory* (1919), both Harvey lectures; *Scientific Features of Modern Medicine* (1911), and *The Human Machine and Industrial Efficiency* (1918).

LEEWARD ISLANDS. A British crown colony in the West Indies which comprised five presidencies: (1) Antigua, with Barbuda and Redonda, (2) St. Christopher (or St. Kitts), with Nevis and Anguilla, (3) Dominica, transferred to WINDWARD ISLANDS (q.v.) on Jan. 1, 1940, (4) Montserrat, and (5) British Virgin Islands, with Sombrero. Total area, 726 square miles; total population (Jan. 1, 1938, estimated), 142,063. Chief towns (with approximate populations): St. John, the capital on Antigua (10,000); Basseterre, on St. Christopher (8000); Roseau, on Dominica (8000); Plymouth, on Montserrat (2000); Charlestown, on Nevis (1200).

Production and Trade. Sugar, cotton, limes and lime products, oranges, grapefruit, bananas, cocoa, and vegetables were the main products of the colony. Trade (1938): Total imports, £733,645; total exports, £576,886 (sugar £376,348, cotton £81,723, molasses £16,955, limes and lime products £26,678). During 1937, 1753 ships aggregating 6,478,040 tons entered and cleared the ports. The total length of the roads in 1938 was 678 miles.

Government. For 1938, total revenue amounted to £337,547; total expenditure, £331,897. On Dec. 31, 1938, the public debt amounted to £354,500 against which the sinking fund (market value) was £49,749. A governor, who heads the government, was represented in the presidencies of Antigua, St. Christopher-Nevis and Dominica by administrators, and in those of Montserrat and British Virgin Islands by commissioners. The whole colony had a federal executive council, and a general legislative council of 20 members (10 official and 10 unofficial). There was an executive and legislative council for each of the presidencies except British Virgin Islands which had an executive council only. Governor and Commander-in-Chief, Sir G. J. Lethem (appointed October, 1935). See DOMINICA; WINDWARD ISLANDS.

LEEWARD ISLANDS, FRENCH. See OCEANIA, FRENCH ESTABLISHMENTS IN.

LEGAL EDUCATION. See LAW.

LEGION OF DECENCY, NATIONAL. An

organization formed by the Roman Catholic Bishops of the United States at their meeting in Washington, D. C., November, 1933 by which they seek to obtain and maintain fundamental moral standards on the screen. The Committee was composed of the Most Rev. John T. McNicholas, O.P., Archbishop of Cincinnati, chairman; the Most Rev. John J. Cantwell, Archbishop of Los Angeles; the Most Rev. Hugh C. Boyle, Bishop of Pittsburgh; the Most Rev. John F. Noll, Bishop of Fort Wayne; and subsequently, the Most Rev. Stephen J. Donahue, Auxiliary Bishop of New York. In April, 1934, the Legion of Decency was formally inaugurated. Every Catholic was asked to take the pledge of the League:

In the Name of the Father and of the Son and of the Holy Ghost, Amen.

I condemn indecent and immoral motion pictures, and those which glorify crime or criminals.

I promise to do all that I can to strengthen public opinion against the production of indecent and immoral films, and to unite with all who protest against them.

I acknowledge my obligation to form a right conscience about pictures that are dangerous to my moral life. As a member of the Legion of Decency, I pledge myself to remain away from them. I promise, further, to stay away altogether from places of amusement which show them as a matter of policy.

Each year, on the Sunday within the octave of December 8, Catholics in the United States are invited to renew this pledge.

In February, 1936, the Bishops' Committee on Motion Pictures transferred the responsibility for the review and classification of motion pictures to the Archdiocese of New York. The Motion Picture Department of the International Federation of Catholic Alumnae, which had been reviewing motion pictures for over a decade and had, over this period, published a list of "Endorsed Motion Pictures," was officially designated as the reviewing and classifying group for the Legion of Decency.

From October, 1938 to November, 1939, the New York office of the National Legion of Decency reviewed 592 feature motion pictures. Of the pictures reviewed, 529 were domestically produced while 63 were produced by foreign companies. The 63 foreign pictures were in six languages. Of the total number of films reviewed, 324 were rated as Class A—Section I—Unobjectionable for General Patronage; 207 were rated as Class A—Section II—Unobjectionable for Adults; 50 were rated as Class B—Objectionable in Part; 9 were rated as Class C—Condemned. Because of the special problems felt to be involved, two films were placed in a category entitled "Separately Classified."

The Rev. John J. McClafferty is executive secretary of the Bishop's Committee on Motion Pictures and is in charge of the New York office at 485 Madison Avenue, which is carrying on the responsibility for the national list of film classifications.

LEGISLATION. See UNITED STATES; articles on the separate States; AUTOMOBILES; BIRTH CONTROL; FIRE PROTECTION; LABOR LEGISLATION; LAW; TAXATION.

LEHIGH UNIVERSITY. A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866. The university is divided into a college of arts and science, a college of business administration, a college of engineering, and a graduate school with courses leading to the Ph.D. degree. The enrollment for the autumn of 1939 was 1965 classified as 243 arts,

452 business, 1110 engineering, and 160 graduate students. The enrollment for the summer session of 1939 was 666. The faculty numbered 181, including 17 persons on the administrative staff. The endowment amounted to \$7,700,000 and the total income for the year was \$1,163,961. There were 238,000 volumes in the library. During the past year Albert Brodhead bequeathed the University a fund amounting to \$704,000; construction was begun on a new dormitory, named the Henry Sturgis Drinker House and accommodating 130 students; and Mr. E. R. Grace, president of the Board of Trustees, has made provision for a new Recreation Building which will be ready in the autumn of 1940. President, Clement Clarence Williams, B.S., B.S. in C.E., C.E., LL.D., Eng.D.

LEWIS, J(AMES) HAMILTON. An American Senator, died in Washington, D. C., Apr. 9, 1939. Born in Danville, Va., May 18, 1863, he was educated at Houghton College, Ga., the University of Virginia, and studied law in Savannah. Admitted to the bar in 1882 he moved to Washington Territory in 1884, where he began the practice of law. He was elected to the Territorial Senate in 1886, made an unsuccessful bid for the governorship in 1892, and in 1896 was elected congressman-at-large. He was the author of a resolution for the recognition of Cuban independence, and served in the Spanish American War with the rank of colonel; he also saw service in Porto Rico and the Philippines (1898-1900). Upon his return to civil life, he failed of re-election, and was an unsuccessful candidate for senator (1894; 1899) and vice president (1896; 1900). In 1903, President McKinley named him as an aide to the Joint High Commission which settled the Alaskan Boundary Dispute.

Lewis removed to Chicago in that year, and in 1905 became city attorney and corporation counsel, serving until 1907. He was an unsuccessful candidate for Governor of Illinois on the Democratic ticket in 1906, but in 1913 he was elected to the U.S. Senate, holding office until 1919 when he failed of re-election. As Democratic whip, he was a consistent supporter of the President. He represented the Senate in London to execute treaty laws for safety at sea, and in 1918 was a special commissioner of the United States for the War Department and the President and served in France under Generals Pershing and Bell. Subsequently, President Wilson offered him the ambassadorship to Belgium, which he refused.

In 1920, Lewis was a candidate for the vice presidential nomination and also ran for the governorship of Illinois, but was defeated. He retired to the practice of law, and in 1923 represented American interests in the Turkish oil fields and in the following year participated in the negotiation of a \$28,000,000 loan to Mexico. As an opponent of Prohibition Lewis was elected to the Senate in 1931, and was re-elected in 1937 for the term ending in 1943. Again appointed Democratic whip, he was a firm supporter of the Administration except on the St. Lawrence seaway pact with Canada, which he opposed, and on the prepayment of the soldiers bonus, which he advocated. He was a firm believer in "isolationism," and his last speech in the Senate, Jan. 25, 1939, was in opposition to the lifting of the arms embargo on Spain. Senator Lewis was a member of several important Senate committees, including expenditures in executive departments (chair-

man), District of Columbia, foreign relations, military affairs, and rules.

Senator Lewis was the author of *Two Great Republics—Rome and the United States* (1913), and, with A. H. Putney, *Handbook on Elections* (1912), and, with T. C. Spelling, *Treatise on the Law Governing Injunctions* (1926).

LIAONING. See CHINA under *Area and Population*.

LIBERIA. A Negro republic on the west coast of Africa. Area, about 43,000 square miles; population, estimated at from 1,000,000 to 2,500,000. Of the total population, about 60,000, including some 12,000 Afro-Americans, residing mainly along the coast, may be considered civilized. Europeans and Americans in Liberia number about 250. Capital, Monrovia (pop. about 10,000). English is the official language.

Education and Religion. There were in 1938 70 government and 80 mission schools with about 10,000 pupils, besides two colleges at Monrovia (one government and one Methodist) and a Methodist vocational school at Kakata. The indigenous tribes are mainly pagan or Mohammedan, except for some Christian converts. The Afro-Americans are Protestant Christians.

Production. Native coffee, cacao, cotton, piassava fibre, palm oil, palm kernels, kola nuts, rice, oil seeds, iron, copper, and gold are produced in small quantities. The Firestone Rubber Company's 1,000,000-acre concession employed nearly 12,600 natives in 1939; rubber production was 4750 long tons. Rich forest, agricultural, and mineral resources await exploitation.

Foreign Trade. Imports in 1938 totaled \$2,242,000 (\$1,958,000 in 1937); exports, \$1,990,000 (\$2,029,000). Values of the chief exports in 1938 were (in 1000 Liberian dollars): Rubber, 1099; palm kernels, 444; coffee, 192; piassava, 176; gold, 50. Trade was mainly with the United States, United Kingdom, and Germany.

Finance. The 1939 budget called for expenditures of 968,000 Liberian dollars, including \$250,901 for interest and amortization of the public debt. Estimated actual 1938 revenues of \$875,000 produced a surplus of \$68,000. On Aug. 31, 1938, the total debt was \$1,943,794 (external, \$1,632,000). The Liberian dollar was fixed at \$4.80 to the pound sterling in 1937 and 1938.

Communications. There are no railways and only about 180 miles of roads (1939). A bus line on the main road from Monrovia to the interior was established in 1939. The rivers and, in the interior, porters are the chief means of transportation. A French weekly air service connects Monrovia with Dakar, Senegal, and Pointe-Noire, French Equatorial Africa. Vessels entering the ports in 1937 numbered 700, of 1,792,455 gross tons. Radio stations at Kolahun and Tohien in the interior were installed in 1939.

Government. The Constitution is modeled on that of the United States. Suffrage is restricted to Negroes owning land. The True Whig Party, dominated by a small oligarchy of Afro-American families at Monrovia, has controlled all branches of the government since 1878. President in 1939, Edwin Barclay, inaugurated for a second term (of eight years) Jan. 6, 1936.

History. It was announced in Washington, June 17, 1939, that the Liberian and United States governments had exchanged notes granting each other's citizens reciprocal rights to establish and operate air services to their respective territories. The way was thus opened for the future extension

of American air lines to the west coast of Africa. Conforming to its new "pay as you go" policy, the Barclay Government in 1939 met payments on the funded debt regularly and promptly. The Treaty of Friendship, Commerce and Navigation between the United States and Liberia, signed Aug. 8, 1938, went into effect for five years with exchange of ratifications on Nov. 21, 1939. On August 21 a United States-Liberian conciliation treaty was signed at Monrovia.

LIBRARY ASSOCIATION, AMERICAN.

The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service, and librarianship. In 1876 when it was organized its membership was 103, in 1939 it was more than 15,500. The activities of the Association are carried on by its officers; by more than 70 committees and boards, comprising hundreds of voluntary workers, engaged in studying such problems as the extension of library service, library administration, special libraries such as those in hospitals, work with the blind and with the foreign born; and by the members of the headquarters staff, who numbered 75 in 1939.

The Association issues various books and pamphlets for libraries and in the interest of library progress and education generally. Among the 1939 publications: *American Librarianship from a European Angle*, by Wilhelm Münthe, contrasts American and European practices; *The Library of Tomorrow*, ed. by Emily Miller Danton, presents inspirational yet practical views of the library of the future; *Hospital Libraries*, by Edith Kathleen Jones, guides librarians in the operation of hospital library service; *College and University Library Buildings*, by Edna Ruth Hanley, exhibits detailed photographs and floor plans for 42 recent library buildings and offers comments and discussions of essentials; and *Personnel Administration in Public Libraries*, by Clara W. Herbert, discusses the personnel factors involved in developing a high-quality staff which contribute to effective library service. Two books are of particular interest to college and university libraries: *Vitalizing a College Library*, by B. Lamar Johnson, relates how the Stephens College Library was made more valuable to the college and its students; and *Teaching with Books, a Study of College Libraries*, by Harvie Branscomb (published jointly with the Association of American Colleges) reveals the extent to which the efforts of the college library are integrated with those of the institution as a whole. New editions of three important library aids were published during the year: *The Library in the School*, by Lucile F. Fargo, third and enlarged edition of the only basic book in the field; a completely revised second edition of *Basic Reference Books*, by Louis Shores; and a second edition of the *Code for Classifiers*, by William Stetson Merrill. In addition there have been books and pamphlets on subjects such as archives and libraries, and floors and floor coverings, and a variety of book lists.

Four periodicals are also issued by the Association: *Bulletin of the American Library Association*, a monthly which includes the annual reports, the conference proceedings, and the yearly handbook; the *Booklist*, published semi-monthly as a guide to the selection and purchase of current books; the *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by can-

vassing agents; and the *Journal of Documentary Reproduction*, a quarterly review of the application of photography and allied techniques to library, museum, and archival service.

A new quarterly, entitled *College and Research Libraries*, will be undertaken in 1939-40 for the Association of College and Reference Libraries, a section of the A.L.A.

At the 61st annual conference, held in San Francisco, June 18 to 24, 1939, with about 3000 librarians present from not only the United States and Canada but also the Hawaiian Islands, Venezuela, Brazil, Chile, Colombia, Mexico, Union of South Africa, Costa Rica, Norway, Eire and England, the Association announced four awards.

Dr. Herbert Putnam, librarian emeritus of the Library of Congress received the Joseph W. Lippincott Award of a certificate and \$500 for the "most outstanding contribution to librarianship," i.e., the recent completion of the great Library of Congress Annex. The epigram, written by Sinclair Lewis for the award certificate, which was designed by William A. Kittredge, this year's recipient of the Gold Medal of the American Institute of Graphic Arts, reads: "I doubt if I owe more to any of my teachers, even to such masters as Tinker of Yale, or to any editor or critic than to the several librarians who have shown so joyous a zeal in encouraging me to use their libraries. The keepers of books are the unarmored keepers of civilization." Dr. Louis R. Wilson, dean of the Graduate Library School, University of Chicago, received the James Terry White medal, given for "notable published professional writing" for his book, *The Geography of Reading*.

The second Caldecott medal, awarded for the most distinguished American picture book for children published during the preceding year, was presented by the Section for Library Work with Children and the School Libraries Section of the Association to Thomas Handforth, for his illustrations of *Mei Li*. The sections also presented the eighteenth Newbery Medal, which is awarded for the most distinguished contribution to children's literature published during the preceding year, to Elizabeth Enright for her book, *Thimble Summer*. Frederic G. Melcher, editor, *Publishers' Weekly*, is the donor of these two medals.

During the conference an honorary membership in the Association was conferred on Dr. John H. Finley, editor emeritus of the *New York Times*, who "has worked actively for the betterment of library and educational opportunities"; the "Library's Bill of Rights" was adopted; a resolution was passed requesting that the new low postage rate include all books, indexes, and bibliographies; a statement of policy regarding gifts and bequests to libraries was adopted; and a lacquered casket was received from the Library Association of China in appreciation of some 20,000 volumes sent by American libraries to the war-torn libraries of Chinese Colleges and Universities.

Officers elected for 1939-40 were: President, Ralph Munn, Public Library, Pittsburgh; first vice president and president-elect, Essae M. Culver, State Library Commission, Baton Rouge, La.; second vice president, Donald Coney, University of Texas Library, Austin; and treasurer, Matthew S. Dudgeon, Public Library, Milwaukee, Wis. The 1940 conference will be held in Cin-

cinnati, May 20 to June 1 and the midwinter meeting December 27 to 30, 1939, in Chicago.

During the 1938 midwinter meeting held in Chicago, December 27 to 30, with a record attendance of 862 librarians present, a federal depository library survey was approved; a new microprint process, which would print a 300 page book in a leaflet of three pages, was discussed; a *Code of Ethics for Librarians* was adopted; the *Classification and Pay Plans for Municipal Public Libraries* was approved; the *National Plan for Libraries* was revised; the A.L.A. reorganization plan and the Federal Aid Bill were discussed; President Roosevelt's order reducing the postal rate on books was commended; and the Carnegie Corporation's appropriation of \$10,000 toward support of a program of republication of out-of-print books in demand was acknowledged with appreciation.

LIBRARY ASSOCIATION, THE. An organization of libraries and librarians throughout the British commonwealth of nations, founded in 1877 and incorporated by Royal charter in 1898. Its primary objects are: To unite all persons engaged or interested in library work by holding conferences and meetings for the discussion of bibliographical questions and matters affecting libraries; to promote the better administration of libraries; to promote whatever may tend to the improvement of the position and qualifications of librarians; and to hold examinations in librarianship, and to issue certificates of efficiency. It maintains a professional register of more than 2000 qualified persons, classified as Fellows (F.L.A.) and Associates (A.L.A.); candidates for senior positions in libraries are selected from among those who have been elected to Fellowship or Associateship. The School of Librarianship at the University of London is conducted under the joint auspices of the University and of the Association. Among the Association's publications are: *The Library Association Record*; *The Library Assistant*; *The Library Association Year Book*; *The Year's Work in Librarianship*; and *The Subject Index to Periodicals*. The President elected for 1939 was Mr. Arundell Esdaile, M.A., Litt.D., F.L.A., Secretary of the British Museum. The Secretary is P. S. J. Welsford, F.C.I.S. Headquarters are at Chaucer House, Malet Place, London, W.C. 1, England.

LIBRARY PROGRESS. Continued progress of libraries has been noted during the year with the extension of library facilities to those previously without this service, the furtherance of the project for federal aid to libraries, the development of plans in the state for the use of state aid grants, the enactment of certain state legislation benefiting libraries, the greater coordination of effort among the many groups interested in libraries and the adoption of three important official library pronouncements—the revised *National Plan for Libraries*, the new *Code of Ethics for Librarians*, and the *Library's Bill of Rights*.

There were about three million less people in the United States in 1939 without library service than in 1934. More than 42 million, or 34 per cent of the population, however, are still without this essential educational service. Rural people constitute 91.8 per cent of the people without library service. This is 71.9 per cent of the entire rural population of the United States. Out of over 3000 counties, there are still 897 without a single library as compared with 1000 in 1934.

Only 40 cities of over 10,000 population lack public libraries. Recent statistics indicate that in 1937-38 the book stock of free public libraries in the United States was 106,772,777 volumes, with a circulation of 403,829,386 books. The expenditures by these libraries was \$51,594,137, which equals 42 cents per capita based upon the total population of the United States. Statistics of public libraries by states will be found in the *A.L.A. Bulletin*, July, 1939, for selected groups of public libraries, in the *A.L.A. Bulletin* for April, 1939, and for selected groups of college, university, and high school libraries, in the *A.L.A. Bulletin* for February, 1939. Progress and statistics of Canadian libraries were covered in *The Survey of Libraries in Canada, 1936-38*, issued by the Dominion Bureau of Statistics in 1939, and "Whither Canadian Libraries" (*A.L.A. Bulletin*, July, 1939).

Librarians and friends of libraries again supported in the first session of the 76th Congress the recommendations of President Roosevelt's Advisory Committee on Education (see 1938 YEAR BOOK, *Library Progress*). The bill was recommended for passage in the Senate by the Committee on Education and Labor and was introduced in the House but not considered by the Committee on Education to which it was referred. Both bills retain their present status when Congress reconvenes in January, 1940.

See ROOSEVELT LIBRARY.

State Aid. Several Canadian provinces and a third of the states planned legislative campaigns during the year. British Columbia increased its aid for three regional public libraries from \$1000 to \$5000 and Nova Scotia offers \$1 for every \$3 appropriated by local agencies for regional libraries. Arkansas, Ohio, Pennsylvania, and Vermont made or renewed appropriations for large unit libraries ranging from \$12,500 to \$50,000 a year. A regional experiment will be continued in New Hampshire and two regional libraries in Louisiana still benefit from a 1938 biennial appropriation. In an effort to balance the budget, Michigan repealed the appropriating section of its state aid act of 1937 for a continuing annual state aid fund of \$500,000. The failure of state aid campaigns in several states was because of economy but in spite of this, the trend toward this newer type of state aid appears to be established. Four southern states appropriated funds for the purchase of school library books—Louisiana, \$300,000; Georgia, \$150,000; Virginia, \$100,000; and Tennessee, \$70,000. Funds of the last three are to be matched by local funds. Five states and one province (Alabama, Illinois, Iowa, Tennessee, West Virginia, and Nova Scotia) took legislative action toward providing or strengthening official state leadership. New laws or amendments to older legislation were passed by six states and one province (Alabama, Connecticut, Indiana, Montana, West Virginia, Wisconsin, and Nova Scotia) to permit regional or joint county library service.

Objectives of the A.L.A. Library Extension Board for the coming year are: strengthening the state library agencies; more field work in the weaker states; representation at regional meetings; continued emphasis on state and federal aid; and co-operation with all rural agencies and groups.

Adult Education. An increased interest and activity in adult education among librarians has been noted during the year. Several new readers'

advisory services were established in medium-sized libraries and the large cities are extending this service to branches. Leadership in co-ordinating adult education activities is being undertaken by some libraries, and library schools are conducting institutes and adding courses on adult education services of the library. Definite advisory services are being carried out in public libraries in 64 cities and in 6 college libraries. Immediate objectives of the A.L.A. Adult Education Board are: emphasis on an educational objective in adult service; increasing the number of experiments and demonstrations and the compilation of results; more consideration to qualitative tests of service; emphasis on adult educational training in library schools and among librarians in service; and co-operation and co-ordination with other interested groups in this field. The board has sponsored the publication of several books on the subject and articles in professional periodicals.

Library Training and Personnel. Surveys of library personnel and training agencies, in-service training for librarians, co-operation with library schools and other agencies, and the development of state plans for the education and certification of librarians were included during the year in the activities of the A.L.A. Board of Education for Librarianship. A statement on correspondence courses in library science was published by the board in which it stressed the opinion that such courses do not offer adequate instruction in library service, that the professional education of librarians is not adaptable to correspondence study, and that study in residence should be required of all library school students.

Response from library schools to the individual need for some means of assisting librarians in service to continue professional preparation was particularly noticeable. In addition to the institutes regularly conducted by the Graduate Library School, University of Chicago, eight accredited schools sponsored institutes. Several other institutes were also held. Changes in accredited library schools continued to indicate an effort to meet conditions in the field. Through financial necessity, Hampton Institute Library School, a pioneer in the field of development of library service and education for Negroes, was closed in June, 1939.

With the publication of the *Classification and Pay Plans for Municipal Public Libraries*, the A.L.A. Board on Salaries, Staff, and Tenure will prepare plans for libraries in institutions of higher education, school libraries, and county libraries. Other work and studies being undertaken or continued by this board include a model scheme of service for libraries; work with the U.S. Bureau of Immigration concerning the entrance into this country of foreign librarians who wish positions here; cost of living studies in the various sections of the country; and collection of data concerning persons desiring exchanges and libraries with which exchanges can be made for that year.

Gifts, Grants, and Buildings. Gifts of money, manuscripts, and books to libraries have been numerous during the past year. The people of the United States were presented by President Roosevelt with all of his books, papers, journals, and other material collected during his years in public life and with twelve acres of his estate. The Federal Government will assume responsibility for the maintenance and operation of the library housing this collection, which will be built upon

this ground. Private subscriptions make possible the building of the library. In December, 1938, Miss Annie-May Hegeman of Pittsburgh deeded valuable property in Washington to the Library of Congress Trust Fund Board with the suggestion that the income be used toward the maintenance of its staff of consultants. When the property is sold, one half of the proceeds goes to the Smithsonian Institution. A bequest of \$1,000,000 from Dr. John Martin Vincent was received by the department of history of Johns Hopkins University and his entire library was left to the University. A rare library of books, pamphlets, and manuscripts on American history was presented by the late Tracy W. McGregor of Detroit, to the University of Virginia and is housed in the McGregor Room of the University's new library. The University of Louisville Library received the legal papers of Justice Brandeis, upon his retirement. A gift of \$250,000 for the establishment of a fund for book purchases will be presented to Yale Law Library by John A. Hooper of York, Pennsylvania, providing other alumni and friends of the school raise \$750,000. Mrs. George B. Alvord of West Hartford gave \$25,000 to Yale University Library for the purchase of books and manuscripts in the field of American literature. A valuable collection of rare volumes on Venetian history was presented to Connecticut College Library.

Among the notable gifts of money for library buildings are: \$600,000 from various foundations and individual donors for a building at Stanford University to house the Herbert Hoover Library on War, Revolution, and Peace; \$366,000 from Cyrus and Gordon McCormick as an endowment in memory of their father, Cyrus Hall McCormick, for the maintenance of the proposed new Princeton University library building and \$100,000 from Miss Jessie Munger for the same library's treasure room; a gift from Merton L. Miller which will make possible the completion of a \$450,000 building at Colby College, Waterville, Maine; \$50,000 to Bucknell University, Lewisburg, Pennsylvania, from an anonymous donor, toward the construction of a new library; \$30,000 plus land for the building from Mr. and Mrs. Clarence Horace Wickham of Manchester for a library building at Burnside, Connecticut; a new library for Passaic, New Jersey, constructed by Julius Forstmann on the site of his old residence; and \$50,000 from the estate of Arthur LaGrange to the Claverack, New York, Library. Book trucks for county and playground service have been given the Lancaster and Wilkes-Barre, Pennsylvania, Libraries.

A number of new libraries are being constructed with the aid of grants from the Public Works Administration. Among the larger ones are the Toledo Public Library, which will cost about \$2,000,000; University of Alabama, over half a million; Southwest Missouri State Teachers College Library, Cape Girardeau, \$350,000; a building to house the Chattanooga Public and University Libraries, \$300,000; Mason City, Iowa, Public Library, \$350,000; University of Georgia Library, Athens, \$315,000; State College of Education Library, Greeley, Colorado, \$207,000; Central Missouri State Teachers College Library, Warrensburg, \$227,000.

Among grants made by the Carnegie Corporation of New York were University of Denver School of Librarianship, \$50,000; Pratt Institute School of Library Science, \$50,000; University

of Pennsylvania, \$20,000 to finance a study of library resources in the Philadelphia area and the development of a plan to co-ordinate them through a community bibliographic and research center; University of Buffalo, \$17,000, for its unique library of books and manuscripts of modern poetry; grants in aid for advanced study in librarianship, awarded by the A.L.A. Committee on Fellowships and Scholarships to five applicants from the United States and one from Canada; and Montclair Public Library, \$6,000 supplemented by funds from thirty-seven libraries included in a study of cost accounting in public libraries.

The Rockefeller Foundation has made grants of \$60,000 for a three-year project of providing American books for selected popular libraries in Norway, Sweden, Denmark, Finland, Holland, Belgium, Switzerland, France and Great Britain; \$30,000 for a three-year project covering studies and work with Latin America; \$38,600 supplementing previous grants for work on the *Union List of Serials* and varying amounts covering visitors' grants to librarians from foreign countries.

Publications. Additional publications in the library field not listed under *Library Association, American*, include: Thomas R. Adam, *The Museum and Popular Culture* (American Association for Adult Education, 1939); *Bibliographic Index*, a cumulative bibliography of bibliographies, quarterly with annual cumulation, began publication 1938 (H. W. Wilson); Arthur E. Bostwick, *A Life with Men and Books* (H. W. Wilson, 1939); Lester Condit, *A Pamphlet about Pamphlets* (University of Chicago Press, 1939); Dorothy E. Cook and Eva Rahbek-Smith, *Educational Film Catalog* (H. W. Wilson, rev. ed., 1939); Talbot Hamlin, *Some European Architectural Libraries, Their Methods, Equipment and Administration* (Columbia University Press, 1939); James C. M. Hanson, *A Comparative Study of Cataloging Rules*, based on the Anglo-American code of 1908 (University of Chicago Press, 1939); Hilaire and Meyer Hiler, *Bibliography of Costume* (H. W. Wilson, 1939); Carleton B. Joeckel, *Current Issues in Library Administration* (University of Chicago Press, 1939); Andrew D. Osborn, *Prussian Instructions, Rules for the Alphabetical Cataloging of the Prussian Libraries*; translated from the 2d ed. (Univ. of Michigan Press, 1938); Laurence F. Schmeckebier, *Government Publications and Their Use* (Brookings Institution, rev. ed., 1939); Minnie E. Sears, *List of Subject Headings for Small Libraries*, 4th ed., rev. by Isabel Stevenson Munro (H. W. Wilson, 1939); James W. Thompson, *The Medieval Library* (Univ. of Chicago Press, 1939); Douglas Waples, *Investigating Library Problems* (Univ. of Chicago Press, 1939); Douglas Waples and Leon Carnovsky, *Libraries and Readers in the State of New York* (Univ. of Chicago Press, 1939); Martha Wilson, *School Library Management*, 6th ed., rev. and rewritten by Althea M. Currin (H. W. Wilson, 1939); Frederick C. Hicks and Katherine Warren, *Yale Law Library Classification*.

MILDRED OTHMER PETERSON.

LIBYA, lib'y-a. An Italian colony (Cyrenaica and Tripolitania) in North Africa. Area, 677,044 square miles; population (1938), 850,250, including 78,721 Europeans and 771,529 natives, of whom 27,740 were Jews. The chief towns are on

the coast; they are: Tripoli (the capital), 98,861 inhabitants; Bengasi (Benghazi), 48,510; Misurata, 15,000; and Homs (Khoms), 31,000. In the interior there are important caravan stations at Ghadames, Sinauen, Mizda, Murzuq (Murzuk), and Ghat.

Production and Trade. The chief agricultural products are barley, dates, olives, oranges, lemons, almonds, and vegetables. Other important products are salt, sponges, fish, and tobacco. Livestock in the colony (August, 1937): 719,794 sheep, 491,181 goats, 65,970 cattle, 75,678 camels, 58,247 donkeys, mules, and horses. In 1938, imports were valued at \$16,900,000 (in old U.S. gold dollars) and exports at \$3,300,000.

Communications. In 1939 there were 242 miles of railway line and 8342 miles of highways, including the new 1132-mile littoral highway extending from Tunisia to Egypt. Air communications include a daily service, Tripoli-Rome; a thrice-weekly service, Bengasi-Sirte-Tripoli; and a weekly service, Bengasi-Cyrene (Cyrene)-Derna (Derne)-Tobruk. During 1937, 1438 vessels entered the ports of Libya, landing 385,604 tons of freight and 59,039 passengers; 1422 ships left the ports with 66,779 tons of freight and 47,910 passengers.

Government. The budget for 1938-39 was balanced at 462,345,471 lire. On Oct. 25, 1938, the Fascist Grand Council, meeting in Rome, decreed the inclusion of the four provinces of Libya—Tripoli, Misurata, Bengasi and Derna—in the national territory of Italy. A scheme for the resettlement of 80,000 Italians in Libya by the end of 1942 was launched in 1938 (see 1938 YEAR BOOK, p. 360). The program is financed by the Italian Government, provision having been made for appropriations of 150,000,000 lire annually in the 1938-39, 1939-40, and 1940-41 budgets. The land allotted to the emigrants is donated by the government of Libya, together with funds for the establishment of rural centers, roads, aqueducts, artesian wells and other local improvements. Governor-General, Air Marshal Italo Balbo (appointed, November, 1933). See ITALY under History.

LIECHTENSTEIN, lik'ten-shtin. An independent principality between Switzerland and Austria. Area, 65 square miles; population (1938 estimate), 12,000. Vaduz (capital) had 2000 inhabitants (estimated) in 1938. Corn, wine, fruit, wood, marble are the chief products. Main industries are cotton spinning and weaving, leather goods, pottery, and cattle rearing. Swiss currency has been in use since February, 1921, and since January, 1924, Liechtenstein has been included in the Swiss Customs Union. Switzerland administers the posts and telegraphs, and has charge of the foreign interests.

In 1939 revenue was estimated at 2,099,300 francs; expenditure at 1,955,170 francs. (Swiss franc averaged \$0.2287 in 1938 and was quoted at \$0.2244 on Dec. 26, 1939). The constitution of Oct. 5, 1921, continued the monarchy and provided for a Diet of 15 members elected every 4 years. Reigning Prince, Francis Joseph II (acceded July 25, 1938 and acknowledged by the people at the traditional *huldegung* in May, 1939). Administrator, Dr. Joseph Hoop (appointed Aug. 4, 1928). A proposal to join the Reich politically was rejected by 95 per cent of the voters at a plebiscite in 1939.

LIGHTING. See ELECTRICAL ILLUMINATION; ELECTRIC LIGHT AND POWER.

LINDBERGH, CHARLES A. See CANADA under *History*.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. Headquarters, 332 South Michigan Avenue, Chicago, Ill. An organization of business and professional men's clubs, formed in Chicago, Ill., June 7, 1917. The first purely service club in the country. Its purpose, to promote good government and good citizenship, and promote high ethical standards in business and the professions. One active and one associate member admitted from each business or profession, or principal division of such. Starting with 25 clubs, the Association by the end of 1939 had grown to 3,500 clubs and 125,000 members. At the annual convention at Pittsburgh, Pa., July 18 to 21, 1939, these officers were elected: President, Alexander T. Wells, New York City; vice-presidents, Karl M. Sorrick, Jackson, Mich., George R. Jordan, Dallas, Texas, and Edward H. Paine, Michigan City, Ind. The founder of the Association, Melvin Jones, has been secretary-treasurer from the beginning. He is also editor of the official magazine, *The Lion*. The 1940 convention will be held at Havana, Cuba, July 23-25.

LIPMAN, JACOB GOODALE. An American agricultural chemist, died at New Brunswick, N. J., Apr. 19, 1939. Born in Friedrichstadt, Russia, Nov. 18, 1874, he was brought to the United States in 1888, and received his education at the Baron de Hirsch Agricultural School in New Jersey, at Rutgers University (B.Sc., 1896) and Cornell University (A.M., 1900, Ph.D., 1903). Upon graduation from Rutgers, he joined the New Jersey Agricultural Experiment Stations, and in 1901 he became its soil chemist and bacteriologist, heading the first department of its kind in the country. After 1911 he was director of the Station. Also, after 1902, Dr. Lipman was attached to the faculty of Rutgers University, as assistant professor of agriculture (1906-07), associate professor (1907-10), professor of soil fertility and bacteriology (1910-13), professor of agriculture after 1913, and dean of agriculture after 1915. In addition to these duties, he lectured at the universities of Illinois, Cornell, Tennessee, and Nebraska.

A leader in the field of agricultural chemistry, Dr. Lipman founded and edited *Soil Science* after 1916 and was associate editor of *Annales des Sciences Agronomiques* and of the *Archiv für Pflanzenbau*. He was a member of many scientific societies and president of the International Society of Soil Sciences during 1924-27. In international affairs he was no less prominent, being a member of several foreign agricultural academies and a delegate to the General Assembly International Institute of Agriculture held at Rome (1922, 24, 26), to the 3d International Conference of Soil Science at Prague, 1922, to the 4th Conference at Rome, 1924. Also, he was president of the 1st International Congress of Soil Science held in Washington, 1927, chairman of the American delegation to the 3d Congress at Oxford, 1935, a delegate to the 1st International Nitrogen Conference at Biarritz, 1926, to the World Dairy Congress in London, 1928, and to the 5th International Technical and Chemical Congress of Agricultural Industries held in The Netherlands in 1937.

Particularly interested in the conservation and replacement of soil nutrients, his researches in these fields were outstanding contributions to the progress of agriculture, and for his achievements he was awarded the Chandler medal of Columbia University in 1934. Beside numerous technical papers, he wrote *Bacteria in Relation to Country Life* (1908) and *Laboratory Guide of Soil Bacteriology* (1912).

LIPPE. See GERMANY.

LIQUOR PRODUCTION. See ALCOHOLIC BEVERAGES.

LITERATURE, ENGLISH AND AMERICAN. Biography. Carl Sandburg's *Abraham Lincoln: the War Years* was highly praised. Other American Presidents were treated in: vols. vii and viii of Ray Stannard Baker's *Woodrow Wilson*; Henry F. Pringle's *The Life and Times of William Howard Taft*; Oliver Perry Chitwood's *John Tyler*; and Raymond Moley's *After Seven Years*, about Franklin D. Roosevelt. Concerned with other American political figures: *Samuel Jones Tilden*, by Alexander C. Flick; *Fremont*, by Allan Nevins; *Alexander Hamilton*, by David Loth; *Thaddeus Stevens*, by Alphonse R. Miller; *Statesmen of the Lost Cause*, Jefferson Davis and his cabinet, by Burton J. Hendrick; and two autobiographies: *Tar Heel Editor*, by Josephus Daniels, and *My Memoir*, written by Edith Bolling Wilson.

Either *Thoreau*, by Henry Seidel Canby, or *The Letters of Ralph Waldo Emerson*, edited by Ralph L. Rusk, led the list of biographies of American literary people. M. A. De Wolfe Howe published *Holmes of the Breakfast Table*, and Katherine Burton's *Paradise Planters* was about the Brook Farm folk. A group of literary autobiographies included: Louis Untermeyer's *From Another World*; Leonard Bacon's *Semi-Centennial*; and Vincent Sheean's *Not Peace But a Sword*, his life March 1938-March 1939. W. D. Puleston published *Mahan*, and Theodore Jorgenson and Nora O. Solum *O. E. Rølvaag*.

Other Americans provided rich biographies, such as, Bellamy Partridge's *Country Lawyer*; James Peter Zollinger's *Sutter*; John Bakeless's *Daniel Boone*; A. J. G. Perkins and Theresa Wolfson's *Frances Wright*; James Dow McCallum's *Eleazar Wheelock*; Mabel L. Robinson's *Runner of the Mountain Tops*, about Agassiz; Arthur M. Schlesinger, Jr.'s *Orestes A. Brownson*; Joseph Henry Jackson's *Tintypes in Gold*, Western highway robbers; Albert Parry's *Whistler's Father*; William Schack's *And He Sat among the Ashes*, about Eilshemius; George Palmer Putnam's *Soaring Wings*, about Amelia Earhart; Herbert C. Satterlee's *J. Pierpont Morgan*; M. R. Werner's *Julius Rosenwald*; and distinguished autobiographies, as, *The Road to Richmond*, Civil War memoirs of Abner K. Small, edited by Harold Adams Small; *All in the Day's Work*, by Ida M. Tarbell; *Across the Busy Years*, by Nicholas Murray Butler; *Fighting Years*, by Oswald Garrison Villard; *Autobiography with Letters*, by William Lyon Phelps; *A Goodly Fellowship*, by Mary Ellen Chase; *Maud*, the diary of a girl, 1881-95, edited by Richard Lee Strout; *We Pointed Them North*, a cowboy's autobiography, by E. C. Abbott and Helena Huntington Smith; *The Flowing Stream*, by Florence Finch Kelly; *Hollywood Saga*, by William C. De Mille; *A Victorian in the Modern World*, by Hutchins Hapgood; *My Day in Court*, by Arthur Train; *Death of a Yale Man*, by Malcolm Ross;

and *Days of Our Years*, by Pierre van Paassen, a foreign correspondent.

E. K. Chambers' *Samuel Taylor Coleridge* and Lawrence Hanson's *The Life of Samuel Taylor Coleridge: the Early Years*, did a life long neglected among British literary figures. Others included: *Pride and Passion*, about Burns, by DeLancey Ferguson; Townsend Scudder's *Jane Welsh Carlyle*; Lionel Trilling's *Matthew Arnold*; George Paston and Peter Quennell's *To Lord Byron*, letters from women; Arthur Bryant's *Samuel Pepys, the Saviour of the Navy*; *The Letters of William and Dorothy Wordsworth*, edited by Ernest de Selincourt; and *Autobiography*, by A. A. Milne; *I Knock at the Door*, by Sean O'Casey; *My Life*, by Havelock Ellis.

British political figures: David Cecil's *The Young Melbourne*; A. Mervyn Davies' *Clive of Plassey*; two books about George II's queen: *Caroline*, by Peter Quennell, and *Caroline of Ansbach*, by R. L. Arkell; *Charles II*, by Hilaire Belloc. Among other Britishers: A. S. Eve's *Rutherford*, the physicist; A. J. Finberg's *The Life of J. M. W. Turner*; Hiram Bingham's *Elihu Yale*; Kenneth B. Murdock's *The Sun at Noon*, about three 17th century people.

Other biographies included: Thomas Rourke's *Man of Glory* (Bolivar); Fletcher Pratt's *Road to Empire*, Napoleon as rising general; Valerie Pirie's *His Majesty of Corsica*, an 18th century adventurer; Theodore Maynard's *Apostle of Charity*, St. Vincent de Paul; Francis Steegmuller's *Flaubert and Mme. Bovary*; Max Nomad's *Apostles of Revolution*; Catherine Drinker Bowen's *Free Artist*, about Anton Rubinstein; Willard Brockway and Herbert Weinstock's *Men of Music*, from beginners to Stravinsky; Laura Riding's *Lives of Wives*, of ancient great men; Saul K. Padover's *The Life and Death of Louis XVI*; Katherine John's *The Prince Imperial*, Napoleon III's son; Walter Pach's *Ingres*; Lewis Gibbs' *Vanessa and the Dean*, about Jonathan Swift, and Constanca de la Mora's *In Place of Splendor*, an autobiography.

Criticism and the History of Literature.

General works in this field included: Malcolm Elwin's *Old Gods Falling*, English literature from 1887 to 1914; C. S. Lewis and E. M. W. Tillyard's *The Personal Heresy*, a debate; Irwin Edman's *Arts and the Man*; Harry Kemp and others' *The Left Heresy*, an attack; Franklin Walker's *San Francisco's Literary Frontier*; and Ian Forbes Fraser's *The Spirit of French Canada*. About poetry were: Ruth Bailey's *Dialogue on Modern Poetry*; G. Wilson Knight's *The Burning Oracle*, from Shakespeare to Byron; Theodore Spencer and Mark van Doren's *Studies in Metaphysical Poetry*; John S. Diekhoff's *Milton on Himself*. In drama, Mark van Doren published *Shakespeare*; Esther Cloudman Dunn *Shakespeare in America*, performances and influences; and Joseph Wood Krutch *The American Drama since 1918*. William York Tindall did not spare criticism in *D. H. Lawrence and Susan His Cow*, while *Melville in the South Seas*, by Charles Roberts Anderson, showed the sources of the novels. Maurice Evans wrote about G. K. Chesterton.

Drama. Robert E. Sherwood's Pulitzer prize play, *Abe Lincoln in Illinois*, marked a year which also saw two Bernard Shaw plays: *Genevra* and *In Good King Charles's Golden Days*; two G. S. Kaufman and Moss Hart plays: *The American Way* and *The Man Who Came to Dinner*; *The White Steed* and *The Coggerers*, by Paul Vincent

Carroll; *What Say They?* by James Bridie; *The Little Foxes*, by Lillian Hellman; *Kiss the Boys Goodbye*, by Clare Boothe; *The Family Reunion*, by T. S. Eliot; *The Gentle People*, by Irwin Shaw; *My Heart's in the Highlands*, by William Saroyan; *Johnson Over Jordan*, by J. B. Priestley; *American Landscape*, by Elmer Rice; *Skylark*, by Samson Raphaelson; *Rocket to the Moon*, by Clifford Odets; *Dead Heat*, by Robert Vansittart. Anthologies included: *American Folk Plays*, edited by Frederick H. Koch, and *Best Short Plays of the Social Theatre*, edited by William Kozlenko.

Economics. Eli Ginzberg's *The Illusion of Economic Stability* said stability was obtainable under no system, and in *Dividends to Pay* E. D. Kennedy said depression was normal. N. S. B. Gras defended historically *Business and Capitalism*, while seven Harvard and Tufts economists defended government spending in *An Economic Program for American Democracy*. Gustavus Myers wrote about *The Ending of Hereditary American Fortunes*. Depression in rural areas was discussed by T. J. Woofter and Ellen Winston in *Seven Lean Years*, while Omar and Ryllis Goslin exposed small town economy in *Our Town's Business*. Economic histories included: *Steam Conquers the Atlantic*, by David Budlong Tyler, and *The Rise of New York Port, 1815-1860*, by Robert Greenhalgh Albion.

Essays. Max Lerner's *Ideas are Weapons* was largely political, while Irwin Edman's *Candle in the Dark* was political and philosophical. In *Orchard's Bay*, Alfred Noyes spoke much of his garden, and Odell Shepard, in *Connecticut*, praised his state. E. B. White, in *Quo Vadimus? or the Case for the Bicycle*, Whit Burnett, in *The Literary Life and the Hell with It*, and Stephen Leacock, in *Too Much College*, were each humorous about his work. Walter de la Mare's *Behold, This Dreamer* included essays and an anthology of other kinds of writing. Ezra Pound discussed *Culture*, and Christopher Morley published *Letters of Askanse*.

Art. Thomas Craven edited two excellent volumes, with less text than reproduction: *A Treasury of Art Masterpieces*, from the Renaissance to now, and *A Treasury of American Prints*. Similar in plan were Peyton Boswell, Jr.'s *Modern American Painting*; *World Famous Paintings*, edited by Rockwell Kent; *Masterpieces of European Painting in America*, edited by Hans Tietze; *Contemporary Painting in Europe*, edited by Anthony Bertram. John Sloan's *Gist of Art* set forth his own principles. James Thomas Flexner's *America's Old Masters* dealt with West, Copley, Stuart, Peale. Roger Fry's *Last Lectures* considered ancient art. Rita Wellman's *Victoria Royal* exhibited an age's taste. Among discussions of individuals: Gertrude Stein's *Picasso*; Albert C. Barnes and Violette de Mazia's *The Art of Cezanne*.

History. Volumes iv, v, vi, of Arnold J. Toynbee's *A Study of History* were concerned with the breakdowns of civilizations. Otto Neurath's *Modern Man in the Making* likewise covered the world, conveying its information by graphs. Philip Guedalla's *The Hundredth Year* was 1936, in all parts of the world.

The Heritage of America, edited by Henry Steele Commager and Allan Nevins gave the documents. Charles A. and Mary R. Beard's *America in Midpassage* covered the years from 1927. Also in American History: *America's Sil-*

ver Age, by Gerald W. Johnson, (Clay, Webster, Calhoun); *The Incredible Era*, (Harding's) by Samuel Hopkins Adams; some frontier studies: *The Rampaging Frontier*, by Thomas D. Clark; *The Trampling Herd*, by Paul I. Wellman; *The Westward Movement*, by Ina Faye Woestemeyer; *The Old Santa Fé Trail*, by Stanley Vestal; *Whiskey Rebels*, by Leland D. Baldwin. H. C. Peterson's *Propaganda for War*, and Frederic L. Paxson's *America at War* dealt with 1914-18. Also: *The Rise of American Naval Power, 1776-1918*, by Harold and Margaret Sprout; *The Invisible Empire*, the Ku Klux Klan, 1866-71, by Stanley F. Horn; *Latin America*, by F. A. Kirkpatrick.

In European history appeared: volume xii and last of *The Cambridge Ancient History*, edited by S. A. Cook, F. E. Adcock, and M. P. Charlesworth; *The Life of Greece*, by Will Durant; *The Thirty Years' War*, by C. V. Wedgwood; *The French Revolution as Told by Contemporaries*, by E. L. Higgins; *The Manila Galleon*, by William Lytle Schurz, the trade between Spain and the Philippines; *The Romanovs*, by William Gerhardt; *The Fall of the Russian Monarchy*, by Bernard Pares; *The War Behind the War 1914-1918*, the home fronts, by Frank P. Chambers; *The Forgotten Peace: Brest-Litovsk*, by John W. Wheeler-Bennett; *Europe: Versailles to Warsaw*, the background of the present European war, by Ronald Stuart Kain.

British history seemed scanty, but included: volume xi of *The Oxford History of England*, *The Whig Supremacy, 1714-1760*, by Basil Williams; *Traders' Dream*, the East India Company, by R. H. Mottram; *A Cartoon History of Our Times*, by David Low.

Juvenile. Noteworthy children's books included: Kay Boyle's *The Youngest Camel*; W. Somerset Maugham's *Princess September and the Nightingale*; T. S. Eliot's *Old Possum's Book of Practical Cats*; Gertrude Stein's *The World Is Round*; Dan Beard's autobiography *Hardly a Man Is Now Alive*; Eve Garnett's *The Family from One End Street*; Elizabeth Morrow's *A Pint of Judgment*; Madeline Darrough Horn's *Log Cabin Family*; Dr. Seuss' *The King's Stilts*; Fred Schwed, Jr.'s *Wacky, The Small Boy*; Munro Leaf's *Fair Play*; Phil Stong's *Cowhand Goes to Town*; Olive Beaupré Miller's *Heroes, Outlaws, and Funny Fellows*, American; Elinore Blaisdell's *Falcon, Fly Back*.

Novels. Aside from the year's success, John Steinbeck's *The Grapes of Wrath*, about migratory labor, proletarian novels did not abound, but included: Frederic Prokosch's *Night of the Poor* and Pietro di Donato's *Christ in Concrete*. Showing political prepossessions were the anti-leftist *Adventures of a Young Man*, by John Dos Passos, the anti-violence *The Wings of the Morning*, by Edward S. Hyams, the anti-Nazi *Mr. Emmanuel*, by Louis Golding. Regional novels included: John P. Marquand's *Wickford Point*, New England; Du Bose Heyward's *Star Spangled Virgin*, the Virgin Islands; Bernice Kelly Harris' *Purslane*, North Carolina. Thomas Wolfe's *The Web and the Rock* praised America. Dorothy Canfield's *Seasoned Timber* dealt with Vermont.

An oddity was James Joyce's *Finnegans Wake*. Aldous Huxley's *After Many a Summer* dealt with the problem of evil. Millen Brand's *The Heroes* and Dalton Trumbo's *Johnny Got His Gun* concerned war veterans. Ethel Vance's *Es-*

cape and Geoffrey Household's *Rogue Male* were exciting about dictatorships.

Historical novels included: Vardis Fisher's *Children of God*, the Mormons; C. S. Forester's *Captain Horatio Hornblower*, Napoleonic era; Clifford Dowdey's *Gamble's Hundred*, colonial Virginia; Eric Linklater's *Judas*; Lin Yu-tang's *Moment in Peking*, since 1900; H. M. Tomlinson's *The Day Before*, the Edwardian era; Francis Griswold's *A Sea Island Lady*, post Civil War; W. L. River's *The Torguts*, 18th-century folk migration; Chard Powers Smith's *Artillery of Time*, small town about 1850; Stuart Cloete's *Watch for the Dawn*, 19th-century South Africa.

Fantasies included: T. H. White's *The Sword in the Stone* and *The Witch in the Wood*, Arthurian; R. C. Sherriff's *The Hopkins Manuscript*, the end of civilization; Sylvia Townsend Warner's *After the Death of Don Juan*, with modern trimmings. Notable first novels: Richard Llewellyn's *How Green Was My Valley*, Welsh; Brainard Cheney's *Lightwood*, post-Civil War Georgia; David Rame's *Wine of Good Hope*, South Africa.

Waldo Frank's *The Bridegroom Cometh* was philosophical. H. G. Wells' *The Holy Terror* was dictator of the world. Pearl Buck's *The Patriot* concerned a Sino-Japanese marriage. John Masefield's *Live and Kicking Ned* contained adventure. A prize-winner was John Selby's *Sam*. Christopher Morley's *Kitty Foyle*, a love story, was very popular. Louis Bromfield published three novels and some short pieces in *It Takes All Kinds*. Hugh Walpole's *The Sea Tower* was psychological horror. William Faulkner's *The Wild Palms* mixed love and action. Henry Handel Richardson's *The Young Cosima* concerned Richard Wagner's wife. *Uncle Fred in the Springtime*, by P. G. Wodehouse, was humorous. First of Henry Miller's works to be published in America was *The Cosmological Eye*. W. Somerset Maugham published *Christmas Holiday*, and Gene Fowler *Illusion in Java*. George R. Stewart's *Doctor's Oral* was satirical about universities. Elizabeth Bowen's *Death of the Heart* showed the decay of the English middle class. Zona Gale's *Magna* was a love story.

Poetry. Edna St. Vincent Millay's *Huntsman, What Quarry?* returned to her earlier manner. Archibald MacLeish's *America Was Promises* was socially conscious. Kenneth Patchen's *First Will and Testament* was proletarian verse. Delmore Schwartz's *In Dreams Begin Responsibilities* marked the appearance of new talent. Mark van Doren, Robert P. Tristram Coffin, and Laura Riding each published volumes called *Collected Poems*. Theda Kenyon's *Scarlet Anne* was a narrative about Anne Hutchinson. Others included: Stephen Spender's *The Still Centre*; Muriel Rukeyser's *A Turning Wind*; Babette Deutsch's *One Part Love*; Josephine Miles' *Lines at Intersection*; Paul Engle's *Corn*; Eileen Dugan's *Poems*, from New Zealand; Christopher La Farge's *Each to the Other*, a novel in poetry; Herbert Bruncken's *The Long Night*; Reuel Denney's *The Connecticut River and Other Poems*; Sara Henderson Hay's *This, My Letter*; David Morton's *All in One Breath*.

Politics. Democracy versus dictatorship received much attention again this year, shown by: Peter F. Drucker's *The End of Economic Man*, insisting that democracy must create the concept of non-economic man or end; *Democracy*, by

Eduard Benes; *The New Democracy and the New Despotism*, by Charles E. Merriam; *Democracy Works*, by Arthur Garfield Hays, optimistic; *The March of Fascism*, by Stephen Raushenbush; *Dictatorship: Its History and Theory*, by Alfred Cobban; *Revolutions and Dictatorships*, by Hans Kohn; *The Foundations of Democracy*, by T. V. Smith and Robert A. Taft, a radio debate. Concerned with the relations between nations were: Sir Arthur Salter's *Security: Can We Retrieve It?*; Anthony Eden's *Foreign Affairs*; Frederick L. Schuman's *Europe on the Eve*; Hans Speier and Alfred Kähler's *War in Our Time*; Graham Hutton's *Survey after Munich*; G. E. R. Gedy's *Betrayer in Central Europe*; Winston S. Churchill's *Step by Step, 1936-1939*; but most of these were made to seem badly dated by the outbreak of war. The debate over American neutrality was carried on in: *Can America Stay Neutral?* by Allen W. Dulles and Hamilton Fish Armstrong; *The New Western Front*, by Stuart Chase and Marian Tyler; and *Blood Is Cheaper than Water*, by Quincy Howe.

George Catlin, in *Anglo-Saxony and Its Tradition*, and Clarence K. Streit, in *Union Now*, advocated united effort by the British Empire and the United States. Dorothy Thompson's *Let the Record Speak* was day-by-day comment. About Asiatic affairs: John Gunther's *Inside Asia*; Hallett Abend's *Chaos in Asia*; A. Morgan Young's *The Rise of a Pagan State (Japan)*; Edgar Ansel Mowrer's *The Dragon Wakes (China)*.

Separate countries were discussed in: *Mexico Marches*, by J. H. Plenn; *The Mexican Challenge*, by Frank L. Kluckhohn; *No Ease in Zion*, about Palestine, by T. R. Feiwel; *Poland: Key to Europe*, by Raymond Leslie Buell; *Norway*, by Agnes Rothery; *Iceland*, by Vilhjalmur Stefansson; *We Shall Live Again*, about Czechoslovakia, by Maurice Hindus; *The Politics of the Balkans*, by Joseph S. Roucek.

Others included: Felix Frankfurter's *Law and Politics*; Joseph Alsop and Robert Kintner's *Men around the President*; and *The British War Blue Book*.

Religion. Two books gave the documents for comparative religion: *The Bible of Mankind*, edited by Mirza Ahmed Sohrab, which emphasized likeness among nine religions, and *The Bible of the World*, edited by Robert O. Ballou, which emphasized differences in seven. Sydney Herbert Mellone's *The Bearings of Psychology on Religion* said religion arose from frustration, while W. B. Selbie's *Christianity and the New Psychology* attacked the latter's "mechanism." Kenneth Scott Latourette told of the expansion of Christianity in *Three Centuries of Advance, 1500-1800*. Edward Westermarck found dubious morals in *Christianity and Morals. I Believe*, edited by Clifton Fadiman, exposed personal philosophies. Other religious books were: Charles E. Raven's *The Gospel and the Church*; Sir Alfred Zimmern's *Spiritual Values and World Affairs*, the Christian's duty in politics; *The Study of Theology*, edited by Kenneth Escott Kirk; *The New Immortality*, by J. W. Dunne, about non-personal time.

Science. General works included: *The Philosophy of Physical Science*, by Sir Arthur Eddington; *The Social Function of Science*, Marxist, by J. D. Bernal; *Science Today and Tomorrow*, by Waldemar Kaempffert; *Science for the World of Tomorrow*, by Gerald Wendt. Histories

included: F. Sherwood Taylor's *The March of Mind*; A. Wolf's *A History of Science, Technology, and Philosophy in the Eighteenth Century*. Physicians were considered in: James Harpole's *Body Menders*; Harvey Graham's *The Story of Surgery*; Bertram M. Bernheim's *Medicine at the Crossroads*, which advocated reforms in practice. In biology: Earnest Albert Hooton's *The Twilight of Man*, alarmist; Amram Scheinfeld and Morton D. Schweitzer's *You and Heredity*; Joseph W. Bigger's *Man against Microbe*; Caryl P. Haskins' *Of Ants and Men*. Donald Culross Peattie's *Flowering Earth* had to do with botany. In astronomy: Arthur Draper and Marian Lockwood's *The Story of Astronomy*; George E. Frost's *Planets, Stars, and Atoms*. In physics: George Russell Harrison's *Atoms in Action*, and Dayton C. Miller's *Sparks, Lightning, Cosmic Rays. Flash!* by Harold E. Edgerton and James R. Killian, Jr., showed the marvels of high-speed photography.

Short Stories. Katherine Anne Porter's *Pale Horse, Pale Rider* had been long awaited. *Here Lies* were the collected stories of Dorothy Parker. Ben Hecht's *Book of Miracles* was mystical. Kressmann Taylor's single story, *Addressee Unknown*, made a sensation. Noel Coward adventured into the form with *To Step Aside*. Others included: Stephen Vincent Benet's *Tales before Midnight*; Jerome Weidman's *The Horse that Could Whistle "Dixie"*; William March's *Some Like Them Short*; John O'Hara's *Files on Parade*; Irwin Shaw's *Sailor off the Bremen*; Arthur Kober's *Pardon Me for Pointing*; *The Damon Runyon Omnibus*; Rosita Forbes' *These Are Real People*. W. Somerset Maugham's *Tellers of Tales* was a fine anthology.

Sociology. Remarkable case studies of American cities were: *Industrial Valley*, about Akron, by Ruth McKenney; *Holyoke, Massachusetts*, by Constance M. Green; *Five Cities*, Seattle, Omaha, Shenandoah, Birmingham, Louisville, by George R. Leighton. The Federal Writers' Project published interviews given in the middle South, *These Are Our Lives*. Willson Whitman's *God's Valley*, of the Tennessee, dealt also with TVA. Eugene and Arline Lohrke, in *Night over England*, showed the masses' feeling about the Munich crisis.

John Dewey's *Freedom and Culture* and Jacques Barzun's *Of Human Freedom* were philosophical. H. G. Wells' *The Fate of Man* prophesied doom, unless—, and Harry Elmer Barnes' *Society in Transition* was full of warnings and plans. Simon Strunsky's *The Living Tradition* showed what did not change in American life. Gerald Heard's *Pain, Sex, and Time* offered a way out of the world's troubles. Robert S. Lynd's *Knowledge for What?* discussed the place of the social sciences in culture.

About races: W. E. B. Du Bois' *Black Folk—Then and Now*; Herbert J. Seligman's *Race against Man*. About agriculture and rural life: Carleton Beals' *American Earth*, the social effects of land's misuse; O. E. Baker, Ralph Borsodi, and M. L. Wilson's *Agriculture in Modern Life*; Carey McWilliams' *Factories in the Fields*, about migratory labor in California. About prostitution: Hickman Powell's *Ninety Times Guilty*, the racket in New York City; Courtney Riley Cooper's *Designs in Scarlet*. About propaganda: C. Hartley Grattan's *The Deadly Parallel*; and *The Fine Art of Propaganda*, edited by Alfred McClung Lee and Eliza-

beth Briant Lee, an analysis of Father Coughlin's speeches.

Other books were: Carl Crow's *The Chinese Are Like That*; Silas Bent's *Newspaper Crusaders*; Fred Rodell's *Woe unto You, Lawyers!* a gay attack, and *You Americans*, edited by B. P. Adams, American life as seen by 15 foreign-press correspondents.

Travel and Out-of-Doors. Federal Writers' Project guides published this year included: *California; Nebraska; Alaska; New York City; Montana; Kansas; Kentucky.*

About Central and South America: Addison Burbank's *Guatemala Profile*; Vera Kelsey and Lilly de Jonge Osborne's *Four Keys to Guatemala*; Ivan T. Sanderson's *Caribbean Treasure*; Thomas Gann's *Glories of the Maya*; Desmond Holdridge's *Feudal Island*, in the mouth of the Amazon; Erna Fergusson's *Venezuela*; Graham Greene's *Another Mexico*, unfriendly; Alexander Wilbourn Weddell's *Introduction to Argentina*; Felix Riesenbergs's *Cape Horn*.

Christopher Isherwood said *Goodbye to Berlin*, before the Nazis; Nora Waln's *Reaching for the Stars* also dealt with Germany. Erskine Caldwell and Margaret Bourke-White published *North of the Danube*. Roy Alexander's *Cruise of the Raider "Wolf"* was an exciting narrative of 1917.

Paul McGuire published *Australia: Her Heritage, Her Future*, and Agnes Newton Keith's *Land below the Wind* was about Borneo. W. H. Auden and Christopher Isherwood made a *Journey to a War*, the Chinese, and Nym Wales went *Inside Red China*.

Carl Carmer wrote about *The Hudson*, and Desmond Holdridge about *Northern Lights* in Labrador. Edward Ellsberg explained submarines in *Men under the Sea*. Gordon S. Cochrane published *Baseball*.

War. Books explaining the technical aspects of war for the layman, all prepared before the invasion of Poland, made a noteworthy group this year. They included: George Fielding Eliot's *Bombs Bursting in Air*, and W. O'D. Pierce's *Air-War*, about air power; Fletcher Pratt's *Sea Power and Today's War*; Oswald Garrison Villard's *Our Military Chaos*, pacifistic; John C. De Wilde, David H. Popper, and Eunice Clark's *Handbook of the War*; Liddell Hart's *The Defence of Britain*; G. T. Garratt's *Gibraltar and the Mediterranean*.

BENFIELD PRESSEY.

LITHOGRAPHS. See PRINTS.

LITHUANIA, lith'ū-ā'nī-ā. A Baltic republic, the independence of which was proclaimed Feb. 16, 1918. Capital, Vilna (restored to Lithuania by Russia in accordance with the terms of the Russo-Lithuanian mutual assistance pact, Oct. 10, 1939). Provisional capital in 1939, Kaunas (Kovno).

Area and Population. Including the Vilna territory and excluding Memel (ceded to Germany Mar. 22, 1939), Lithuania had an area of 22,964 square miles and an estimated population of 2,879,070 on Dec. 31, 1939. The newly annexed territory of Vilna, with 457,500 inhabitants, comprises 2570 square miles. The population of Memel was 153,793; area, 1100 square miles. About 80 per cent of the population is agricultural. Living births in 1938 numbered 57,951 (22.6 per 1000); deaths, 32,256 (12.6 per 1000); marriages, 20,248

(7.9 per 1000). Estimated populations of the chief cities on Jan. 1, 1939, were: Kaunas (Kovno), 152,000; Memel (Klaipėda), 40,000; Šiauliai, 31,000; Panevėžys, 26,000.

National Defense. Military service is compulsory. On Nov. 1, 1939, the army consisted of 25,775 active soldiers and 287,000 reservists (according to the Adjutant General's Office, Washington, D. C.). The air force comprised 775 men and 70 aircraft. One patrol vessel constituted the navy. Details concerning the Russian military bases in Lithuania are treated below under the section on *History*.

Education and Religion. About 15 per cent of the population was illiterate at the beginning of 1939. School attendance in 1937-38 was: Elementary, 207,173; secondary and high schools, 35,508; university, 3861. (These figures include Memel, where enrollment was 18,465 in elementary and 5555 in secondary and high schools.) Roman Catholics formed 80.5 per cent of the population at the 1923 census; Protestants and Calvinists, 9.5; Jews, 7.3; Greek Orthodox, 2.5. Protestants comprise 91.7 per cent of population of Memel.

Production. About 77 per cent of the working population is engaged in agriculture and 10 per cent in commerce, industry, and transportation. Arable land in 1937 consisted of 6,697,158 acres, of which forests accounted for 2,645,384 acres. Including Memel but not Vilna, the yields of the chief cereals in 1939 were (in metric tons): Wheat, 251,200 (251,300 in 1938); barley, 246,700 (274,000); rye, 653,400 (623,700); oats, 401,700 (420,000). The potato harvest in 1938 was 77,-830,000 bu.; linseed, 1,161,000 bu.; flax, 56,843,000 lb. Livestock statistics for the end of 1938 showed 558,000 horses; 1,193,000 cattle; 1,249,000 swine; 619,000 sheep; and 4,851,000 chickens and geese. The sea fisheries in 1938 yielded 1,700,000 lb. of fish valued at 500,000 lits. Total industrial output in 1938 was valued at 480,000,000 lits, chiefly derived from foodstuffs, textiles, lumber, paper (including chemical wood pulp), footwear and clothing, metals, chemicals, and leather. Production of other industries in 1938 was: Matches, 27,625,000 boxes; alcohol, 1,980,557 gal.; sugar, 20,637 metric tons; tobacco, 1,940,268 lb.; beer, 5,868,336 gal.

Foreign Trade. Total imports in 1938 were valued at 223,600,000 lits (212,700,000 in 1937) and exports at 233,200,000 lits (208,300,000 in 1937). The value of the chief 1938 exports was: Butter, 48,458,700 lits; grain, 21,702,500 lits; swine, 21,257,300 lits; bacon, lard, and other cured and salted meats, 25,132,300 lits. See IMPORTS AND EXPORTS.

Finance. Actual budget returns for 1938 showed total receipts of 366,500,000 lits and expenditures of 366,300,000 lits. Original budget estimates for 1939 balanced at 368,800,000, the largest in the country's history. In consequence of the cession of Memel to Germany, these estimates were reduced by some 27,000,000 lits in June, 1939. The public debt on Jan. 1, 1939, totaled 132,-600,000 lits (internal, 52,485,700). The lit exchanged practically at par (\$0.1693) in 1936, 1937, and 1938.

Transportation. Lithuania in 1938 had 1464 miles of railway line; 20,272 miles of roads and highways (1939), and 1606 miles of waterways (see ROADS AND STREETS). During 1938 the railways carried 4,204,748 passengers and 2,376,182 metric tons of freight, the gross receipts totaling 35,230,699 lits. During the same year, 1544 ves-

sels of 910,819 net registered tons entered the port of Memel.

Government. The original, democratic constitution of Aug. 1, 1922, gave way to a promulgated constitution of May 15, 1928, after the Nationalist Union, or Tautininkai party had established single-party rule, similar to fascism, late in 1926. The constitution of Feb. 12, 1938 declares the state a republic; the head of this republic is a President, elected by the Diet for a term of six years. The President in 1939 was Antanas Smetona (re-elected, Nov. 14, 1938). The legislative body consists of a single chamber, the Diet (or Seimas), which has 128 members, elected by popular suffrage according to the system of proportional representation. While the Nationalist Union continued predominant, the Christian Democrat and People's Socialist parties, previously suppressed, gained representation in the cabinet in 1939, to the number of two members each. The President appoints the Premier and, at the latter's recommendation, the other members of the Cabinet. The other high officers of the State, civil, and military, are also appointed by the President.

HISTORY

Lithuania Strives to Survive. Perils repeatedly beset the independence of Lithuania in 1939. The nation had three neighbors that it feared. Germany sought and presently took Memel, which Lithuania had seized 16 years before. Poland held Vilna and with it a great section of territory wrested from Lithuania, which still dreaded the possibility that Poland might take yet more. Russia was feared, both as wanting to bring independent Lithuania back under its authority and as bent on subjecting the land to communism. Too feeble to do otherwise than submit, Lithuania, by good luck and some degree of address ended the year more populous and greater in extent than at its beginning, rid of one difficult neighbor, Poland, and on at least outwardly good terms with the other two.

The Loss of Memel. German forces occupied Memel on March 23; on the same day the Lithuanian Government signed a treaty ceding Memel to the Reich. For details of the negotiations with Germany and of the proceedings in Memel, to effect German annexation, see MEMEL, under *History*. The outcome had been expected as soon to come, even in the later months of 1938. The loss of Memel's port and industries did considerable economic harm to Lithuania. The country needed access to the sea, and it counted on these industries to provide not only a supply of necessary goods to the agricultural inhabitants of Lithuania but also to provide exports toward balancing the country's imports. While the arrangement with Germany allowed Lithuania the use of a free zone in the port of Memel, Lithuania's government wanted a more secure outlet in its own territory.

In order to have such an outlet, the government, even before the actual cession of Memel, provided in January a grant of 2,000,000 lits toward a harbor at Svetoji, a village on the Lithuanian coast, a few miles north of the Memel boundary. It persisted through later months in the plan of creating a port at this point. Efforts were made to establish in Lithuanian territory industries in the manufacture of products of wood, such as had been carried on in Memel.

Recovery of Vilna. Russian troops, as uninvited collaborators with the German forces overrunning Poland, swept through the eastern part of that country in the early autumn (see EUROPEAN

WAR under *The Russian Front*). They occupied Vilna on September 19 (see POLAND under *History*). Russia at this time sought to improve its military position in the lands adjoining the Baltic. It now promptly made a treaty with Lithuania, transferring to that country the city and surrounding district of Vilna and obtaining for Russia the right to set up and maintain military posts in Lithuania, under stipulations similar to those in other treaties of mutual assistance, made by Russia about the same time, with LATVIA and ESTONIA (q.v.). The Lithuanian treaty was signed October 10. Lithuanian troops occupied Vilna on the 27th. Russian forces entered Lithuania before the middle of November; they came to occupy the posts assured by the treaty and located by supplementary convention. Their number as stated in October did not exceed 20,000.

The acquisition of Vilna brought Lithuania 2570 square miles of territory. This increased the extent of the country by one-eighth. Some 457,500 inhabitants, acquired with this territory, added to the population by somewhat less than one-fifth. The gain in territory was more than twice the previous loss by the cession of Memel; gain in population was thrice the loss from the cession of Memel. For all this substantial increase, Lithuania did not get all that she might have asked. The territory delivered by Russia was only a minor part, in extent, of that which Poland had seized from Lithuania. The price that the country paid for the extension of its sovereignty was heavy in peril and prospective inconvenience. Russian troops became a fixture in Lithuanian territory. Russia acquired the right to demand Lithuanian co-operation against any enemy that might move against Russia through this territory. Lithuania had to accept the possibility of becoming a battlefield in the event of war between Russia and some other great power, such as Germany; and not only this—she faced the outlook of contributing her own soldiers to this battlefield. Lithuanian sentiment, moved by the fresh impression of German aggression, looked on the treaty with Russia as a protection sufficient in value to offset these disadvantages. The possibility of the population's becoming indoctrinated with communism through the activity of Russians established in the country by treaty caused only moderate expressions of worry.

Internal Politics. The cabinet underwent two successive changes. On March 27, soon after the cession of Memel, the Mironas Ministry resigned; Gen. Jonas Cernius headed a partly new cabinet, which took office on the following day. On November 21 Antanas Merkys, in turn, became Premier. He made a concession, quite out of the line of the Nationalist Union's prior course, by including in his cabinet two representatives of each of two outlawed popular parties (see above under *Government*). The government provided asylum for 1500 or more Jews expelled by the Germans from the conquered neighboring Polish province of Suwalki. It was reported at the end of March that former Premier Augustinas Voldemaras, Fascist and pro-German leader long in trouble with the Lithuanian authorities, had made an attempt to seize the government and had been defeated. Voldemaras was allowed, however, to return from exile in August.

The fiscal operation of the government had to meet difficulties peculiar to the year. The cession of Memel's busy seaport town employing 10,000 persons or more in manufacture alone, cut off an important source of public revenue. The govern-

ment had to raise the taxes on real estate by one-fourth, toward the end of May, and to increase the rates of other taxation. In October the acquisition of Vilna put the government in need of further funds with which to take care of a newly acquired region somewhat disordered by military occupation and political change. With this region the care of 50,000 Polish refugees who had crowded into Vilna was said to have fallen on the Lithuanian authorities.

LITTLE ENTENTE. A political and military combination formed by Czecho-Slovakia, Rumania and Yugoslavia in 1920-21 for the common defense of their frontiers against Hungarian revisionist aspirations. With the partition of Czecho-Slovakia in 1938 and 1939, there remained of the Little Entente only the agreement between Rumania and Yugoslavia to aid one another if either was attacked by Hungary. See CZECHO-SLOVAKIA, HUNGARY, RUMANIA, and YUGOSLAVIA under *History*; also 1938 YEAR BOOK, p. 421.

LIVESTOCK. Crop and Livestock reports for the United States indicated ample supplies of feed grains from the 1939 harvest and a carry-over of old corn from 1938, which was the largest on record. There was an increase of about 7 to 8 per cent in the numbers of grain-consuming animals on farms as compared with 1938, although livestock increases in some areas were limited by feed shortages. Much of the increase was in hogs. Although smaller than in 1938, the supply of feed for each animal unit was above the pre-drought average. Range and pastures were below normal in the western states, and west of the Missouri River, where there was drought. There were large movements of feeder cattle and feeder lambs from the western states into the central and eastern Corn Belt where feed supplies were plentiful. Supplies of high protein feeds were somewhat larger in 1939-40, and there was an increased crop of the oilseed feeds, especially of soybean and linseed cake. Livestock-feed price ratios were generally favorable to producers during most of 1939.

Increased production in numbers of hogs, cattle, and sheep continued in 1939, and the indications were that the numbers of both cattle and lambs fed in the 1939-40 feeding season were larger than in 1938-39. Drought causing some feed shortages in the far western states curtailed feed production, but in the Corn Belt, feeding of livestock was heavy. With the improved domestic and foreign demand for meat animals in the fall and winter of 1939, slaughter of hogs was particularly heavy.

The rapid increase in swine production, beginning in the spring of 1938, continued through the

fall of this year. The 1939 spring and fall pig crops totaled 84,000,000 head, which was about 13,000,000 head larger than in 1938, bringing hog production for the United States back to predrought levels. Federally inspected slaughter of hogs in 1939 was over 40,000,000 head, as compared with over 35,000,000 head in 1938. Except for a brief rise in September, the trend of pork prices was distinctly downward, and in December prices reached the lowest levels in about five years. Exports of pork and lard were nearly 40 per cent larger than in 1938, reaching approximately 400,000,000 lb., but in the early 1920's the exports amounted to nearly three times this amount.

Cattle numbers have been increasing since 1937 following the reductions made necessary during and after the drought of 1934. Drought in the western range and Great Plains states reduced feed supplies, and the ranges and pastures were short in 1939. In most other regions cattle numbers increased. Cattle numbers were estimated to have increased about 2,000,000 head in the entire country over 1938. Cattle and calves slaughtered under Federal inspection totaled approximately 9 and 5 million head respectively, about 4 per cent less than in 1938.

Movements of stocker and feeder cattle into the Corn Belt states during the summer and fall were nearly 17 per cent larger than last year, and the largest for this season in 15 years. This was accounted for in part by the drought conditions and a strong demand for feeder cattle in the Corn Belt where feed supplies were plentiful. The trend in prices of slaughter cattle was mostly downward during the first half of 1939. Prices of slaughter cattle rose sharply in early September, but declined again in the last quarter of the year.

The 1939 lamb crop of nearly 32,000,000 head was about 1 per cent smaller than the record crop of 1938. As a result of unfavorable range conditions during the summer and fall of 1938, a larger than normal proportion of the lambs was marketed in feeder condition, resulting in an important decrease in the slaughter supplies of lamb available in the spring and summer of 1939. Total Federal inspected slaughter of sheep and lambs in 1939 amounted to about 17,000,000 head, as compared with over 18,000,000 head in 1938. Short feed in the western states caused some reduction in feeding operations, and shipments of feeder lambs into the Corn Belt were larger and earlier during the fall than in 1938. Prices of slaughter lambs generally fluctuated in a narrow range throughout the year, but were higher than in 1938.

MEAT SLAUGHTERED UNDER FEDERAL INSPECTION IN THE UNITED STATES

| | Cattle | Calves | Hogs | Sheep, lambs |

* Average for 1934, 1935, 1936, 1937, 1938. ^b Beef and veal.

Increased tractor competition, declining prices for work stock, inroads of disease in some sections, plus a high death rate from old age, pointed to a continued decrease in the number of horses and mules on farms in 1939. Colt and mule production continued to show a decline with small highspeed single-plow types of tractors replacing horses on small farms.

International Conditions. The quota restrictions on imports of bacon, hams, and pork from non-dominion countries was suspended by the British Government on Sept. 9, 1939. Provisional maximum prices were set up for bacon, ham, and lard, and the United Kingdom requisitioned 50 per cent of the domestic production for distribution to usual import channels on account of the suspension of Danish exports and the negligible shipments from the Baltic countries. Additional supplies from the United States seemed imminent at one time.

Hog numbers in the British Isles were estimated at 5,333,000 head in the summer of 1939, which was about 40 per cent in excess of the average for the five years preceding the World War. Per capita consumption, as a result of the stimulated domestic production, was estimated at 43.9 pounds in 1938-39. Since the collapse of the Pigs Marketing Scheme in 1936, hog numbers and pork production fell off somewhat, but was still larger than prior to the World War.

Notwithstanding efforts of the British Government to promote the domestic hog industry, Great Britain continued to be the principal market for pork products from the United States. About 48 to 50 per cent of the total supplies for consumption were imported during the past three years, compared with 62 per cent in the years of the World War.

Although the United States was once the largest supplier of this market, the United States had a smaller share in the trade in recent years because of the reduced United States production and because of British restrictions on imports of foreign bacon and ham in effect since 1933. The United Kingdom has also followed a policy of promoting imports from British overseas dominions since 1932. Canada had advanced to second place only to Denmark in supplying the British market during the last several years.

Hog numbers in Germany, including Austria and Sudetenland, in June, 1939, were officially estimated at 25,176,000 head, an increase of 8 per cent over 1938. It was also estimated that hogs were being finished in recent years to heavier weights than heretofore. Increased imports of fresh pork and bacon, as much as 107 per cent to 62,000,000 lb., were reported during the first six months of 1939. Much of the fresh pork imports of Germany originated in Poland and Danzig, with Denmark coming second. There were more than 500,000 head of live hogs imported by Germany during the first six months of 1939, in addition to lard imports of 44,000,000 lb. The principal sources of the more recent lard imports were the neighboring countries of Denmark, Hungary, and Yugoslavia, with fair quantities from China.

Cattle imports into the United States during the first part of the year were more than double the imports of previous years, and prior to September, the year's quota of live cattle was exceeded.

Several of the belligerent and neutral countries of Europe established control measures affecting

imports, exports, production, distribution, and prices of pork products to insure an adequate supply of cured pork and lard under the war conditions. In spite of attempts in recent years in the United Kingdom and Germany to promote domestic production and reduce imports, these countries continue to be dependent on large quantities of pork products from other sources.

The United Kingdom imported large quantities of lard and ham from the United States, and bacon from Denmark and Canada, and prior to the war from Netherlands, Poland, Sweden, and the Baltic States. Quotas for the import of bacon in effect since November, 1932, were removed on Sept. 5, 1939, to offset anticipated reductions in the receipts of cured pork from continental countries. More leniency was also given in decisions rendered on Oct. 20, 1939, regarding imports of American ham, bacon, and lard. Maximum prices with periodic changes for all meats sold in the United Kingdom were established for the protection of English consumers.

Exemptions from import duties on all meats were granted by Germany on November 1, but imports and exports were controlled by trading and buying permits. Prices of both imported and exported pork products were regulated and pork and lard were distributed under a rationing system.

Domestic pork production in France was essentially on a self-sufficient basis in peace times. Import duties on fresh and salt pork were suspended until June 30, 1940, but they continued to be subject to French import-license requirements. National and Provisional Committees for the control of prices were established.

Denmark exports large quantities of bacon to the United Kingdom and live hogs and lard to Germany. An agreement was reached that Germany would not interfere with Danish exports to England with the understanding that the United Kingdom would not interfere with Danish imports of feedstuffs, which permits Denmark to supply Germany with live hogs and lard.

Export and production under control were in the main in operation in other neutral pork producing countries, such as Netherlands, Sweden, Italy, Yugoslavia, Rumania, and Bulgaria. Import restrictions on bacon, ham, and pork in Turkey were removed on Sept. 30, 1939.

Research. Among the varied and diverse lines of endeavor to which research was devoted in the studies of the experiment stations and the U.S. Bureau of Animal Industry, attention was given to the increased use and value of roughages in nutrition, and factors which may modify the nutritive value of the feeds. The California Experiment Station found in studying grasslike plants and broadleaved herbs on the San Joaquin Experimental Range, that most of the species showed a continuous and rather orderly decline in crude protein, silica free ash, calcium, phosphorus, and potassium from early growth to plant maturity, while crude fiber increased with the advance of the season. Pasture fertilization was found by the Louisiana Experiment Station to have an important effect on the hay yield and grazing returns from pasturing. Modifications in the composition of the pastures in addition to the increased yield were concluded to involve sound and economical practices. The Illinois Experiment Station found marked and significant differences in the consumption of forage at different

stages of maturity by steers. Feeding a sub-maintenance ration to pregnant ewes during the winter at the Canadian Experiment Station seriously reduced the amount and quality of the wool produced.

Research in livestock breeding, management, nutrition, and feeding was continued in the U.S. Bureau of Animal Industry. In the search for superior germ plasm, one object was improved, intelligence of dogs, giving special attention to herding ability. Progress was made in the development of methods for estimating lignin and indigestible portions of feeds. Improved methods of assaying vitamin E were developed. The deficiency of this vitamin results in fetal resorption during the gestation period. The major benefit from this vitamin was produced by feeding it during the first half of the gestation period. Different kinds of grasses were found to give variable response in the growth level of rats fed corn and grass. Succulent orchard grass and red top gave a better response than Kentucky bluegrass and Canada bluegrass.

Co-operative meat investigations were continued between the Bureau of Animal Industry and other Bureaus and State Agricultural Experiment Stations with much of the work supervised in the Agricultural Research Center at Beltsville, Maryland. In freezing studies, beef frozen at 20° F. was found to be more tender than meat that had not been frozen. In studies at the Mellon Institute for Industrial Research, ultraviolet irradiation applied at high temperature was found to speed up the time required for ripening beef. In a few days beef was made as tender as that which had been ripened normally for weeks.

Studies on the storage of frozen lamb rib cuts at the Agricultural Research Center showed that although cuts frozen and stored at 0° F. for 168 days were satisfactory, the quality decreased when held for 280 days. Evidently the satisfactory storage period at 0° F. is somewhere between 6 and 9 months if palatable meat is to be produced.

The investigations included many phases of production, breeding, and management of cattle, sheep, and swine. Attention was being given at Beltsville to Record of Performance studies with the several classes of meat and fiber-producing animals. Efforts were made to develop tests of meat animals that would indicate not only producing ability but also the quality of the carcass produced.

Artificial insemination methods with sheep and

horses were carried forward and semen was successfully shipped from Beltsville, Maryland, to Miles City, Montana, and Dubois, Idaho, and several lambs were produced even though sires never saw the dams. See VETERINARY MEDICINE.

GEORGE HAINES.

LIVING COSTS AND STANDARDS.

During the first half of 1939, the cost of living in the United States showed relatively slight change from the situation prevailing during 1938. According to the record prepared by the Bureau of Labor Statistics, a decline of nine-tenths of 1 per cent was registered during the first quarter of the year and a further decline of three-tenths of 1 per cent during the second quarter. Living costs on June 15, 1939, were estimated to be 1.9 per cent lower than they had been on the same date of 1938.

With the outbreak of the European War in September, a sharp increase in the prices of necessities was anticipated by numbers of the buying public who recalled the experience of the previous war. Such an increase did not appear to have materialized to a serious extent, however, by the end of the year. Secretary of Commerce Hopkins, in a year-end statement on conditions in the United States, made the following comment on the relation of the war to domestic living costs:

"Commodity prices, which had inclined to weakness in the first two-thirds of the year, advanced under the impetus of concentrated demand in September. Prices of farm products and foods rose substantially with benefit to purchasing power in rural areas. Industrial raw materials were bid up rapidly and there soon followed price

¹ Covers 51 cities since June, 1920.

advances over a widening range of semifinished and finished goods which gave promise for a time of exercising adverse effects upon consumer purchasing.

"Prompt realization of this fact, and of the extremes to which initial price rises went, tended to halt this adverse development, though it did not entirely prevent all of its manifestations. However, retail food prices and other living costs now are not much changed from the position a year ago and, of course, aggregate purchasing power is considerably higher."

The Cost of Living Index compiled by the U.S. Bureau of Labor Statistics is set forth in Table 1. It is based on reports from 32 large cities with the period 1923-25 taken as an average, or equivalent to 100.

Budget Studies. The division of the Works Progress Administration has evolved a "maintenance budget" for the typical four-person manual worker's family in the United States. This budget affords more than a "minimum of subsistence" to the family, although it is not so liberal as the skilled worker may hope to obtain. In December, 1938, in 31 cities surveyed by the Bureau of Labor Statistics, the average cost of the budget was \$1316 a year, ranging from \$1129 in Mobile, Ala., to \$1440 in San Francisco. This average cost was \$56 more than the average annual cost in 1935, the year in which it was first estimated.

A cost budget for single working women in San Francisco was compiled by the Heller Committee of the University of California, based on San Francisco prices for March, 1938. Total annual living costs for the women in low-skilled, clerical, or sales occupations were put at \$1105, including \$22 in payroll taxes. The largest items were room and board, \$561; clothing, \$157; leisure-time activities, \$85; carfare and savings, \$50 each; care of the person and medical services, \$41 each. The New York State Department of Labor computes annually the cost of "adequate maintenance and protection of health" for working women. The figures arrived at for 1938 were \$1059 for a woman living as a member of a family and \$1160 for a woman living alone.

Expenditures for Maintenance. In its effort to determine what the family of modest means actually spends on living costs, the U.S.

Department of Labor released reports on two extensive surveys during 1939. From a report of 14,469 families dwelling in 42 cities and earning an average of approximately \$1500 annually, it was revealed that an average of \$508 a year is spent for food, \$367 for housing, heat and light, \$160 for clothing, and \$87 on an automobile. An exhaustive study of family living in the city of Chicago covered 2711 families having a median income of \$1860. This survey pointed out that all family incomes in Chicago aggregated \$1,327,000,000 in 1935-36; about one-third of the families earned under \$1,000 while two-fifths had incomes between \$1000 and \$2000. It is of particular interest to note that the families earning less than \$1750 a year operated at a total net deficit. The results of the survey were tabulated in part as in Table 2.

In a study of United States consumer expenditures for 1935-36, the National Resources Committee considered as a whole the 29,400,300 families of two or more persons and the 10,058,000 men and women living alone or as lodgers or servants, thus including over 98 per cent of the total population. The total income of these "consumer units" was \$59,300,000,000, of which about 50 billion, or 85 per cent was spent for current consumption. Of the remainder, nearly 4 per cent was used for gifts, 1½ per cent for taxes, and 10 per cent was saved. Of the current expenditures, food claimed the largest share, 29 per cent of the total income. Housing claimed 16 per cent; household operation and clothing about 9 per cent each; automobile expenditures 6½ per cent; and medical care, 4 per cent. Less than 1 per cent was spent for education.

Food Prices. In all moderate-income budgets the leading item is that of food, toward which as much as a third or even half of the family income is usually devoted. For that reason the trend in food prices is particularly pertinent to the subject of living costs. The table at the top of page 448 lists some 50 important articles of food with the actual retail price in cents for Nov. 14, 1939, together with the price on the corresponding date in 1938. These items are selected from a list published in the *Monthly Labor Review* of January, 1940, the prices representing an average of the reports from 51 large cities.

* Preliminary.

Comparison of North and South. One of the most interesting surveys in the field of living costs in 1939 was one prepared by the U.S. Bureau of Labor Statistics at the request of the Wage and Hour Division to supply information needed in the administration of the Fair Labor Standards Act of 1937. The object of the inquiry was a comparison of the cost required to purchase the same level of well-being for wage earners in the North and in the South. As a basis of comparison, five cities with populations over 10,000 and under 25,000 were chosen in each region. Because of the differences in consumption habits between northerners and southerners, two separate comparisons were made, one based upon typical northern consumption and the other upon typical southern consumption. From the average of the two comparisons, the following general conclusions were reached:

The cost of living in the 5 small southern cities surveyed . . . was found to be 3.1 per cent lower on the average than in the 5 northern cities of the same size. Food prices were virtually the same, and lower housing and fuel costs in the 5 southern cities were partially offset by higher prices for clothing, furniture, furnishings and equipment, and miscellaneous items. It is of interest to note that the difference of 3.1 per cent in living costs between the northern cities as a group and the southern cities as a group is smaller than the differences between some of the cities in the same region. The lowest as well as the highest cost in the 10 cities surveyed was found in the northern group.

The cost of the goods consumed by the average wage earner's family in the North was found to be \$1387; the same goods would have cost \$1374 (1 per cent less) if bought in the South. The cost of goods consumed by the average wage earner's family in the South was found to be \$1075, and those goods would have cost \$1136 in the North. For food, the average northern family spent \$456 and the average southern family \$350. However, the northerner's diet would cost 3.9 per cent more in the South, and the southerner's diet would cost 3.2 per cent more in the North; therefore, no important difference is indicated as to the actual price of the food consumed.

Expenditures for housing averaged \$226 for

¹ Provisional figures. ² British families. ³ Includes rent, furniture, upkeep and equipment, fuel and light. ⁴ Generally includes laundry.

northern families and \$165 for southern families. Local influences on housing costs, however, are apparently more important than any regional factors. Fuel provided the greatest percentage difference of expenditures in the two regions, since the southerners required only half as many thermal units as the northerners. Bituminous coal prices ranged from \$8.31 to \$9 in the South and from \$5.95 to \$10.24 in the North; electricity from 5 to 9 cents per kilowatt-hour in the South and from 4 to 8 cents in the North. The low prices of natural gas in some cities was a variable factor. The northern family spent \$125 for clothes and the southern family \$115; clothing costs were about 2 per cent higher in the South whether calculated on the basis of northern or of southern consumption. Prices for certain articles showed marked variations between regions.

Diets of City Workers. The Department of Agriculture concluded in 1939 a study of diet from 4000 records covering non-relief families earning \$500 to \$2000 a year. The majority of these families spent between 25 and 40 per cent of their income on food, which was almost invariably the largest single item on their budget. Families with average per capita incomes of \$5 to \$6 per week spent an average of \$1.25 to \$1.87 for food, while with incomes of \$8 to \$10, the expenditure was \$2.50 to \$3.12. The diets of fully half the families were found to be in need of improvement according to present-day standards. Quantities of protein and iron were generally sufficient, but not more than half of the families received enough calcium, vitamin B, and vitamin C, and four families out of five received insufficient amounts of vitamin A. At the retail price levels of 1935, an adequate diet could be purchased for \$1.90 to \$2.75 per person, according to the region in which he lived. However, only 30 per cent of the families spending that amount selected good diets. Milk products, fruits, and vegetables were the most serious deficiencies.

Foreign Statistics. The International Labor Office in Geneva collects and correlates information from various countries as to family living expenditures and costs. With few exceptions, these statistics are communicated to the Office by governments or are taken from official publications. It is pointed out, however, that statistical methods vary somewhat among governments and that the figures are not always exactly comparable. Table 3 shows income and expenditures by the average wage earner's family in a number of countries, as reported in the *Year-Book of Labour Statistics, 1939*. (For the value of foreign currencies, see the table under INTERNATIONAL BANKING AND FINANCE.)

LOANS, COMMERCIAL. See BANKS AND BANKING under *Bank Portfolio Policies*.

LOMBOK. See NETHERLANDS INDIES.

LONDON. See ART SALES; GREAT BRITAIN.

LOS ANGELES. See CALIFORNIA; WATERWORKS AND WATER PURIFICATION.

LOUISIANA. Area and Population. Area, 48,506 square miles; included (1930) water, 3097 square miles. Population: Apr. 1, 1930 (census), 2,101,593; July 1, 1937 (Federal estimate), 2,132,000; 1920 (census), 1,798,509. New Orleans had (1930) 458,762 inhabitants; Baton Rouge, the capital, 30,729.

Agriculture. Louisiana harvested, in 1939, 4,193,000 acres of principal crops. Cotton, on 1,130,000 acres, made 750,000 bales (\$33,000,000 in estimated value on the farm); sugar cane (ex-

clusive of cane for sirup or seed), on 238,000 acres, 5,069,000 tons (\$14,193,000); corn, on 1,555,000 acres, 23,325,000 bu. (\$14,928,000); rice, 479,000 acres, 20,597,000 bu. (\$16,066,000); sweet potatoes, 95,000 acres, 6,935,000 bu. (\$4,161,000); tame hay, 321,000 acres, 406,000 tons (\$4,304,000); potatoes, 39,000 acres, 2,106,000 bu. (\$1,580,000).

Manufacturing. Manufacturers' establishments in Louisiana numbered 1684 in 1937 (in 1935, 1611); they employed 76,057 wage-earners (in 1935, 61,664); paid them \$50,203,023 (in 1935, \$44,981,789); produced goods to the value of \$580,839,828 (in 1935, \$433,519,717), and by the processes of manufacture contributed to that value \$199,855,726 (in 1935, \$142,943,088). The refining of petroleum yielded the highest total of products among the classified industrial groups; the refineries' output totaled, in value, \$122,151,945 for 1937. Refineries of cane sugar attained a production of \$75,463,193. Manufactured from cottonseed, a total of oil, cake, and meal valued at \$12,702,413 was produced. The manufacture of lumber and timber products, totaling \$44,496,047, was supplemented by lesser but substantial totals of wood pulp, paper, and products of planing mills. The output of manufactories in New Orleans totaled, for 1937, \$126,508,215.

Mineral Production. According to the Bureau of Mines' current issue of its *Minerals Year Book*, Louisiana produced in 1937 native minerals having a total value of \$182,118,905. Petroleum provided three-fifths of the amount, natural gas three-tenths, and sulphur much of the rest. The output of petroleum increased to about 94,812,000 barrels for 1938, from 90,924,000 barrels, in value \$110,300,000, for 1937. The Cross Lake field, near Shreveport was discovered in 1938, but exploratory drilling for petroleum concentrated chiefly on the coastal area, where wells of exceptional depth were drilled, notably one producing well in the newly discovered Dulac field, which went down 13,260 feet, the greatest distance reached in successful drilling up to 1939. The production of natural gas dropped by about 14 per cent, to 260 billion cu. ft. for 1938, from 315,301 million cu. ft., in value \$53,908,000, for 1937. The output of sulphur, responsive to the pace of industry, slackened in 1938, and production in Louisiana diminished to 328,405 long tons, from 429,602 tons, in value \$7,705,448, for 1937. Salt was produced in 1938 to the total quantity of 958,186 short tons and to the value of \$2,775,384.

Political and Other Events. Suddenly, with little warning the seemingly smooth-running organization of the successors to the power of the late Senator Huey Long flew to pieces in July and brought to grief Governor Leche, Pres. James Monroe Smith of the State University, political leader Seymour Weiss, and many of their associates. The first intimation of change was the announcement, June 22, made by robust young Governor Leche, that he would resign in a few days, because of ill health. Leche next announced (June 24) that President Smith of Louisiana State University had resigned after the discovery of financial irregularities there. Leche himself resigned on June 26, and Lt.-Gov. Earl K. Long succeeded him in office; on the same day a firm of brokers reported that President Smith had attempted to put in their hands bonds of the Louisiana State University to cover indebtedness incurred on a speculative account;

on June 27 President Smith and his wife were missing, and he was accused of having borrowed money from three banks on the security of about \$500,000 of the University's bonds, now found worthless as not having been properly issued; surrendering in Canada, Smith was brought back to Baton Rouge (July 4) to face a State indictment for embezzlement of the University's funds; on July 18 Smith, Weiss and over a score of others were named in Federal indictments charging use of the mails to defraud the University in a transaction involving the University's purchase of the Bienville Hotel at New Orleans. William G. Rankin, the State's Conservation Commissioner, resigned (July 24) at Governor Long's request, in the midst of examination of the conduct of his office as to violation of the State's restrictions on the production of petroleum and seeming discrepancies in accounts covering the building of Geology Hall on the University's grounds. On August 7 ex-Governor Leche was indicted, with Weiss, an employee of the Standard Oil Company of Louisiana, and two other persons in the petroleum business, in Federal indictments charging use of the mails in fraudulent dealings involving transfers of substantial sums in cash and the illicit handling of petroleum in excess of the State's restrictions, in 1936. Director James A. Shaw of the mineral division of the Department of Conservation killed himself, August 20, while waiting to give testimony as to these charges. Weiss and President Smith were convicted in the Hotel Bienville case, September 14, and were sentenced to serve for 30 months in Federal prison and pay fines of \$1000; the trial of Weiss and ex-Governor Leche was set for a date in January, 1940.

The net result of the events of the three months was that Leche was out of office and awaiting trial; his political ally, Weiss, and the head of the State University, Smith, were under prison sentence; the Department of Conservation was under suspicion of having aided lucrative evasion of its own rules for the proration of petroleum; and the plundering of the resources of the State University had been brought to light. Mayor Robert S. Maestri of New Orleans and his political friend Gov. Earl K. Long remained untouched; Maestri had been Commissioner of Conservation before becoming Mayor of New Orleans in 1936, but no disclosures as to the corrupt favors for producers of petroleum in past years brought in his name, while on the contrary, he had won subsequent approval in well-respected quarters for capable performance of the Mayoral duties in New Orleans. Smith, pleading guilty to one of the many State charges against him—a charge of forgery—was sentenced, November 13, to prison for 8 years. He tried to kill himself in his cell on the 16th by severing an artery; his life was saved and no further prosecutions were pressed against him in 1939.

Gov. Earl K. Long and Mayor Maestri now remained the chief survivors of the overthrow. Long, however, had soon to seek re-election as Governor at the State Democratic primary (virtually the electing poll under the single-party system in the State) in January, 1940; and the rapid prosecutions of officials by the Federal authorities had stirred into life appetite for prosecutions and inquiries under the State's own authority, qualified to enter the subject more deeply than at the few points where the incidental application of the Federal law against evading income

taxes or using the mails to defraud had enabled the authorities at Washington to proceed.

The action of two grand juries, one in New Orleans and the other in East Baton Rouge Parish, strengthened demand among citizens for effectual investigation of matters and persons under suspicion. On the grand jury at New Orleans, two members tried, October 9, to read before the Court a petition, signed by seven in all, for the removal of the District Attorney (C. A. Byrne), charged with obstructing inquiry; though the petition was rejected and its two sponsors were arrested by Court order, there followed (October 10) a mass meeting and a second petition for the District Attorney's removal. The grand jury of East Baton Rouge took the course (October 9) of adjourning before the opening of the session of court to which it was to have reported, thus expressing dissatisfaction with the conduct of matters before it by Attorney-General Ellison and the local District Attorney. There followed Ellison's summary removal by Governor Long (October 23) on the ground, quite foreign to immediate issues, that Ellison was holding office illegally. Long appointed a new Attorney-General, L. P. Gardner; individuals then brought suit, October 27, for a court order to compel the District Attorney of Baton Rouge to start court proceedings for the removal of both Governor Long and Gardner.

Officers. Louisiana's chief officers, serving in 1939, were: Governor, Richard W. Leche (Dem., resigned June 26); Lieutenant-Governor and (by succession June 26) Governor, Earl K. Long (Dem.); Secretary of State, E. A. Conway; Treasurer, A. P. Tugwell; Auditor, L. B. Baynard; Attorney-General, David M. Ellison; Superintendent of Education, T. H. Harris.

LUTHERAN CHURCH. The Evangelical Lutheran Church is found in all parts of the world, preaching the Gospel in many different languages. In America alone about twenty-five languages are used in the work of the Church. Luther's Small Catechism is translated into 160 languages. Its manifold character is expressed in various forms of organizations and worship. Doctrinally the Lutheran Church receives and holds the canonical books of the Old and New Testaments as the inspired Word of God, therefore the only infallible rule and norm of faith and life. It accepts the ecumenical creeds and regards the unaltered Augsburg Confession as the correct exposition of the doctrines taught in the Word of God.

In America the Lutheran Church is organized on democratic lines in synods and national church bodies. There are seventeen individual Lutheran Church organizations in the United States. All of them except a few smaller ones have affiliations by which they co-operate with the larger bodies, so that all but 3 per cent are accounted for in the three major divisions—the United Lutheran Church in America, the American Lutheran Conference, and the Synodical Conference. There continues to be a definite progress toward greater

co-operation and solidarity. Several of the major bodies have had commissions at work looking toward a better understanding and ultimate unification. An agreement in doctrine, which was reached by the commissions of the United Lutheran Church in America and the American Lutheran Church in February, 1939, will be submitted to the biennial conventions of these bodies in 1940 for consideration and approval.

Along with this trend toward greater solidarity there was a corresponding movement toward deeper spirituality among all the bodies. Missionary work both at home and abroad received greater emphasis and definite steps were taken to enlist the lay membership in an extensive program of evangelism. Similarly marked progress is noted in the fields of education and stewardship.

Special attention and interest was manifested in the sphere of Christian Welfare in 1939. At the urgent request of the Inner Mission and welfare workers throughout the Church the National Lutheran Council, a common agency of eight Lutheran bodies, established a new department of service, known as National Lutheran Welfare, at 39 East 35th Street, New York City. Dr. C. E. Krumbholz, formerly Executive Secretary of the Board of Social Missions of the United Lutheran Church in America, assumed the direction of the department, June 1, 1939. This service will act as a central clearing bureau for the more than 300 Lutheran Welfare societies in the United States and endeavor to co-ordinate these far-flung activities.

Due to the difficulty of securing an adequate representation on account of the hostilities in Europe the proposed meeting of the Lutheran World Convention in Philadelphia in May, 1940 was called off. A smaller meeting of Lutheran leaders has been suggested in Europe instead. For statistics, see RELIGIOUS ORGANIZATIONS.

LUXEMBURG, lük'sem-bürg. A grand duchy bounded by Germany, France, and Belgium. Area, 999 square miles; population (1938 estimate), 301,000, most of whom profess the Roman Catholic faith. The people speak a Germanic dialect (French is their secondary language). Chief towns: Luxembourg (capital), 57,740 inhabitants; Esch-Alzette, the mining center, 27,517; Diffendange, 15,945; Dudelange, 13,572. During 1937 there were 4514 births, 3555 deaths, and 2486 marriages.

Production and Trade. Agricultural is the occupation of some 32 per cent of the population, the chief crops being oats (41,600 metric tons in 1938) and potatoes (285,600 metric tons in 1938). On January 1, 1938, the country had 108,572 cattle, 147,365 swine, 17,307 horses, 6955 sheep, and 3514 goats. The mining and metallurgical industries are important, the production figures (in metric tons) for 1938 being iron ore (1,450,000, metal content), pig iron and ferroalloys (1,551,000), steel (1,437,000), basic slag (320,000). Seven steelworks and 35 blast furnaces were in operation during 1937. Statistics of trade are included in those of Belgium by reason of the Belgo-Luxembourg Economic Union which came into force on May 1, 1922. In 1938 there were 2558 miles of highways, and 318 miles of railway lines open to traffic.

Government. For 1938, revenue was estimated at 344,356,518 francs and expenditure at 384,458,634 francs. Public debt (Dec. 31, 1937), 697,164,547 francs (Luxembourg franc equals 1.25 Belgian franc). Executive power and the right

to organize the government rest with the Grand Duchess. Legislative power rests with the Grand Duchess and with the Chamber of Deputies (lower chamber) of 55 members (in 1937, 25 Catholics, 18 Laborites, 6 Radical Liberals, 3 Independents, 3 Democrats) elected for a term of 6 years (one-half being renewed every 3 years) by universal suffrage. There is a Council of State (upper house) consisting of 15 members appointed for life by the sovereign. Ruler, Grand Duchess Charlotte (succeeded Jan. 9, 1919); Minister of State, Pierre Dupong (Catholic).

History. The Grand Duchy found itself in a difficult position because of the outbreak of war in Europe during September but, in view of numerous treaties in which Germany, France, and Great Britain are parties and the renewed assurances, given by the belligerents following the start of the current war, that Luxembourg's neutral rights would be fully respected, the country hoped to remain at peace despite the severe economic problems involved. In November the Minister of Finance reported an estimated budget deficit of 16,401,333 francs in 1940 compared with a surplus of 10,000,000 in 1938, 5,000,000 in 1937, and 10,000,000 in 1936.

LYNCHING. Although several anti-lynching bills were introduced before the 76th Congress, none reached a vote, largely because of the open declaration by Senator Connally and other southern Senators that any effort to revive such legislation would result in a prolonged filibuster like that of the preceding year. Senators Wagner, Van Nuys, and Capper introduced on January 19 a bill which retained the main features of the Wagner-Van Nuys bill of 1937; it provided for criminal prosecution of State officers guilty of negligence in protecting persons against lynching mobs and made counties in which lynchings occur subject to civil suits for damage. The new bill, however, included "gangster killings" in the definition of lynching and placed the burden of proof on the party bringing suit rather than on the State officers accused of negligence. In an appended statement the authors of the bill pointed out that, although seven lynchings occurred in the United States in 1938, not one case resulted in conviction, prosecution, or even arrest. Senator Barbour introduced a similar bill which, however, would impose fines against counties only where "wilful" neglect occurs. On July 28, Representative Gavan disclosed that he had obtained the necessary signatures to his petition to force an anti-lynching bill to the floor of the House, but that he would not call the bill up until the next session.

According to statistics compiled by the Tuskegee (Ala.) Institute, three persons were lynched in the United States during 1939, two Negroes and one white. The white man was Miles W. Brown of Panama City, Fla., convicted of killing a store owner, Roy Van Kleeck, for whom he had formerly worked. Brown claimed that he had committed the murder in self defense, in an altercation over his dismissal from the store, but he was found with some \$1300 which it was charged he had taken from Van Kleeck. Outraged because the jury recommended mercy, making a life sentence mandatory, four or five masked men overpowered the jailor at three a.m. on April 1 and seized Brown, whom they shot and left on a country roadside.

Of the two Negroes, one was lynched in Florida and the other in Mississippi. In one case, the charge was the killing of a boy in an automobile

accident and, in the other, an altercation with a man. The Tuskegee Institute reported 18 instances, involving 20 Negroes and five white men, in which lynching was prevented by officers of the law during the year. The three lynchings which occurred brought the total since 1882 to 1292.

LYONS, Rt. Hon. JOSEPH ALOYSIUS. An Australian politician, died at Sydney, Apr. 7, 1939. Born at Stanley, Tasmania, Sept. 15, 1879, he was educated at the University of Tasmania and subsequently entered the department of education there, becoming master of one of the largest Tasmanian schools. In 1909 he entered politics as a Labor candidate for the Tasmanian Assembly. Elected, he served in that body until 1929, acting as treasurer, minister of education, and of railways during 1914-16 and becoming premier of that State in 1923. He served as minister for railways (1923-24) and for mines (1925-28).

After 1929, Lyons was actively associated with Commonwealth politics, being elected to the Australian Parliament. He served as postmaster-general and minister for public works (1929-31) and as acting treasurer (1930-31). In 1931 he broke with the Labor Government over its inflationary policy, and founded the United Australia Party, leading the Opposition to the Government from May to December, 1931. In the elections of Dec. 19, 1931, the new party was swept into office and a few days later the ministry of Mr. Scullin resigned. Called to form a new cabinet, Lyons accepted the Premiership and also assumed the office of Treasurer (held until 1935), and began his program of financial retrenchment and full payment of all governmental obligations. At the end of his first year in office, the budget was balanced, the trade balance improved, and foreign obligations were met or refunded. This was not done without a severe political struggle, and in 1934 the United Australian Party was retained in office, and again in the elections of 1937 the people showed their confidence in the government. Perhaps the most significant development of Mr. Lyons' period of office was the country's remarkable recovery from the grave economic and financial difficulties experienced after 1929. At various times throughout his premiership, Mr. Lyons held the posts of minister of commerce (1932), minister for health and reparation (1935-36), vice-president of the Executive Council (1935-37), and minister for defence (1937). For developments in 1939, see AUSTRALIA under *History*.

Made a Privy Councillor in 1932 and a Companion of Honor in 1936, Mr. Lyons represented Australia at the jubilee celebration of the coronation of George V (1935) and at the coronation of George VI (1937), and was the leader of the Australian delegation to discuss Imperial Trade Questions at London (1935) and to the Imperial Conference (1937). Edinburgh, London, and Aberdeen conferred the freedom of the city upon him.

MACAO, ma-kä'ô. A colony of Portugal in South China. Total area, including the nearby islands of Taipa and Colôane, 6 square miles; population (1938 estimate), 170,000, compared with 157,175 in 1927 census, of whom 3846 were Portuguese, 152,738 were Chinese, and 152,738 were of various nationalities. Trade, chiefly transit, is in the hands of Chinese. In 1938 there were 68 miles of roads. Imports were valued at

£983,258 in 1936; exports at £571,061. (British pound averaged \$4.9709 during 1936). In 1937, 2268 vessels entered and cleared the ports. The budget for 1938 was estimated to balance at 37,-787,517 escudos (escudo averaged \$0.0443 in 1938). In 1939 Pan American Airways used Macao as a secondary airport to Hong Kong, where weather conditions are frequently unfavorable. Portugal governs Macao by virtue of a treaty with China (Dec. 1, 1887). The colony is administered by a governor.

MCGILL UNIVERSITY. A coeducational institution of higher learning in Montreal, Que., Canada, founded in 1821. The enrollment for the 1939-40 session was as follows: Degree students, arts and science, 1113; commerce, 194; engineering, 457; architecture, 22; medicine, 450; dentistry, 59; law, 51; library science, 15; graduate studies, 230; music, 6; diploma students, 75; partial students, 213. At Macdonald College, an affiliated college at Sainte Anne de Bellevue, there were 90 degree students enrolled in the faculty of agriculture; 75 degree students in the school of household science; 44 diploma students in agriculture; 34 in household science; and 188 in the school for teachers. The registration in the French Summer School for 1939 was 102. The number of members on the teaching staff was 554. The endowment amounted to \$20,374,019, while the income for 1938-39 was \$2,013,179. The library contained 394,050 volumes. Principal and Vice-Chancellor, Frank Cyril James who succeeded Lewis W. Douglas on Jan. 1, 1940.

MACHADO Y MORALES, mä-chä'dô ë mö-rä'läs, GERARDO. A Cuban politician, died at Miami Beach, Fla., Mar. 29, 1939. He was born at Camajuani, Santa Clara, Cuba, Sept. 29, 1873. In 1895 he joined the Cuban Army in its final rebellion against Spain and rose to the rank of a brigadier-general. After the War he served in the Rural Guards, and subsequently became president of the Compania Electrica Cubana of Havana, a subsidiary of the Electric Bond and Share Co. Entering politics he was elected mayor of Santa Clara and held that office until the establishment of the Republic. In the elections of 1908 he supported General Gomez and he himself ran for governor of Santa Clara but was defeated. After his election, Gomez appointed him chief of the Cuban Army and later secretary of the interior and inspector general of the Army. In 1910 he resigned and organized the Liberalist-Union Party, ran for governor of Havana, but was defeated. Four years later he reentered the Liberal Party and took part in an unsuccessful revolution after the re-election of President Menocal. He was arrested, imprisoned, and court-martialed, but later released.

In 1920, Machado won control of the Liberal party, and in 1924 he won the nomination for the presidency, being elected Nov. 1, 1924, and inaugurated on May 20, 1925. His campaign program promised an honest, democratic administration and a promise not to stand for reelection, and after taking office he announced the furthering of amicable relations between Cuba and the United States, a vast public works program, and a gradual amortization of the public debt. Until 1928-29, Machado was known as the "best president Cuba ever had," but thereafter he gradually assumed dictatorial powers which led to a reign of terror in that country.

The first dissatisfaction with his rule arose through the amendments to the Constitution ef-

fective in 1928, giving the president a six-year instead of a four-year term and doing away with the right of re-election. On Nov. 2, 1928 he was elected to succeed himself, and thereafter his regime was repeatedly criticized for violations of constitutional rights. His despotism was augmented by the acute economic depression and widespread suffering of the Island in 1930, and only his well-controlled army prevented revolution. From then on his regime was marked by the stifling of all political opposition, strikes, censorship, martial law, murders, etc. The struggle between Machado and his opponents reached its peak in 1933 and the battle raged from January to August. On August 11, the army finally deserted him and on the following day he signed a leave of absence for himself and fled.

After his flight he lived in Montreal, New York, Europe, Dominica, and Bermuda. In 1937 he returned to New York where he was arrested. Extradition proceedings against him were dismissed, however, and he settled in Miami, Fla.

MACHINE DEVELOPMENT. Although the Machine Tool Show planned by the National Machine Tool Builders Association was cancelled at the last moment on account of the war, many new machines had been developed for the exhibition which show many changes from previous models. Not only have capacities and functions been greatly improved but the contours and general appearance have been radically changed in many cases. All the mechanism possible has been enclosed so that many new machines bear little resemblance to their prototypes. There are also many changes in mechanisms and in frame design. And in spite of mechanisms being largely enclosed they are made easily accessible through doors or panels. More machine bases are being made of welded steel plates which in some cases are found to be more satisfactory if combined with parts made of cast iron or steel.

Machine Drives. Motor drives are now incorporated into the machine itself in nearly all cases, the type of motor being selected to suit the requirements of the work. And this in spite of the greater first cost and increased current consumption over group drives for similar machines. The added convenience of the individual motor drive is considered well worth the extra cost involved.

In addition to the main driving motor there are now few machines without smaller, individual motors for performing the various functions such as, feeds, rapid traverse, clamping the cross rail to the housing in planers and boring mills, and pumping oil both for lubrication and for cooling the work and the tools. Multiple spindle drilling machines and others almost invariably now have a separate motor for each spindle.

Speed variation and control are being increased to meet the demand of new cutting tools and different materials. These variations are secured by gear transmission devices, by belts and chains with pulleys in which the diameters of both driver and driven pulleys can be changed, by friction devices, and by hydraulic mechanisms. There is a noticeable increase of the latter in several fields.

Machine spindles are now being driven by hydraulic devices some of which give extremely wide variations of speed. One new hydraulic transmission gives a speed range of from 10 to 3000 r.p.m., which is most unusual. Should this prove as successful as desired it will be very

helpful in the designing of many types of machines.

Machines with a reciprocating movement such as planers, shapers, and slotters are using hydraulic drives very successfully. As a feeding mechanism the hydraulic method has proved most successful in grinding and drilling machines, and is now being applied to lathes and milling machines.

Another adaptation of the hydraulic drive is to be found in the so-called "fluid flywheel" coming into use on a few cars in this country, although not new in England. In fact it has been clamoring for recognition in this country for at least 15 years. It is in reality a hydraulic transmission of the slipping clutch type.

One new application of hydraulics is a control mechanism on the screw feed of milling machines to prevent *backlash* and so make it possible to feed *with* the cutter, or what is known as climb-cutting. This method saves cutters and produces a better finish where it can be used.

Gearing. Gearing continues to receive attention both in design and construction. The demand for gears that will transmit up to 250 h.p. in the transmission of an automobile, and with a minimum of noise, has stimulated designers of both gears and machines for cutting them, as well as the production of steels that have greater strength and wearing qualities than ever known before. Better methods of cutting gear teeth, and of giving them a high degree of finish, have been devised. These finishing methods include shaving and lapping which make the teeth more nearly perfect in shape, in spacing, and in surface finish, all of which reduces noise and adds to the life of gears.

The really new gearing development in tooth design is the Gleason curved tooth bevel gear known as the Zerol tooth. This is a curved tooth with a zero angle to replace straight bevel gear teeth and to give a better and quieter gear which can be substituted for the plain bevel gear without changing the bearing mountings. It is a modification of the spiral bevel gears used in nearly every motor car and truck rear axle drive.

Materials. New steel alloys and alloys of non-ferrous metals give the designer more materials with desirable qualities than ever before. The improvements include greater strength per pound of weight, toughness, hardness, and machineability, which has an important effect on machining costs. In this connection the improvements in both cutting oils and cutting compounds, largely due to the research laboratory work of the oil company chemists, have played an important part. There is also the refined method of cleaning the coolants by centrifugal separators which effects a substantial saving in the grinding wheels used and in the coolant itself. The clean coolant gives a better finish and prevents skin rash on the hands of the workers.

Tools made of new alloys are also reducing production costs. Machining steel has been a stumbling block in the past but some of the newer alloys work here about as well as on cast metals. Standardization of carbide tips for cutting tools has reduced the cost of these tools, which adds to the reduction in production costs. Tools which will cut metals at higher speeds than formerly have led to the re-designing of many machine tools so as to utilize the new cutting alloys.

Stainless steels, formerly machined with considerable difficulty, can now be handled in auto-

matic screw machines and other machining operations, with much the same speeds as other steels. Combining the proper tools with the best coolants for this work gives results that were formerly impossible.

There is also a growing use of such materials as aluminum and magnesium, as well as a wide variety of plastics, all of which present problems in machining. Light weight, which is important in reducing the inertia of rapidly moving parts as well as in airplane construction, make these materials highly desirable in many places. Using the light materials in such reciprocating parts as rams in shapers and slotters, and for lever arms in sewing and similar machines, it has been possible to increase their speed almost beyond belief.

In some work, such as the crank cases of airplane engines, the softness of aluminum sometimes fails to hold studs properly. This is now overcome by a new development known as the Aero thread. Here a helical steel spring is inserted in a specially tapped hole and the inner surfaces of the spring hold the stud. The same plan can be used in connection with plastics although the usual solution for this difficulty is to mold inserts of any desired metal into the plastic form. Plastics are also replacing metals in some fields, a late application being the cover or lid of the trunk in automobile bodies, though not a regular production as yet.

General Changes. Many changes are taking place in various phases of manufacturing. Windowless plants are being tried to secure uniform and better lighting and air conditioning, both adding to production. Men can not only work more easily in an air-conditioned plant but a more uniform product is secured on account of the constant temperature and freedom from dust. Some large plants now bore automobile cylinders in constant temperature rooms.

Lighting is also changing by the introduction of such new methods as fluorescent luminaries, which give a uniformly distributed light and require very little current. Safety work clothes and shoes, as well as goggles, are helping to reduce the number of industrial accidents. Light wave measurement of flat surfaces and of dimensions of parts which must be very accurate, is being used more and more.

Many old operations are receiving great attention. Threads are being ground from the solid stock both for accuracy and on a production basis. Burnishing, tumbling, and plating are now suited to each particular job. Metal parts are being heated by induction coils for hardening in regular production. Wrenches are being made with a torque measuring device to show when bolts are as tight as they should be.

See ELECTRICAL MACHINERY.

F. H. COLVIN.

MACKENZIE, DISTRICT OF. See NORTH-WEST TERRITORIES.

MADAGASCAR. A French island colony in the Indian Ocean Area, 241,094 square miles; population (1936 census) 3,797,936 (including that of the Comoro Islands). Estimated population, 1938, 3,800,000. Chief towns (with 1936 populations in parentheses): Tananarive, the capital (119,823); Majunga (23,684); Tamatave (21,421); Antsirabe (18,215); Tulear (15,180); Diégo Suarez (12,237); Mananjary (11,426); Fianarantsoa (14,740). Education is compulsory

in the primary schools. In 1936 there were 210,973 pupils enrolled in the 1643 schools of all kinds.

Production and Trade. The main agricultural products (with production figures for the 1938-39 season in metric tons) were: Maize (100,000); rice (440,000); coffee (29,500); sugar (12,000); copra (2000); potatoes (36,000 in 1937-38); tobacco (6300 in 1937-38); groundnuts (8200 in 1937-38); cacao (200 in 1937-38). In 1938 there were 6,000,000 cattle, 1,000,000 hogs, and 300,000 sheep in the colony. Forests are rich in cabinet woods, beeswax, raffia, resins, gums, and rubber. Gold exports (1938) totaled 12,699 fine ounces; phosphate production aggregated 6000 metric tons. The colony's imports (1938) were valued at 602,700,000 francs; exports at 819,400,000. (Franc averaged \$0.0288 in 1938.)

Communications. Highway mileage in Madagascar and the island of Réunion was 14,353 in 1938; railways extended 534 miles. There is an automobile service with a network of routes totaling 1375 miles. A regular air service connects Tananarive with Paris. During 1937, 7768 vessels of 4,014,000 tons entered the ports of Madagascar.

Government. The budget for 1938 was estimated to balance at 297,690,000 francs. The government is administered by a governor-general, who is aided by a consultative council. An economic and financial delegation, consisting of 30 French citizens and 24 natives, meets once a year to examine budget proposals and economic questions. In their relations with the government the natives are represented by chiefs. Governor-General, Léon Cayla (appointed Feb 10, 1930).

Comoro Islands. An archipelago, comprising the islands of Mayotte, Anjouan, Grande Comore, and Moheli, forming a region under the general government of Madagascar. The chief imports were cotton fabrics, metals, and rice; the chief exports, sugar, copra, sisal, and vanilla. Area, about 800 square miles; population (1936) 128,608. Capital, Zandzi.

MADEIRA, ma-dé'ra; Port. ma-dá'ra. An administrative district (Funchal) of Portugal consisting of a group of islands (Madeira, Porto Santo, and three uninhabited islands) in the Atlantic, west of Morocco. Area, 314 square miles; population (1930 census), 211,601. Funchal (capital), on the island of Madeira, had 31,352 inhabitants; Ponta do Sol, 6190; Machico, 8619. Wine, cane sugar, and bananas are the main products. The prosperity of the islands depends on the tourist traffic. There are about 160 miles of roads.

MAGNETISM. See PHYSICS.

MAHÉ See FRENCH INDIES

MAINE. Area and Population. Area, 33,040 square miles; this included, in 1930, water, 3145 square miles. Population by census of Apr. 1, 1930, 797,423; by Federal estimate for July 1, 1937, 856,000; by census of 1920, 768,014. Portland had (1930) 70,810 inhabitants; Augusta, the capital, 17,198.

Agriculture. Maine harvested 1,357,000 acres of principal crops in 1939. Potatoes, from 170,000 acres, totaled 38,250,000 bu. (estimated value, \$26,775,000); 1,005,000 acres gave 918,000 tons of tame hay (\$7,528,000); oats, 121,000 acres, yielded 4,598,000 bu. (\$2,023,000); 900,000 bu. of apples gathered for market had an approximate value of \$765,000.

Manufacturing. In 1937 the manufacturing establishments in Maine numbered 1171 (in 1935, 1189); employed 75,464 wage-earners (in 1935, 68,603); paid them \$72,263,133 (in 1935, \$58,026,987); produced goods, inclusive of goods used by other manufacturers in the State, to the value of \$348,636,096 (in 1935, \$271,730,779); and contributed to this sum, by their processes, \$151,110,521 (in 1935, \$117,215,565). About one in eleven of the population worked for factory wages in 1937. Paper, boots and shoes, woven cottons, and woolen fabrics made up about half of the value of manufactured products; all four were made for markets outside the State, thus bringing money into Maine. Paper-making employed 8023 wage-earners in 1937, paid them \$10,566,722 totaled \$70,084,878 in output, and contributed to that sum, by manufacture, \$27,978,989. The subsidiary industry of pulp-making from wood (chiefly) and fibre, while providing material for the paper-makers, was separately classified in the U.S. Census of manufactures; its output of 1937, \$28,890,516, presumably in great part became material for Maine's paper-making industry and thus reappeared in the value of the paper product. The pulp-making wage-earners, 3356, and their wages for 1937, \$4,458,058, were, however, additional to the corresponding totals in the paper-making group; and paper-making and pulp-making combined paid more wages than any other classification of manufacturers. One other industry surpassed them in number of wage-earners: the manufacturers of boots and shoes employed 13,605; to these was paid \$10,910,203; and the output of boots and shoes for 1937 totaled \$42,568,005. Makers of woven cottons employed 9812 and produced in goods \$28,937,439. Makers of woollens employed 6639 and attained, in output, \$28,409,949.

For 1937, Portland's manufactures totaled \$26,793,410; those of the twin cities of Lewiston and Auburn were: Lewiston, \$25,692,593 (largely textiles) and Auburn, \$14,551,370 (largely shoes). The manufactures of Biddeford totaled \$19,693,019.

Education. For the academic year 1937-38, the last for which complete data on the public schools in Maine had been issued, the State's population of school age (from 5 years to 21) was reported as 260,394. The year's enrollments of pupils in all the public schools totaled 172,286; this comprised 136,681 in the elementary studies and 35,605 in high schools. The annual total of expenditure for public-school education was \$10,523,535. The greater part of this sum went to pay the 4745 teachers in elementary positions their salaries for the year, averaging \$792.97, and to provide 1292 high-school teachers' pay at the average rate of \$1338 18.

Legislation. The regular biennial session of the Legislature, meeting in January and closing late in April, enacted a general appropriation bill carrying a total of \$20,730,000 for the expenditures of the State government during the following two years. It shaped a measure, at the suggestion of Governor Barrows, to require municipalities to contribute to old-age assistance and in return shifting to them a share of the money provided for highway work. The exhibition of moving pictures on Sunday was made lawful in the State, but a proposal to put a special tax on Sunday movies met with defeat. One hour a week of absence from public schools was made allowable for children on condition that their parents sent

them to places of worship or other suitable places to receive moral instruction during the granted time. A bill permitting the re-trial of a case on the defendant's giving the grounds of new evidence was passed, but the Governor vetoed it on advice that the courts could already entertain a writ of error. Measures were enacted to create a State boxing commission for the regulation of commercial pugilistic bouts and a board to set minimum wages for women and children employed in the packing of fish.

A statutory Passamaquoddy District Authority was created and charged with the function of directing the construction of the tidal waterworks and other means of electric generation previously started on Passamaquoddy Bay by the Federal Government and abandoned when Congress ceased appropriating therefor; the move fell in with efforts in Washington to restore the undertaking to the list of public works defrayed by the Government.

Political and Other Events. Lewis D. Barrows began his second term as Governor January 5. He proposed to the Legislature the course, which it later approved, of transferring to the municipalities a part of the charge of the State's share of the payments of old-age assistance, and granting them, in partial return an apportioned yearly \$800,000 of money for highways; he represented this plan as permitting a rise in the number of recipients to 14,000, from 11,500, and the proposal did not call for any immediate taxation by the State government to compensate the added cost. The related question of further rise in the State's bonded debt was sent to the voters in the form of a referendum, whether to amend the State constitution so as to increase the permitted total of the State's bond issues to \$45,000,000. A vote cast at a special popular election, September 11, dealt with this proposal.

The nine organizers of the C.I.O. convicted, in a State court, of injuring property in the course of the shoe-factory strike at Auburn and Lewiston in 1937 lost their appeals from the verdict after carrying the case as far as the U.S. Supreme Court; they entered the Androscoggin County Jail (January 5), to serve sentences of five months. Dr. George H. Coombs, the State's Director of Health, declared to a committee of Legislators in February that malnutrition, contributing to scurvy, was prevalent among school-pupils in the northern part of Aroostook County; Governor Barrows rejoined that reports of scurvy were "incorrect, high-pressure advertising"; Coombs stood by his statement and immediately resigned. Later the Governor, answering inquiry on this subject from the Legislature, stated that the last five cases of reported scurvy had occurred in the previous autumn and had all ended in recovery; he gave the apparent source of the rumors about scurvy in Maine as a communication from the Federal Bureau of Home Economics, addressed to, and given to the press by, Representative Brewster, former Democratic Governor.

Officers. Maine's chief officers, serving in 1939, were: Governor, Lewis O. Barrows (Rep.); Secretary of State, Frederick Robie; Treasurer, Belmont A. Smith; Auditor, Elbert D. Hayford; Attorney-General, Franz U. Burkett; Commissioner of Education, Bertram E. Packard.

MAINE, UNIVERSITY OF. A coeducational State institution of higher learning at Orono, founded in 1865. The enrollment for the fall of 1939 was 2061, of whom 1545 were men and 516 were women. The

teaching members of the faculty number 167. A new dormitory to accommodate 160 women was under construction. The productive funds amounted to \$995,883 and the income for the year was \$1,766,949. The library has 136,000 volumes. The enrollment at the 1939 summer session, including the University's Biological station on Frenchman's Bay at Lamoine, was 604. President, Arthur A. Hauck, Ph.D.

MALTA. An island in the Mediterranean, 58 miles south of Sicily, and under British rule since 1800. Its area is 95 square miles and is governed jointly with the islands of Gozo (26 sq. mi.), and Comino (1 sq. mi.). Total area, 122 square miles; civil population (Jan. 1, 1938), 264,663, compared with 241,621 (1931 census). During 1937 there were 8879 births, 5304 deaths, 1806 marriages. There were 34,054 pupils in the 167 schools of all kinds and 156 students in the university at the beginning of the school year 1937-38. Valletta, the capital, had 22,779 inhabitants in 1931. Malta is the headquarters of the British Mediterranean Fleet, and is an important link in British Imperial communications.

Production and Trade. Crop production (1938-39) in metric tons was: Barley, 4600; wheat, 8000; potatoes, 28,500; maize, 100. Oranges, figs, and honey are plentiful. Lace, cotton, filigree, beer, cigarettes, wine, and canned tomatoes are produced. Livestock (1937) included: 9247 horses, mules, and asses; 3823 cattle, 15,030 sheep, 33,707 goats. The fish catch (1937-38) amounted to 1200 tons valued at £73,000. In 1938 imports were valued at £3,866,138; exports, £687,387. Vessels entering Valletta during 1938 aggregated 4,488,153 tons.

Government. The budget for the year ending Mar. 31, 1940, estimated revenue at £1,499,811; expenditure at £1,420,699. In 1938-39, revenue was £1,343,014; expenditure, £1,353,762. A new constitution was promulgated (Feb. 26, 1939) in accordance with Letters Patent received in Valletta on February 14. It provides for a Council consisting of 8 official, 2 nominated and 10 elected members to advise the governor of the island, who may nevertheless rule by decree. English is made the language of government; Maltese the language of the courts; the language to be taught in the schools is left to the discretion of the governor. Religious freedom is guaranteed, but clergymen are barred from elective office. The constitution of 1921, under which Malta had a responsible ministry, was suspended in 1933 following widespread pro-Italian agitation. As a result of the 1939 elections, the new Malta Council will be composed of 6 Constitutionalists (pro-British); 3 Opposition Nationalists (pro-Italian) and 1 Labor party member. Governor and Commander-in-Chief, General Sir Charles Bonham-Carter (appointed Feb. 17, 1936).

History. Economies of £35,000 annually in the public services and new revenue to the extent of £91,150 in 1939 and rising to £107,500 in 1944-45 were recommended to the government in March, 1939, by a special committee appointed by the governor to examine the colony's financial structure. Such savings and taxes, it was reported, would

enable the government to enlarge the drainage system of Valletta; construct a new power station; and install at a cost of £80,000 several pasteurization plants for goats' milk. (Pasteurization of goats' milk was ordered by the government to check the spread of undulant fever, the virus of which is carried in the milk of the goat).

During 1939 the government spent £200,000 in modernizing accommodations for British troops, whose numbers were greatly augmented both before and after the outbreak of the European war on September 3.

MAMMALS. See ZOOLOGY.

MANADO. See NETHERLANDS INDIES.

MANCHOUKUO, mǎn'jō'kwō'. An empire in northeastern Asia established under Japanese protection Mar. 1, 1932; comprising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria, and Jehol in Inner Mongolia. Capital, Hsinking (formerly Chang-chun). Ruler in 1939, Emperor Kangtē, who was enthroned Mar. 1, 1934.

Area and Population. Including the South Manchuria Railway Zone under direct Japanese jurisdiction but excluding Kwantung (q.v.), the area of Manchoukuo is estimated by Japanese sources at 503,013 square miles. The population on Dec. 31, 1937, totaled 36,933,206 (35,337,980 on Dec. 31, 1936). There were 35,518,849 Manchurians (predominantly Chinese, with Manchu and Mongol minorities), 931,459 Koreans, 417,759 Japanese, and 65,139 others, mainly Russians. Populations of chief cities (December, 1937): Mukden, 711,674; Dairen (in Kwantung), 503,778; Harbin, 457,980; Hsinking, 334,692; Antung, 204,382; Yingkow, 161,908; Kirin, 122,586. In 1938 573,786 Chinese coolies entered Manchoukuo and 291,097 departed. Korean peasants settling in Manchoukuo in 1938 numbered 15,850. The Japanese population of Manchoukuo rose by 379,114 between 1933 and 1937, but of these only 5245 represented Japanese farm colonists.

Defense. Conscription for all men between 19 and 40 was introduced in 1938, the term of service being three years. The regular Manchoukuoan army, officered by Japanese, numbered about 80,000 and there is a navy of 22 new gunboats, patrol vessels, and other small ships. In addition about 475,000 picked Japanese troops were reported to have been concentrated in Manchoukuo as of June, 1939. See *History*.

Education and Religion. In 1938 there were 12,063 elementary schools, with 1,372,454 pupils; 136 high schools, with 39,491 pupils; 15 normal schools, with 3901 students; 79 vocational schools, with 8149 students. Enrollment in institutions of higher learning was 1264, including the National University founded at Hsinking in 1938. Buddhism, Taoism, Mohammedanism and Lamaism are the chief religions. Christians number about 100,000.

Production. About 85 per cent of the inhabitants are engaged in agriculture, but manufacturing is rapidly expanding. Estimated yields of the chief crops in 1938 were (in metric tons): Soybeans, 4,634,240; other beans, 344,051; kaoliang, 4,626,293; millet, 3,181,211; corn, 2,298,506; wheat, 933,522; rice, 770,467. Livestock (1936): Cattle, 1,421,263; sheep, 1,680,545; goats, 751,587; swine, 6,911,167; camels, 11,024; horses, 1,998,000 (1935). Coal and lignite output in 1937 was about 14,100,000 metric tons; iron ore, pig iron, steel, magnesite, gold are the other chief metals (see 1938 YEAR BOOK for 1936 figures).

There were in Manchoukuo on Dec. 31, 1938, 3900 business companies with a paid-up capital of 2,469,162,000 yuan. They included 712 manufacturing industries (textiles and dyeing, 52; chemicals, 119; metals, machinery, and tools, 115; lumbering and wood products, 91; foodstuffs, 216; miscellaneous, 119); ceramics and mining industries, 186; electric and gas industries, 28; banking and commercial enterprises, 2062.

Foreign Trade. Imports in 1938 totaled 1,271,191,000 yuan (887,412,000 in 1937); exports, 714,374,000 (645,298,000). Japan supplied imports to the value of 979,184,000 yuan in 1938 (666,270,000 in 1937) and took exports valued at 411,442,000 yuan (321,512,000). Leading exports were soybeans, 230,846,000 yuan; castor seeds, 70,067,000; coal and briquettes, 27,859,000. The chief imports were cotton textiles, 104,645,000 yuan; iron and steel, 76,430,000; machinery and parts, 53,859,000; vehicles and parts, 44,562,000. Soybeans and their products normally account for about half of Manchoukuo's total exports.

Finance. The general accounts budget for 1939 balanced at 403,377,000 yuan (304,555,000 in 1938) while the special accounts budget called for revenues of 1,353,957,000 yuan and expenditures of 1,288,261,670 yuan (1,128,936,828 and 1,088,572,518, respectively, in 1938). The Manchoukuo yuan was pegged to the Japanese yen (one yuan equals one yen) on Oct. 28, 1935. The yen exchanged at an average of \$0.2845 in 1938 and \$0.2596 in 1939.

The public debt on Dec. 31, 1937, totaled 462,030,250 yuan of which 207,000,000 yuan represented borrowings in Japan.

Communications. The railway mileage of Manchoukuo increased from 3799 miles on Mar. 1, 1933, to 6216 miles on Nov. 1, 1938, all of which are owned or operated by the South Manchuria Railway Co., controlled by the Japanese Government. The company also operates the North Chosen Railways (214 miles) in Korea. The business revenues from all these lines in 1938 were 192,745,937 yuan and expenditures 95,628,871 yuan. On all of its numerous business enterprises, the S.M.R. in 1938 reported revenues of 387,411,623 yuan and expenditures of 314,536,436 yuan. State highways totaled about 4000 miles in 1938. Commercial air services link the leading cities and towns. On Mar. 1, 1938, a non-stop air service between Hsinking and Tokyo was inaugurated. Extensive improvements to the new port of Hulutao to increase its capacity to 4,000,000 metric tons annually were under way in 1939.

Government. Under the Constitution of Mar. 1, 1934, as amended July 1, 1937, Manchoukuo is a monarchy in which the Emperor exercises both executive and legislative powers, the latter being subject to the approval of the Legislative Council, an advisory body appointed by the Emperor. There is also a Privy Council of five members; a State Council, or cabinet, of six departments; and a General Affairs Board, attached to the State Council, which supervises budgets and national policies. A Planning Council is under the direct control of the Prime Minister.

Actual power rested in the hands of the Japanese Ambassador to Manchoukuo, who was also commander-in-chief of the Japanese and Manchoukuoan troops in Manchoukuo and Governor of Kwantung (q.v.). Lieut. Gen. Yoshikiro Umezumi replaced Gen. Kenkichi Uyeda as Japanese Ambassador and commander-in-chief at Hsinking in September, 1939. Prime Minister, Marshal Chang Chinghui, whose cabinet was reorganized May 7, 1937.

HISTORY

Border Warfare. The sporadic clashes along Manchoukuo's borders that had marked Japanese-Soviet relations since the Japanese conquest of Manchuria in 1931 assumed far greater proportions in 1939. In May fighting broke out along the Manchoukuo-Outer Mongolian frontier between Japanese and Manchoukuoan troops on one side and Soviet and Outer Mongolian forces on the other. The conflict gradually increased in intensity during the summer months, with both sides bringing up reinforcements. During July Soviet planes repeatedly bombed Halunarschan, terminus of the nearest Manchoukuoan railway supply point, and other railway centers. Late in August a large-scale battle for the possession of disputed territory along the Khalka River raged for 10 days, with both sides using planes, artillery, tanks and mechanized forces. With the outbreak of the European war on September 1, the fighting was ended and on September 16 a truce was arranged between Soviet and Japanese commanders.

On October 3 a War Office spokesman in Tokyo admitted that the Japanese forces had suffered a check from Soviet-Manchoukuoan forces that were superior both numerically and mechanically. He placed the Japanese-Manchoukuoan losses in killed, wounded, and sick at 18,000 and estimated enemy losses at about the same.

In connection with the war threat, the Manchoukuoan Government on July 26 invoked certain provisions of the Defense of the Realm Act, including general police and air-defense measures, restrictions on freedom of speech, publication, travel, and communication, and prohibition of the possession of guns or explosives. Meanwhile the Japanese authorities were strengthening their general military and economic position in Manchoukuo. Late in May a scheme for the development of the northern frontier regions at a cost of 1,000,000,000 yuan, to be completed in the main before 1942, was announced at Hsinking. It called for the construction of additional strategic railways, colonization of frontier areas with Japanese farmers, and the construction of supply bases.

The Five-Year Plan. The frontier development project was one of the additions incorporated in the five-year plan for the economic development of Manchoukuo, inaugurated in 1937 and revised and enlarged in 1938 and 1939. With the 1939 innovations, the plan called for a total expenditure of about six billion yuan, to be raised mainly in Japan. According to official Japanese statistics, Japanese investments in Manchuria during 1936-38 totaled 1,035,248,000 yen.

This programme speeded the transformation of Manchoukuo into a Japanese military and economic appendage. State control of foreign trade was extended on May 25, with the result that additional foreign exchange was diverted to the financing of imports of war materials and heavy industrial equipment. At the same time imports of all other kinds of goods from countries other than Japan were more severely restricted. These developments were accompanied late in 1939 by an industrial boom, an increasing shortage of commodities, rising prices, and other symptoms of monetary inflation that caused anxiety and hardship, particularly among the farming population. Government price-control measures failed to check the inflationary tendency.

On December 11 a 400,000,000-yen bond issued was announced, bringing the government loans

floated during 1939 to 5,030,000,000 yen. Registration of technicians and other experts for war service was decided upon October 1. A government monopoly of imports and exports was established together with an agency controlling the distribution and prices of indispensable commodities.

Other Events. On January 9 Hungary joined the list of states recognizing the independence of Manchoukuo; the others were Japan, Italy, Germany, Poland, and El Salvador. On February 24, Manchoukuo became a signatory of the anti-Comintern pact concluded by Germany and Japan Nov. 25, 1936. The barter agreement concluded with Germany in 1938 was extended for one year on May 31. In January it was announced that the Mongol princes in Manchoukuo had transferred their lands to the government and renounced their feudal privileges, accepting in return the interest on a public loan of 6,000,000 yuan.

See CHINA, JAPAN, MONGOLIA, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

MANDATED TERRITORIES. Following is a list (as of Dec. 31, 1939) of territories conquered from the German and Ottoman empires during the World War and mandated by the League of Nations to various of the Allied Powers under the terms of the Treaty of Versailles.

| Mandated Territory* | Mandatory Power | Former Owner |
|--------------------------|-----------------------|----------------|
| Cameroun, French | France | Germany |
| Camerouns, British | Great Britain | Germany |
| Japanese Pacific Islands | Japan | Germany |
| Nauru | British Empire | Germany |
| New Guinea, Territory of | Australia | Germany |
| Palestine | Great Britain | Ottoman Empire |
| Ruanda-Urundi | Belgium | Germany |
| Samoa, Western | New Zealand | Germany |
| South-West Africa | Union of South Africa | Germany |
| Syria and Lebanon | France | Ottoman Empire |
| Tanganyika Territory | Great Britain | Germany |
| Togo, French | France | Germany |
| Togoland | Great Britain | Germany |

* Iraq, a territory mandated to Great Britain, became an independent State by treaty with the mandatory power on June 30, 1930.

See the separate article on each mandated territory; also GERMANY under *History*; LEAGUE OF NATIONS

MANEUVERS, FIRST ARMY, U.S. See MILITARY PROGRESS.

MANGANESE. In view of the relatively small production of high-grade manganese ores in the United States and the high rate of consumption in the steel and other industries, the bulk of domestic supply is imported from Russia, Cuba, African Gold Coast, Brazil, and British India. Manganese is regarded as a "strategic" material by the U.S. Army and Navy, and is bought by those departments of the Government for stockpile reserves. In 1938 the Navy bought 11,500 tons of standard grade ferro-manganese. In 1939 the Procurement Division of the Treasury Department invited bids under the Strategic Minerals Act but no awards were announced.

The industrial importance of this mineral led the Bureau of Mines to make monthly surveys of production and stocks of manganese ore in the United States. The report for October, 1939, shows production of 3400 tons of ore containing 35 per cent or more of manganese, compared with 3000 tons in September; imports of 111,900 long tons in October, and 87,581 tons in September. For the first ten months of 1939 The Gold Coast

supplied 41 per cent of United States imports. Stocks of manganese ore in bonded warehouses Oct. 31, 1939, were 886,020 long tons, containing 437,425 tons of manganese metal, compared with 842,048 and 418,721 tons, respectively, at the beginning of 1939.

Major uses for manganese are found in the production of steel, the manufacture of dry batteries, and in the chemical, ceramic, and glass industries. Two principal grades of ore are recognized in the trade: metallurgical, 48-50 per cent metallic manganese content, for use in the iron and steel industries; and chemical 70 to 85 per cent manganese dioxide, valued for its high oxygen content.

H. C. PARMELEE.

MANHATTAN COLLEGE. A Roman Catholic institution for higher education, under the Brothers of the Christian Schools, founded in 1863. The enrollment for 1939-40 was 1189, including 635 in the School of Arts and Sciences, 257 in the School of Engineering, and 297 in the School of Business. The registration for the summer session—1939—was 170. There were 108 members of the faculty. The income for the year was \$574,500. There were 58,721 volumes in the library. President, Brother A. Victor, F.S.C., Ph.D.

MANITOBA, mǎn'ī-tō'ba. A prairie province in west-central Canada. Area, 246,512 square miles; population (June 1, 1939, estimate), 727,000, compared with 711,216 (1936 census). During 1938 there were 13,478 births (18.7 per 1000); 5893 deaths (8.2 per 1000); and 6262 marriages (8.7 per 1000). Chief towns (1936 population figures in parentheses): Winnipeg, the capital (215,814); Brandon (16,461); St. Boniface (16,275); Portage la Prairie (6538); and Transcona (5578). In 1937 there were 164,810 pupils enrolled in schools of all kinds, including 5354 in the universities and colleges.

Production. The gross value of agricultural production for 1938 was estimated at \$87,491,000 (\$121,253,000 in 1937), of which field crops represented \$54,649,000 (\$90,930,000 in 1937). Other important items were: Dairy products, \$15,363,000; farm animals, \$10,146,000; poultry and eggs, \$4,190,000. Crop production in 1939 in bushels was: Wheat, 59,000,000; oats, 32,000,000; barley, 27,000,000; rye, 2,404,000; flaxseed, 620,000; and hay and clover, 624,000 tons. Livestock (1939): Horses, 315,000; cattle (including milch cows) 787,000; sheep, 230,000; swine, 311,000. Fur production (1937) totaled 480,479 pelts valued at \$663,579. The output of forests in 1938 equaled 73,897 M cu. ft. valued at \$2,812,234. In 1938 the fish catch was valued at \$1,811,100.

Mineral production for 1938 was valued at \$15,233,728 of which gold (185,706 fine oz.) accounted for \$6,532,209; copper (65,582,772 lb.), \$6,539,914; zinc (46,864,575 lb.), \$1,440,148; silver (1,198,315 fine oz.), \$520,991; cadmium (115,166 lb.), \$92,543. In 1937, from the 1043 establishments, with a total of 23,706 workers, the gross value of manufactures was \$140,805,000. Chief industries were meat (slaughtering and packing); railway rolling stock; flour; butter and cheese; printing and publishing; malt and malt products.

Government. For the year ended Apr. 30, 1939, revenue totaled \$16,960,854; expenditure, \$15,578,487; public debt, \$129,007,425. The government is administered by a lieutenant-governor (appointed by the governor-general in council)

and he is advised by a ministry of 8 members who are members of the legislative assembly of 55 members elected for a term of 5 years by popular vote of the people. Manitoba is represented in the Dominion parliament at Ottawa by 6 Senators (appointed for life) and 17 members of the House of Commons. Lieutenant-Governor, William J. Tupper (appointed Nov. 17, 1934); Premier, John Bracken. See CANADA under *History*.

MANUFACTURED GAS. See GAS.

MANUFACTURERS, NATIONAL ASSOCIATION OF. A voluntary organization of corporations and individuals engaged in production of manufactured goods. Founded in Cincinnati in 1895, the membership numbers approximately 6000 manufacturers from all industrial centers of the United States. These members, who are conservatively estimated to employ more than 50 per cent of the manufacturing employees of the country, contribute to the support of the Association. Offices are maintained in New York, Washington, D. C., and San Francisco, and the policies are controlled by a Board of Directors, consisting of representatives of large and small firms in various industries from all parts of the country. The general aims and purposes of the Association as set forth in its Constitution are:

The promotion of the industrial interests of the United States, the fostering of the domestic and foreign commerce of the United States, the betterment of the relations between employer and employee, the protection of the individual liberty and rights of employer and employee, the education of the public in the principles of individual liberty and ownership of property, the support of legislation in furtherance of those principles and opposition to legislation in derogation thereof

Activities are grouped under four general headings: Public Relations, Economic Research, Employment Relations, and Legislative. To serve its members the Association issues a weekly *News Letter*, a bi-monthly *Social Security Bulletin*, a monthly *Labor Relations Bulletin*, a monthly *Law Digest*, and occasional bulletins on agriculture, tariffs, and other subjects related to industrial management. Also, it maintains a research staff and an industrial library to furnish information to its members. Principal among the institutions which the Association has fought for during the past 42 years are the Panama Canal, the U.S. Department of Commerce, the original "pure-foods" laws, an enlarged foreign trade, the Parcel Post, the Federal Reserve System, the non-partisan, semi-judicial tariff commission, a strong merchant marine, Workmen's Compensation, and Safety Work. The Association also was instrumental in forming the National Industrial Council Board, the National Safety Council, and the Chamber of Commerce of the United States.

At the annual meeting of the Association, held in New York, Dec. 6-8, 1939, at which Wendell Willkie was a principal speaker, a "Declaration of Principles Relating to the Conduct of American Industry" was adopted, which will have long range significance as an official guide-book to management policy. In previous years, the "platform" adopted by the annual meeting generally consisted of industrial attitude toward public issues then current. Such issues in 1939 were treated by separate resolutions, and the basic document concerned itself principally with industrial attitude toward its own management responsibilities.

The officers of the Association for 1939 were:

Chairman of the Executive Committee, William B. Warner, President, McCall Corporation; Chairman of the Board, Charles R. Hook, President, The American Rolling Mill Co.; President, Howard Conoley, Chairman of the Board, Walworth Co.; Vice-Presidents, A. W. Hawkes, President, Congoleum-Nairn, Inc.; H. W. Prentiss, Jr., President, Armstrong Cork Co.; S. Clay Williams, Chairman of the Board, R. J. Reynolds Tobacco Co. Walter B. Weisenburgen is Executive Vice-President of the Association and the active full-time head. Headquarters were at 14 West 49th St., New York, N. Y.

MARIETTA COLLEGE. A nonsectarian, coeducational institution at Marietta, O., founded in 1797, chartered in 1835. The total registration for the autumn term of 1939 was 423 of whom 250 were men and 173 women. The 1939 summer school enrollment was 17. The faculty numbered 38. The endowment amounted to \$1,291,883 and the income for the year was \$157,560. The library contained 115,093 volumes. During 1939 the college raised \$96,253 of a \$1,500,000 endowment. President, Harry Kelso Eversull, D.D.

MARKETING. A number of significant changes occurred in the field of marketing during the year. All major divisions of distribution enjoyed an increased volume of turnover, due to the expansion of industrial activity and the consequent increase in consumer purchasing power. Progress in applying the Robinson-Patman Act by the Federal Trade Commission, in view of the refusal of the Supreme Court to review the Commission's orders halting allowances and discounts in lieu of brokerage fees to large buyers of merchandise, brought additional significant changes in wholesaling practices. In the retail field, interest centered upon legislation barring price cutting on branded goods and sales below cost. Additional states enacted such laws, and various retail groups co-operated with manufacturers in seeking to strengthen their enforcement. Super-markets made marked progress as a relatively new type of retail agency in the grocery field, while liberalization of terms was characteristic of the installment finance sector of retailing.

Another development in the retail field was the application of the new Federal Food Drug and Cosmetic Act, which went into effect January 1. Efforts were made to enact corresponding state laws in a number of states, and eight such measures were put into effect. The phase of the new legislation of greatest immediate interest to distributors was the descriptive labeling requirements as administered by the Department of Agriculture.

Raw Materials Marketing. The marketing of farm products was once again influenced in large measure, during 1939, by the agricultural control

program. Loans were made available by the Government to growers of cotton, wheat, and corn complying with the program which practically established minimum prices for these commodities. Thus, farmers who were not satisfied with the prices available in the market, or who expected higher prices later on, could pledge their crops with the Commodity Credit Corporation for these Government loans. The Government also largely influenced the marketing of various other farm products through purchases of surplus production for relief distribution. In the case of flue-cured tobacco, the outbreak of the European war caused the withdrawal of British tobacco companies as buyers. Since they normally purchased some 30 per cent of the crop, it was necessary to suspend the auction sales, but the Commodity Credit Corporation stepped in and took over large quantities of the tobacco, giving options to British manufacturers for its purchase later on. In this way, the demoralization of the market for flue-cured tobacco was checked, although prices declined sharply and plans were launched to cut the 1940 crop substantially.

The marketing of imported raw materials and foodstuffs in this country was affected materially by the war. Export quotas set by the international cartels were modified or lifted in the case of rubber and tin, while the sugar-quota system was suspended in this country by Presidential proclamation on September 11, and was not re-imposed until near the end of the year for the following year, to check a rise in the sugar price that was brought about by heavy advance purchases by consumers. The suspension of the quotas caused the domestic sugar price to lose all the advance that occurred at the start of the war.

Trading on the commodity futures exchanges was again in moderate volume, largely as a result of Government restrictions on production of the major crops. The turnover on all the futures exchanges aggregated 2,423,000 contracts, which compared with 2,446,000 in 1938, and 76 per cent of the total trading occurred on the regulated cotton, grain, and butter and egg futures exchanges, as compared to 80 per cent on these regulated exchanges in 1938. The Commodity Exchange Administration, in its annual report for the year ended June 30, 1939, urged the extension of Federal regulation to futures trading in 15 other commodities, including imported products such as sugar, coffee, and cocoa. Only rubber, raw silk, and non-ferrous metals would be exempt from Federal regulation of futures trading, if this program were adopted. Many members of commodity exchanges opposed this proposal, contending that the Commodity Exchange Administration had had insufficient experience to justify any such sweeping extension of its powers. Various unregulated commodity futures exchanges effected further improvements in their operations, such as the regular publication of open interest statistics and the elimination of speculative trading in commodity futures contracts on credit.

Wholesale Trade. The increase in the volume of wholesale trade made 1939 a more satisfactory year for jobbers generally than was 1938. The firmer trend in commodity prices during the latter part of the year also proved a favorable development. Wholesalers who sell brands of their own were aided to some extent by the wider adoption of unfair sales laws, which barred the use of competitive nationally advertised brands as loss leaders by retailers, and by the increased employment

of price maintenance contracts under state fair trade laws. For the year as a whole, 2276 wholesalers reported an increase of 6.7 per cent in sales over 1938.

A great deal of activity in connection with the enforcement of the Robinson-Patman Act took place during the year, but most pending investigations and proceedings before the Federal Trade Commission did not reach the stage where actual orders were issued. When the United States Supreme Court refused to review the Commission's order that the Great Atlantic & Pacific Tea Company cease to accept brokerage allowances, or the equivalent, lingering hopes that this section of the law would be held invalid or interpreted in a narrow sense largely disappeared. As a result, there was a tendency in several industries to review and modify prevailing policies with regard to price differentials of all kinds, to adjust them to the act. In the floor-covering field, for example, the practice of allowing quantity discounts to distributors on a cumulative basis was abandoned by leading manufacturers at the turn of the year.

The volume of wholesale trade, month by month, during 1938 and 1939, as reported by the Bureau of the Census on the basis of reports from a varying number of wholesalers, was as follows:

WHOLESALE TRADE

(Sales of Wholesalers Reporting to The Bureau of The Census and The National Association of Credit Men. Figures not comparable as number of reporting concerns varies)

| Month | 1938 | 1939 |
|--------------|---------------|---------------|
| January .. | \$125,890,000 | \$168,856,000 |
| February .. | 123,089,000 | 183,999,000 |
| March .. | 156,706,000 | 210,188,000 |
| April .. | 161,011,000 | 185,109,000 |
| May .. | 154,602,000 | 213,143,000 |
| June .. | 179,282,000 | 203,752,000 |
| July .. | 165,615,000 | 196,974,000 |
| August .. | 197,445,000 | 216,765,000 |
| September .. | 217,489,000 | 253,688,000 |
| October .. | 211,804,000 | 233,818,000 |
| November .. | 204,222,000 | 217,124,000 |
| December .. | 185,565,000 | 177,194,000 |

Retail Trade. Department store sales increased by 5 per cent during 1939, as compared with the year before, according to the Federal Reserve Board. Changes in sales volume of stores in various Federal Reserve Districts for the year were as follows:

DEPARTMENT STORE SALES

(Change in Volume, 1939 as compared with 1938)

| Federal Reserve District | Percentage Change (+ Increase) | Federal Reserve District | Percentage Change (+ Increase) |
|--------------------------|--------------------------------|--------------------------|--------------------------------|
| Boston .. | +3 | Chicago .. | +6 |
| New York .. | +2 | St. Louis .. | +6 |
| Philadelphia .. | +7 | Minneapolis .. | +5 |
| Cleveland .. | +9 | Kansas City .. | +1 |
| Richmond .. | +5 | Dallas .. | +1 |
| Atlanta .. | +9 | San Francisco .. | +3 |

Sales of other types of stores over the three years 1937-39 varied as follows:

RETAIL SALES

(1929-31 = 100)

| | 1937 | 1938 | 1939 |
|-----------------------------|-------|-------|-------|
| Variety Chain Stores .. | 102.0 | 98.0 | 101.9 |
| Grocery Chain Stores .. | 95.7 | 94.1 | 101.6 |
| Rural Merchandise Stores .. | 121.7 | 114.1 | 119.0 |

* Preliminary.

This increase in retail sales through various types of distribution agencies reflected not only a

sharp increase in payrolls, particularly during the latter months of the year, incident to the upturn in industrial activity, but also larger dividend disbursements and entrepreneurial withdrawals, because of the increase in business profits, and a moderate upturn in farm income for the year. Department store sales were aided to some extent by the wider adoption of installment selling methods, including the introduction by a number of metropolitan department stores of the system of installment payments on larger purchases above a specified minimum. Also, longer terms were made available to buyers of a number of durable consumers' goods on credit. Liberalization of installment sales terms was brought about further through active competition by the banks in installment financing.

In the grocery field, the super-market type of store, in which the buyer obtains minimum service and the appeal is primarily one of low price, enjoyed its best year. More than 1300 new independent super-markets were opened during the year, making the total number of such stores in operation at the end of 1939 almost 5000. In addition, a number of super-markets were opened by chain-store enterprises, both because they were profitable in themselves and because these stores furnished a means of escaping punitive chain-store taxes. Consumer opposition, as well as the ability of chains to reduce their tax burdens through opening super-markets and giving up a large number of smaller stores, explained the declining popularity of punitive chain-store taxes. At the end of the year, only 19 states had such taxes, as compared with the 25 states that originally imposed them. The extremely burdensome Patman bill for Federal chain-store taxation failed to emerge from committee in Congress.

By the end of the year, 44 states had fair-trade laws in effect, Alabama having been added to the list of states authorizing price maintenance on branded goods by sellers. These laws are now being used most widely in the sale of durable consumers' goods and liquor. During 1939 a number of manufacturers of electrical appliances made use of the law for the first time. By the end of 1939, furthermore, 21 states had in effect unfair sales laws barring retail sales below cost. Five states, Connecticut, Maryland, Michigan, New Jersey, and Pennsylvania, reported that their unfair sales laws had been declared unconstitutional by the states' Supreme Courts, and litigation involving such legislation in several other states was under way. In New York, the legislature passed a law to bar loss-leader selling, but the Governor vetoed it as unenforceable. In Ohio, a concerted effort to bar loss-leader selling of food products was made under the auspices of the National Food and Grocery Conference Committee, which represents wholesalers and manufacturers as well as retailers. The so-called Model Unfair Sales Law in that state bars sales at wholesale with a mark-up of less than 2 per cent, and retail sales where the mark-up is less than 6 per cent. Independent retailers claimed that the experiment has been successful.

The Federal Surplus Commodities Corporation expanded the application of its plan for the distribution of surplus foods to persons on relief through the issuance of stamps. The plan was tried in a number of cities, with reasonable success, and steps were under way at the end of the year to apply the same system to the relief distribution of cotton textiles. Under this plan, relief

recipients who buy a stated quantity of the surplus commodities through the use of stamps distributed to them receive an additional allotment, to be bought with stamps of a different color they receive at the same time. Since the stamps are exchangeable for merchandise through established retailers, the sales volume of the latter is increased by this scheme, and retailers generally favor the plan as against the alternative, still widely used, of distributing commodities to persons on relief from government stations.

For legislation, as Chain Store, see TAXATION.

MARQUESAS ISLANDS. See OCEANIA, FRENCH ESTABLISHMENTS IN.

MARQUETTE UNIVERSITY. An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. The total enrollment for the autumn of 1939 was 4161. The registration for the 1939 summer session was 878. The faculty numbered 404. Endowment funds amounted to \$2,258,960. The income for the year was \$1,277,316, which included the value of the services rendered gratis by the Jesuits in 1938-39. The library contained 118,882 volumes. In the summer of 1939 a campaign was launched to raise funds for a new Engineering building and endowment for the College of Engineering. President, The Rev. Raphael C. McCarthy, S.J., Ph.D.

MARSHALL ISLANDS. See JAPANESE PACIFIC ISLANDS.

MARTINIQUE, mar'ti-nēk'. A French West Indian colony. Area, 385 square miles, population (1936 census), 246,712. Fort-de-France, the capital, had 43,338 inhabitants in 1931. Output of chief products, in metric tons, was: Sugar, 55,000 (1938-39); cacao, 200 (1937-38); bananas, 39,360 (exports, 1937); preserved pineapple, 877 (exports, 1937). Rum exports totaled 1,704,340 gal. in 1937. General merchandise imports (1938) in old U.S. gold dollars were valued at \$4,400,000; exports at \$4,800,000. In 1937, 600 vessels entered Martinique ports. There were, in 1937, 479 miles of roads. For 1937 the budget was balanced at 101,100,000 francs (franc averaged \$0.0405 in 1937; \$0.0288 in 1938; \$0.0251 in 1939). The government was under a governor who was assisted by an executive council, an elected general council, and elected municipal councils. Martinique was represented by one senator and two deputies in the French parliament.

MARYLAND. Area and Population. Area, 12,327 square miles; included (1930) water, 2386 square miles. Population: Apr. 1, 1930 (census), 1,631,526; July 1, 1937 (Federal estimate), 1,679,000; 1920 (census), 1,449,661. Baltimore had (1930) 804,874 inhabitants; Annapolis, the capital, 12,531.

Agriculture. Maryland harvested, in 1939, 1,652,200 acres of principal crops. Nearly four-fifths of this total was in corn, wheat, and tame hay. Corn, on 506,000 acres, made 18,216,000 bu. (estimated value on the farm, \$11,294,000); wheat, on 377,000 acres, 7,352,000 bu. (\$5,735,000); tame hay, on 413,000 acres, 518,000 tons (\$5,491,000). Tobacco, on 38,200 acres, yielded 29,796,000 pounds (\$5,661,000); potatoes, 25,000 acres, 2,375,000 bu. (\$2,161,000). Barley, on 72,000 acres, a rising total, gave 2,160,000

bu. (\$1,015,000). Apples gathered for market amounted to 1,700,000 bu. (\$1,105,000).

Manufacturing. More than four-fifths of the manufacturing activity of Maryland in 1937 was concentrated in the city of Baltimore and in adjoining Baltimore County. As to the State the main totals for 1937 (1936 in parenthesis) follow: manufacturing establishments numbered 2683 (2679); their wage-earners totaled 145,932 (117,245); the year's wages amounted to \$156,995,227 (\$108,281,552); the goods produced, inclusive of some products used in further manufacture, attained \$1,095,862,972 (\$741,607,981); the part contributed to this total production by processes of manufacture in Maryland came to \$430,835,614 (\$296,689,318). Corresponding figures for 1937 on Baltimore city and county are: manufacturing establishments, 1835; wage-earners, 105,615; wages, \$124,623,167; goods produced, \$925,760,636; the part of this value contributed by manufacture, \$352,494,611. The city of Baltimore, in turn, exclusive of the outlying county, had in 1937, 1754 establishments, employing 80,836 wage-earners, who received \$86,079,694; and within the city were manufactured \$729,183,999 in goods, to which sum manufacture contributed \$265,185,691.

Less than half of the State's production of manufactures in 1937 was itemized, by the U.S. Census of Manufactures, according to specified classifications. In particular, the data on steel-making and the making of heavy chemicals, both important features of the industry of the Baltimore area, were not detailed. The output of makers of garments of divers sorts aggregated about \$50,000,000; that of meat-packers, \$40,611,524; canning and other preparation of fruits and vegetables, \$30,881,579; the output of tin cans and other tinware, \$37,040,006; shipbuilding, \$17,925,710.

Mineral Production. Coal mining slackened in 1938 in Maryland as elsewhere; mines in the State produced about 1,306,000 net tons of coal, as against 1,549,000, value \$3,315,000, for 1937. Coke, made in byproduct ovens fed with coal chiefly from West Virginia, made 1,105,262 net tons of coke in 1938, as against 1,513,651 in 1937. Iron was made from imported ores in the Baltimore area; blast furnaces in the State shipped 1,219,611 gross tons of pig iron in 1938, as against 1,514,372 in 1937.

Education. Inhabitants of school age (reckoned in Maryland as the period from 5 years to 18), were reported for the academic year 1938-39 as 404,416. The year's enrollments of pupils, in all public schools numbered 296,545; this comprised 233,143 in elementary study and 63,402 in high schools. Outside of these three totals an enrollment of 56,015 in schools unconnected with the public-school system was recorded for the year 1937-38 (the latest for which this particular figure had been issued). The public schools' current expenditure for education in the year 1938-39 amounted to \$21,011,219. About two-thirds of this went to pay teachers, numbering 8901, a year's salaries at an average of \$1597.

Legislation. The General Assembly, convening in regular 90-day biennial session in January, wrote into law a considerable part of a programme of measures recommended by the incoming executive, Governor O'Connor. It enacted a revenue bill designed to add \$8,500,000 to the State's receipts, chiefly by recasting the State's income tax, augmenting the excise on beer and spirits, and laying an impost at 2 per cent on titles to new automobiles. With regard to the distribution of public

authority, provision was made for consolidations among the State's departments; a Legislative Council was established, to function between legislative sessions; a Department of Public Welfare was created; provision was made for reorganizing the People's Court of Baltimore; courts were authorized to make their own rules; a constitutional amendment was initiated, to fill the office of clerk of the Court of Appeals by appointment instead of popular election; and the Department of Engineering was abolished. An issue of \$4,130,000 of the State's bonds was authorized, for the purpose of acquiring Morgan College (at Baltimore, for the education of Negroes) and for additional construction at that college.

Political and Other Events. Governor Nice's Republican administration was succeeded, January 11, by that of Herbert R. O'Connor, Democrat, previously Attorney-General. Mayor H. W. Jackson of Baltimore was re-elected, May 9; in July he advocated heavy increase in the city's taxes, for the covering of deficit incurred in the local expenditure for poor-relief.

A tree of wide note, the Wye Oak, in Talbot County, considered by many to be the finest of white oak trees in the United States, came into possession of the State (September 20) by purchase from private owners. The girth of its trunk was 27 feet 8 inches at the height of 54 inches; the tree's height was about 95 feet.

Officers. Maryland's chief officers, serving in 1939, were: Governor, Herbert R. O'Connor (Dem.); Secretary of State, John B. Gontrum; Treasurer, Hooper S. Miles; Comptroller, J. Millard Tawes; Attorney-General, William C. Walsh.

MARYLAND, UNIVERSITY OF. A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1939 was 4550. The 1939 summer school had an attendance of 1401. The faculty numbered 700. The total income from appropriations and other receipts for the year ended Sept. 30, 1938, amounted to \$3,384,900. The library contained 125,000 volumes. A large construction program, aggregating \$2,500,000, was practically completed President, H. Clifton Byrd.

MASSACHUSETTS. Area and Population. Area, 8266 square miles; included (1930) water, 227 square miles. Population: Apr. 1, 1930 (census), 4,249,614; July 1, 1937 (Federal estimate), 4,426,000; 1920 (census), 3,852,356. Boston, the capital, had (1930) 781,188 inhabitants; Worcester, 195,311; Springfield, 149,900.

Agriculture. Massachusetts harvested 477,300 acres in 1939. Tame hay, the most extensive crop, occupied 396,000 acres, which made 504,000 tons (estimated farm value, \$8,064,000); cranberries, a specialty of the State, grown on 13,700 acres, totaled 13,700 barrels (\$4,882,000); apples gathered for market, 2,420,000 bu. (\$2,057,000); potatoes, on 17,000 acres, 2,635,000 bu. (\$2,635,000); tobacco, 6300 acres, 9,920,000 lb. (\$3,343,000); corn, 38,000 acres, 1,520,000 bu. (\$1,064,000).

Manufacturing. In 1937 the manufacturing establishments in Massachusetts numbered 8619 (in 1935, 8266) and employed 496,036 wage-earners (in 1935, 437,459), to whom was paid \$556,076,859 (in 1935, \$438,416,128); the output of manufactured products amounted to \$2,620,788,793 (in 1935, \$2,060,045,208), of which \$1,256,489,764 constituted value contributed by manufacturing processes (in 1935, \$975,870,612). The importance of the manufacturing industry in the State's subsistence may be expressed by the

high proportion of the population, one person in nine, earning wages in manufacturing, and by the average income per capita, \$125 a year, that such wages represented.

Highly diverse, the manufactures fell into several hundred classifications; some of these, however, while separately conducted, made successive steps in the treatment of the same material. The production of boots and shoes attained the highest individual total for 1937: \$151,994,697, not to count the making of rubber boots and shoes, totaling \$22,761,637 more. Other leading industries connected with apparel were wool-weaving, cotton-weaving, and garment-making. In the first of these three, worsted-weaving occupied 28,884 wage-earners and attained \$145,849,779 in output for 1937; this did not include \$58,870,492, the output of woolen (as distinct from worsted) woven goods. While the cotton manufactories of Massachusetts had met with heavy competition from those in other States, the production of cotton fabrics remained a leading industry; in 1937 it employed 34,414 wage-earners and attained a production of \$87,268,229. The year's output of garments reached an aggregate value not far from \$90,000,000 but distributed among divers classifications.

Another group of manufactures, also furnishing a major source of support to the population, was that producing machinery and its accessories. Establishments making electrical machinery, apparatus, and supplies occupied 25,642 wage-earners and totaled \$151,525,057 in products. Textile machinery to the value of \$45,019,666 was produced. Machine tools and their accessories, inclusive of machinists' instruments of precision aggregated \$41,243,576 in output. The production of miscellaneous machinery amounted to \$50,772,702.

The Bostonian industrial area, comprising Essex, Middlesex, Norfolk, and Suffolk counties did more than half of the manufacturing done in the State. It had in 1937, 5443 manufacturing establishments; these employed 247,684 wage earners and paid them \$281,911,062; its output of products came to \$1,483,827,399, of which sum the processes of manufacture supplied \$677,039,367. Between one-third and one-fourth of these totals were achieved in the city of Boston. Worcester had 516 manufacturing establishments, with 31,134 wage-earners, and produced \$182,777,047. Springfield's production of manufactures amounted to \$94,854,167. Lawrence, the site of a highly developed woolen industry, effected a production of \$114,887,471. Fifteen cities each exceeded \$50,000,000 in their respective totals of manufactured products for 1937.

Education. Massachusetts, reporting for the academic year 1938-39, stated the number of the population of school age thus, in groups according to age: 5 years, to 7 years, 118,270; 7 to 14, 496,915; 14 to 16, 157,559. The year's enrollments of pupils in all public schools numbered 717,365; this comprised 425,094 elementary pupils, 110,035 in junior high schools, and 182,236 in high schools. The year's expenditures for public-school education were listed as \$70,198,883 for support and \$3,538,692 for outlay. The salaries of the teachers, who numbered 26,006, averaged about \$1942 for the year.

Legislation. The General Court met in January in its first regular biennial session, previous sessions having occurred annually. Sitting until August 13, it worked under the handicap of in-

experience in providing for the State's needs over the longer period. Republican in both houses and teamed with a Republican Governor, the Legislature still failed to accomplish what the voters of 1938 had been led to hope—the termination of expenditure beyond the State's means to meet without detriment.

The general appropriation for the next two years, after heavy cuts made by Governor Saltonstall, was established at about \$151,000,000. The total of general and highway fund appropriations, as stated in the press, somewhat exceeded, on an annual basis, that under the Hurley administration, owing to higher provision for service of debt and for reimbursing towns and cities for their poor aid; it carried an additional \$6,500,000 a year for poor-relief and an annual \$4,000,000 for extinguishing hurricane debt.

In legislation to bring the State's revenue up to the scale of expenditure and at the same time to lower the State's assessment on the municipalities, the Legislature, after long opposition to new and heavy special taxes, finally voted an impost of two cents on the package of 20 cigarettes; an increase of the existing surtax on incomes, for one year, to 15 per cent, from five; higher excise on liquor; and changes providing a moderate increase in the State's duties on inheritances. Additional taxation was expected to augment revenue by about \$20,000,000 over the time to the end of the calendar year 1940, some of the imposts being applied on September 1, by the Governor's exercise of his power of emergency.

Other acts of the General Court provided an accounting system intended to help keep expenditures under control; permitted popular votes to authorize cities' issuance of bonds; gave statutory support to the requirement that State contracts be awarded according to competitive bidding; repealed the requirement, suspended by the previous Legislature, that employees contribute 1 per cent of their pay toward the cost of unemployment compensation; made the signatures of 3 per cent of the entire number voting for Governor at the latest election requisite to an independent candidate's having his name put on the election ballot for any State office; abolished the existing Unemployment Compensation Commission and created a successor; granted the State's ratification to the 148-year-old Federal Bill of Rights; and reorganized the State's Civil Service Commission as a new body of five new appointees. The pending Federal Child-Labor Amendment and a renewed motion to repeal the State's requirement that teachers take a prescribed oath were both again rejected. The Legislators being out of pocket by the change to biennial sessions (their pay being by the term), repeated efforts were made to pass, over the Governor's opposition, a bill to raise the compensation to \$3500 for the biennium. The Legislature obtained from the Supreme Judicial Court (July 27) an advisory opinion that House and Senate could provide for summoning a special legislative session, without call from the Governor, by the voice of a majority in each branch.

Political and Other Events. Leverett Saltonstall, who became Governor on January 4, was 46 years old, a native of the State, member of a long-established family, graduate of Harvard, and practising lawyer, who had not frequently run for public office. He had, the support of Republican majorities in the General Court on matters of partisan character, though not invariably on others. The main feature of his first year's performance

of office was persistent pressure to put through a group of onerous and generally unwelcome taxes, the intended means of renouncing deficits and resuming the normal way of operating the government out of revenue. The Legislators' aversion to voting the additional taxes kept the General Court in session for 6½ months and brought about a compromise giving only part of the results that Saltonstall had sought, but nevertheless removing the need for some of the tax on realty imposed locally to meet the State's requirements from the towns. The hostility to a general sales tax, one of the alternatives in the Saltonstall plan of new taxation, was widespread among the public and insurmountable at the time, but a tax on cigarettes provided a fair part of the new revenue sought.

The Governor was successful in helping, by mediation, to bring about the end of a truck-drivers' strike, costly to trade—particularly in perishable foods—in the first month of his tenure.

Proceedings against some of the State's officials holding over from the previous administration resulted in their removal by the Governor and Council. Commissioner of Education James G. Reardon, charged with having made profuse expenditures on the property of some of the public educational institutions, under the pretext of repairing damage done by the hurricane of 1937, was investigated by the Attorney-General. The resulting report indicated that some hundreds of thousands of dollars had been expended uselessly, as far as related to the supposed purpose, in such ways as needless improvement or embellishment of buildings and grounds. Acting on the report, the Governor and Council removed Reardon, replacing him with Walter F. Downey, long the principal of the Boston English High School. Shortcomings in the Department of Public Works were a more serious matter. The Governor appointed a commission of three men of personal standing, Charles P. Howard, Henry L. Shattuck, and John L. Hurley, all serving without remuneration, who made an extended study of the Department's recent acts. Their resulting report, published June 12, ascribed to extravagance, favoritism, laxity, and similar faults in the Department the dissipation of several million dollars of public money. Among conspicuous accusations were the alleged expenditure of about \$1,000,000 for the removal of tree stumps after the hurricane, where \$400,000 would have sufficed; the building of more than 400 bridges without competition for letting contracts; and inflated costs for equipment and repairs. The Council voted the removal (July 26) of William F. Callahan, Commissioner of Public Works, and the Governor nominated John W. Beal to succeed him.

The U.S. Supreme Court, deciding (March 13) the contest of several States for the right to tax the \$36,000,000 estate of the decedent E. H. R. Green (son of Hetty Green) as that of a resident, determined him to have been a resident of Massachusetts; an estimate made at that time put the expected windfall to the State in death dues and other imposts and charges at \$5,000,000. The State's Supreme Judicial Court decided (July 28) in a suit over the "breakage" (marginal sum retained by State and race track in paying a bet under the system of *pari-mutuel*), held the bettor entitled to receive the substantial multiple of the unpaid fraction of a dime, when the winning bet was for a number of times the minimum unit; the "breakage" retained by the State and the race tracks had amounted to \$721,786 for 1938; a com-

putation made for the litigant set the part ascribable to the contested kind of "breakage" at \$456,000; on this basis the State stood to lose about \$228,000 a year or half the sum affected by the suit, race tracks losing the rest.

A site three miles east of Holyoke, comprising about 4300 acres, was chosen in September by the Department of War, for the Northeastern Air Base, to be developed at cost of \$8,000,000, as one of the set of such bases provided by Congress for the aerial defense of the country.

The New York, New Haven, and Hartford Railroad Company, seeking reorganization under Federal bankruptcy law, alarmed southeastern Massachusetts in the spring by declaring that it did not wish to retain control and operation of the leased Old Colony railroad unless allowed to abandon this line's local passenger service. The prospect presented likelihood of hardship to commuting residents of Boston's southern suburbs and to divers commercial interests in towns along the route. Federal Judge Hincks of New Haven gave attention to the plea of bondholders that the cost of maintaining this service was rapidly depleting the company's remaining liquid assets; the Governor was notified that the company was taking steps to abandon the service on September 24. Saltonstall petitioned the Court for time to allow the Legislative commission on transportation to work out proposals that would afford a substitute to abandonment. Hincks then (August 28) authorized service to continue until January 1. The need for abandoning passenger service was attributed by the trustees of the Old Colony Railroad to the upgrowth of travel by automobile over improved highways, which had deprived the line of "considerably more than half" the former passenger traffic. The State appealed from Hincks to the U.S. Supreme Court, which held that Hincks had no authority to allow abandonment. The State's Department of Public Utilities, November 28, ordered the part of the service previously abandoned to be resumed. Trustees of the Boston and Providence Railroad, former leased line of the New Haven and still operated by it under court order, lost (December 19) in Federal Circuit Court, appeal from a court's decision holding the operated line liable for certain resulting deficits; but the amount of these was ordered redetermined.

Boston's school committee voted to admit no entering class to its Teachers' College in the autumn, and thus to start eliminating the college, as necessary economy required. The city felt the depressive force of its tax-rate, \$41.30 for 1938, on valuations regarded as high; the Boston Elevated system had achieved an increasingly heavy deficit in that year, for which the city was financially responsible. In consequence of these obstacles the moderate decrease of the State's requisition on the municipalities, for revenue, did not greatly lessen Boston's difficulties. In Charlestown a reported plan of the Federal Housing Authority for a set of dwellings for the poor, was opposed by persons in business on Bunker Hill Street, which they declared was to be condemned in part of its course and turned into a lawn for the development. Cambridge, seeking higher public revenue, made a proposal through a committee of members of the city council, to Harvard university, that this great tax-exempt property-holder make a voluntary contribution of \$100,000 a year toward the cost of the public services. President Conant declined the proposal in an extended letter of May 16. The controversy was an old one brought up at various

times over 20 years; Lowell when President had started Harvard's habit of making donations in place of taxes on such property as Harvard should acquire after a given date. Sheriff John F. Dowd of Suffolk County was charged with a variety of official abuses and disappeared in November.

Experimental planting of shad in the Nemasket River, at Middleboro, resulted in the catching of a number of full-grown fish in 1939, giving encouragement to the idea of renewing the shad-runs in other small rivers of the State.

Officers. The chief officers of Massachusetts, serving in 1939, were: Governor, Leverett Saltonstall (Rep.); Lieutenant-Governor, Horace T. Cahill; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, William E. Hurley; Auditor, Russell A. Wood; Attorney-General, Paul A. Dever; Commissioner of Education, Walter F. Downey.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A nonsectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1939 was 3100, including 721 graduate students. For the summer session, the registration was 1555. There were 283 members on the faculty and 401 other members on the active staff. The productive funds amounted to \$36,229,975, and the income for the year was \$5,573,608. The library contained 340,000 volumes. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

MASSACHUSETTS STATE COLLEGE. The land-grant college of Massachusetts, organized for resident instruction, extension education, research and control services for agriculture; founded in Amherst, Mass., in 1863. The student enrollment in the fall of 1939 was 1650. There were 158 enrolled in the summer session. The faculty numbered 260 including research and extension staffs. The income for the year 1939 amounted to \$1,503,022, of which \$1,133,600 was from State appropriation; \$361,422 from Federal appropriation, and \$8000 from endowed funds. The library contains approximately 114,000 volumes and 160,000 pamphlets and reports. President, Hugh P. Baker, M.F., D.Oec., LL.D.

MAURITANIA. See FRENCH WEST AFRICA.
MAURITIUS, *mô-rish'î-ûs*; -ish'ûs. A British crown colony in the South Indian Ocean, comprising the island of Mauritius (720 sq. mi.; pop., 403,718, Jan. 1, 1939) and its dependent islands, 230 to 1200 miles away (87 sq. mi.; pop., 11,774, Jan. 1, 1939).

Port Louis (capital), with suburbs, had 56,576 inhabitants in 1938. The chief products are sugar (321,370 met. tons in 1938-39), copra, aloe fibre, tobacco, and tea. In 1938, imports were valued at Rs33,830,015; exports, Rs26,136,140 (sugar accounted for Rs32,777,092). Foodstuffs, petroleum, cotton piece goods, jute bags, fertilizers, and machinery were the main imports. (The rupee averaged \$0.3659 for 1938.) For the year ended June 30, 1938, revenue totaled Rs17,259,849; expenditure, Rs26,640,996 (includes special expenditure of Rs10,790,721); public debt, £3,093,768; sinking fund, £1,481,028. The government is vested in a governor with an executive council, and a council of government of 27 members (8 ex officio, 9 nominated, and 10 elected by a moderate franchise). Governor, Sir Bede Clifford (appointed May 21, 1937).

MAYNOR, DOROTHY. See MUSIC; NEGROES.

MAYO, CHARLES HORACE. An American surgeon, the son of Dr. William Worrall Mayo

(1819-1911) and brother of Dr. William James Mayo (q.v.), died in Chicago, Ill., May 26, 1939. He was born in Rochester, Minn., July 19, 1865, and was educated at Northwestern University (M.D., 1888). Returning to Rochester he entered the practice of medicine and became associated with his father and his brother. From the time St. Mary's Hospital was opened on Oct. 1, 1889 to 1905, he and his brother did all the operative work of the Hospital. Out of this work and partnership grew The Mayo Clinic.

In 1915, with his brother, he established The Mayo Foundation for Medical Education and Research in affiliation with the Graduate School of the University of Minnesota, endowing it with \$2,800,000. In 1919, they founded the Mayo Properties Association to hold all the properties, endowments, and funds of the Clinic. When the hospital opened in 1889 it had 13 patients and a staff of three—the Mayos. In the course of years The Mayo Clinic became world renowned and the mecca of the medical world. A new large clinic building was opened in 1928. By 1939, the Clinic had a staff of several hundred physicians and surgeons and had had more than a million patients. The careful reports by the physicians are collected yearly in *Collected Papers by the Staff of St. Mary's Hospital, Mayo Clinic, Rochester, Minnesota* (1910 et seq.).

Dr. Charles Mayo served as a member of the State Board of Health and Vital Statistics (1900-02), as health officer of Rochester (1912-37), and on the Rochester School Board (1915-23). During the World War he saw service alternating with his brother, as chief consultant for all surgical services, in the Medical Department of the Army of the United States, Office of the Surgeon General, and was awarded the Distinguished Service Medal, U.S. Army (1920) and the French Legion of Honor (1925). From 1919 to 1936 he was professor of surgery at the Medical School of the University of Minnesota, and from 1915 to 1936, when he was retired as emeritus, he was professor of surgery, The Mayo Foundation, the Graduate School of the University of Minnesota. He was surgeon and associate chief of staff at The Mayo Clinic and surgeon at St. Mary's, Colonial, and Worrall hospitals. In 1930 he retired from surgical practice and in 1933 from executive authority. In 1939 Dr. Mayo made possible to the city of Rochester the Mayo Civic Auditorium by his gift of about one-half the cost.

Dr. Mayo was recognized as the originator of modern goiter surgery and as a pioneer in the surgical treatment of the nervous system. He originated the Mayo operation for varicose veins and the Mayo vaginal hysterectomy. He contributed many refinements in other fields of major and minor surgery, and was a pre-eminent authority in cancer research.

Many honors came to the younger of the Mayo brothers. He received numerous honorary degrees, was a fellow of the American College of Surgeons, of the Royal College of Surgeons, England, and of the Royal College of Surgeons, Ireland, and of the Royal Society of Medicine, London, England, and had served as president of the American College of Surgeons (1924-25); of the American Medical Association (1916-17), receiving its gold medal in 1930; of the Society of Clinical Surgery (1911-12), and of the American Surgical Association (1931-32). In 1934 President Roosevelt presented him with a com-

memorative plaque, and in 1936 the Inter-State Postgraduate Medical Association of North America presented him with a bronze medal for his contributions to scientific medicine.

A member of the advisory board of the *Encyclopedia Britannica* and a contributor to *Narkose und Anaesthesia*, with his brother he published *A Collection of Papers Published Previous to 1909* (2 vol., 1912) and contributed to medical journals *Intrathoracic Goiter, with Report of Cases* (1910), *The Phophylaxis of Cancer* (1910), and *Surgery of the Thymus Gland* (1912). His complete bibliography contains more than 400 papers on medical, surgical and allied subjects.

MAYO, WILLIAM JAMES. An American surgeon, the son of Dr. William Worrall Mayo (1819-1911) and brother of Dr. Charles Horace Mayo (q.v.), died in Rochester, Minn., July 28, 1939. Born in Le Sueur, Minn., June 29, 1861, he was educated at the University of Michigan (M.D., 1883). He began the practice of medicine in Rochester in 1883, and in 1889, with his father and brother became associated with St. Mary's Hospital and eventually founded The Mayo Clinic for an account of which see MAYO, CHARLES HORACE.

The careers of the two brothers were so intertwined that the story of one is necessarily the story of the other. During the World War alternating with his brother he served as chief consultant in the Medical Department of the Army of the United States, Office of the Surgeon General, and was awarded the Distinguished Service Medal U.S. Army (1919). Associated with St. Mary's Hospital and The Mayo Clinic, he was known as an especially successful operator in cases of gallstones, cancer, and diseases of the intestinal tract. A skillful surgeon, he was also a great organizer. He retired as a surgeon in 1928 and from executive authority in 1933. In 1915 he and his brother established and endowed The Mayo Foundation for Medical Education and Research and thereafter he took an active part in its guidance and the teaching and training of the young assistants. From 1907 until his death he served on the Board of Regents of the University of Minnesota.

Honors were heaped on Dr. William Mayo. He received honorary degrees from all parts of the world, was a fellow of the Royal College of Surgeons of Edinburgh (Scotland), England, and Ireland and of the Royal Society of Medicine of England. From 1907 until his death he served as a Regent of the University of Minnesota; he was president of the Minnesota State Medical Association (1893-94), the American Medical Association (1905-06), the Society of Clinical Surgery (1911-12), the American College of Surgeons (1918-20), the Congress of American Physicians and Surgeons (1925), and the Inter-State Postgraduate Medical Association of North America (1932-33). He received the gold medal of the National Institute of Social Sciences in 1918, the Henry Jacob Bigelow gold medal of the Boston Surgical Society in 1921, a citation for distinguished service presented by the National Organization and at the same time a commemorative plaque presented by President Roosevelt in 1934, and the gold medal of the American Medical Association in 1930.

His papers published previous to 1909 were collected with those of his brother under the title *A Collection of Papers Published Previous to 1909* (2 vol., 1912), and subsequently he issued

Gastrojejunostomy (1912), *Removal of the Rectum for Cancer: Statistical Report of 102 Cases* (1911), *Jejunostomy* (1912), *Surgery of the Pancreas* (1913), and *Surgical Considerations of Splenectomy* (1915). The complete list of his papers numbers more than 575 articles.

MEAT. See LIVESTOCK.

MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF. An organization founded in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions—aeronautic, applied mechanics, fuels, graphic arts, hydraulic, iron and steel, machine-shop practice, management, materials handling, oil and gas power, petroleum, power, process industries, railroad, textile, and wood industries—and a professional group on heat transfer. The membership at the beginning of the fiscal year, Oct. 1, 1939, was 14,728. Enrolled in the Society's 117 Student Branches were more than 6000 students.

There were held during the year 643 meetings of the 71 local sections of the Society, as well as 604 meetings of student branches and 4 national meetings of professional divisions. The major meetings, however, were the spring meeting, New Orleans, La., Feb. 23-25, 1939; semi-annual meeting, San Francisco, Cal., July 10-14, 1939; and the annual meeting, Philadelphia, Pa., Dec. 4-8, 1939. The British-American Engineering Congress, scheduled to be held in New York, N. Y., Sept. 4-8, 1939, was canceled because of the war.

The technical committees of the Society, numbering 502 with 1987 members, continued work in research, standardization, and formulation of safety, power test, and boiler codes and rules. Regular publications during 1939 were: *Mechanical Engineering*, the monthly journal; *Transactions* (including the *Journal of Applied Mechanics*), which contains the year's papers of specialized interest and is also issued monthly, with several supplementary sections containing committee personnel and other general information, memorial biographies, and an index to all publications of the Society for the year; and the *Mechanical Catalog and Directory*.

The officers for 1939-40 are: President, Warren H. McBryde; vice-presidents, W. Lyle Dudley, Alfred Iddles, James W. Parker, Kenneth H. Condit, Francis Hodgkinson, J. C. Hunsaker, K. M. Irwin; managers, Carl L. Bausch, Samuel B. Earle, Frank H. Prouty, Clarke Freeman, William H. Winterrowd, Willis R. Woolrich, Joseph W. Eshelman, Linn Helander, Guy T. Shoemaker; treasurer, W. D. Ennis; secretary, C. E. Davies; assistant secretaries, Ernest Hartford, C. B. LePage; editor, George A. Stetson.

The main office of the Society is in the Engineering Societies Building, 29 West 39th Street, New York, N. Y. There is a mid-west office at 205 West Wacker Drive, Chicago, Ill., and a mid-continent office, concerned principally with the problems of the petroleum industry, at 211 Midco Building, Tulsa, Okla.

MECHANIZATION. See MILITARY PROGRESS.

MECKLENBURG. See GERMANY.

MEDICAL ASSOCIATION, AMERICAN. A federacy of the constituent, State and Territorial, medical associations, founded in 1847 to "promote the science and art of medicine and the betterment of public health." Members of the association must be members of constituent associations; those in

good standing, who have qualified as fellows, constitute the scientific assembly of the association. On Dec. 1, 1939, there were 114,063 members, of whom 71,241 were fellows.

The ninetieth annual session was held in St. Louis, Mo., May 15-19, 1939, the house of delegates (in which are vested the legislative powers of the association) and the scientific assembly convening on May 15. At the section meetings leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The scientific exhibit and the technical exhibit were also of great interest.

The officers elected for 1939-40 were: President, Rock Sleyster, Wauwatosa, Wis.; president-elect, Nathan B. Van Etten, New York; vice-president, Alphonse McMahon, St. Louis, Mo.; secretary and general manager, Olin West, Chicago, Ill.; and treasurer, Herman L. Kretschmer, Chicago, Ill. The official publication is the *Journal of the American Medical Association*, Morris Fishbein, editor. Eight other scientific journals, each dealing with a special field of medicine, as well as *Hygieia*, a health magazine, the American Medical Directory, and the Quarterly Cumulative Index Medicus are published by the association. Headquarters are at 535 North Dearborn Street, Chicago, Ill. See MEDICINE AND SURGERY; SUPREME COURT.

MEDICINE AND SURGERY. Surgical Treatment of the Patent Ductus Arteriosus.

The ductus arteriosus is a short blood vessel which connects the aorta with the pulmonary artery. During fetal life when the organism's oxygen requirements are met by the diffusion of oxygen from the maternal circulation, it provides a compensatory mechanism by which blood can be short-circuited around the lungs, which, because they are partially expanded, present an increased resistance to blood flow. At birth, or shortly thereafter, the ductus normally closes, and all the blood leaving the right side of the heart passes through the lungs where it is aerated. In occasional individuals the vessel fails to close, and there remains a persistent fistula between the aorta and the pulmonary artery, so that blood leaving the left side of the heart under high pressure and normally destined for the general circulation is in part regurgitated into the pulmonary circulation. This vascular anomaly, while not always incompatible with health, is frequently associated with the development of evidences of heart disease. In a series of 92 cases of patent ductus arteriosus uncomplicated by any other congenital vascular defects, observed at post mortem by Abbott, the average age at death was but 24 years. The two most common causes of death in this group were, first, cardiac failure due to the excessive strain placed on the heart by the abnormal arteriovenous communication, and second, the development of a bacterial infection in the ductus, which was responsible for a subacute embolic disease in many respects identical with subacute bacterial endocarditis.

Gross, of the Children's Hospital and the Peter Bent Brigham Hospital, Boston, reported at the annual meeting of the American Surgical Association that he had successfully obliterated a patent ductus arteriosus, by operation, in four cases. He attempted this surgical procedure only after careful anatomical studies on the cadaver and numerous operations on dogs, which convinced him that the procedure was a feasible one.

The operative technique which he worked out is a relatively straightforward one. He opens the chest through an anterior incision, allows the left lung to collapse temporarily, and thus exposes the ductus by a transpleural approach. After cautious and painstaking dissection he is able to isolate the short ductus and to ligate it doubly with strong sutures of silk. This, of course, interrupts the continuity of the vessel and closes the abnormal communication between the systemic and pulmonary circulations. In the cases reported, the ligation has been readily accomplished and the patients have had a remarkably smooth and uneventful convalescence. He has allowed them to be out of bed on the first day after operation, and to be discharged from the hospital in about two weeks. It is not to be supposed, however, that any intra-thoracic procedure of this magnitude is devoid of risk, and Gross specifically warns that the mere discovery of a patent ductus arteriosus is no reason, per se, for advising surgery. The criteria for operation which he has established are as follows: (1) There must be convincing evidence, clinically and roentgenologically, that the ductus is patent; (2) One must be able to exclude, with reasonable certainty, the presence of associated anomalies of the heart or great vessels, in which case the continued patency of the ductus might be a compensatory process; (3) And, finally, "one should have an indication that the ductus is enlarging, that the danger of bacterial endarteritis is high, or that the heart is carrying an increased burden."

The results of the operation in these four cases have been very striking. After ligation of the ductus, the loud murmur associated with the regurgitation into the pulmonary artery disappears, the blood pressure returns to normal levels, and the overactive heart beat is reduced to one of normal intensity. In two instances there was reduction of the size of the heart. All the children have done well, have returned to school, and "bid fair to have an improved cardio-vascular system." (*Annals of Surgery* 110:321, 1939).

There is no question but that this work of Gross is a fundamental contribution to surgery. By it he has offered a definitive method of treatment for one variety of congenital heart disease which should prevent the dangers of subacute bacterial endarteritis and cardiac failure. Increasing experience will make it possible to select more accurately those individuals with a patent ductus arteriosus by whom the risks of a major operative procedure should be assumed, in order that the serious or even tragic complications sometimes associated with the conditions may be avoided.

Heparin and Sulfapyridine in Subacute Bacterial Endocarditis. Kelson and White, of the Massachusetts General Hospital, have made observations which suggest that the combined use of heparin, an anticoagulant, and sulfapyridine may be of value in the treatment of subacute bacterial endocarditis. This disease, an infection of the heart valves usually caused by the streptococcus viridans, is usually seen only in patients who have previously suffered valvular damage from rheumatic fever. It is characterized anatomically by the presence of small masses of fibrin and bacteria (so called "vegetations") on the valve leaflets, which tend to break off into the blood stream and so to cause plugging or embolism of small arteries in various parts of the body, notably in such organs as the spleen, kid-

neys, and brain. Clinically, there is protracted fever, signs of embolism (hematuria, enlargement of the spleen, petechial hemorrhages in the skin and mucous membranes), and a course progressively down hill, so that death usually results within a few months to a year. Recovery, once signs of embolism appear, occurs only with the greatest rarity. During the disease the offending organism may be cultured from the blood. Treatment has been quite ineffective.

The rationale of combined heparin-sulfapyridine therapy is simple. The organisms are susceptible to sulfapyridine *in vitro*, and patients treated with sulfapyridine alone frequently show marked, though only temporary, improvement. It is thought that sulfapyridine is relatively ineffective clinically because organisms on the heart valves are covered by layers of fibrin, a result of the clotting of blood on ulcerated areas of the valves, and thus are protected from the circulating blood with its phagocytic leukocytes. It is hoped that further clotting can be prevented by the intravenous administration of heparin. This is a potent, non-toxic, anti-coagulant isolated from the liver by Murray and Best, of Toronto, which has been shown to be effective in the prevention of intra-vascular clotting in a variety of conditions. By the prevention of the deposition of further clot, one might attempt to "(1) restrict the nidus and culture medium for bacterial growth, (2) prevent embolism from the freeing of fresh thrombus, and (3) check the growth of the vegetations so that proliferating fibroblasts may fill in the areas thus limited." (Kelson and White, *J.A.M.A.* 113, 1700, 1939).

The method employed by Kelson and White was, in brief, to administer heparin by a continuous intravenous drip for 14 days. During this same period, as well as one week before and one week following it, sulfapyridine was given by mouth. Frequent studies of the clotting time were made, and the dosage of heparin varied in order to maintain it at about five times the normal level.

The results of this method of treatment in seven cases have been reported by Kelson and White. In four, the treatment was of too short duration to produce any demonstrable effects. Treatment with heparin was discontinued in two of these cases because of the rapid course of the disease which terminated fatally in two weeks or less, and in the remaining two because the particular samples of heparin used proved to be toxic. The three remaining patients who were able to take heparin for more than one week showed striking improvement. At the time of the report they had been free from evidences of the disease for 19 weeks, 18 weeks, and 4 weeks respectively after discontinuing treatment. It remains to be seen, of course, whether these striking remissions will be maintained, but the fact that spontaneous afebrile intervals of more than five weeks duration are of extraordinary rarity during the course of such an endocarditis (occurring but once in 246 control cases studied by Kelson and White) suggests very strongly that the results obtained in these three cases are significant.

The use of an anti-coagulant in such an embolic disease as subacute bacterial endocarditis carries with it the hazard of intensifying the hemorrhage which may result from the rupture of a vessel after embolization. Indeed in one of the cases reported by Kelson and White, death resulted from the formation of an intra-cranial clot (subdural hematoma). In a single case similarly

treated by Friedman, Hamburger, and Katz, of the Michael Reese Hospital, Chicago, the fatal issue was brought about by hemorrhage into the ventricles of the brain from an area of softening, apparently the result of a cerebral embolus. The risk then is real, but seems one worthy of assumption in such a desperate situation with an almost hopeless prognosis.

Kelson and White point out that the chances of healing the ulcerated vegetative processes on the heart valves would seem best early in the course of the disease when they are still small, and for this reason stress the importance of early diagnosis. As long as no effective treatment was available, the establishment of a diagnosis of subacute bacterial endocarditis was important only in so far as the prognosis was concerned. Now that it would seem that some hope may be offered patients with this disease, its early establishment is a matter of great practical concern.

It is, of course, too early to raise sanguine hopes that another dread disease has been conquered. It will require the cumulative experience of numerous observers over a considerable period of time to define the merits and hazards of this new treatment, and to estimate the permanent results which one may expect to achieve by it. Kelson and White aptly conclude: "Neither blind to the failures nor prematurely boastful of the apparent successes, we shall continue patiently to gather further experience to learn just how good our combined therapy may prove to be and to better our technic. This preliminary report is presented because of the interesting method of attack, and because that attack has in these first few months given more promise than any other method we have ourselves used or heard of in the past."

Stilbestrol—A Synthetic Estrogen. In 1923 Allen and Doisy reported the isolation of a hormone from the ovary which when administered to ovariectomized animals was capable of producing anatomical changes in the generative tract similar to those normally observed during so-called heat, or estrous. Since this fundamental discovery much has been learned concerning the chemical nature and the physiologic effects of female sex hormones. It has been shown that several related substances of known chemical composition have potent estrogenic properties, and some of these have been made available for clinical use. These materials have proved to be of value in the treatment of untoward symptoms sometimes associated with the menopause, of gonorrheal and senile vulvo-vaginitis, and to a lesser degree, perhaps, in the treatment of certain other syndromes resulting from ovarian hypoactivity. In spite of its unquestionable value, estrogenic therapy has had certain practical disadvantages. The most important of these is its high cost—a result of the fact that the estrogens are derived commercially from biological sources (commonly from the urine of pregnancy) and must be carried through expensive processes of extraction and purification. Another difficulty is that the estrogens now available lose much of their potency when given by mouth, and, therefore, ordinarily are administered intramuscularly, by which route they are 10 to 20 times more effective. A new synthetic estrogen promises to offer definite advantages in these two respects.

In 1938 a group of English investigators, Dodds, Goldberg, Lawson, and Robinson, synthesized a new compound, *diethylstilbestrol*, which

they said was capable of high estrogenic activity, lost little of its potency on oral administration, and could be prepared relatively cheaply. (*Lancet* 1, 1389, 1938). This new estrogen, interestingly enough, differs markedly in its structure from the naturally occurring estrogens, and does not contain a phenanthrene ring system found universally in the natural estrogens, and formerly thought essential for estrogenic activity.

Although numerous reports from abroad have attested the remarkable estrogenic potency of stilbestrol, the Council of Pharmacy and Chemistry of the American Medical Association has stated that more careful studies of its possible toxic effects must be made before it can be recommended for general clinical use. The results of three such preliminary studies are now available, and may be briefly recorded.

Shorr, Robinson, and Papanicolaou, of Cornell and the Rockefeller Institute for Medical Research, found in the treatment of 44 patients that stilbestrol was actively estrogenic, producing in menopausal women the same anatomical changes in the generative tract as the natural estrogens, and like them was effective in relieving the subjective symptoms of the menopause. They further confirmed the finding that stilbestrol was remarkably effective when given by mouth. It lost less than one-half its activity by this route, in contrast to the natural estrogens which may lose from 90 to 95 per cent. In their series, however, stilbestrol therapy resulted in a high percentage of undesirable side effects. Eighty per cent of the patients showed, to a certain degree, some of the following toxic symptoms: anorexia, nausea, vomiting, abdominal distress, nervous phenomena, and skin rashes. And furthermore, in contrast to the European reports, the gastro-intestinal symptoms seemed to be of central origin and occurred with parenteral as well as with oral administration. It was their feeling, therefore, that until more had been learned concerning the significance of these side effects, the use of stilbestrol should be confined to experimental studies.

In contrast to these findings, Buxton and Engle, of the College of Physicians and Surgeons, Columbia University, reported that in 16 of 17 patients treated from 1 to 6 months, no evidence of toxicity could be attributed to stilbestrol. In one patient there were urinary manifestations possibly attributable to this estrogen. Mild nausea occurred in four of the 17 patients, and two of these had vomiting after the first treatment. Since rather detailed laboratory studies were made in all the cases, with uniformly negative results, they were inclined to attribute little importance to the occasional mild gastro-intestinal symptoms mentioned above.

MacBryde, Freedman, and Loeffel, of the Washington University School of Medicine, likewise reported that their experience with stilbestrol in the treatment of 37 patients had been quite favorable and that no serious toxic symptoms had been produced. Nausea occurred in eight patients, and vomiting in three, but reducing the size of the dose or changing the route of administration gave prompt relief. In no case was it necessary to withdraw the preparation because of toxic manifestations. (*Journal of the American Medical Association* 113, 2312-2320, 1939).

It may be seen, then, that these preliminary studies with stilbestrol, while not uniformly fa-

vorable, nevertheless give promise that this new estrogen may be of great value clinically. Perhaps more important is the fact that the door has been opened for the development of other and better synthetic estrogens. The availability of materials of such great estrogenic activity places a new responsibility on the physician, since their indiscriminate use may not be entirely without danger. Perhaps the chief hazard in the prolonged use of estrogens in susceptible patients is the possibility of the induction of cancer, since it has been clearly shown in animal experiments that prolonged treatment with massive doses of estrogens may produce definite carcinogenic effects. Like all potent drugs, the new estrogen must be used cautiously and only upon very definite indications.

Pneumonectomy in the Treatment of Cancer and Suppurative Disease of the Lung.

Certainly one of the most important advances in surgery in the decade just ended has been the demonstration that the removal of a lung is a feasible operation in man, and further that pneumonectomy offers an excellent chance of cure in chronic suppurative diseases of the lung as well as a reasonable hope of cure in selected instances of carcinoma of the lung. To appreciate the significance of this achievement it is necessary to know that the first successful excision of an entire lung in man was performed as recently as 1931 by Nissen, in Germany, and that it was not until 1933 that Evarts Graham, of St. Louis, first reported a pneumonectomy for carcinoma of the lung with survival of the patient for more than a brief period after operation. Added importance is lent this advance in thoracic surgery by the recent recognition of the high incidence of carcinoma of the lung. Not only is it not a rare tumor, as previously supposed, but rather a fairly common one. It now seems likely that about 10 per cent of all cancers are to be found as tumors of the lung, and it is interesting that almost all of these are thought to arise from the epithelium of the bronchial tree, and hence are designated as bronchiogenic carcinomata. Because a high proportion of these tumors arise from the large primary bronchi, they tend, in growing, to block the bronchus, and, therefore, cause collapse of the lung distal to the site of the obstruction. Not infrequently infection of the lung may occur behind the bronchial block, and the carcinoma, therefore, may masquerade as a suppurative process. Perhaps the most important aids in the clinical diagnosis of cancer of the lung, since it symptomatically presents no characteristic features, are, first, visualization of the interior of the trachea and the first portion of the large bronchi by means of the bronchoscope, and second the use of the X-Ray. By bronchoscopy, one may often see the intra-bronchial tumor and remove a small piece of tissue for microscopic confirmation of the diagnosis. In X-Ray films of the chest either the tumor or such presumptive evidence of its presence as collapse of a portion of the lung may usually be demonstrated.

What, then, in the present state of our knowledge, are the risks of pneumonectomy and the prospects of cure? Concerning the first question, a fairly exact answer can be given, but not enough time has elapsed to permit any very accurate estimation of how many patients who have survived operation will be alive and free from cancer five years later. According to Overholt, of Boston, who has recently completed a review of

the literature, 110 cases of pneumonectomy have been recorded, 62 having been performed for cancer and 48 for benign lesions, chiefly suppurative disease. The mortality, since the first successful case recorded in 1931, has been 65 per cent for the malignant group and 24 per cent for the benign group. The percentage of survivors in the group with cancer, though small, still represents a very creditable salvage of patients suffering with an otherwise fatal disease. Of course, it must be realized that in many patients with carcinoma of the lung, operation may be deemed inadvisable because of age, poor general condition, or obvious extension of the growth beyond the lung. Also, in the cases subjected to thoracic exploration, perhaps half will be inoperable because of mediastinal invasion. And, finally, of the patients who have no apparent metastases and survive pneumonectomy, a certain number will die from cancer which, though undetectable, had already extended beyond the lung at the time of operation. These considerations, though depressing, are the same ones which must be faced when dealing with malignant disease at any site. Though one can only guess as to what the ultimate rate of five-year cures may be (and this figure may, of course, increase with added experience and refinements in technique) it is perhaps not too much to say, as does Overholt, that it would seem that a sufferer from cancer of the lung has "as good a chance, or possibly a better chance, than a patient with cancer of the stomach which required total gastrectomy for its eradication."

In the same paper, Overholt reports his personal experience with pneumonectomy in 22 cases. He was able to report the unusually low mortality rate of 33 per cent in 15 cases of carcinoma of the lung. (*Journal of Thoracic Surgery* 9, 17, 1939). In seven patients undergoing pneumonectomy for benign lesions, he had no operative deaths—truly a remarkable record.

At the least, then, it may be said that cancer of the lung no longer belongs in the category of hopeless diseases—that its victims may be offered a chance of cure which, though small, compares favorably with that of other serious forms of malignant disease. The thorax has proved to be the last of the great body cavities which the surgeon may successfully enter in the pursuit of malignant neoplasm. And there is reason to hope that by the end of the next decade very much more favorable results may be reported. The factors upon which further improvement will be based are two: First, the earlier diagnosis of cancer while it is essentially a local disease; and second, technical improvements which will increase the safety of operation.

Treatment of Addison's Disease with a Synthetic Crystalline Hormone. Addison's Disease is a syndrome characterized by weakness, low blood pressure, gastro-intestinal symptoms, and pigmentation of the skin, caused by tuberculosis of the adrenal glands or by atrophy of the adrenals from other causes. In the past, its course has usually been fatal. In the last decade, however, two important advances in its treatment have been made. The first of these consisted of the discovery of the profound disorder of salt and water metabolism with which the disease is associated. Loeb, Harrop, and Wilder were among those who from 1932 to 1936 pointed out that the addition of large amounts of sodium salts to the diet, together with a reduction of the intake of potassium salts, was of marked value in com-

batting this metabolic disorder. The second advance consisted of the isolation of extracts from the cortex of the adrenals which were capable of maintaining life in adrenalectomized animals, and which proved to be of considerable value in the treatment of patients with Addison's Disease. This work was carried out by Swingle and Pfiffner, by Rogoff and Stewart, and by Hartman and his associates. (See *NEW INTERNATIONAL YEAR BOOK*, 1930; p. 463 f.)

Because of their high cost and markedly variable potency, commercial extracts of the adrenal cortex have proved to be but moderately satisfactory in clinical use. The isolation of a series of active crystalline steroids from the adrenal cortex has been accomplished during the past three years, and quite recently Reichstein, a Swiss investigator, has been able to synthesize one of these steroids, desoxycorticosterone acetate, in sufficient quantities for clinical use. During 1939 three groups of American workers, headed by Thorn, at Johns Hopkins, Ferrebee at Columbia, and Cleghorn at the University of Toronto, have reported quite favorably on the use of this new synthetic material.

Thorn and his co-workers studied six patients with Addison's Disease in whom they implanted, subcutaneously, pellets of desoxycorticosterone acetate weighing from 50 to 150 mgms. each. In each instance there followed "striking and continued improvement." This was evidenced not only by a gain in body weight, an elevation of the blood pressure, and a return to normal activity, but also by the demonstration by laboratory methods that the underlying metabolic disorder had been controlled—that is to say, the normal relations between sodium and potassium in the blood and urine were restored, and the volume of the circulating blood, previously decreased, returned to normal levels. Thorn believes that the method of implanting pellets of the hormone subcutaneously is the "most efficacious and economical method available for administering adrenal cortical hormone." The advantages claimed for this method are that (1) the hormone is slowly absorbed and, therefore, exerts a prolonged effect; (2) less of the hormone is required by this route, and (3) the necessity for daily injection of the hormone is obviated. It is advisable, however, before beginning this form of treatment to measure the patient's requirement of the hormone as determined by daily injections of a solution in oil. (*Johns Hopkins Hospital Bulletin* 64:339, 1939).

Ferrebee and his associates studied in great detail 13 patients with Addison's Disease, treated by the daily subcutaneous or intra-muscular injection of salts of desoxycorticosterone, and reached conclusions which were in general agreement with Thorn's. The results of their very careful study may be briefly summarized. They found desoxycorticosterone esters to produce striking clinical improvement, "far greater than has resulted from any therapy hitherto advocated." This improvement was associated with a retention of sodium and water (both of which are lost in abnormal amounts in the untreated disease). They point out that there is great variation in the amount of the hormone required to alleviate the symptoms of adrenal insufficiency in different patients, and warn that great caution must be exercised in the administration of the hormone, since excessive amounts may lead to abnormal water retention, with the development of edema and signs of heart failure. (*J.A.M.A.* 113: 1725, 1939).

Cleghorn and his colleagues compared the effects of desoxycorticosterone acetate with that of an aqueous cortical extract in the treatment of four patients. They found the new synthetic crystalline hormone to have several indisputable advantages. Patients were found to have an increased sense of well-being on desoxycorticosterone acetate, and blood pressure and blood chemistry findings were restored approximately to normal. Furthermore the hormone could be given in small injections and was less painful than the extract. Because of its slow absorption from an oily solution they believed it to be of less value than the extract at times of severe crisis with vascular collapse. There is some evidence, they think, that desoxycorticosterone acetate may not provide complete replacement therapy. (*Canadian Medical Association Journal* 41: 226, 1939).

The matter may be summed up practically by saying that before the synthesis of the crystalline hormone few patients received really adequate hormone therapy. Because of the cost, inconvenience, and pain associated with the large amount of extract required, few patients were actually restored to normal health and could return to work. Results so far obtained with the synthetic hormone suggest that these desirable ends may now be frequently attained.

Vitamin K. Experiences with Vitamin K during 1939 have amply confirmed its value in the prevention of hemorrhage associated with a decreased level of prothrombin in the blood. While it has been of especial value in the prevention of bleeding in jaundiced patients, and has, therefore, very appreciably decreased the risks of surgery in this group, it has also been used in several other conditions in which a deficiency of prothrombin has been found to exist. These include hypoprothrombinemia (1) associated with the ingestion of a diet inadequate in Vitamin K, (2) occurring in newborn infants, (3) caused by inadequate intestinal absorption following short-circuiting operations on the small bowel, severe diarrheal diseases, etc., and (4) following injury to the liver (cirrhosis, atrophy, neoplasm, etc.). (Snell, *J.A.M.A.* 113: 2056, 1939).

Important work has also been done on the chemical identification of the vitamin. A series of related quinoid compounds have been isolated from alfalfa extract and putrefied fish meal, rich natural sources of Vitamin K, which have proved to have anti-hemorrhagic properties. The structural formula of one of these, Vitamin K₁, has been established by synthesis as 2-methyl-3-phytyl-1, 4 naphtho-quinone by Doisy and his associates in St. Louis, and by Fieser and his co-workers in Boston. This compound has been shown to be effective in two clinical cases of obstructive jaundice by Frank, Hurwitz, and Seligman. (*New England Journal of Medicine*, 221, 975, 1939).

New Developments in the Treatment of Syphilis. Nearsphenamine. A group of workers at the Mount Sinai Hospital and the Department of Health, New York City, have presented an interesting new plan for the treatment of early syphilis. These investigators, Hyman, Chargin, Rice, and Leifer, have suggested that it may be possible to eradicate entirely an early syphilitic infection by the administration of massive doses of nearsphenamine by a continuous intravenous drip in as short a period as five to seven days. (*J.A.M.A.* 113: 1208, 1939).

Although Ehrlich, to whom we are indebted for the first really effective chemotherapeutic agent,

salvarsan or arsphenamine, had hoped to effect a total sterilization of infected tissues, it soon became apparent that doses of the drug large enough to be effectively spirocheticidal, were much too toxic to be used clinically; so that it became necessary to give smaller doses at frequent intervals over a period of months or even years. As Dr. Rice points out, "even the most modern methods for rendering the disease permanently non-communicable require a minimum of from eight to ten months of treatment." And, of course, cure in any individual case requires much more prolonged treatment.

Hyman, Chargin, and Leifer were led to believe from their previous studies that many of the "reactions" associated with the intravenous injection of a variety of materials resulted not from the inherent toxicity of the substance injected, but rather from the fact that it was injected too rapidly. They surmised that this "speed shock" might be the real cause of some of the toxic manifestations resulting from the intravenous injection of the arsphenamines. Should this concept prove to be valid, it might be possible, they postulated, to administer safely massive doses of arsphenamine, given very slowly by means of a continuous intravenous drip, and thus approach Ehrlich's dream of a "therapia sterilisans magna." At any rate in 1933 they treated 25 patients with recently acquired syphilis in this manner, giving four grams of nearsphenamine in five days. There were no severe toxic reactions, and manifestations of clinical improvement were "rapid and dramatic." The results of treatment in this small group were reviewed again in 1938, and were considered satisfactory enough by a group of eminent syphilologists, who made a critical study of the matter at Dr. Rice's request, to warrant a more extensive investigation. This investigation has been supervised by a committee of which Dr. Charles C. Leib is chairman, and has been carried out through the collaboration of the Mount Sinai Hospital, the New York Hospital, Bellevue Hospital, the United States Public Health Service, and the New York City Health Department.

At the time of the report, 86 male patients with primary or early secondary syphilis had been treated. The average dose of nearsphenamine was 4.1 grams, and the average duration of treatment was approximately five days. As a rule, about one gram of nearsphenamine in 1500 cubic centimeters of 5 per cent dextrose was given in 15 hours each day. The only major toxic symptoms were cerebral in origin, and occurred in two cases. In one, they proved to be of little consequence, but in the second, an unfortunate negro male of 18, repeated convulsions occurred and death resulted on the third day, apparently caused by a hemorrhagic encephalitis.

The remaining toxic phenomena were relatively non-serious. Fifty-seven per cent of the patients had a primary elevation of temperature and 63 per cent a secondary one. Fifty-two per cent experienced toxic skin rashes, usually associated with the secondary fever. Peripheral neuritis developed in 38 per cent, but did not prove to be severely incapacitating although it lasted as long as four to six months. Careful studies of kidney function showed no significant evidence of renal injury, and although certain tests showed slight impairment of liver function, there was no clinical evidence of liver damage. It was concluded from studies of the blood that no important changes resulted. That no significant retention of nearsphen-

amine resulted was evidenced by the fact that 60 per cent of the injected arsenic could be recovered from the urine and feces during the period of hospitalization.

The clinical results were striking. There was prompt healing of both primary and secondary lesions, and in as short a period as 24 hours, spirochetes could no longer be demonstrated by dark field examination. Patients experienced a sense of well-being, and frequently had improved appetites and gained in weight.

The serological results, as determined by the Wassermann reaction, were also favorable. Seven patients were lost from observation and one died, so that only 78 could be followed. In four of these there was clinical or serological relapse, and in seven more there was a tendency toward reversal of the Wassermann reaction, although it had not become entirely negative. None of this latter group showed any clinical signs of persistent infection.

In 67 patients, constituting 86 per cent of those adequately followed, complete reversal of the serological reaction occurred, the Wassermann reaction becoming entirely negative. These patients, as far as could be determined by clinical or serological tests, were free of evidences of syphilis. A review of the smaller group in which results had been less favorable, showed that the members comprising it had sought treatment at a later date after acquiring the infection than had the members of the larger group, and further that on admission they showed more strongly positive Wassermann reactions, a point, of course, which strongly emphasized the desirability of early treatment.

The authors conclude that "the massive dose method of chemotherapy in early syphilis apparently yields immediate clinical and serologic results that equal the best results that are obtainable" by present methods of continuous treatment over long periods with alternating courses of the arsenamines and the heavy metals (bismuth and mercury). However, because they believe the factor of toxicity may still be reduced, they emphasize that "this method of treatment must still be considered in an experimental phase and should not be employed for routine clinical use until greater safeguards have been established."

Should extended experience in a group large enough to be statistically significant, observed over a period long enough to allow observations concerning the prevention of the late crippling manifestations of the disease, confirm the value of this method of treatment, there can be but little question that an important advance has been made. It will be of great economic advantage to the patient and the community, and from the public health point of view should aid in the control of the spread of syphilis by rendering a large proportion of the patients non-infectious in a few days, while at the same time isolating them from intimate contact with others during the period of their infectiousness.

Sobisminol. During 1939 a soluble bismuth preparation intended for oral administration, as well as for intra-muscular injection, was accepted by the Council on Pharmacy and Chemistry of the American Medical Association for inclusion in the group of New and Nonofficial Remedies. This product, a complex organic compound resulting from the interaction of sodium bismuthate, tri-isopropanolamine, and proplene glycol, was developed by P. J. Hanzlik of Stanford University, and has been given the nonproprietary designa-

tion of "sobisminol." Favorable clinical experiences with its oral administration have been reported by two groups of workers in California—Meninger and Barnett of San Francisco, and Scholtz, McEachern, and Wood of Los Angeles. It is the first bismuth preparation which has been shown to be effectively spirocheticidal when given by mouth.

According to the Los Angeles group, sobisminol in daily doses containing 0.84 grams of bismuth will bring about involution of active syphilitic lesions of the skin. It also seemed especially effective in relieving the symptoms of late syphilis of the central nervous system. In spite of frequent mild gastro-intestinal symptoms, the drug was in general well tolerated and no serious reactions occurred after its use. It could be given in daily doses over a long period without any cumulative toxic effect. Experience with its use has not been extensive enough to say that the oral administration of sobisminol may be safely substituted for the injections of other forms of bismuth in the routine treatment of early syphilis, but the presumption is that this will prove to be the case. Oral therapy, while offering economic advantages to the patient, is very apt to be misused, and is associated with the risk of "self-treatment." To be effective it demands the honest and intelligent co-operation of the patient. (*J.A.M.A.* 113: 2219, 1939).

National Health Program. On January 23, President Roosevelt sent a message to Congress proposing a national health program, in which he said "the objective of a National Health Program is to make available in all parts of our country and for all groups of our people the scientific knowledge and skill at our command to prevent and care for sickness and disability; to safeguard mothers, infants, and children; and to offset through social insurance the loss of earnings among workers who are temporarily or permanently disabled."

Following in the wake of the President's message Senator Wagner of New York, on February 28, introduced in the Senate a bill for carrying out some of the phases of the National Health Program, in which an expenditure of \$80,000,000 was called for during the first year with progressive increases during the next 10 years. The aim of this bill was to establish, expand, and improve State programs for "(1) child and maternal care, (2) general public health services and investigations, (3) construction of needed hospitals and health centers, (4) general programs of medical care, and (5) insurance against the loss of wages during periods of temporary disability." It was proposed that this bill, if enacted, should be called the "National Health Act of 1939."

Extensive hearings on the proposed act were held before the sub-committee of the Committee on Education and Labor, but the 76th Congress adjourned sine die, August 5, without having taken any action on the bill. The Senate Committee on Education and Labor did, however, submit a preliminary report in which it expressed the view that legislation along the general lines of the bill proposed by Senator Wagner was necessary to strengthen the health services of the nation and to make provision for progressive and effective improvements of health conditions. It promised to submit a report to the next Congress.

Widely divergent views were expressed by various persons who testified at the committee hearings. While strong support was lent the bill by

Doctor Thomas Parran, Surgeon General of the United States Public Health Service, who said that the Wagner Health Act was a logical outgrowth of the Social Security Act, and that it represented the most comprehensive approach ever made to the diverse and serious problems of health and medical care for the Nation, and by other representatives of governmental agencies and social service groups, opposition by accredited representatives of the American Medical Association was expressed. A committee headed by Dr. Walter F. Donaldson, to whom the Wagner National Health Bill had been referred for consideration, reported at the annual meeting of the American Medical Association in St. Louis, on May 17, that "the Wagner Health Bill as judged by the considerations that have been here presented, is inconsistent with the fundamental principles of medical care established by years of scientific, professional medical experience, and in the opinion of your committee it is therefore contrary to the best interests of the American people." Representatives of the Association who appeared before the Committee on Education and Labor, objected to the bill on the grounds that it did not safeguard the continuance of private practice as it is now carried on; that it made no provision for the use of vacant beds now available in church and community hospitals; that it would tend to make Federal aid for medical care the rule rather than the exception, and perhaps chiefly on the ground that the bill provided for supreme Federal control.

The Association advanced a platform of its own in regard to medical care, the provisions of which are as follows:

1. The establishment of an agency of the Federal government under which shall be co-ordinated and administered all medical and health functions of the Federal government exclusive of those of the Army and Navy.
2. The allotment of such funds as the Congress may make available to any state in actual need, for the prevention of disease, the promotion of health, and the care of the sick on proof of such need.
3. The principle that the care of public health and the provision of medical service to the sick is primarily a local responsibility.
4. The development of a mechanism for meeting the needs of expansion of preventive medical services with local determination of needs and local control of administration.
5. The extension of medical care for the indigent and the medically indigent with local determination of needs and local control of administration.
6. In the extension of medical services to all the people, the utmost utilization of qualified medical and hospital facilities already established.
7. The continued development of the private practice of medicine, subject to such changes as may be necessary to maintain the quality of medical services and to increase their availability.
8. Expansion of public health and medical services consistent with the American system of democracy.

Anti-Trust Proceedings Against the American Medical Association. Considerable interest was aroused during the past year by proceedings brought under the Sherman Anti-Trust Act against the American Medical Association, the Medical Society of the District of Columbia, and certain other medical societies, a group of hospitals in Washington, D. C., and a number of individual defendants. (See *LAW under Causes Célèbres*; SUPREME COURT.) The grounds for the indictment were that the defendants had illegally restrained Group Health Association, Inc., "in its business of arranging for the provision of medical care and hospitalization to its members and their dependents on a risk sharing prepayment basis," and, furthermore, had restrained "the doctors serving on the medical staff of said Group

Health Association, Inc., in the pursuit of their callings."

Group Health Association, Inc., is a non-profit co-operative association of governmental employees in the District of Columbia falling within the low income group, who banded themselves together in order to procure medical services on a prepayment basis. The action was brought because physicians employed by the Association had been expelled from the Medical Society of the District of Columbia, and had been denied consultation with its members by the Society. Furthermore, physicians employed by the Association had been removed from the staffs of certain Washington hospitals, and had been denied the privilege of caring for patients admitted to those hospitals.

After indicating the nature of the indictment and the form of conspiracy charged, Mr. Justice Proctor of the District Court of the United States for the District of Columbia, on July 26, 1939, sustained demurrers to the indictment. The essence of Judge Proctor's reasoning was that the practice of medicine is not a trade, and, therefore, not within the purview of the Act. The Department of Justice, which had initiated the proceeding against the defendants, sought to have the Supreme Court accept jurisdiction on an appeal directly to that Tribunal without following the usual course through the Circuit Court of Appeals. The Supreme Court, however, on Oct. 23, 1939, refused to allow this extraordinary procedure, although it was unopposed by counsel for the defendants, the reason assigned being that no constitutional issue was involved, and, therefore, no reason to depart from customary judicial procedure existed. At this point the case rested at the close of the year.

Its ultimate disposition will be a matter of interest, because it will, no doubt, have an important bearing upon the subsequent relationship between physicians who may be employed by like groups offering medical care on a prepayment basis, and organized medicine. Similar experiments in health insurance are being carried out in other parts of the country, notably in Massachusetts, by Health Associates, Inc. Unquestionably, one important factor in their success or failure will be their ability to obtain adequate and competent medical services in communities where their activities will be opposed by the local units of organized medicine.

H. WALTON COCHRAN.

MEMEL, mā'məl. A territory on the east coast of the Baltic, ceded by Lithuania to Germany on Mar. 23, 1939. Area, 1099 square miles; population on Jan. 1, 1938, 152,660 including 38,927 in the port and city of Memel. The inhabitants are predominantly German-speaking.

Memel Territory was severed from Germany by the Treaty of Versailles to provide Lithuania with a seaport under an autonomous regime. Lithuanian troops seized it from the French garrison Jan. 15, 1923, and by the Memel Statute of May 8, 1924, signed by Lithuania, Britain, France, Japan, and Italy, it was created an autonomous territory under Lithuanian sovereignty. Although Germans controlled the elective Diet and Directorate (government) of the territory, their au-

onomous rights were restricted during the period 1926-38 by Lithuanian governors acting under martial law. With the advent of the Hitler regime in Germany, the majority of the Memel Germans joined the Nazi movement and agitated for the return of Memel to the Reich. Under German pressure, the Lithuanian Government abolished martial law in Memel on Nov. 1, 1938 and left the Memel Nazis in control (see 1938 YEAR BOOK, p. 420).

History. The steps taken late in 1938 to eliminate Lithuanian influence and return the territory to the Reich were carried to a rapid conclusion in 1939. On January 14 the Lithuanian Governor, Viktoras Gailius, appointed Willy Bertuleit, second in command of the Memel Nazi party, as head of the Directorate. Without awaiting this formal recognition of Lithuanian acquiescence to Berlin's demands, the Memel Nazis under Dr. Ernst Neumann had proceeded with the Nazification of the territory. Nazi Storm Troops replaced the Lithuanian police. A "security detachment" of several thousand men was organized to propagate and defend Nazi ideas. The trade unions were replaced by a Nazi Labor Front. Lithuanian officials and civil servants in the territory were replaced by Memel Germans. Economic measures were taken to favor the German as against the Lithuanian and Jewish inhabitants.

Reunion with the Reich. Following the annexation of Bohemia and Moravia by the Reich on March 15, the Memel Nazis began mass demonstrations for reunion with Germany. The Lithuanian Foreign Minister hurried to Berlin, where on March 20 he received an ultimatum threatening occupation of Memel by German troops unless the territory was ceded within four days. The Lithuanian Government accepted this demand on March 21 but declared Germany's action illegal and announced that it would consult the signatories of the Memel Statute. The German Government then threatened to invade all of Lithuania unless this statement was repudiated and Memel surrendered immediately.

The Lithuanian Government capitulated and on March 23 signed a treaty ceding Memel to the Reich. In return Lithuania received a free port zone in Memel harbor. The treaty bound Lithuania and Germany not "to proceed against the other by force nor to support an attack from a third side against one of the two sides." That same day Hitler arrived in Memel harbor at the head of the German fleet and took formal possession of the territory, which was incorporated in the administrative district of East Prussia. Pending the establishment of a free zone the German authorities permitted Lithuanians to use Memel harbor. On April 18 the Lithuanian State Railways transferred to the German State Railways all its railway lines (85.69 miles), equipment and rolling stock within Memel territory.

An annex to the German-Lithuanian treaty provided for the operation of the Lithuanian free port zone in Memel. The German harbor board was to conclude a contract for utilization of a section of the port, under a 99-year lease, with a company in which Lithuanian capital predominated. The cost of the lease was to be considered as defrayed by the Lithuanian Government's past investment in improving the Memel port works.

METALLURGY. Announcement that the Aluminum Company of America will spend several million dollars on a new plant at Vancouver, Wash., to produce aluminum from power generated at the new Bonneville Dam was perhaps the most interesting news of the year to the metallurgical industry. Use of cheap hydroelectric power generated at the various United States Government dams that have been in process of construction has attracted much thought from metallurgists, and this is one of the first concrete results. It is the first sale of Bonneville power to an industry that is new to that part of the country. The initial capacity of the new plant will be 15,000 tons of aluminum per year, and the power will cost \$17.50 per kilowatt-year.

Cheap power should attract other metallurgical industries to the Northwest, utilizing possibly the phosphate deposits of Idaho and Montana, the chrome deposits of Oregon and northern California, and low-grade iron ore, clay, magnesite, and other minerals as yet undeveloped in that area. The accompanying table shows the amount of power required for the production of certain mineral products. At the Bonneville Dam this power can be had at \$14.50 per kilowatt-year, or 1.65 mills per kilowatt-hour, an especially attractive rate to the electrometallurgical industries.

ELECTRIC POWER REQUIRED FOR THE PRODUCTION OF CERTAIN METALS AND MINERAL PRODUCTS

| Product | Kilowatt-hours required per ton finished product |
|----------------------------|--|
| Aluminum | 20,000 to 25,000 |
| Zinc and Cadmium | 2,000 to 3,000 |
| Copper (by leaching) | 1,700 to 2,600 |
| Magnesium | 13,000 to 14,000 |
| Steel | 500 to 750 |
| Ferroalloys (chrome, etc.) | 5,000 to 10,000 |
| Abrasives and Refractories | |
| Fused Alumina | 2,000 to 2,500 |
| Silicon Carbide | 6,000 to 8,000 |
| Silicon | 12,000 to 14,000 |
| Graphite | 7,600 to 8,000 |
| Phosphoric Acid | 5,000 to 6,000 |
| Sodium (metallic) | 13,000 to 15,000 |

To utilize domestic ores with the assistance of cheap power, the U.S. Bureau of Mines has been carrying on extensive experiments on electrometallurgy, as a result of which a commercial method for the production of electrolytic manganese has been developed which is being exploited by the Electro Manganese Corporation at Knoxville, Tenn. Experiments on the production of metallic magnesium from magnesite indicate that one or the other of the following methods offer the greatest possibilities of success: (1) Direct reduction of magnesium oxide by carbon, and purification of the product by distillation; or (2) production of anhydrous magnesium chloride by treating a mixture of magnesium oxide and carbon with chlorine. Magnesium metal is then made by electrolysis of the fused chloride.

Owing to its use in lightweight alloys, production of magnesium metal in the United States has increased from less than 300 tons in 1928 to 2400 tons in 1938. This all came from brines, but the growing importance of the metal in industry has created much interest in its production from domestic ores. Experimental work indicates that

concentration of magnesite ores by flotation is feasible.

Mercury. Interest in the metallurgy of quicksilver has been stimulated by the tripling of the price of this metal by the European producing monopoly within the last few months. No fundamental change has taken place in practice during the last two decades, but the designs of mechanical furnaces, dust collectors, and condensing systems have improved, as has the type and grade of fuel used for firing the furnaces. Practically all American ore is low in grade and it is usually hand-sorted, sometimes screened, and occasionally concentrated by jigging or flotation, by which an ore running, say, 5 lb. of quicksilver per ton may be raised to 12 to 15 lb. Ordinarily it costs too much to grind ore to flotation size to warrant use of that process on the entire mill feed. Distillation of the quicksilver may be conducted either in a rotary kiln, similar to that used for making cement clinker, or in multiple-hearth furnaces of the mechanical rabbling type. The former is a sloping revolving tube, lined with fire-brick, usually with a fuel-oil burner inserted at its lower end. Dimensions may vary from an internal diameter of 1½ by 16 feet, with a capacity of about 8 tons of ore per day, to 7 by 100 feet or larger, with a capacity of about 250 tons. The hearth furnaces, which employ oil firing on one or more hearths, also may vary greatly in size, from 4½ to 21½ feet in diameter, and with from four to 16 hearths. Gas may be substituted for oil as fuel, and the use of butane gas is a new and promising development.

Both types of furnaces make much more dust than the old hand-fired furnaces. Cyclone dust collectors have proved superior to other types for this service, usually with a blower following the dust collector. For condensing the mercury, glazed sewer tile has recently been generally adopted, but the use of metal pipes has advantages that are coming to be recognized. "Duriron" and "Corrosiron" have proved practical, though relatively heavy; stainless steel has been successfully used, and Monel metal is being tried. Cooling of the condensers may be by either air or water.

Tin. Experiments in the metallurgy of tin have been conducted by two American companies during 1939 and as result, commercial plants should be in operation during 1940. That of the American Metal Company will use an electrolytic process, as did the American Smelting & Refining Company during the World War. Details of the process to be used by the other company, the Phelps Dodge Corporation, have not been announced. Both companies will treat Bolivian tin concentrates, which, under normal peacetime conditions, can probably be more cheaply smelted in England, as has formerly been done.

Copper. Copper-smelting equipment in the United States has been enlarged by the addition of the new Hurley, New Mexico, smelter of the Nevada Consolidated Copper Corporation, which was blown in in May, 1939. The reverberatory furnace there installed is an unusually large one, 28½ by 126 feet, fired by natural gas through multi-jet burners. The waste-heat boiler plant is most modern, consisting of two 1260-h.p. boilers installed just back of the reverberatory, with no uptake flue. These boilers utilize about 60 per cent of the fuel burned in the furnace and reduce the exit gases to a temperature of 410 degrees F. In this plant, the trend toward elimination of roasting furnaces is again exemplified, the concentrates and fluxes being charged direct. Conveyor belts are

used wherever possible, with vibrating conveyors down each side of the furnace for charging. Tracks and cars are conspicuous by their absence around a modern copper smelter.

In copper refining, a novelty has been the installation of a pilot plant for the production of electrolytic copper direct from blister copper anodes.

Lead. In lead metallurgy, the trend toward larger equipment continues. In Australia, sintering machines have been in operation with beds 10 feet wide; in the United States, 63 inches is a fairly standard width, with some remaining at 42 inches. Return of the smoke and dust through the sinter bed is becoming general practice, as is the recovery of metallic lead from the wind boxes, owing to the high lead content of the concentrates. Dilution is necessary in some plants, and lime sand from beach deposits has proved ideal for this purpose in Utah. A big saving in oil consumption for ignition has been secured at one plant by mounting a single small oil-burner on a mechanically-driven swinging arm passing to and fro across the bed.

In lead refining, gaseous chlorine is now being used for the removal of tin as tetrachloride, which is vaporized and condensed. Tin can also be removed by violent agitation of the molten metal with lead oxide. One company has developed the electric smelting of lead concentrates, with a complete sintering plant, furnace, and kettle house, producing five tons of drossed bullion a day from a high-zinc charge, most of the zinc being volatilized.

Zinc. Horizontal-retort zinc distillation plants continue to increase their production per retort, one plant regularly producing over 100 lb. of metal per retort daily. Also, the 32- or 28-hour period of retort firing has increased the useful life of the refractories used, simplified the labor problem, and increased zinc extraction. Work on the reduction of zinc in gaseous suspension continues on a semi-commercial scale at one plant. In electrolytic zinc refining, a silver-lead alloy has become the standard anode at most plants. Anodes of cast lead coated with lead electrolytically deposited by the Betts process are used at one plant.

Ore Dressing and Hydrometallurgy. Further headway is seen in the use of rod mills to fill the gap between intermediate crushing and coarse grinding. They eliminate dusting and the closed-circuit operation of fine crushers, and they supply a finer product to the ball mills, which then may use smaller grinding balls, say 2½ inch. Low-level-discharge ball mills have proved their efficiency in recent extended tests; a pool of pulp from 1 to 1½ feet deep is maintained in the mill.

The popularity of jigs in grinding circuits continues, especially for the recovery of gold and tin, and finer material is thus recovered than was formerly thought possible. One improvement in jig design involves a specially designed cam to actuate the plunger, thereby prolonging the positive upward flow of pulp over a predetermined time cycle and eliminating the peak flows that needlessly disturb the bed. Tabling practice may be improved by the use of dispersants. It is contended that pulps of great fineness may be effectively tabled into distinct mineral fractions if properly dispersed, as by the addition of a little sodium silicate to the pulp.

Some extremely deep flotation cells are now being manufactured, some with a submergence depth of nearly 8 feet, though the impeller for circulation and aeration is placed near the surface. A few new flotation reagents have appeared, but most of

them are not of general application. Flotation remains a process of concentration that cannot be standardized. The machines, reagents, and method to be used on a specific ore to get the best results must be determined by experimentation aided by as much experience as possible.

An old metallurgical problem in the treatment of an antimony-gold ore at the Santo Domingo mine, in Peru, has apparently been successfully solved. The concentrates are high in sulphur and ordinary roasting takes place at a comparatively high heat, forming gold compounds that are insoluble in cyanide solution so that only a 50 or 60 per cent extraction has been possible. By directing the hot calcined concentrate through a pipe into a closed tank of water, and leading the large volume of resultant steam into the multiple-hearth roasting furnace used in the process, and at the same time closely regulating the draft and fuel, the temperature could be held at from 600 to 700 degrees F., and practically no insoluble compounds were formed. The soluble antimony compounds would foul the cyanide solution, so those soluble in an acid solution were removed by washing in the closed tank already mentioned. After dewatering, the pulp was washed in lime-water, and then ground in a ball mill in cyanide solution. A table with a "high-grade" riffle was put in closed circuit with the ball mill to remove coarse gold for amalgamation. Thus over-all recovery was raised to better than 90 per cent on this refractory ore.

One new idea in the cyanidation of gold seems to have possibilities. It consists in the atomization of cyanide pulp by pumping it into a large tank under high pressure, which is thought to be superior to mechanical or air agitation.

An interesting novelty in the mechanism for classifiers and thickeners is a robot lifting device which automatically raises the rakes clear of the segregating pulp pool in case of failure in the main power line. The device operates from a battery circuit and is driven by a small direct-current motor that is cut in when the power line fails. Sticking of the rakes in the pulp in case of a shutdown is thus obviated.

EDWARD HODGES ROBIE.

METEOROLOGY. Chapman has made a very interesting survey on the lunar tide in the atmosphere. From time immemorial the tides in the oceans have been familiar to mankind, but Laplace, in 1825, seems to have been the first to try to determine, from barometric observations, whether the moon produces a tide in the air as it does in the sea. He used eight years of Paris barometric observations, but without success. In 1828 Bouvard used 11 years of Paris data, and in 1843 Eisenlohr used 22 years, but they too were unsuccessful. Lefroy in 1842, from 17 months' bi-hourly observations at St. Helena, first determined this air-tide. In 1852 Elliot determined it at Singapore from five years' data and in 1871 Bergsma determined it at Batavia. These three stations are all in the Tropics where barometric changes resulting from the irregular passage of anticyclones and depressions are almost unknown, or at least very small; also in the Tropics the air-tide, according to theory, should be larger than elsewhere. These combined reasons explain why the tropical air-tide was readily determined, whereas until 1918 all efforts to find it in meteorological records outside the Tropics were unsuccessful. In 1918 Chapman determined the Greenwich air-tide from 64 years' hourly data, by rejecting all days (about two-

thirds the whole) on which the barometric range exceeded 0.1 inch. High tide occurs twice on each lunar day at Greenwich, just *before* the moon's upper and lower transits, and its range is less than 0.001 inch of mercury.

In 1918 the air-tide was thus known at three tropical and one non-tropical station; since then its value has been determined at 50 more stations, the computations at 28 of these stations having been made since 1930.

Several meteorologists have worked on the lunar air-tide since 1918, but to Chapman and his co-workers is due most of the results. The 50 stations for which the air-tide has now been computed are fairly well distributed over the globe. At the majority of stations, the time of high tide occurs somewhat after lunar transit, though at some stations it occurs before the moon's meridian passage. Generally speaking, the range of tide is highest in the low latitudes and least in the high latitudes, just as the tide theory suggests, though there are some notable exceptions. For example, Chapman finds that the range of air-tide at Melbourne is about twice that of Buenos Aires, though these two stations have approximately the same latitude. Some specially striking irregularities in the geographical distribution of the tide are found in North America. Along the eastern part from St. John and Montreal southward to Bermuda and Mexico City, the air-tide has a normal and regular distribution with nearly the same phase at all stations within this area. At Dodge City, Kansas, the phase is fairly regular, but the amplitude is smaller than at the more easterly stations in the same latitude. Going to the west of North America, the tide becomes increasingly abnormal, either in the smallness of its amplitude or in its unusual phase, or in both these respects. At Victoria, Vancouver, and Portland, the amplitude is very small; at Salt Lake City it has an early maximum, and at San Francisco and San Diego the time of high tide is two hours before the lunar transit. At Mt. Wilson and Mt. Hamilton, which are close by but at much higher elevations, the time of high tide is after the lunar transit.

One of the most interesting deductions of Chapman about the lunar air-tide is that the low frequency pressure oscillations (about 705 per annum) set up in the atmosphere by the moon are adiabatic and not isothermal. In this, Laplace assumed they would be isothermal and thus fell into the same error which he himself corrected with reference to Newton's theory of the velocity of sound. But sound waves have several hundred oscillations per second, and this was why Laplace corrected Newton's determination of the velocity of sound. Chapman points out that because of the great length of the lunar tidal wave (half-way round the earth), the heat generated by tidal compression cannot travel this immense distance in the time available, nor can the heat escape upward or downward sufficiently fast, hence there is adiabatic compression.

Fred L. Whipple has worked since 1936 with two patrol synchronized cameras at the Harvard College Observatory for the purpose of photographing meteors simultaneously. One camera is at Cambridge and the other is about 24 miles away at the Oak Ridge Station, the long base line affording accurate determination of meteor heights by triangulation. Whipple's principal aim in this work was to obtain precise spatial orbits of sporadic meteors in order to find out if they belong to the solar system or not. But his observations

also provide meteorologists with accurate data about a part of the atmosphere beyond the reach of sounding balloons. Whipple has used his observations to determine the densities of the earth's atmosphere at heights of from 50 to 100 kilometers. No sounding balloon has ever attained a height exceeding 36 kilometers. The principles involved in finding the air density from meteor trails are that the integrated light of a meteor with an observed velocity is a direct measure of its original mass and the instantaneous luminosity is proportional to the rate of loss of meteoric matter, the light being emitted when atoms evaporated from the body by friction collide with the air molecules. In this way the diminishing mass of the meteor can be computed from observations for each instant; from the observed velocity the deceleration can be computed, and from these the resistance of the air can be computed, and, in turn, the density. Atmospheric densities can also be computed independently from the observations by using the height of maximum brightness of a meteor. A third independent check is to use the time of beginning of the photographic trail. All three methods give reasonably consistent results. These density determinations are of decided interest, because they provide a method of computing atmospheric temperatures at heights beyond the reach of balloons.

The advent of aviation caused meteorologists to study atmospheric visibility, a feature previously ignored. Visibility observations have been taken and recorded for upward of 15 years, and H. L. Wright has just made a study of the visibility observations in the British Isles. He finds that sea-salt nuclei are much larger than combustion nuclei and play a large part in the determination of visibility. Visibility can be measured in (1) the International Code of Visibility, which simply gives the distances between which objects are visible, (2) the extinction coefficient, and (3) a new unit proposed by Gold—the nebule—which is a screen having a transmission coefficient $x = \sqrt[100]{1/1000}$. It is quite immaterial whether the obscuring matter in a screen is compressed within the thickness of a disc, as in a visibility meter, or expanded to a thickness equal to a thickness equal to the distance of the object viewed. All that matters is that the total number of nebules in the screen is the same in all cases. In a normal obscuring atmosphere the material is spread out evenly between the observer and the object or light which is viewed, and the visibility may be measured in nebules per unit distance. Thus the international code of 6 means that objects are visible at 4 km., but not visible at 10 km., and this corresponds to 10 nebules per km. Wright gives the mean visibility conditions in nebules per kilometer for numerous stations in the British Isles and for the different seasons. It will be interesting to find if salt nuclei play as important a role in visibility in other parts of the world as Wright has found for the British Isles.

Pierce has completed an exhaustive analysis of the meteorological conditions accompanying the New England Hurricane of 1938. He used all available upper air and surface data, and constructed constant level and isentropic charts for each day during the progress of the hurricane. On the maintenance of the energy of this storm Pierce points out that, when the hurricane acquired the deep polar air mass to the west of its path, there was abundant energy supplied by the potential energy of air mass distribution. Most tropical hurricanes on striking land receive no such potential

energy due to air mass distribution and are easily dissipated.

Practical Meteorology. Applied meteorology made remarkable progress during the year. The outstanding events were the initiation of four weather maps a day and the opening of about 20 radiosonde stations. Of lesser importance were the initiation of "breakfast broadcasts" and of trans-Atlantic weather service for aviation.

In the earliest years of the U.S. Weather Bureau three synoptic weather maps were drawn daily based on simultaneous observations made eight hours apart. About the end of the 19th century, the three maps a day were reduced to two, these being based on observations made at 7:30 a.m., and p.m., 75th meridian time. The two maps a day program continued until the year 1939, when maps were begun to be drawn from observations made at 1:30 a.m. and p.m., 75th meridian time, as well as the two times mentioned above. This makes possible a closer study of the movements of air masses with a corresponding improvement in the accuracy of weather forecasts.

Beginning in 1898 the U.S. Weather Bureau began upper air observations of temperature, humidity, and pressure by means of kites. Kites continued to be used until 1933 when they were displaced by airplanes. In 1938 the use of radiosondes was begun at six stations, and to these were added 18 more in the U.S. proper during 1939. (There were two more established in Alaska and two in the West Indies.) These upper air observations make available, both for the daily forecaster and the research meteorologist, a vast amount of data, always desired in earlier years, but unfortunately not obtainable.

The 1:30 a.m. weather map has made possible a new feature—the breakfast broadcast—by which a forecast of the day's weather is announced to the general public. Thus, people engaged in industries which are affected by weather can plan their work in the light of the latest weather information.

Had peace continued in Europe, the transatlantic airway weather service would have been a notable step forward, but on account of the war the commerce benefiting from this new service is limited.

The regular publication of mean monthly isentropic charts was begun in August. These charts show the mean air flow over isentropic surfaces. All in all, the U.S. Weather Bureau is giving a very good account of the \$6,156,870 appropriated to it by the Congress, and further improvement in forecasts is expected.

During the year there were international conferences of meteorologists at Montevideo, Uruguay, in February, and at Berlin, Germany, in June. The first was a conference of Regional Commission III to discuss meteorological problems affecting the two Americas. The other was the regular biennial meeting of the International Meteorological Committee, and also sessions of the International Commissions of Aerology, Maritime Meteorology, and Aeronautical Meteorology. Besides these two gatherings, which were concerned with administrative matters of exchanging weather information and the like, there were other meetings of meteorologists devoted to the scientific phases of the subject. Foremost among these was the meeting of the Section of Meteorology of the International Geodesic and Geophysical Union at Washington in September—the first time this international body has ever met in America—and the first joint meeting of the Royal and American Meteorological

Societies in Toronto in August. The war in Europe reduced the attendance of the meeting in Washington.

The war in Europe has reduced the number of vessels sending reports of weather observations to the United States. While this is causing temporary hardships to meteorology, it should be borne in mind that it was due to the lack of extensive weather reports from foreign countries that led Bjerknes in Norway to a more intensive study of the local Norwegian weather reports and to the inception of air mass analysis—one of the good things to come from the World War.

In the year 1939 there were 138 tornadoes reported in the U.S. with a death toll of 98 and property losses of about \$5,000,000.

There were five tropical hurricanes in the North Atlantic during the year, none of which were of unusual importance.

RICHMOND T. ZOCH.

METHODIST CHURCH. The year 1939 showed a continued forward movement in the growth of the Church. While all reports have not been tabulated, there will be an increase in Membership of 50,000 or more.

The outstanding work of the year was the consummation of the union of three Methodist bodies into the Methodist Church at the Uniting Conference held in Kansas City, Missouri, April 26 to May 10. Nine hundred delegates from the three bodies met to complete the act of union and to formulate rules for the government of the New Church. Many voices declared that the three groups could not be brought into agreement, but from the opening Communion service the Uniting process was working in the hearts of the Delegates. As they worshiped together, as they worked together in Committees, as they discussed together the questions on the floor of the Conference, as they mingled Socially between sessions, the differences began to disappear and the points of common interest increased and quietly, as the working of the leaven in the meal, the fact of Union grew until that which could not be done became an established fact and the three Methodisms became one.

The head of the gavel that was used to open the first session on April 26 and to close the final session on May 10, was made of oakwood taken from the tree on St. Simon's Island off the coast of Georgia under which John Wesley preached in 1737. The head of another gavel used was of English Oak taken from the first Chapel that John Wesley built at Kingswood, Bristol, Eng-

land, in 1739 and the handle was of wood from the original John Street Church, New York City, dedicated in 1768, a union of the first Methodist structures in England and America. Other gavels used were from Historic Methodist Buildings and Mission fields of the Church.

It was the afternoon of May 10, 1939. The work of the Uniting Conference had been completed. All was in readiness for the service of "Declaration of Union." More than 12,000 people were in the Auditorium as the service opened at 7:45 p.m. The enthusiasm increased as the service moved forward through the Worship period, the address by Bishop Edwin Holt Hughes, the Senior Effective Bishop in the United States of the New Church, through the Declarations to the climax as the Bishops and Delegates, with uplifted hands, declared—"To the Methodist Church thus established we do solemnly declare our allegiance, and upon all its life and service we do reverently invoke the blessing of Almighty God. Amen."

On the motion by Judge H. H. White of Louisiana, seconded by James R. Joy of New Jersey and Judge Harry Shaw of West Virginia "that the Declaration of Union which has been adopted section by section, be now adopted as a whole" Bishop John H. Moore said, "I shall take the vote, first standing in favor of the adoption, and after you are seated I will take the vote for those who oppose the adoption."

"If you will adopt this Declaration of Union as a whole, you will stand and lift your right hand." The entire Conference arose. "If you oppose the adoption of this Declaration, will you stand and lift your right hand. No one stands. The vote is Unanimous."

At 8:59 p.m. May 10, 1939, Bishop Moore said, "The Declaration of Union has been adopted. The Methodist Church is. Long live the Methodist Church."

At once the Greater Kansas City Messiah Chorus, conducted by Mr. Powell Weaver, burst into the majestic strains of the Hallelujah Chorus by George Frederick Handel.

After the singing of the Hymn "O God, Our Help in Ages Past" and a motion for adjournment made by Thomas D. Ellis of Georgia and seconded by E. H. Cherrington of Ohio, the Uniting Conference stood adjourned with the benediction pronounced by Bishop John L. Nuelsen of Geneva, Switzerland, and the Methodist Church began its United Task of helping to bring in the Kingdom of God in the Earth.

After the organization of the Methodist Church each Conference of the three uniting bodies met, heard the reports for the year, and voted to dissolve the conference of the former body and organized the Conference as a part of the Methodist Church. The first General Conference of the Methodist Church will be held in Atlantic City, New Jersey, beginning Apr. 24, 1940. This General Conference will be followed by meetings of the Jurisdictional Conferences beginning in June.

The Methodist Church faces its task in 1940 with 34 Effective, 2 Missionary, 7 Central Conference and 17 Retired Bishops, and more than 7,900,000 Members. See LAW.

METROPOLITAN MUSEUM OF ART. See ART MUSEUMS; ART EXHIBITIONS.

MEXICO. A Federal republic of North America, comprising 28 States, 2 Territories, and the Federal District (City of Mexico and 11 surrounding villages). Capital, Mexico, D. F.

Area and Population. Area, 760,290 square

miles; population, 19,479,000 (estimated) on June 30, 1938 (16,553,000 at 1930 census). The racial division of the population (1930 census) was: Indians, 4,630,880; whites, 2,444,466; mixed race, 9,040,590. Living births registered in 1938 numbered 764,544 (39.2 per 1000); deaths, in 1937, 457,795 (23.9 per 1000); marriages in 1938, 123,521 (6.3 per 1000). The population of the city of Mexico in August, 1939, was estimated at 1,447,000 (1,234,000 in 1930). Populations of other towns (1930): Guadalajara, 175,539; Monterrey, 132,577; Puebla, 114,793; Mérida, 95,015; San Luis Potosí, 74,003; León, 69,238; Tampico, 68,126; Veracruz, 67,494; Torreón, 66,001; Aguascalientes, 62,244.

Defense. Military service in the active army or National Guard is compulsory. Strength of the active army in 1938, 3405 officers and 38,430 men; navy, 6 escort vessels, 10 coast guard patrol vessels and minor craft. The air force in 1939 comprised about 170 pilots and 70 planes. Defense appropriations for 1939 totaled 92,984,458 pesos.

Education and Religion. The 1930 census showed 59 per cent of the population to be illiterate. Federal, State, and municipal educational appropriations for 1939 aggregated \$40,245,000. See EDUCATION.

Roman Catholicism is the predominant faith, but the 1917 Constitution provides for strict state control of the Catholic and other churches. All foreign priests were expelled in 1926 and Federal and State anti-church laws reduced the number of native priests officiating to about 350 in 1936. In subsequent years a number of State governments permitted the churches to reopen. Churches and other buildings used for religious functions were nationalized in 1936.

Production. Agriculture, mining, stock raising, and manufacturing are the main occupations. Yields of the chief crops were (in metric tons, except as noted): Wheat, 322,400 in 1938; barley, 69,700 in 1938; corn, 1,634,700 in 1937; rice, 74,600 in 1937-38; potatoes, 68,500 in 1937; coffee, 37,000 in 1937-38; cane sugar, 352,500 in 1938-39; tobacco, 14,300 in 1937; cotton, 73,700 in 1937. Henequen, chickpeas, alfalfa, vegetables, and fruits are other crops.

The value of mineral production in 1938 (excluding coal and petroleum) was 557,180,000 pesos (\$14,016,000 in 1937). Production of the chief minerals in 1938 was (in metric tons): Petroleum, 5,654,000 (6,888,000 in 1937); coal, 893,141; silver, 2520; lead, 282,369; zinc, 172,218; copper, 41,851; antimony, 8069; cadmium, 762; iron, 111,093; molybdenum, 806; white arsenic, 8894; bismuth, 186. Gold production was 28,734 kilograms; mercury, 293,683 kilograms. The industrial census of 1935 showed 7241 manufacturing establishments employing 215,003 persons and with a total production value of 1,038,685,000 pesos.

Foreign Trade. Imports in 1938 were equivalent to \$109,694,000 (\$170,317,000 in 1937); exports, \$186,064,000 (\$247,638,000). Conversions to dollars were made at average peso exchange rates of \$0.222 in 1938 and \$0.2775 in 1937. The United States supplied 57.7 per cent of the 1938 imports (62.2 in 1937); Germany, 18 (16.1). Of the 1938 exports, the United States took 67.4 per cent (56.2 in 1937); United Kingdom, 9.4 (11); Germany, 7.7 (9.4). Leading 1938 exports were: Silver, 170,802,299 pesos; gold, 152,714,822 pesos; lead, 108,993,447 pesos; zinc, 79,-

996,894 pesos; copper, 38,851,620 pesos. See IMPORTS AND EXPORTS.

Finance. Actual Federal revenues in 1938 were 444,611,000 pesos and expenditures 499,000,000 pesos. The above figures do not include the government's obligation to the Bank of Mexico, which stood at 146,900,000 pesos plus 27,800,000 pesos of road bonds at the end of 1938. The 1939 budget estimated expenditures at 445,875,614 pesos; 1940, 442,000,000. The foreign debt (in default since 1914) was officially estimated at 1,133,995,000 pesos, including unpaid interest, as of July 1, 1937. The recognized internal debt as of Dec. 31, 1936, was 434,386,000 pesos (principal, 288,765,000; interest, 145,621,000). See History.

Transportation. The principal railway system, the National Railways, was nationalized in 1937 and turned over to the railway workers' union for operation in 1938. Railway lines in 1936 extended 14,252 miles. In 1939, 1034 miles of line were under construction. Highways totaled 56,923 miles (641 miles built in 1938). There were (1939) 23 air lines operating over 15,343 miles of route (12,751 miles local and 2592 miles international). Improvements in port works at Progreso, Acapulco, and Mazatlán were in progress in 1939.

Government. The Constitution of 1917, as amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for re-election. Legislative power rests with an elective Congress of 2 houses—a Chamber of Deputies of 172 members, elected for 3 years, and a Senate of 58 members, renewed every 6 years. Former President Plutarco Elías Calles, acting through the National Revolutionary party which he organized in 1928, controlled the Federal government and Congress until President Lázaro Cárdenas (inaugurated Nov. 30, 1934) broke the power of Calles in 1935-36. For developments in 1939, see History.

HISTORY

Internal Developments. President Cárdenas continued during 1939 the resolute course of internal economic and social reorganization undertaken in preceding years (see 1938 YEAR BOOK, p. 452 f.). The extensive foreign oil properties expropriated by the Mexican Government on Mar. 18, 1938, were retained despite the powerful opposition of the oil companies and the United States and British governments. The distribution of large landed estates to peasants on a communal basis was extended. Further measures of a nationalistic character were enacted regulating the status and property holdings of foreigners. But the economic depression that gripped the country in 1938, due at least in part to the government's policies, continued during 1939. Opposition to the Cárdenas programme appeared to be increasing, while dissension spread among the supporters of the President. With the progress of the political campaign for the Presidential election set for July, 1940, sporadic political strife flared out with growing intensity. Mexico seemed once more to be nearing the brink of revolution and civil war.

The Oil Issue. Efforts of the United States and other foreign oil companies to regain control of their properties or obtain immediate and "fair" compensation were defeated in the Mexican courts. The Supreme Court on April 24 declined

to grant an injunction against government occupation and exploitation of American-owned oil wells and properties not mentioned in the expropriation decree of Mar. 18, 1938. On December 3 the same court upheld the constitutionality of the 1938 decree. Meanwhile decisions of French and United States courts provisionally overrode legal efforts of the oil companies to prevent the sale in those countries of petroleum from expropriated wells.

The boycott organized by the oil companies against sales by the Mexican Government in foreign markets worked havoc with the petroleum industry. In 1938 shipments abroad declined 41 per cent in volume from 1937, while the value declined from 162,000,000 pesos in 1937 to 79,700,000 in 1938. The government was obliged to dispose of its oil below the world market price.

Nevertheless new markets for the expropriated oil were opened by barter deals with Germany and Italy early in 1939. A Brazilian firm on July 4 announced an agreement to purchase 5,500,000 barrels of crude oil annually from the Mexican Government. In his speech of September 1 to the Mexican Congress, President Cárdenas declared that the government was breaking through the companies' boycott abroad and that the outlook for the industry was bright. He admitted that the government had been unable to pay the 133-per cent increase in wages and social-welfare benefits awarded petroleum workers by the Labor Board previous to expropriation. But he said that when the oil could be sold on a cash basis at higher prices full payment of the wages fixed in the Labor Board award would be possible.

The outbreak of the European war in September deprived Mexico of the German petroleum market and set back the government's plans. New efforts were made to dispose of the oil in the United States. At the end of November it was reported that production of the expropriated wells exceeded both consumption in Mexico and exportation by about a million barrels monthly. Unrest was said to be on the increase among oilfield workers, who feared further curtailment of production and payrolls.

Negotiations for a settlement of the controversy were opened by Donald R. Richberg, representing the oil companies, with President Cárdenas in March. They discussed a proposal drafted in the State Department at Washington for the administration of the oil properties by a 9-man board. Three members were to represent the Mexican Government, 3 the oil companies, and 3 were to be "neutral" members chosen from a panel selected by the American and Mexican governments. Cárdenas insisted, however, that his government must retain control of the industry, while the oil companies flatly rejected the State Department's suggestion.

Three alternative proposals advanced by the Mexican Government were likewise unacceptable to the companies. They were: (1) joint government-company exploitation of the expropriated fields and division of the earnings; (2) delivery of oil for export to the companies by the government at a discount permitting the companies to amortize their investment in the fields and obtain a profit, and (3) payment by the government of a cash compensation after appraisal of the value of the expropriated properties.

In his speech of September 1 the President stated that the government had reserved 20 per

cent of all foreign sales of expropriated oil to indemnify the companies. He announced that the government had completed an inventory and evaluation of the oil properties which would be used as the basis of an offer of compensation to the companies. The companies had refused to co-operate with the government evaluation procedure. They held that Mexico was unable to pay an equitable price for the seized properties within a reasonable time even if the government wished to do so. On December 8 the government proceeded with the statutory appraisal of the oil properties, citing the 17 American companies whose properties were expropriated in 1938 and 10 additional companies to appear before the Federal District Court for the appointment of expert appraisers.

Land Distribution. President Cárdenas stressed the increasing momentum of the land distribution campaign in his speech of September 1. In the preceding twelve months the government had distributed 1317 parcels of land involving 989,304 acres among 106,829 farmers, while since the beginning of the revolutionary regime a total of 14,207 communal land distribution projects had been completed involving the distribution of 61,340,354 acres among 1,643,237 farmers. Three-fifths of the entire total was distributed during the Cárdenas regime. More large estates owned by United States citizens were among those expropriated during the year 1939.

Other Nationalistic Measures. To free Mexico from dependence upon United States and other foreign airplane manufacturers, the government in February contracted with the Canadian Car and Foundry Company, Ltd., for the establishment of an airplane factory near the capital. A movement was launched to curb the buying or holding by foreigners of real estate in the cities. It was charged that foreigners were taking advantage of a favorable exchange situation and Mexican economic difficulties to buy up extensive properties at low prices. A decree of August 19 prohibited acquisition by foreigners of land, water rights, mining concessions, etc., within 35 miles of the Mexican frontiers or coasts. To acquire similar property in the rest of the country, the foreign purchaser was required to renounce any appeal to his own government for protection of his rights. A campaign for repatriation of 1,400,000 Mexicans from the United States was inaugurated.

Despite growing public dissatisfaction with the results, the government continued to support the labor unions in their operation of the National Railways and in their continually increasing demands upon foreign-owned mining, power, and other enterprises. A series of wrecks on the National Railways, clogging of transport facilities at Veracruz and other ports, the growing financial difficulties of the system, and the inability of the unions to maintain discipline and efficiency among the railway workers provoked vigorous criticism from the Mexican press. A committee of workers joined in the widespread demand calling for the restoration of government operation of the railways.

Labor difficulties and restrictions imposed by the government, coupled with depressed economic conditions, led to further retrenchment or withdrawal of United States and other foreign business enterprises operating in Mexico. To check this trend Congress enacted legislation, effective

Jan. 1, 1940, guaranteeing capital and minimum interest on all sums invested in specified industries.

Economic Situation. President Cárdenas in his message of September 1 reported "recovery in almost all branches of the national economy" from the monetary panic and flight of capital of 1937-38. However, the independent newspaper *El Universal* on July 2 declared:

Mexico is experiencing a period of complete depression—our money has been devaluated; industrial progress is blocked by continuous labor conflicts, by ever increasing taxation and by the difficulties encountered in our railroad system; there is a lack of consumption; crop scarcity has made it necessary to import articles of prime necessity; the cost of living is very high; and, finally, innumerable indications and tangible facts, of which the public is well aware, . . . show that Mexico is passing through a severe economic crisis.

In an effort to check the depreciation of the peso and restore the government's credit, the Bank of Mexico re-entered the exchange market on Jan. 2, 1939, fixing the new rate of 4.99 pesos to the dollar. The average free rate was 3.50 pesos to the dollar in 1937 and 4.52 in 1938. The reduction of the price paid by the U.S. Government for foreign silver in July led to further depreciation, the average rate being 5.97 pesos to the dollar in August. Because of anticipated higher prices for Mexican raw materials, the peso strengthened after the outbreak of the European war, reaching a low of 4.75 to the dollar. With the exception of copper, mineral prices failed to show the expected increases and the government was forced to reduce the valuations set on minerals for export tax purposes. On November 23 the 4 per cent tax on all capital leaving the country, imposed in 1936, was repealed in order to aid the government in pegging the peso at about five to the dollar.

Political Developments. The Presidential campaign got under way early in 1939, Cárdenas having announced on Feb. 20, 1938, that he would not be a candidate for re-election. On Jan. 17, 1939, three leading members of the government resigned to seek the nomination from the dominant Party of the Mexican Revolution (PRM)—Gen. Francisco Mújica, Secretary of Communications and Public Works; Brig. Gen. Manuel Avila Camacho, Secretary of National Defense; and Gen. Rafael Sanchez Tapia, commander of the Mexico City military zone. On February 22 General Camacho won the endorsement of Vicente Lombardo Toledano's radical Mexican Confederation of Labor (CTM). The peasants, ranking next to the CTM in influence within the government party, and the army endorsed Camacho's candidacy soon afterwards. On July 14 General Mújica, the most radical aspirant for the nomination, withdrew his candidacy with the result that General Camacho was nominated unanimously by the national convention of the PRM in Mexico City on November 3.

The convention approved by a large majority a platform calling for complete nationalization of the Mexican oil industry, woman suffrage, institution of compulsory military service, and inauguration of a second Six-Year Plan of social, political, and economic rehabilitation. The platform was termed relatively conservative. The preamble called for co-operation of all classes in developing Mexico's national wealth "with due respect to the incentives of private benefit." The rights of labor were guaranteed, in such a way "that private industry will not find in them any

hampering or hostility." "Gradual reparation of social injustices" was called for.

Late in January four leaders of the chief opposition party, the Democratic Constitutional Front, were arrested for publicly criticizing President Cárdenas and his policies. They were released soon afterwards and thereafter the government permitted a large measure of freedom to opposition elements in organizing their campaigns. On March 7 the conservative Gen. Joaquín Amaro entered the Presidential race with a strong attack on the Cárdenas labor, social, and expropriation policies. He was widely attacked as the candidate and agent of the exiled ex-President, Gen. Plutarco Calles.

While President Cárdenas was absent from the capital during June and July on a tour of the Northern and Western States, opposition elements made considerable headway in organizing a strong anti-government front. Thirteen opposition parties and groups were united in the National Federation of Independent Parties. The Federation and many other groups endorsed the candidacy of Gen. Juan Andreu Almazán, considered the most able Mexican military leader and a moderate in politics.

He advocated friendly relations with the United States, encouragement to foreign capital, giving small landowners individual rather than communal titles to their land, organization of farmers in co-operatives, the curbing of labor "racketeers," prohibition of union intervention in religious or political issues, restoration of religious education and freedom of worship, immigration of selected European races, and in general efforts to raise the standard of living through the co-operative efforts of employers and workers. A great throng cheered him upon his arrival in Mexico City August 27 from his home city of Monterrey to organize his campaign.

Dissensions within the various groups comprising the government party split the forces supporting General Camacho and enhanced General Almazán's chances of success. Luis I. Rodríguez resigned as President of the PRM on May 28 following criticism of his leadership and was replaced on June 19 by Gen. Heriberto Jara, a revolutionary veteran. His efforts to promote unity within the party failed. In August a group of Senators who had previously supported the candidacy of General Mújica switched to General Almazán. At the same time Cárdenas shifted prominent members of the army command.

A great May Day parade held in Mexico City by some 70,000 members of the CTM militia, organized by Lombardo Toledano and drilled by army officers during the preceding two years, indicated that the radical workers were ready to play an influential part in defending the Cárdenas policies against reaction. However friction within the confederation caused the defection of some 20,000 members at its congress held in Puebla late in July. Causes of this dissension included Lombardo Toledano's action in incorporating numerous Spanish Republican refugees in the CTM, where they competed with native Mexicans for jobs. The Soviet-German rapprochement in August and September split the confederation into pro-Stalin and anti-Stalin factions. Lombardo Toledano, who was considered pro-Stalin, lost much of his influence. Many CTM members went over to the more conservative labor federation (CROM) led by Luis Morones, who supported General Almazán.

Two highly controversial laws approved by Congress at the end of December added to the bitterness of the Presidential campaign. One, amending Article 23 of the Constitution, provided for more socialized education and prohibited religious instruction in any school. The other authorized labor unions to participate in politics.

The Spanish Refugees. After General Franco's final victory in the civil war in Spain (q.v.), President Cárdenas threw open Mexico's doors to more than 5000 Republican refugees, who arrived during the summer, mainly from concentration camps in France. It was reported that as many as 300,000 Spanish refugees sought to enter Mexico. At first the government talked of admitting 40,000, but violent protests from both opposition elements and some of the government's supporters caused a progressive reduction of this estimate. The Rightist groups bitterly attacked Cárdenas and Lombardo Toledano on the ground that they were importing Spanish Loyalist war veterans to fight the government's political battles.

Ten thousand Mexican laborers gave a shipload of Spanish refugees a warm welcome when they arrived at Veracruz on June 13, but friction soon developed between the newcomers and some of the labor unions, which balked at permitting them to work. The lot of the Spanish refugees would have been much worse had it not been for the fact that part of the Loyalist Government's gold reserves, valued at 1,800,000,000 francs, were sent to Mexico in March. By agreement between the Mexican Government and the former Spanish Republican Government in Paris, it was agreed July 28 to use 300,000,000 pesos of this fund to organize a bank for the benefit of Spanish refugee settlement in Mexico.

A project for settling some 1500 refugee families from Czecho-Slovakia, Poland, Germany, and Austria was announced by the Governor of Tabasco on November 16. Many Jewish refugees had been entering the country for some time. Their coming served to fan the anti-Semitic and anti-radical campaign that had been promoted by the Mexican Gold Shirts and other pro-Fascist or conservative groups.

Growth of Disorders. The uprising led by Gen. Saturnino Cedillo in 1938 (see 1938 YEAR BOOK, p. 455) was terminated with the death of Cedillo in a clash with Federal troops near Matehuala, State of San Luis Potosí, on January 11. But other disorders spread with the development of political tension. There were repeated clashes between peasants favoring and opposing the communal farm (*ejido*) system. A minor revolt broke out in the State of Guanajuato in July. The government undertook to disarm the population in centres where trouble was expected during the electoral campaign, particularly in the States of Veracruz and Oaxaca. The dissensions within the labor unions caused an increase in factional armed clashes.

Foreign Affairs. United States. The oil expropriation issue and other related controversies placed a severe strain on Mexican-United States relations (see 1938 YEAR BOOK, p. 456). As noted above, the State Department at Washington sought to promote a compromise settlement of the oil controversy. When this failed, it attempted to keep the negotiations open.

The compromise agreement of Nov. 12, 1938, for indemnification of Americans whose lands in Mexico were expropriated removed this issue

from the field of controversy in 1939. The first payment of \$1,000,000 by the Mexican Government for settlement of these claims was made on May 31. Mexico also continued payment of \$500,000 annually on account of claims for damages to American properties during the Mexican revolutionary disorders.

There were also new irritations to American-Mexican relations. The Mexico City correspondent of the *New York Times* was summarily expelled from the country on January 16, apparently because the government was not pleased with his news dispatches concerning the oil expropriation and other matters. Pressure was exerted on other American correspondents to give the official viewpoint in dispatches on Mexican affairs. There were a number of cases of official harassment of American residents in Mexico. On June 8 the American school in Mexico City was stoned by a mob. Later Mexican leaders said that the mob had been incited to the attack by Fascist propaganda to the effect that the plane in which the Mexican flier Francisco Sarabia crashed to his death near Washington on June 7 had been deliberately damaged by Americans.

Inter-American Relations. The Mexican Government sought support for its expropriation policy from Leftist regimes in other Latin American countries. An unsuccessful effort to establish a Cuban-Mexican "axis" against the United States was made during the visit of Cuba's "strong man," Chief of Staff Fulgencio Batista, to Mexico in February (see CUBA under *History*). In January Mexico and Bolivia, which likewise had expropriated American oil properties, agreed to raise their Ministers in La Paz and Mexico City, respectively, to the rank of Ambassadors. There was little trade or other intercourse between the two countries. Mexican delegations at the various inter-American conferences held during the year were active in pressing the Cárdenas Leftist policies and seeking outside support for them. See PAN AMERICAN UNION; PAN AMERICANISM.

On the other hand, the Cárdenas Government followed the example of the United States in refusing to recognize the German annexation of Bohemia and Moravia or the division of Poland between Germany and Russia. Neutrality policies adopted with respect to the European conflict were similar to those of the United States. On July 22 the government newspaper *Nacional* advanced Mexico's claim to a portion of British Honduras in connection with Guatemalan claims to that territory (see GUATEMALA under *History*). British-Mexican diplomatic relations had been suspended in 1938.

Germany and Mexico. Germany continued to make political and economic headway in Mexico during the first three quarters of 1939 as a result of Mexican friction with the United States and Britain. New and larger deals for the barter of Mexican oil for German manufactures were arranged. At the outbreak of the European war, Germany owed Mexico for some \$6,000,000 worth of oil. On September 14 the German Minister in Mexico City proposed that a number of German ships that sought refuge in Mexican harbors be held as security for the Reich's oil debt. The Mexican Government did not intern the German vessels, but was reported considering their confiscation if the oil debt was not paid.

Late in February eight persons, most of them Germans, were arrested by Mexican police on

suspicion of Nazi espionage activities. Two of them—Baron Hans Heinrich von Holleufer, an agent in Mexican-German barter deals, and a Polish Jew—were expelled from Mexico by a Presidential decree on March 1. According to Mexican press reports, the investigation revealed an espionage ring operating in Mexico, British Honduras, and the United States and directed mainly against the United States.

After the war in Europe began, there were repeated charges that German vessels in Mexican ports were refueling and supplying German submarines. The Mexican artist, Diego Rivera, stated in November that agents of Stalin and Hitler were collaborating in Mexico in activities directed against the Allies and the United States, and that they had the co-operation of the Mexican Communist party.

Relations with Spain. The Fascist movement in Mexico received a strong stimulus from the victory of General Franco in the Spanish civil war. The Mexican branch of the Spanish Fascist movement (*Falange Española*) redoubled its activities with the aid of funds from Franco sympathizers in Mexico, which were diverted into Mexican politics once Franco's triumph in Spain was assured. The Cárdenas Government watched with concern evidences of collaboration among the Spanish Fascists and German, Italian, and Japanese agents in support of anti-liberal opposition groups. In April, after Spanish Fascists had held meetings and anti-labor demonstrations in Mexico City and Veracruz, the government warned them that foreign organizations of a political and military character were unwelcome. Shortly afterward three leaders of the *Falange Española* were expelled from Mexico and the organization announced its dissolution. Reports later in the year indicated that the Spanish Fascists were continuing their activities underground in collaboration with anti-government elements, including some members of the Mexican Roman Catholic clergy. Nevertheless diplomatic relations between the Cárdenas and Franco governments were restored to normal on July 24, with the Portuguese chargé d'affaires in Mexico City taking charge of the Spanish Embassy on behalf of the Franco regime.

MIAMI UNIVERSITY. A coeducational State-supported institution at Oxford, O., founded in 1809. The enrollment for the autumn of 1939 was 3231, as follows: Liberal arts, 1169; education, 935; business administration, 951; fine arts, 136; and graduates, 40. The enrollment in the summer session: 1st term, 793; 2d term, 297. The faculty numbered 221. The income from the State of Ohio, fees, gifts, and income on investments for 1937-38 was \$97,174. There were 152,025 bound volumes in the library. President, Alfred H. Upham, Ph.D.

MICHIGAN. Area and Population. Area, 57,980 square miles, exclusive of the State's part of the Great Lakes; included (1930) other water, 500 square miles. Population: Apr. 1, 1930 (census), 4,842,325; July 1, 1937 (Federal estimate), 4,830,000; 1920 (census), 3,668,412. Detroit had (1930) 1,568,662 inhabitants; Grand Rapids, 168,592; Flint, 156,492; Lansing, the capital, 78,397.

Agriculture. Michigan's harvest of 1939 covered 7,425,000 acres. Corn, on 1,574,000 acres, made 58,238,000 bu. (estimated farm value, \$31,-449,000); tame hay, on 2,640,000 acres, 3,415,000 tons (\$23,905,000); potatoes, 250,000 acres, 24,-

250,000 bu. (\$14,550,000); wheat, 739,000 acres, 15,424,000 bu. (\$11,568,000); oats, 1,139,000 acres, 42,712,000 bu. (\$13,668,000); dry beans, 452,000 acres, 4,520,000 100-lb. bags (\$11,740,000); apples for market, 7,800,000 bu. (\$4,290,000); peaches, 2,760,000 bu. (\$1,932,000). Sugar beets, on 120,000 acres, gave 1,024,000 tons; the value of the previous year's crop (nearly of the same size) was \$6,110,000.

Manufacturing. Figures on the manufacturing activity of Michigan in 1937, appearing in the U.S. Census of Manufactures published in 1939, were as follows (figures for 1935 in parenthesis): manufacturing establishments numbered 5614 (5544); they employed 660,676 wage-earners (531,658); their year's wages were \$986,840,523; the output of manufactured goods attained \$5,296,100,960 (\$3,986,178,348); to which sum the processes of manufacture contributed \$2,091,663,311 (\$1,558,119,450). As the product of one line of manufacture sometimes went into another line as material the figure for the value of manufactured products included duplications. More than one in every eight inhabitants were at work during 1937 for factory wages; these averaged nearly \$1500 a year to the worker; they came almost to \$204 per capita of the population.

The predominant industry was the production of motor-driven vehicles; it accounted for one-half or more of the total manufactured output; not all of the output of motor-driven vehicles was due to automobile-making establishments; on the contrary, the total for that output was largely a duplication of that for the production of parts and accessories of such vehicles; and the total for these, in turn, duplicated to some extent those for machinery, tools, steel-works' output and other lines.

The establishments making motor-driven vehicles in 1937 numbered 27; they employed 121,312 wage-earners, who received \$203,344,147; they used \$1,162,423,441 in materials and other necessities, and produced \$1,613,225,661 in value of output; to this total their own manufacturing processes contributed \$450,802,220. The separately classified makers of bodies and parts for such vehicles employed 176,165 wage earners, paid them \$285,146,797, used \$826,224,863 of materials and other necessities, attained an output of \$1,313,376,621, and contributed to this sum, by their own processes of manufacture, \$487,152,358. The two manufacturing groups together employed 45 per cent of Michigan's manufacturing wage-earners and paid almost half the factory wages dispensed in the State.

Third of the manufacturing groups in point of magnitude, steel-works, and rolling mills, produced \$130,888,132 in goods, of which part eventually found its way into automobiles. Foundry products amounted to \$114,463,371. Paper, manufactured on a large scale, showed an output of \$92,418,197.

Furniture, one of the long established manufactures dating from the days of abundant lumber near at hand, accounted for \$57,889,188 of the manufacturing total. Chemicals attained a production of \$60,035,644; drugs and medicines, of \$44,975,552; miscellaneous machinery, \$53,271,042; machine-shop products, \$67,428,487; machine-tool accessories and machinists' instruments of precision, \$67,989,622.

The Detroit industrial area, comprising Oakland and Wayne counties, employed in 1937, 406,882, or five-eighths of the State's total; paid

in manufacturing wages \$648,515,254, nearly two-thirds of the figure for all Michigan and produced manufactures to the total of \$3,409,350,809, to which its manufacturing processes contributed \$1,304,952,550. The manufactured products of Battle Creek totaled \$82,741,772; those of Saginaw, \$76,460,561; Kalamazoo, \$70,586,825; Grand Rapids, \$102,567,748.

Mineral Production. The yearly total value of Michigan's production of native minerals was \$119,167,573 for 1937. Iron ore covered about one-third of the amount and petroleum over one-sixth; copper, cement, salt, and natural gas were substantial components. Iron mines' shipments sank to some 4,092,902 gross tons of ore, for 1938, which scarcely came to 30 per cent of the 12,626,935 tons shipped in 1937; the totals by value were \$13,139,823 (1938) and \$41,136,202 (1937). The production of petroleum extended the gain achieved in 1937; the yearly total rose to some 19,211,000 barrels for 1938, from 16,628,000 (value, \$21,950,000) for 1937. Though falling prices for the product somewhat reduced drilling in 1938 several new fields yielded petroleum; notably, the Freeman-Redding field, in Clare County. Cement shipped by producers, 7,192,511 barrels for 1938, fell somewhat below the 7,831,880 barrels shipped in 1937; the totals by value were \$8,767,959 (1938) and \$9,836,999 (1937). Copper mines produced ore containing, for 1938, 93,486,000 pounds of copper, as against 94,928,000 pounds, by value \$11,486,288, for 1937. Salt sold or used by producers diminished to 2,078,612 short tons for 1938, from 2,476,406 for 1937; by value, to \$6,151,154 from \$6,506,120. Natural gas though not produced in sufficient quantity to supply the yearly consumption in Michigan, yielded (1937) 9080 million cu. ft., of which the value was \$871,000 at the wells but \$5,640,000 at the consumer's end of the pipe lines; the production of natural gas was reported as 9233 million cu. ft. for 1938.

Apart from the total production of iron ore and other native minerals as totaled above, Michigan had important industries for handling minerals from outside. Though relatively little coal was mined in the State, coke was produced to the total of 1,751,781 net tons for 1938, as against 2,283,518 (value, \$13,816,401) for 1937. Pig iron was made, not necessarily from Michigan ore, on a substantial scale; blast furnaces' shipments of pig iron fell to 558,782 gross tons for 1938, from 886,602 for 1937; by value, to \$9,806,994, from \$15,064,083.

Education. Inhabitants of school age in Michigan (from 5 to 19 years) were reported as numbering 1,399,769 on May 31, 1938. For the academic year 1937-38 (the latest for which the data that follow had been issued) enrollments of pupils in all public schools totaled 959,827; this comprised 548,194 in the elementary group, 386,360 in high schools, and 25,273 otherwise enrolled. The year's expenditures for public-school education totaled \$98,415,803. Of this, the greater part went to salaries paid to 32,566 teachers at the average of \$1525.04 a year.

Legislation. The regular session of the 60th Legislature assembled January 4, adjourned provisionally May 26, resumed on June 29 at the Governor's demand, although he had disposed of the bills sent to him, and put through measures designed to bring the budget for the next two years at least formally into balance. The problem of lawmaking bristled with difficulties raised by two changes of governors within three months, a

change of partisan control from Democratic to Republican, a legacy of floating debt left by the Murphy administration, and Republican campaign promises to appropriate \$45,000,000 for public schools and to balance the budget.

State civil service, immune to placeholders' loss of positions by change in partisan supremacy, had been created by a special session in 1937, under the Murphy administration. The session of 1939 leaned to the view that the act of 1937 had simply provided permanent tenure for great numbers of Democratic "henchmen" and created lists of Democratic heirs to the jobs. Accordingly, after much dispute, the session amended the system in divers ways, doing away with the old priority lists and throwing many positions open to new appointment. Natural to a sweeping change of partisan control, also, were acts reorganizing a number of the State's departments. These acts did away with the Emergency Relief Commission and the Public Utilities Commission, created instead a five-man State Welfare Commission and a Michigan Public Service Commission, and put an end to the Legislative Council created in 1933.

In addition to a \$2,728,000 deficiency appropriation designed to meet some of the more pressing charges already standing against State institutions and services, the session appropriated a reported total of \$207,401,779 for expenditure in the next two years, inclusive of a sharply reduced annual total of State aid to schools. The estimated revenues of the State for the same period exceeded appropriations by \$140,006. In order to elevate revenues sufficiently to exceed expenses, the lawgivers added to the State's taxes a specific tax on intangible property at 6 per cent on the income thereof or, in case of an unproductive intangible, at one-tenth of 1 per cent of face value; the tax on productive intangibles might not exceed three-tenths of 1 per cent of face value. A sales tax on electric light and power from municipal sources was also imposed. The revenue from the new taxes was to approximate \$4,000,000 a year.

A new act on labor relations put mild although definite restrictions on strikers, in the endeavor to preclude such happenings as the strikers' seizure and forcible holding of employers' premises, witnessed in 1937; interference with employees entering or leaving such premises in pursuance of duty was forbidden, and a five days' wait, before a strike, was required, to allow time for a newly created State Labor Relations Board to mediate between the affected parties. Another act affecting labor, an amendment to the system of unemployment-compensation, increased the spread in the rate of the tax on employers, as between the ones who threw few out of work and those dropping many from the payroll; other amendments reduced the wait preliminary to the unemployed person's receipt of his first payment to two weeks, from three, and excluded from payment the worker who had left his employment voluntarily.

Seven commissions, created in the Murphy administration, for such purposes as the study of taxes and the reform of State government, met their deaths by the failure of the Legislature to make further appropriation for them. A method for regulating the price of milk was provided, whereby a commission of seven members, authorized to license handlers of milk, was to set prices, which handlers must observe lest licenses be withdrawn. Amendments to the traffic code raised the allowable rate of travel on city streets to 25 miles an hour and gave stricter ap-

plication to the law on drunken drivers. The Lieutenant-Governor acquired \$2500 a year, additional his \$3 per diem, by an act making him a member, ex officio, of the Administrative Board, at that remuneration. Detroit was authorized to extend water mains and sewers to reach other municipalities in Wayne County. Outlying lines of the Detroit Street Railway were put under the jurisdiction of the Public Utilities Commission. Education on the subject of temperance was required as part of the work of the Department of Public Instruction; but without accompanying appropriation for the cost of the service. Public-school busses were allowed to transport pupils of private and of parochial schools, under stated conditions.

Political and Other Events. Frank D. Fitzgerald (q.v.), who had preceded Murphy as Governor, succeeded him January 1, bringing the State back under the rule of the Republicans. He died about ten weeks later, March 16, of a brief illness, before he had had time to deal adequately with the many important problems of the State. He was at the time in the midst of an effort to handle the move of the Legislature's Republican majority to do away, as a matter of reprisal, with the system of civil service created by the previous Democratic Legislature—a system suspected by some Republicans of embodying a scheme to lock Democratic employees into their State positions. He was also, at the moment of his death, confronted with a demand that he use his powers to send the State police into the cities and suppress gambling establishments, over the heads of the local authorities.

Luren D. Dickinson, Lieutenant-Governor, who succeeded to the Governorship, was a countryman and veteran Republican office-holder, 80 years old, well versed in political ways and highly regarded by a great part of the rural population; he had formerly been a champion of prohibition in the State, had the mental repertory of the older generation, and did not represent himself as keenly enlisted for or against the sociological proposals of the day.

The budgetary position of the State was characterized by Aud.-Gen. V. J. Brown (April 10) as the worst in the history of Michigan. The general fund was said to be overdrawn by many millions, and the deficit on the accounts of the closing biennium was expected to reach \$30,000,000 by the close of June. This state of affairs was attributed to overexpenditure consequent upon the acts of the previous Legislature and the administration of Governor Murphy; the deficit was regarded as inherited from that time.

The State had unusual difficulty early in 1939, under these conditions, in meeting some of the most pressing charges upon it. The acting Director of Emergency Relief stated (March 15) that 77,327 cases were on the rolls for the receipt of poor-aid and that every county's relief commission seemed to have exhausted its funds for these people's support; this made it a pressing matter for the State to find several million dollars to help sustain these dependents until June 30. Retrenchment was applied in many directions under the terms of an economy act designed to curtail some of the State's operations and thus limit the tardiness in the payment of the State's current debts. Many of the crippled children in the University Hospital were sent home in July because of reduced allowances from the State for their care. Though new taxes were created by the Legislature

they did not give much immediate help; as late as the middle of August the checks for the State's semi-monthly payments of salary were mailed to an amount \$46,000 in excess of the money in banks for meeting such checks. The Budget Director declared, September 1, that the remaining deficit of the State's general fund totaled \$25,-211,014.

The State Supreme Court ruled early in September against the much disputed ordinance of the city of Dearborn forbidding the distribution of handbills in the streets except after their approval by the city clerk with regard to the truth of the statements that they contained. The 21 remaining cases against alleged participants in lawless acts of the Black Legion (see YEAR BOOK, 1936, p. 454) were dismissed (May 18) from the criminal courts' dockets. Virgil F. Effinger, long sought on one of the chief indictments in this group, had remained out of reach in spite of effort to extradite him from Ohio. A Board of Milk Control, created by the Legislature in 1939, was set up; it raised the price of milk at both ends of the marketing process, so that the household consumer paid an additional cent a quart. The Emergency Appropriations Commission, a body delegated by the Legislature to grant public money in minor amounts, between sessions of the Legislature, from \$500,000 a year specially provided, made small additional allotments to a number of the State's bureaus. Provision of means for the nonpartisan election of judges, through an amendment to the State constitution, was adopted by popular vote on April 3; separate ballots were thereby required for the nomination of the judicial candidates at the primary elections, and the names admitted to be printed on these ballots had to be qualified by petition bearing signatures in specified number; candidates' names had to appear without designation of their partisan affiliations.

Affairs of Detroit. The popular vote, cast in Detroit on April 3, adopted a proposed amendment of the city charter, creating a so-called "merit system" for the municipal police service; a proposal for a fund to pension employees of the Detroit Street Railway, condemned by an actuary as unsound, was defeated. The city was troubled until late in the year by difficulty in restraining a mounting deficit. It won in the State Supreme Court (April 4) two decisions affirming its course in dealing with tardiness in the payment of taxes on property; the Court held that the amendment of 1933, allowing the city to seize and sell property for delinquency as to taxes, was valid and that the city need not pay unsatisfied State and County taxes on a piece of property in order to realize its own claim for taxes thereon. Sharing in an effort to rehabilitate the Hupp Motor Car Corporation, which had obtained a loan of \$900,000 from the RFC, the City Council voted in April to cut that company's bill for unpaid taxes to \$125,000, from \$275,000.

Disturbances of Labor. Strikes and kindred interruptions of occupation in the chief manufacturing of automobiles alternated for most of the year with strife between employees' unions or between factions of the prevailing group; thus the character of labor relations in Michigan's predominant automobile-making industry much resembled that of the two years previous. The conflict between the supporters of Homer Martin in the United Automobile Workers and his opponents had quieted in 1938; it broke out again in January, 1939. Martin's opponents in the executive board of

this group started stripping him and his subordinates of their authority; he retaliated by suspending (January 20) the 15 opponents who formed the majority of the board. They remained too many for him to overcome in the groups dominating the employees in most of the shops where the industry went on. He endeavored in February to lay the way for alliance with the A.F.L., whose trade unions still sought to maintain their place in the manufacturing, against the industrial unions of the C.I.O. A call on the employees of the Plymouth works of the Chrysler Corporation to throw off their C.I.O. buttons (February 22) caused a riot that temporarily closed the shop and demonstrated Martin's inability to lead a general exodus. Thereafter the U.A.W. supplied a name to two rival organizations, of which Martin headed one, affiliated with the A.F.L. and holding authority over a somewhat uncertain number of workers in the industry. In May and June these two struggled for supremacy in a series of strikes, among shops of General Motors and Chrysler companies. Martin's U.A.W.A. started a strike in the General Motors' works at Flint and Saginaw early in June, but the new State law on strikes had gone into effect, and he found that the police were arresting his pickets as prescribed therein, for interfering with non-strikers going about their work. General Motors' management, using a right newly granted to the employer, appealed to the NLRB, July 1, to assume jurisdiction (impliedly, to hold elections in order to determine with which fragment of the old union the company should deal), in the subsequent strike started by the U.A.W.A. wing affiliated with the C.I.O. The NLRB did not order an election at the time, but James Dewey, a Federal mediator, entered the proceedings and brought about an agreement (August 5) between the company and the union's wing affiliated with the C.I.O. This agreement left the ownership of the pre-existing contract (claimed by the rival organization) for settlement by other authority, but was thought to give the labor group making the new agreement a strong hold on the affiliation of the workers.

There followed a protracted slowing and, subsequently, interruption of work in the Chrysler factories. As the output of one factory supplied the work at another, the intentional interruption at one point in the chain of production tended to stop movement all along the line. The company complained that it had encountered slowdowns from the start of production on its 1940-model automobiles, August 15. The union presented, October 11, a demand for a unionized shop, in which all employees must within a given time after receiving their positions, enter the union. Federal conciliators entered the negotiations, which lingered over many weeks and kept 50,000 idle and payless; the State's Unemployment Compensation Commission disallowed these people payment from its fund, holding them excluded by a specification in the State law, excluding those idle because of a labor dispute.

The C.I.O.'s faction of the U.A.W. finally called a strike, November 25, against the main Dodge factory of the Chrysler organization. The latter then accepted terms, under which wages rose 3 cents an hour, seizures of property and slowdowns were barred, and grievances were left to a board of appeals, having representatives of either side among its members. The employees ratified the resulting contract by vote November 29.

The Utility Workers Organizing Committee, connected with the C.I.O., started September 22, a strike against the Consumers Power Company, furnishing electric current to consumers in an area, mainly in southern Michigan, containing about 2,000,000 inhabitants. There occurred no general interruption of service.

Elections. Detroit, in its municipal election, November 7, elected Edward J. Jeffries to be mayor, giving him nearly two votes to every one for his opponent, the actual mayor, Richard W. Reading. The campaign was formally non-partisan, but Reading, who had won at the last election as an opponent of the social practices of the C.I.O., was thought to have strengthened that group by his defeat.

Officers. Michigan's chief officers, serving in 1939, were: Governor, Frank D. Fitzgerald (Rep., died in office March 16); Lieutenant-Governor and (succeeding Fitzgerald) Governor, Luren D. Dickinson (Rep.); Secretary of State, Harry F. Kelly; Attorney-General, Thomas Read; Treasurer, Miller Duncel; Auditor-General, Vernon J. Brown; Superintendent of Public Instruction, Eugene B. Elliott.

MICHIGAN, LAKE. See WATERWORKS AND WATER PURIFICATION.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women at Ann Arbor, founded in 1817. The resident enrollment in the fall of 1939 was 12,098. The enrollment for the summer session of 1939 was 5594. These figures do not include students taking courses for credit in the Extension Service. The total enrollment of the regular session, the summer session, and extension service in 1938-39 was 19,591. There were 773 members of the faculties in 1939-40, not including assistants or teaching fellows. The income of the University in 1938-39, exclusive of gifts, was \$9,683,937, and the value of gifts received during 1938-39, exclusive of grants from the Public Works Administration, was \$645,944. Endowment funds amounted to \$14,356,133 on June 30, 1939, and the value of grounds, buildings, and equipment was \$53,364,689. There were 1,060,784 volumes in the libraries of the University. The most important event of the year 1938-39 was the actual construction of the buildings to the cost of which funds were contributed by the Federal Public Works Administration. These include two groups of dormitories for men composed respectively of seven and four units: Stockwell Hall, a dormitory for women; Victor C. Vaughan House, a dormitory for medical students; a home for interns at the University Hospital; an addition to the Dental Building to provide quarters especially for postgraduate and children's dentistry; a new building for the Student Health Service; and necessary additions to the heating and power plant in order adequately to care for this expansion of the physical plant. A programme for the administration of the University Residence Halls was devised during the year, the central purpose of which was to insure that students in the University residence should find cultural advantages and experience in communal living which would be an essential and highly important part of their education. Through the generosity of anonymous donors, it was possible in 1939 for the University of Michigan to plan to erect a building in Detroit which will serve as a center for the many graduate courses and extension courses given by the institution in that city. This building will adjoin another which is

to be erected by the Engineering Society of Detroit for its own purposes, and between the two buildings will be a unit with special rooms including an auditorium seating about 1000 persons which will be used by both the University and the Engineering Society. President, Alexander Grant Ruthven, Ph.D., LL.D., Sc.D.

MICROPHOTOGRAPHY. See PHOTOGRAPHY.

MIDDLEBURY COLLEGE. A coeducational, nonsectarian college at Middlebury, Vt., founded in 1800. For the autumn term of 1939, 783 students were registered as undergraduates and 16 as graduates; of these, 433 were men and 366 women. The enrollment in the special summer schools of French, Spanish, German, Italian, and English, conducted by the college, amounted to 700. There were 61 members of the faculty. The productive funds of the college in 1938-39 amounted to \$4,315,646 and the income for the year was \$401,891. Gifts to the college were \$18,604. The library contained 110,000 volumes. Construction of the James Gifford Memorial Hall for men, to house 110 students, was started in October 1939. The gift of a recitation hall by Charles A. Munroe of New York was also announced this fall. Ground for this building will be broken in the spring of 1940. President, Paul Dwight Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MIDWAY ISLANDS. A group of islands in the North Pacific (28° 12' N.; 177° 22' W.), some 1200 miles to the northwest of Hawaii. Area, 28 square miles; population (1936), 118. The Naval Appropriations Bill of 1939 provided for the construction on the islands of a U.S. air and submarine base. Since 1935 the islands have been used as a station on Pan American Airways' transpacific route to Manila. They are under the jurisdiction of the U.S. Navy Department.

MILITARY PROGRESS. Trends. The year opened with all major nations attempting to solve the ever-present problem of fire and movement—striking power versus mobility, their views and opinions crystallizing from the "laboratory" results of the armed conflicts in Ethiopia, Spain, and China, and their programs accelerated by the diplomatic conflicts culminating in Munich. Dominant was the theory that to win a war a lightning stroke was necessary—a solar plexus blow paralyzing all elements of national defense in the adversary nation. According to proponents of this theory three elements were essential, viz.:

1. An overwhelming initial blow from the air.
2. A following hammer-stroke by ground troops to seize and hold essential hostile terrain.
3. An accompanying defense from counter-blows, by means of antiaircraft elements and garisons of fixed fortifications.

Such doctrines were subscribed to by the so-called dictator powers, already geared to impress the entire national effort in support of the fighting forces. The so-called democratic nations, pacifistically inclined by nature of their respective popular governments, had for a number of years neglected their military protection to a greater or lesser extent, but were straining every effort to regain the ground lost. These latter, however, were necessarily restricted to the focusing of attention primarily upon the successful parry of an initial aggressive blow, with the counter-offensive temporarily in secondary role.

All military opinion was convinced of the necessity for a basic organization which would embrace the efforts of the entire nation united economically, financially, and commercially, behind the armed forces—the theory of the "nation at war" definitely replacing that of the "nation in arms," outmoded by the first World War.

The technical military problem involved insofar as mobile ground troops were concerned was one which would embody the basic principles of war while taking advantage of the latest developments of science. Since in battle the division—made up of components of infantry, artillery, and auxiliary arms—is the basic self-contained unit of combat, the essential was to construct a division which would be able to move fast while at the same time retain striking power. Mobility could be attained in part by motorization and reduction in man-power, while striking power must be retained or increased by increasing the number of automatic weapons in the infantry component, with the further limitation that the actual man-power must not be so reduced as to endanger ability to utilize the final factor in striking power—the physical assault to occupy the objective.

The solution adopted in general was a divisional organization consisting of nine infantry battalions of approximately 1000 rifles each, supported by an artillery component of light guns, the infantry battalions being grouped in threes.

Exceptions to this triangular divisional formation at the beginning of 1939 were several. Great Britain, for instance, was changing over from a composite formation of 12 infantry battalions organized in 3 brigades (each equivalent to a U.S. infantry regiment), first to a 9-battalion, then, in part to a 6-battalion, and finally to an 8-battalion infantry component. The United States, except for 1 provisional triangular division in experimental use since 1935, retained its World War large division of 12 infantry battalions, organized in 2 brigades of 2 regiments each, supported by a 3-regiment artillery brigade. Japan, with approximately the same organization as the United States, had been experimenting in China with the use of single brigades (half-divisions) reinforced by an artillery component. Italy, with a triangular division, was also experimenting with a 2-regiment (6 battalions) infantry component.

Much of this experimentation was in fact a partial return to the idea, utilized some years ago by both Great Britain and France in "little wars," but since discarded in major campaigns, of making up the infantry-artillery team in accordance with the necessities of the moment and the exigencies of the situation. In Great Britain such forces were termed "mixed brigades" or "field forces," and in France "*groupes mobiles*." Further variations in type divisions were necessitated by geographical considerations in the various nations where, for instance, the difficulties of mountain warfare rendered it essential to group fighting men in smaller units, sacrificing striking power for mobility.

An important trend in artillery matériel not only abroad but in the United States had been toward the so-called gun-howitzer; the principle involved being search for a weapon which should combine the range of a flat-trajectory gun with the ability to search, by means of the more curved trajectory of the howitzer, terrain which might be screened by hilly ground from the flatter trajectory of the gun. A homely example would be the

| Type | Weight (tons) | Crew | Max. speed M.P.H. | Combat speed | Traction | Armament | Armor thickness in inches (front only) |
|-----------------------------|-------------------------------|------|--------------------------|----------------|--------------------------------|--|--|
| Creeping..... | $\frac{1}{4}$ - $\frac{1}{2}$ | 1 | 6-12 | 1-5 | Track | 1 MG. | .25-.50 |
| Tankette .. | 2-4 | 2 | 20-35 | 8-15 | Track | 1 MG. or 1 cannon | .25-.63 |
| Light tank..... | 5-9 | 2-4 | 15-45* | 10-20 | Track | 1-3 MGs or 1 cannon and 2 MGs | .35-1.33 |
| Medium tank..... | 10-20 | 4-6 | 15-35 | 8-20 | Track | 1-2 cannon and 1-3 MGs | .50-1.4 |
| Heavy tank..... | 30-75 | 6-10 | 10-20 | 5-10 | Track | 3 cannon and 2-10 MGs | 1-2 |
| Amphibian..... | 3.3-11 | 2-3 | 6-10 water 25-36 land | 8-20 | Propeller and track | 1-3 MGs | .35-.59 |

| Light armored car.... | 4-8 | 3-4 | 35-60 | 25-40 on roads | 2 or 4 wheel drive | 1 cannon or 1 heavy MG and 2-3 light MGs | .20-.35 |

* The Russian Christie-type fast tanks are credited with speed up to 68 m.p.h.

ability of an individual to lob a baseball over a high fence that would stop a line drive. Search for a happy medium had taken the form of improvements of gun mounts to permit higher elevations, and the use of propelling charges made up of increments some of which might be removed to reduce projectile range.

Developments in the automotive industry had made mechanization—utilization of fast units of armored combat vehicles—a fact. The armored vehicle—tank in the infantry, combat car in the cavalry—moving on cross-country treads, and armed with light cannon and machine guns, was a self-contained fighting unit, more mobile than its World War precursor, the original tank.

Modern armored vehicles had attained the general characteristics given in table above.

Use of these modern vehicles had in general gravitated into two major functions:

(A) Tanks utilized with infantry as either (1) accompanying, or (2) leading; that is, moving in assault with the infantry waves to break down hostile strong points, or used to crash openings in the hostile front through which the assaulting infantry and more tanks could follow.

(B) Tanks and armored cars utilized in mobile divisions for raids, advance or rear guard actions or pursuit; in other words, cavalry missions. Units organized for this purpose were known as mechanized cavalry or armored troops.

This mechanization had in turn brought about the development of special weapons to combat it—primarily artillery, since the tank is most vulnerable to artillery fire. Other anti-tank weapons were tank-traps—steep-sided holes like elephant traps; land mines, and obstacles ranging from improvised obstructions such as felled trees to permanent concrete and metal obstructions sown deep in areas through which tanks must pass.

The following table gives the approximate armor-penetration characteristics of various weapons used against tanks, based upon 90 degree angle of incidence:—

| Weapon | Caliber (inches) | Rate of fire in combat, rds. per minute | Armor penetration at 100 yds. distance |
|----------------------------|------------------|---|--|
| Rifle..... | .30 | 10 | .35 inch. |
| Automatic Rifle..... | .30 | 40 | .35 " |
| Light MG..... | .30 | 250 | .35 " |
| Heavy MG..... | .50 | 100-150 | .80 " |
| 20 mm anti-tank rifle..... | .79 | 10 | 1.25 " |
| 37 mm cannon* | 1.45 | 10-20 | 1.30 " |
| 47 mm cannon* | 1.85 | 10-20 | 2.00 " |
| 75 mm cannon..... | 3.00 | 6 | † |

* Both these calibers are specifically anti-tank artillery. † Direct hit probably fatal to any tank.

The menace of the air arm, which had proven in the Spanish civil war that it could take its place on the battlefield as part of the combat-team, in addition to its long-range bombardment abilities, had brought about tremendous developments in anti-aircraft weapons, and in defense systems co-ordinated by means of warning intelligence nets to notify headquarters of the approach of hostile aircraft, and combining balloon barrages, anti-aircraft artillery, both fixed and mobile, and the use of fighter-type airplanes to combat bombers in the air.

Modern anti-aircraft artillery has the following general characteristics:—

| Weapon | Caliber (inches) | Effective vertical range | Average rate of fire per minute |
|-------------|------------------|--------------------------|---------------------------------|
| Mobile..... | 2.7-3.2 | 20,000 ft. | 10-30 rounds |
| Fixed..... | 3 to 5 | 30,000 ft. | 10-15 rounds |

Fire control is by director, with the data computed—provided the observer can track the target in his range-finder—and set off on the gun by electro-mechanical remote control. Without director control and semi-automatic loading, anti-aircraft fire is reduced tremendously in volume and effect. Guns are fired in batteries of at least four; the trend is also towards multiple-barreled guns, particularly on naval vessels where space is valuable. This is for the purpose of assuring coverage of a certain air space by a group of bursting shells, rather than by attempting to destroy the target with a direct hit. Modern anti-aircraft shell are of the high-explosive type, detonating by means of a mechanical fuze and showering steel fragments. The old artillery adage—"one gun, no gun"—has definite bearing on this problem.

No new developments in chemical warfare had been definitely proven.

Operations. Hostilities during 1939 in Europe on land (See EUROPEAN WAR.) break down into three broad phases:—

1. Invasion of Poland by Germany.
2. Invasion of Finland by Russia.
3. Defensive measures and feints along the Franco-German frontier.

The first of these followed definitely the pattern noted above: overwhelming initial blow from the air, paralyzing Polish air power, co-ordinated with hammer-strokes by fast-moving ground troops—with armored elements leading—over-riding hostile troops and piercing geographical barriers to gain possession of vital terrain. Mopping up of the demoralized Polish troops followed more slowly. Air and ground troops were used in close

co-operation. Defense from counter-blows on the western front was assured by the Westwall fortifications and antiaircraft elements.

The second operation, following the same pattern in theory, is still nebulous of results. Without further knowledge it would be impossible to make a definite critical analysis. The surmise might be made however, that lack of co-ordination and of tactical and strategical ability on the Soviet side, added to the Finnish geographical barriers to invasion, primarily delayed any decisive result.

The third operation—between two defensive zones of great strength—has so far resulted in the stalemate visualized by soldiers at the opening of the war.

It should be noted that so far unrestricted air warfare—the totalitarian warfare upon civic centers advocated by the late General Douhet of the Italian Army, and after him dubbed the "Douhet Theory," has been used in but two of the above operations—the Polish and Finnish invasions. In both cases the attacker had overwhelmingly superior air power, capable—at least in theory—of attaining and maintaining that ephemeral thing—air superiority, precluding possibility of defensive retaliatory raids into the aggressor terrain.

At the close of 1939 the Powers of the world line up in military strength as follows:

LAND FORCES, PRINCIPAL WORLD POWERS

[Estimates based on tabulations in "World in Arms," as of Aug. 1, 1939, amplified by later developments]

| Nation | Under arms, Dec. 31, 1939 | Trained re- serves mobi- lizing or mo- bilizable | Total |

| United States ² | 229,000 | 240,000 | 469,000 |

* Estimates only. ¹ Russia may be expected to retain 50% of her mobilized strength east of the Urals for future Asiatic eventualities. Mobilization in this nation is relatively slow; partial mobilization was probably in effect prior to outbreak of Russo-Finnish hostilities. ² Normal peace-time Regular effectives. ³ Coast defense forces are under naval control. ⁴ See "United States" below.

United States. In January, 1939, President Roosevelt addressed Congress upon the necessity of placing the United States Army in a position of preparedness for any eventuality. April 25 the Congress passed the Army Appropriation Bill of \$549,000,000—largest peace-time War Department

allotment in the national history, the President signing it the next day. \$340,000,000 of this sum was for Air Corps expansion, and of the remainder approximately \$120,000,000 was allocated for critical items of armament essential for equipping and modernizing the Army—both Regular and National Guard.

At that time the Regular Army consisted of 165,000 enlisted men and approximately 14,000 officers; the National Guard had a strength of 190,000—figures limited by Congressional appropriations for pay and subsistence, although the National Defense Act of 1920 had authorized a Regular Army strength of 280,000 enlisted and 18,000 officers, and a National Guard minimum strength of 424,000. These last noted figures had, of course, never been appropriated for, although authorized. There existed also a lately authorized Regular enlisted reserve force of approximately 20,000 men, as a reservoir for filling existing units to war strength in emergency; and an Officers' Reserve Corps of approximately 104,000 active reservists, as a framework for a National Army if authorized.

The Regular Army consisted of six divisions—five of them incomplete—and six additional brigades of infantry; one cavalry division, one mechanized cavalry (armored) brigade, five mobile antiaircraft regiments, coast artillery elements both fixed and mobile, manning harbor defenses; an air corps, and a service command comprising technical and supply troops and personnel on duty at schools, depots, etc. All these units were scattered throughout the continental United States and also garrisoning our overseas possessions—Philippines, Hawaii, Alaska, Panama Canal Zone, and Puerto Rico.

The National Guard consisted of eighteen incomplete divisions of infantry, four incomplete cavalry divisions, ten mobile antiaircraft regiments, harbor defense coast artillery and technical and supply elements, and an air corps of observation aviation, all—with exception of two infantry regiments each in Hawaii and Puerto Rico—in the continental United States.

In the continental United States—omitting air corps, service command, coast artillery, and the overseas garrisons—the existing mobile Regular Army combat troops available totalled 70,000 officers and men. These, together with the National Guard and certain Reserve elements, comprised the initial protective force, to be mobilized in case of emergency in the four existing Army territorial areas, with mission of carrying on until such time as a National Army might be raised. It was for the modernization of equipment and armament of all this force that the appropriations noted above had been allotted. With the normal two-year average time-lag necessary between placing of contracts and completion of manufacture of non-commercial critical items, the now authorized essential—but not complete—modernization program for this 165,000 Regular and 190,000 National Guard force could be expected to be fact in 1941.

Further complication in any emergency mobilization of this force in the United States would be the fact that these troops must come from widely scattered posts, marching at existing peace strength, and forming a melange of elements which so far had had for the most part but one prior mobilization test in each of the four Army areas—tests which by reason of lack of matériel, of time for necessary preliminary hardening, and

of suitable terrain, had never been 100 per cent complete.

On April 30 an Executive order created the Puerto Rican Department, with headquarters at San Juan, for the establishment of an advanced base—air and naval—to seal the Caribbean Sea to hostile encroachment and thus protect the western approaches to the Panama Canal. Establishment of further advance bases, and improvements to the existing Panama Canal defenses were also taken under immediate consideration.

On June 30 Gen. Malin Craig, retiring Chief of Staff, in his final report for the fiscal year 1939, called attention to the fact that modern developments, particularly in the air arm, had made it necessary to provide for a "more forward defense" by the Army for itself and for the Navy whose bases it must defend. He summed up the requirements of an economical, properly balanced position in readiness for this country as follows:—

1. An outpost line for security and the protection of the initial defense force, with the elements manning it, both ground and air, to be prepared for immediate action, their training and equipment to be complete and their strength sufficient to withstand attack until reinforced. Panama and Hawaii, properly strengthened, and the proposed installations in Puerto Rico and Alaska, constitute this general line.

2. The main position—the continental United States, manned by the Initial Protective Force, consisting of the Regular Army—less troops on outpost duty, and all the federalized National Guard, together with certain Reserves assigned to them in emergency. "It is evident and important," wrote General Craig, "that a certain proportion of these available forces must consist of immediately available infantry-artillery teams—small, seasoned, hard-hitting divisions—that are available for instant dispatch to reinforce our forward positions, to seize or hold naval and air bases and to destroy enemy bases."

On August 15 the second First Army maneuvers (the first were held in 1935) took place in the Plattsburg, N. Y., area, where under Lieut. Gen. Hugh A. Drum some 75,000 troops, Regular, National Guard, and Reserve, were gathered for two weeks of intensive training and sham battle. As was pointed out by General Drum at the time, this force was far short of the strength allotted to a type Army—some 321,000 men, and was also short in the essential automatic small arms, machine guns, light and heavy artillery, and truck transportation. Included in its field components was the 7th Cavalry Brigade, Mcz., our sole armored unit. The results of this maneuver, carried on with the existing strength of the units involved, indicated what was already known to the military—that lack of essential corps and army troops, lack of sufficient modern matériel, and the improvisation of staff and command elements necessitated by the existing shortage of personnel and matériel, would militate heavily against the immediate functioning of any of the field Armies as co-ordinated combat teams.

On September 5, President Roosevelt proclaimed the neutrality (q.v.) of the United States as the European struggle opened, following this by proclamation of a limited national emergency insofar as pertained to "The proper observance, the safeguarding and enforcing of the neutrality of the United States and the strengthening of our national defense within the limits of peace-time

authorization." On September 8, an Executive order followed, authorizing an increase in the Regular Army enlisted strength to 227,000—still some 53,000 short of the National Defense Act strength; and an increase in the National Guard to 235,000, still far short of the National Defense Act minimum of 424,000.

By the end of September a brigade of infantry and an additional coast artillery quota had been sent to the Panama Canal Zone to augment the garrison, and elements of field artillery, coast artillery—both antiaircraft and mobile harbor defense units, engineers, air corps, and auxiliary services to Puerto Rico, nucleus of the protective force for that base.

Furthermore, the remaining Regular mobile combat troops in the continental United States were reorganized into an army corps of five divisions, each of which was to be complete in all elements although at a peace strength, and certain essential corps troops—additional medium artillery, an antitank artillery battalion, a corps cavalry reconnaissance regiment, and command and staff elements—were provided.

The new infantry division formation was the result of the years of experimentation with the 2nd Division in Texas.

Its combat elements consist of three infantry regiments of three battalions each; the battalion consisting of three rifle companies and one heavy weapons company; two field artillery regiments, one of three battalions of three batteries each, totalling 36 75-mm. guns, and one of two battalions of two batteries each, totalling 16 155-mm. howitzers. Other organic elements include a command echelon, a battalion each of engineers, quartermaster and medical troops, and a company each of military police and signal corps. The division is partly motorized—that is, its transportation is motorized. For short hauls without supplies, its vehicles can transport the personnel. For long hauls, with supply, a portion of the personnel can be carried direct to the end of the day's march, the vehicles returning to pick up other elements which have started on foot, thus shuttling if necessary the entire command. Combining motor transportation and marching, this type division may be expected to maintain a forty-mile-per-day rate indefinitely, as opposed to the twelve-fifteen mile daily rate of the old division. Its authorized peace time strength is 436 officers and 8,517 enlisted men.

It is a solution, in terms of modern matériel, of the problem of mobility and striking power—conflicting factors. The old type division had grown unwieldy for modern use. The authorized peace strength of the old division was approximately 13,500, its war strength about 24,000. Equipment of the rifle battalions of the infantry regiments with the new Garand semi-automatic rifle, firing eight rounds per clip to the five-round clip of the old Springfield Model of 1903, and the addition of machine guns both heavy and light, both 60-mm. and 81-mm. mortars, and 37-mm. antitank guns, has materially increased the potential fire power of these units while the direct artillery support remains in effect the same as in the old division—twelve guns per infantry regiment.

Other defense projects now in process include the organization of two additional mobile antiaircraft regiments, while Army air bases under way include Westover Field, Holyoke, Mass.; MacDill Field, Tampa, Fla.; Howard Field, Panama Canal Zone; Borinquen Field, Puerto Rico; McClellan Field, Sacramento, Calif.; and Hill Field, Ogden,

Utah. Organization of additional squadrons of Army Air Corps to use these bases was authorized on Dec. 28, 1939. New naval air bases include Kodiak and Sitka, Alaska; and San Juan, Puerto Rico.

Pending at the end of the last fiscal year, June 30, 1939, was a project for construction of a third set of locks and approaches in the Panama Canal, roughly paralleling the existing lock system, to facilitate passage of the United States Fleet and minimize the chances of blocking the canal by any opponent. The estimated cost of such construction is \$277,000,000.

The expansion program already authorized and appropriated for by Congress calls for augmenting the actual strength in all types of planes for the Army Air Corps from the 2300 previously authorized to an approximate total of 5500 by June, 1941, with production going along rapidly. By 1944 the Navy also will have 3000 planes instead of the approximate 1500 of all types in service at the beginning of September, 1939.

The Army Air Corps increases authorized by the last Congress included also pilot personnel. Between July 1, 1939, and September 28, 1940, it is estimated that more than 4,500 students will have been selected for primary flying training. To take care of the increased number of candidates the preliminary three months of primary flying training has been allocated to certain approved civilian flying schools, following which successful candidates pass to a three months' basic military flying training at Randolph Field, and in turn to a final three months' advanced training at Kelly Field. To date a total of two classes—14 Regular officers and 483 flying cadets, have successfully completed the courses at civilian flying schools and are now enrolled in the Randolph Field course. Based on past experience, approximately 52 per cent of the candidates entering the courses may be expected to graduate as military pilots.

For increasing the mobility of the new Army some 12,000 four-wheel drive trucks, which can negotiate almost any type of terrain, are being contracted for. To officer the five divisions and the corps strenuous efforts have had to be made, since no increase in Regular Army officer strength was provided in the Executive order of September 8. These steps include graduation early in 1940 of all present service school classes with exception of the Military Academy and the Army War College, and the utilization of young reserve officers in the combat branches, approximately 1300 other than Air Corps; this last step being dependent upon funds being made available by the next Congress. It is contemplated that Reserve officers so used will be placed on duty for six month periods, in the grades of second and first lieutenants. Acceptance of such active duty would of course be voluntary.

Certain changes in cavalry regimental organization are being made to increase fire power and flexibility of movement. The corps reconnaissance regiment mentioned above will be the 6th Cavalry, transformed into a squadron of horse furnished with sufficient motor transportation to carry both men and animals to the area to be reconnoitered, and a mechanized squadron of fast moving scout cars and a motorcycle troop.

The new 37-mm. antitank gun, of improved model designed by the Ordnance Department, will figure in the equipment of the infantry divisions, as in the corps antitank battalion, which will

consist of three companies of four each of these weapons, plus .50 caliber machine guns.

In field artillery developments recent improvements in mounts for the 75-mm. gun—still basically the French 75, constitute a major essential item of production. In addition a 75-mm. howitzer is in production for use with artillery units of the mechanized forces and for horse and motor-drawn artillery accompanying fast mobile units. Modernization of both 155-mm. howitzer and 155-mm. gun, of which stocks are on hand, will increase both mobility and range of these weapons.

Several steps remain to be completed however as 1939 draws to a close, before the hard-hitting, trained small divisions envisioned by General Craig as spearhead of the initial protective force come to full growth.

Training as combat teams—essential element—is now being carried out under the directive of the present Chief of Staff, Gen. George C. Marshall. The five divisions, at existing strengths, are training as units at Fort Benning, Ga.; Fort Sam Houston, Tex.; Fort Lewis, Washington; Camp McClellan, Ala., and Camp Jackson, South Carolina. The essential corps units available under the new program are being trained at Fort Bragg, North Carolina; Fort Knox, Ky., and Camp Ord, California. The cavalry concentration is at Fort Bliss, Texas. All these posts are in areas where year-round training is practicable. The program calls for further concentration of the entire army corps for mass maneuvers in the coming spring in southern areas. Additional training for the National Guard is also in effect.

But filling of the man-power quota is still incomplete, although recruiting efforts are now in full swing. At present the enlisted Regular Army strength is approximately 215,000. National Guard recruiting is also proceeding, with November strength noted as 214,000. However, the 227,000 Regular Army quota, even when filled, will not provide the man power for all the additional corps and army units necessary for the articulated functioning of the five-division army corps as a complete combat team.

Nor will the new organization be completely equipped with necessary matériel. That appropriated for and contracted for in 1939 was on the basis of the 165,000 Regular and 190,000 National Guard strength. It will be in the hands of the troops in 1941. The additional equipment for the increased strength has not yet been appropriated for. If ordered in 1940 it cannot be in the hands of the troops prior to 1942.

On December 20 announcement of pending creation of an Air Defense Command for the continental United States was made. This will include co-ordinated control of antiaircraft units, pursuit planes, and antiaircraft warning service of signal communications—all elements for the protection of an area against hostile attack.

Completion of the program as noted above depends in 1940 upon the will of the people. The War Department policy is summed up in the following excerpts from the Report of the Secretary of War, Mr. Harry H. Woodring, made public Dec. 28, 1939:—

"These are the days when by the threat of the exercise of armed might, or by the actual employment of military violence, the maps of the world are changed overnight. . . . There is but one road along which a peace-loving people can travel with security. That road is a national defense highway, with a foundation of such firmness as to assure

the support of any military load. . . . The determination of the numerical strength of the Army of the United States, with its various components, lies with the Congress of the United States. Whatever is the decision as to the size of our Army—our initial protective force . . . I must urgently insist that that force decided upon be complete as to personnel, as to matériel, and that it be 100 per cent efficient as to training. Our Military Establishment must be an 'Army in being'!"

MILLS COLLEGE. A college for women in Oakland, Calif., founded in 1852. The enrollment in the autumn of 1939 was 620, for the summer session of 1939, 368. The faculty numbered 101 members. The total productive funds amounted to \$1,910,864 and the total assets to \$4,639,192, while the gross income for the year ending June, 1939, was \$890,115. The library contained 77,000 volumes. President, Aurelia Henry Reinhardt, Ph.D., Litt.D., LL.D., L.H.D.

MINERALOGY. Several important textbooks, compilations, and editions dealing wholly or in part with mineralogy have been published during the year 1939.

The most important and significant of these is *The Birth and Development of the Geological Science* by Frank Dawson Adams, published in December 1938, too late for inclusion in last year's YEAR BOOK. The eminent author of this work combines with his notable scholarship the rare gift of lucid and vivid writing. This combination has produced a book that will be welcome not only by the world of science, which has long suffered from its lack, but by the general reader who will find here fascinating literature in a field that is but little known. Dean Adams has brought to his task a knowledge of the literature of his subject, both classical and modern, which can only be described as "encyclopedic."

The scope of the work will become evident when one considers such chapter headings as, "On the Generation of Stones," "Medieval Mineralogy," "Birth of Modern Mineralogy and its Development from Agricola to Werner and Berzelius," and "The Origin of Metals and their Ores." The mineralogist will find many such amazing citations as this one: "no less than twenty-seven Systems of Mineralogy were written by various authors in different countries of Europe, during the one hundred and twenty-eight years between 1647 and 1775." The book is illustrated by 14 half-tone plates, and 78 figures, many of them reproducing old engravings and wood cuts.

Following lines that somewhat overlap those of *The Birth and Development of the Geological Sciences*, the *Source Book in Geology*, by Kirtley E. Mather, and Shirley L. Mason, contains selections from the works of noted geologists who lived, wrote, and died between the middle of the 15th century and the present year. It is thus a compilation of selected passages, selected by the authors as representing "the most significant passages from the works of the most important contributors to the science of geology in their eras." Among the 132 geologists represented in this Hall of Fame, there are certainly some whose views on certain questions we would like to compare in a sort of "immortal symposium." The compilers have done this for us by arranging

groups of authors under subject headings, in a "Guide to Subject Matter" which precedes the index. Here we find such a heading as Cosmogony, with page references to Descartes, Liebnitz, Kant, Buffon, Laplace, Proctor, Bickerton, and Chamberlin. Other important groupings include, to name a very few of them, Fossils, with 17 citations ranging from da Vinci, c. 1500 to Owen, 1864; Igneous Rocks, Crystallography, Mineralogy, Physics of the Earth, Volcanism, and Ore Deposits. From the scant four names listed under the last named subject one misses those of the late Carl Richard Beck, and James F. Kemp, both notable authorities in their subject. However, Drs. Mather and Mason are both to be congratulated for getting such an amazing amount of classical geology into 681 pages.

Another compilation, more strictly mineralogical in character, is a *Descriptive List of New Minerals*, by George L. English. In 258 pages of his book Mr. English gives the determinative facts regarding upward of 2600 mineral names that have been added since the publication of the last edition of Dana's *System of Mineralogy* in 1892. As a work of reference this impressive alphabetical list represents a vast amount of research and a corresponding economy in time and labor for the reader who consults it. One of the most valuable features of Mr. English's work is his carefully prepared references to first notices of new species, which alone are calculated to save the student hours of search through a voluminous literature. There are, perhaps, too many "trade names" and local synonyms, but even these often include unexpected facts, like the hardness of carborundum, difficult to find elsewhere.

The 3d ed. of *Gems and Gem Minerals*, whose senior author is Dr. Edward H. Kraus of the University of Michigan, appears with Dr. Chester B. Slawson as the junior author in place of Dr. Edward F. Holden, who died while the 1st ed. was being printed. The revision and addition of new matter, which brings the work of Drs. Kraus and Slawson up to date, has resulted in 27 additional pages of text and 19 additional illustrations in the text. Moreover, of the 344 text figures 65 are new. These new illustrations are particularly in evidence in the chapter on Cutting and Polishing Gems, where a fine series illustrating the cutting of the Jonker diamond in 1935 is to be found. The most important innovation, however, is the introduction of four-color plates illustrating 80 gems both faceted and cut cabochon.

The new mineral species announced during 1939 include several of importance. A silicate of sodium and beryllium occurs as white and semi-transparent grains in the Kola Peninsula of Russia. It has been named *chkalovite*. *Kotoite*, a magnesium borate, is found as a granular constituent of dolomitic marble at the Hoe Kol mine, Suan, Korea. *Teineite*, occurs in sky blue prismatic crystals at the Tiené mine, Hokkaido, Japan; it is a hydrated copper tellurate. Also from Japan comes *abukumalite*, a phosphosilicate of calcium and yttrium, occurring in dark reddish-brown masses in the Abukuma range. The Belgian Congo, which has furnished many new species in the past has yielded *trievite*, a hydrated copper-cobalt oxide, occurring as a secondary black mineral at the Étoile du Congo mine. *Weberite*, is a sodium magnesium-aluminum fluoride occurring in pale gray grains in the cryolite of Ivigtut, Greenland. Borax Lake, Cali-

fornia, has furnished a new sodium chloroborate occurring in crusts and named *tepleite*.

HERBERT P. WHITLOCK

MINERALS. See the articles such as COAL, IRON AND STEEL, NICKEL, ETC.; also sections on minerals in State articles; BUSINESS REVIEW; METALLURGY; MINES, BUREAU OF.

MINES, BUREAU OF. The U.S. Bureau of Mines was organized in 1910 as a bureau of the Interior Department, transferred by Presidential order on July 1, 1925, to the Department of Commerce, and transferred back to the Interior Department on Apr. 24, 1934.

Under the amended organic Act approved Feb. 25, 1913, the Bureau is declared to be a bureau of mining, metallurgy, and mineral technology. It is the Bureau's duty to conduct investigations concerning the mining, preparation, treatment, and utilization of mineral substances with a view to improving health conditions, increasing safety, efficiency, and economic development, and preventing waste in the mining, quarrying, metallurgical, and other mineral industries.

Technical investigations with which the Bureau has been charged are the special duty of the Technologic Branch and the Health and Safety Branch. Studies in the economics of the mineral industries are conducted by the Economics and Statistics Branch. Fourteen experiment stations and six field offices, under the Technologic Branch, located in the more important mineral districts, study problems in the mining, treatment, and utilization of the various mineral materials, devoting their efforts largely to the solution of problems affecting the mineral industry of their respective regions. The Health and Safety Branch supervises the work of 15 mine safety stations or field offices, 2 mine rescue cars, and a number of mine rescue trucks. When mine disasters occur, these rescue cars or trucks are dispatched to the scene, where the crews assist in mine rescue work.

Studies looking toward the freeing of the United States from dependence on foreign countries for certain strategic minerals, the devising of processes which should facilitate the utilization of low-grade mineral deposits hitherto undeveloped, and the conservation of minerals through prevention of waste featured the investigative program of the Bureau of Mines during the fiscal year 1939.

Studies relating to the making of electrolytic manganese, the production of pure sponge chromium, and the manufacture of magnesium metal featured the work in metallurgy. Comparative tests on various types of low-rank coals from the West were made by the coal-hydrogenation laboratory. The Bureau's petroleum engineers continued engineering studies and field demonstrations designed to conserve this precious mineral resource. The Bureau produced 6,000,000 cubic feet of helium at the plant at Amarillo, Texas, during the year 1939, most of it being for Army and Navy use. Studies relating to nonmetallic minerals indicated that domestic clays may come to replace English clays, and pointed the way to important uses for coal refuse.

The Bureau continued its work of providing exhaustive statistical and economic data which have proven of the greatest practical importance to the mineral industries. During the fiscal year more than 120,000 persons in the mineral industries were given Bureau of Mines training courses

in mine rescue and first-aid methods. This was the largest number ever trained in a 12-month period. See METALLURGY.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 32 local sections and has 47 student affiliated societies in American colleges. On Nov. 30, 1939, there were 13,636 members, distributed as follows: Honorary, 17; members, 6915; junior members, 2427; associates, 603; Rocky Mountain members, 88; and junior foreign affiliates, 52. In addition there were 3534 student associates.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention, usually beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the Society during 1939 for notable work in the field of mining and metallurgy were: The William Lawrence Saunders Gold Medal to Louis S. Cates; the Robert W. Hunt Award to Kenneth Charles McCutcheon and John Chipman; and the Alfred Nobel Prize to Ralph J. Schilthuis.

The Institute publishes *Transactions*, an annual in several volumes, containing the best papers of the year on mining and metallurgical subjects; *Mining Technology*, *Metals Technology*, and *Petroleum Technology*, technical pamphlets published several times during the year; *Mining and Metallurgy*, a monthly magazine; the *Directory*, which constitutes a "Who's Who" in the profession; and individual technical pamphlets and special volumes. In connection with three other societies, it maintains the Engineering Societies Library and an employment bureau. The president in 1939 was Donald B. Gillies, and the officers for 1940 are: President, H. G. Moulton; Vice Presidents, Erle V. Daveler, W. B. Heroy, Henry Krumb, Paul D. Merica, W. M. Peirce, and Wilfred Sykes; Treasurer, Karl Eilers; and Secretary, A. B. Parsons. Headquarters are in the Engineering Societies Building, 29 West Thirty-ninth St., New York City.

MINNESOTA. Area and Population. Area, 84,682 square miles, exclusive of State's part of Lake Superior; included (1930) other water, 3824 square miles. Population: Apr. 1, 1930 (census), 2,563,953; July 1, 1937 (Federal estimate), 2,652,000; 1920 (census), 2,387,125. Minneapolis had (1930) 464,356 inhabitants; St. Paul, the capital, 271,606; Duluth, 101,463.

Agriculture. Farmers in Minnesota harvested, in 1939, 18,901,800 acres of the principal crops. Corn, on 4,501,000 acres, made 204,796,000 bu. (estimated value on the farm, \$104,446,000); oats, on 3,939,000 acres, 151,652,000 bu. (\$37,913,000); barley, on 2,136,000 acres, 59,808,000 bu. (\$23,325,000); tame hay, on 3,076,000 acres, 4,773,000 tons (\$20,524,000); wheat, on 1,595,000 acres, 22,108,000 bu. (\$16,139,000); flaxseed, 1,223,000

acres, 12,230,000 bu. (\$19,201,000); potatoes, 239,000 acres, 20,315,000 bu. (\$11,173,000); rye, 525,000 acres, 7,350,000 bu. (\$2,572,000).

Manufacturing. Establishments engaged in manufacturing in Minnesota in 1937 numbered 3718 (in 1935, 3701); they employed 89,125 wage-earners (in 1935, 76,241) and paid them \$107,393,009 (in 1935, \$77,974,350); their products for 1937 totaled \$937,462,797 in value (for 1935, \$746,350,564), of which sum the part contributed by manufacture amounted to \$312,897,951 (for 1935, \$245,507,288). The factories averaged less than 25 wage-earning employees; the wages averaged about \$1200 a year; and the total contribution made by manufacture, to the value of products was one-third, as against higher ratios in States where intricate processes of manufacture were more the rule.

Three classes of manufacturing, each treating one leading kind of products of the farm, accounted for nearly two-fifths of the manufactured output of 1937; they were the meat-packers, the grain mills (chiefly flour mills), and the establishments making butter. Meat-packing, the leading industry in point of manufactured product, was carried on by 12 relatively large establishments employing, in 1937, 8537 wage-earners, who received in pay \$12,121,548; \$201,467,613 was the value of the packers' products; their own manufacturing processes contributed to this sum \$32,875,026. The grain mills numbered 65; employed 2372 wage-earners, who received \$3,341,897; and produced \$97,017,761 in value of output, to which sum they contributed \$14,079,738 by their own processes. Butter-making, conducted in 839 establishments (28 per cent of all the State's factories), employed 2639 wage-earners, paid them \$2,864,732, produced goods to the value of \$96,130,819, and contributed to this sum, by manufacture, \$9,726,765. The smaller industry of treating linseed, typical of the region, produced oil, cake, and meal totaling \$14,334,978. Two lines of fabrication, that of heating and cooking apparatus and that of refrigerating apparatus, each produced goods not far from \$16,000,000 in total.

The main industrial area, in and outlying Minneapolis and St. Paul, employed 55,509 wage-earners, paid them \$69,315,991, and produced, in goods, \$533,732,768. The manufactures of Minneapolis totaled \$262,877,781; those of St. Paul, \$157,289,987.

Mineral Production. Lacking coal, petroleum, and almost all the industrial metals, Michigan continued to hold a high place in mineral production by the sole reason of producing the bulk of the iron ore mined in the United States. The total value of the yearly production, for 1937, of minerals native to the State was \$152,107,070; as in other years, iron ore supplied all but about \$11,000,000 of the sum. The shipments of iron ore from the mines fell to 14,535,744 gross tons for 1938, from 47,878,042 for 1937; their yearly value fell to \$44,361,534, from \$141,542,594. The drop resulted from a sharp decline in manufacturing activity and not from conditions in the iron mines. The State Tax Commission's estimate of May 1, 1938, put the total of unmined iron ore in the State at 1,225,773,389 gross tons. Ore containing both iron and manganese, mined in the State and itemized separately from iron ore, was produced in 1937 to the quantity of 1,257,900 long tons and the value of \$3,451,795; the quantity mined in 1938 was but 276,607 tons.

Legislation. The regular biennial 90-day ses-

sion of the Legislature, which met in January, attracted notice throughout the country by passing a law for the regulation of labor relations with attention to the behavior of the organized laborers. While it also restricted employers, this act by its prohibitions to workers tended to counterbalance the leaning of the Federal Labor Act toward regulating the employer. The list of "unfair" practises, for employers, as set down in the Minnesota act, resembled that in the Federal law, but in addition there appeared a list of practises unfair for labor unions, notably sit-down strikes (seizure of the employer's premises) and strikes violating written agreement, both proceedings being forbidden. No striking was allowed until after two days' notice to the employer; the Governor might extend the period to as much as 40 days for reason of public welfare. A group of persons picketing an establishment on account of a strike was required to have actual strikers for a majority. Unions were forbidden to threaten and coerce workers who were not members. The act contained strict clauses for the protection of farmers and other third parties from strikers' attacks on vehicles. Strikers' familiar practise of preventing the free use of highway and street by people whom they opposed, while illegal under existing statutes, was made an infraction of the new act as well. The actions designated as unfair on the part of employers were mainly as in the National Labor Relations Act.

The Legislature also dealt with Governor Stassen's recommendations covering changes in the organization of the State administration with a view to more businesslike management of public affairs. Among other changes was the abolition of the State tax commission, replaced by a department of taxation under a single head. The law on persons delinquent in payment of the tax on property was made less severe. The State's Auditor, in order to improve control over State and local public finance, was required to prepare quarterly and yearly statements of the accounts of governing bodies, after a uniform system that their books must follow. Another officer, the Public Examiner, was to share in the duties of financial supervision. A civil-service act strengthened control over the personnel of the State's offices.

Political and Other Events. Harold E. Stassen, who took office as Governor in January, worked in accord with fellow Republicans who formed the majority in the Legislature. His stand was conservative, as opposed to the sometimes tumultuous popular activity of the liberals under the administrations of his predecessors Benson and Olson. A stoppage of work, backed by the Workers' Alliance, started early in July, among persons on the payroll of the WPA in several States; some of this group in Minnesota participated. When the WPA Administrator in Minnesota, Linus Glotzbach, dropped the non-workers to the foot of the seniority list, there ensued a violent strike, in which encounters (July 14 and 17) with police and deputy sheriffs in Minneapolis resulted in two deaths, one being that of a policeman. Federal prosecutions against about 150 charged with participation in strikers' efforts to prevent clients from gaining a living through the WPA were started in Minneapolis under indictments returned August thereafter; trials began in October, in which month eight of the defendants were convicted. Twenty five were convicted on December 4.

Nels W. Elsberg, formerly the State's High-

way Commissioner, was reported (May 13) to have been found guilty, in District Court, of conspiracy in connection with payment of \$71,000 in false claims against the Department. The removal of Conservation Commissioner Wenzel, for official misconduct, was ordered by Governor Stassen on November 23.

Officers. Minnesota's chief officers, serving in 1939, were: Governor, Harold E. Stassen (Rep.); Lieutenant-Governor, C. Elmer Anderson; Secretary of State, Mike Holm; Treasurer, Julius A. Schmahl; Auditor, Stafford King; Attorney-General, J. A. A. Burnquist; Commissioner of Education, John G. Rockwell.

MINNESOTA, UNIVERSITY OF. A coeducational State institution for higher learning in Minneapolis, founded in 1851. The 1939 autumn registration of collegiate grade students was 15,301, while the summer session enrollment for the same year was 7375. The full time equivalent number of faculty members of instructor's rank and higher for the year 1938-39 numbered 908. The income for the year ending June 30, 1939, amounted to \$11,992,080. Gifts received during the year amounted to \$487,492. The total of endowment funds for all purposes was \$16,536,206 on June 30, 1939. Income from endowment funds for the year 1938-39 totaled \$520,801. Buildings at the following estimated costs were under construction during 1938-39: Business Administration Unit of the Social Science Group, \$300,000; Forestry Building, \$250,000; State Board of Health and University Psychology Building, \$325,000; Coffman Memorial Union, \$1,982,000; Journalism Building, \$246,500; Museum of Natural History, \$272,000; Women's Dormitory, \$621,500; Dormitory for Graduate Students, \$220,000; Health Service Building, \$107,000. The library contained 1,073,906 volumes. Chancellor, Guy Stanton Ford, LL.D.

MINORITIES. See ARGENTINA, BELGIUM, BRAZIL, BULGARIA, BURMA, CANADA, CZECHOSLOVAKIA, DENMARK, ESTONIA, FRANCE, GERMANY, HUNGARY, ITALY, LATVIA, LITHUANIA, IRELAND, NORTHERN; POLAND, RUMANIA, SPAIN, SWITZERLAND, TURKEY, and YUGOSLAVIA under *Area and Population or History*; FASCISM; JEWS; REFUGEES.

MIQUELON ISLANDS. See ST. PIERRE AND MIQUELON.

MISSIONS, FOREIGN. See articles on various religious organizations for statistics.

MISSISSIPPI. Area and Population. Area, 46,865 square miles; included (1930) water, 503 square miles. Population: Apr. 1, 1930 (census), 2,009,821; July 1, 1937 (Federal estimate), 2,023,000; 1920 (census), 1,790,618. Jackson, the capital, had (1930) 48,282 inhabitants.

Agriculture. Mississippi harvested, in 1939, 6,996,000 acres of principal crops. Cotton, on 2,525,000 acres, gave 1,585,000 bales (\$72,118,000); the year's harvested acreage of cotton came to less than seven-tenths of the average for the decade 1928-37, but the yield to the acre, 301 pounds, ran correspondingly higher. Corn, on 2,839,000 acres, produced 35,488,000 bu. (\$26,261,000); tame hay, on 897,000 acres, 1,140,000 tons (\$11,514,000); sweet potatoes, 83,000 acres, 6,142,000 bu. (\$4,606,000); potatoes, 20,000 acres, 1,420,000 bu. (\$1,051,000); oats, 76,000 acres, 2,736,000 bu. (\$1,149,000).

Manufacturing. According to figures published by the U.S. Census of Manufactures in 1939, 1100 manufacturing establishments operated

in Mississippi in 1937 (in 1935, 1059); their wage-earners numbered 46,040 (in 1935, 36,367) and received in pay \$26,383,931 (in 1935, \$19,334,105); the value of manufactures' products totaled \$190,670,510 (for 1935, \$120,330,001), to which sum the processes of manufacture in the State contributed \$76,224,685 (for 1935, \$49,521,480). Oil, cake, and meal made out of cottonseed furnished \$42,576,010 of the manufactured output of 1937. Goods woven from cotton attained \$6,932,363. Lumber and timber products, totaling \$35,507,143, did not include the products of the planing mills, an additional \$5,886,526. Clothing, largely shirts, was made to the total of some \$15,500,000.

Mineral Production. Exploration in 1938 failed to find petroleum in exploitable quantities, but in 1939 productive wells were driven in Yazoo County. Natural gas continued to supply the greater part of the yearly production of native minerals, which for 1937 totaled \$4,821,950. The production of natural gas amounted to 14,298 million cu. ft. for 1938, as against 13,348 million for 1937. All of the total obtained in 1938 came from the Jackson field, as the Amory field did not produce after 1937. The Jackson field suffered in 1938 from the encroachment of salt water in some of the wells and from a fire at one of the wells, which the State extinguished, thereafter reimbursing itself out of a temporary tax of 7.5 per cent on all the wells' output. Except for unintentional waste of gas, the product went by pipe lines to consumers. Its value for 1937 was stated as \$577,000 at the wells and \$3,041,000 on reaching the consumer. About 40 per cent of it was exported to Alabama, Florida, and Louisiana.

Education. For the academic year 1938-39 Mississippi's inhabitants of school age (from 6 years to 20) was stated as 843,239, comprising 379,238 whites and 464,001 Negroes. Enrollments of pupils in all public schools totaled 608,730 (308,883 white; 299,847 Negro); 536,209 enrollments were in the elementary group (white, 246,013; Negro, 290,196); 72,521 were in high schools (white, 62,870; Negro, 9651). Outside of these totals, junior and senior colleges had enrollments of 10,860 whites and 906 Negroes. Expenditure on public-school education, during the year, exclusive of that for debt and outlay, totaled \$13,646,068. Teachers in public schools numbered 16,105 (white, 10,175; colored, 5930); the year's salaries of the whole number averaged \$480.80.

Political and Other Events. The operation of the "Balance Agriculture With Industry" programme, adopted in 1936, was reported to have brought the State a substantial gain of manufacturing industry in the course of three years. As authorized by the statute of 1936, the Industrial Commission issued certificates of public convenience and necessity to each of many local communities; under power given by such a certificate, a community would hold an election on the question whether to issue bonds to pay for setting up a factory; in more than nine cases out of ten the voters would authorize the bonds, and commonly there would follow the construction of the factory and its sale or lease to a private firm, for operation. The sharp gain of Mississippi's manufacturing output from 1935 to 1937 was ascribed to this method of promoting the establishment of new enterprises. Instances of communities cited as favorably affected then or later were Natchez, on the Mississippi River, where a company employed 1200 people making tires with rubber imported

through New Orleans and floated up the river, cotton locally produced, and carbon black, obtained from natural-gas fields in States near by; Pascagoula on the coast, where a shipbuilding enterprise expected to employ 1500 people; and Laurel, with two industries, one a co-operative enterprise making starch from sweet potatoes and the other a firm fabricating "composition" boards out of young growth and the waste from saw mills. The readiness of some manufacturers to leave areas in the Northeastern States, affected by excessive taxation and powerful labor unions, tended to favor Mississippi's efforts. The designs of the authorities of that State were, reportedly, to establish many small enterprises, scattered, so far as feasible, among separate communities, thus to avoid creation of definitely industrial districts.

Elections. At the Democratic primary election Paul B. Johnson of Hattiesburg gained a lead over ex-Gov. Martin Sennett Conner, in the choice of a Democratic candidate for Governor; as this lead did not suffice under the election law, there followed (August 29) a runoff, in which Johnson was chosen. As no organized opposing party existed in the State, Johnson's subsequent formal election on November 7 was, in effect, assured by the August vote. The primary campaign provided a lively contest; U.S. Senator Harrison, not wholly in accord with the Federal Administration, favored Conner, while the State's other Senator, Bilbo, supported Johnson, who in turn had campaigned in 1935 and had then been regarded as a disciple of the political principles of Huey Long of Louisiana.

Officers. Mississippi's chief officers, serving in 1939, were: Governor, Hugh L. White (Dem.); Lieutenant Governor, J. B. Snider; Secretary of State, Walker Wood; Attorney-General, Greek L. Rice; Treasurer, Newton James; Auditor, Carl N. Craig; Superintendent of Education, I. S. Vandiver.

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher learning at University, Miss., chartered in 1844. The enrollment for the autumn of 1939 was 1400 (1011 men, 389 women). The enrollment for the summer session of 1939 was 473. There were 115 faculty members at opening of the 1939 session. The endowment amounted to \$733,808, while the income for the year, exclusive of subsistence, was \$603,310.47. The library contained 68,515 volumes. Chancellor, Alfred Benjamin Butts, M.A., Ph.D., LL.B.

MISSOURI. Area and Population. Area, 69,420 square miles; included (1930) water, 693 square miles. Population: Apr. 1, 1930 (census), 3,629,367; July 1, 1937 (Federal estimate), 3,989,000; 1920 (census), 3,404,055. St. Louis (1930) had 821,960 inhabitants; Kansas City, 399,746; Jefferson City, the capital, 21,596.

Agriculture. Farmers in Missouri harvested in 1939 an acreage of 12,201,500 in the principal crops. Corn, on 4,229,000 acres, made 122,641,000 bu. (estimated value on the farm, \$66,226,000); wheat, on 1,773,000 acres, 29,241,000 bu. (\$19,591,000); tame hay, 2,954,000 acres, 3,222,000 tons (\$18,365,000); cotton, 375,000 acres, 440,000 bales (\$19,360,000); oats, 1,860,000 acres, 40,920,000 bu. (\$11,548,000); potatoes, 53,000 acres, 4,664,000 bu. (\$2,938,000); grain sorghums, 225,000 acres, 3,600,000 bu. (\$2,304,000). A noteworthy development in the agriculture of the cotton counties was the rise of the average yield per acre of Missouri cotton to 561 lb. for 1939, the highest in that year for any State but Cali-

fornia and 79 per cent above the average for the decade 1928-37. This rise in its earlier stage was reported to have attracted new purchasers to the land and, affecting the system of cotton culture, to have played a part in the tendency, noted below under *Events*, to dispense with the tenant farmer.

Manufacturing. In 1937 the manufacturing establishments in Missouri numbered 4291 (in 1935, 4379); they employed 186,831 wage-earners (in 1935, 157,683) and paid them \$202,585,847 (in 1935, \$153,734,808). The year's output of manufactured products in 1937 totaled \$1,505,383,002 (in 1935, \$1,183,637,068), of which sum the part attributable to the process of manufacture attained \$560,398,068 (in 1935, \$440,928,492). Of the 140 classifications for which the U.S. Census of Manufactures showed separate totals, only two made more than \$100,000,000 each in products during 1937. The products of the meat-packers amounted to \$116,576,053; those of the makers of boots and shoes, to \$103,253,379. The boot-and-shoe industry led as a payer of wages, for its 57 manufacturing establishments had, in 1937, 26,110 wage-earners and paid them \$22,367,811. The meat-packers' 40 establishments had 5066 wage-earners, who received \$6,931,060. The wages in either group came to somewhat less than half of the value imparted to goods by manufacture; this value totaled \$47,005,634 for the boot-and-shoe industry and \$14,515,116 for the packing industry. The grain mills (chiefly flour mills) produced \$61,597,878 in yearly total of output, in 1937; the output of electrical machinery and supplies ran to \$53,090,558; the value produced by manufacturers of leading classifications of garments exceeded \$55,000,000.

In St. Louis were produced \$766,992,585 in manufactures, constituting two-thirds of the whole State's total for 1937; the factories in St. Louis employed in that year 95,261 wage-earners, paid them \$111,305,834, and contributed by manufacture, \$303,925,775 to the value of the year's output. Kansas City, Mo., for which the Census did not publish separate figures to cover 1937, attained for 1935 totals from one-third to one-fourth as great as those for St. Louis, thus ranking as the State's next most important industrial centre.

Mineral Production. Of Missouri's production of native minerals, totaling \$52,446,272 for 1937, lead made up more than one-third while coal and cement each approximated one-seventh. Mines' shipments in 1938 contained lead, zinc, and silver to the total value of \$12,396,948, as against \$21,482,955 for 1937. The silver, in minor amounts, was obtained in the recovery of the lead. Mines in the southwestern area produced chiefly zinc; those in the southeastern area, chiefly lead. Ore shipped in 1938 contained 112,027 tons of lead, as against 157,631 tons for 1937; by value, \$11,226,484 (1938) and \$18,600,458 (1937). Zinc in mines' shipments decreased to \$981,696 (1938) from \$2,678,000 (1937). The yearly mining of coal diminished to 3,412,000 net tons (1938), from 4,091,000 tons (value, \$7,978,000) for 1937. Cement shipped from mills amounted to 4,570,389 barrels for 1938 and 4,565,448 for 1937; in total value, \$6,871,120 (1938) and \$7,041,016 (1937). By a change of classification the U.S. Bureau of Mines ceased in 1939 to treat the manufacture of pottery as one of the State's mineral industries. This industry, formerly included in the class of clay products, had caused clay products to be

listed in the YEAR BOOK as a leading mineral industry of the State.

Education. Missouri's inhabitants of school age (from 6 years to 20) were reported for the academic year 1938-39 as 946,475. Enrollments of pupils in all public schools totaled 712,326; this comprised 519,830 in elementary study and 192,496 in high schools. The year's expenditures for public-school education totaled \$57,875,789; the teachers numbered 26,342.

Legislation. A regular biennial session of the Legislature opened January 4. The Federal Social Security Board had not long before cut off the Federal contribution to the State's old-age assistance, having found Missouri's system of payment too lax. As the State had to amend the law on the subject in order to bring back Federal monthly aid, clauses otherwise altering the old law were passed too. The acts lowered age of qualification to 65 years, from 70, specified the basis of need for assistance in such a way as to offset a recent decision of the State Court of Appeals holding voluntary outside aid to the applicant not to come into consideration, and restricted the power of State circuit courts to reverse the State Social Security organization's decisions against applicants.

The biennial appropriations were enacted without resort to new taxation for meeting an apprehended moderate deficiency of income. The 2-per cent sales tax was made to remain in force until the end of 1941. Helping Governor Stark in his efforts to break the political organization of Thomas J. Pendergast, Democratic leader in Kansas City, the Legislature enacted a bill stripping Kansas City of its power to choose its own police head and vesting the control of the police in a commission of four men to be appointed by the Governor. An act regulating the business of making small loans subjected "salary-buyers" to the jurisdiction of the State Finance Department and raised the monthly rate of lawful interest on such loans to 3 per cent, from 2½, assertedly in order to attract legitimate companies into the business. An act signed by the Governor under the impression that it concerned strikers' taking possession of an employer's premises gave the owner of the premises the right to apply to the courts for a speedy remedy by a suit for unlawful detainer; the act was elsewhere declared, however, to be meant to apply particularly to farmers' tenant-helpers who would not heed notice to vacate.

Political and Other Events. Thomas J. Pendergast, long Democratic leader of Kansas City, pleaded guilty and was sent to prison on a Federal indictment. This indictment, obtained April 7 by Maurice M. Milligan, U.S. District Attorney at Kansas City, charged Pendergast with evasion of Federal income taxes, due on income to the amount of \$433,550 that he had received in 1935 and 1936, and \$315,000 of such income was stated to have been received in connection with the settlement of a long maintained dispute between the State of Missouri and a group of 137 insurance companies over \$9,500,000 collected and impounded during a period when the companies' rates were in question; R. E. O'Malley, the State's Superintendent of Insurance, charged with having similarly received \$62,500 and failed to pay the tax thereon, was also indicted. The implication of the indictment of Pendergast was that he had received the specified payments in return for using his influence for the settlement of the issue over the above-mentioned \$9,500,000: a

settlement according the policyholders 20 per cent and giving 80 per cent to the companies.

Pendergast pleaded guilty, May 22, to evasion of Federal income taxes, and was sentenced to serve 15 months in a Federal prison. He entered the Leavenworth Prison May 29. The State of Missouri instituted proceedings to obtain from insurance companies the sum that they had received in the \$9,500,000 settlement, and a special Federal Court of 3 members ordered the companies June 1 to return the money to Court custody with a view to its later distribution among policyholders. C. R. Street, alleged to have represented the companies in dealings with Pendergast, had died after the settlement but before the indictments. Federal demands on Pendergast for \$830,493, inclusive of penalties and of alleged income-tax evasions not tried, were reported to have been settled late in December on the basis of a payment of \$350,000 to be made by Pendergast. This did not cancel his prison sentence.

Governor Stark, elected in 1936 with the aid of the Pendergast vote in Kansas City, Mo., did not take any public part in the Federal proceedings against the Kansas City leader, and U.S. Attorney-General Murphy declared that the conduct of the case had been left in the hands of the local U.S. District Attorney. The manner in which information against Pendergast had come into Federal hands was not disclosed; however, President Roosevelt affirmed at a press conference, April 11, reported by the Associated Press, that Governor Stark had mentioned the subject of Pendergast to him some time before and that the President had referred the Governor to the Treasury, which would investigate tax matters. Stark had, prior to the Federal prosecution of Pendergast, called upon the Legislature, March 23, to take from Kansas City the control of its own police and put these under the rule of a commission of appointees of the Governor (see *Legislation*, above); and in an address to the inhabitants of the State, by radio, he called upon them, April 2, to support his efforts by letters to Legislators.

The Federal Social Security Board stopped, with the end of 1938, the monthly Federal contribution toward the cost of old-age assistance in Missouri; it had held the State's law governing the distribution of this assistance to be unsatisfactory as a safeguard to the proper dispensation of Federal money. The State paid out of its own cash entirely the usual monthly distribution in January; it amounted to \$1,390,862, divided among 74,821 persons. Nothing was paid in February; on March 9, in view of the Legislature's amendment of the law governing the payments, the Federal Board resumed the grants to the State, making up also the sums that it had not paid for January and for February.

"Share-croppers" (metayers) to the number of 1500 persons or more made a striking demonstration of their neediness in January; during wintry weather these people, farmers and their families, encamped along roads in the southeastern part of the State, mainly in New Madrid and Mississippi counties, having left farms where they said that they could not subsist. Federal agencies fed them and the State authorities put them back in the houses that they had left. The Federal Bureau of Investigation looked into their treatment and reported that none of a group of 1161 whose cases were examined had been evicted; it held that the area had a surplus of agricultural labor, augmented

by the spread of mechanized farming and by some features of the Federal activities for agriculture and for poor-relief. The demonstrators were for the most part Negroes; the heads of families had been cultivating land under contracts by which they delivered to the landlord a share of the crop. As the Federal agricultural aid planned for 1938 had increased the tenant's share of benefit payments it had become advantageous to landowners to hire laborers instead of renting the land for a share of the crop. See PRISONS.

Affairs of Kansas City. Kansas City, Mo., had long maintained a City Manager; the Democratic organization headed by Thomas J. Pendergast had won at the municipal polls for 12 years, during which it maintained as City Manager H. F. McElroy. In January a grand jury of Jackson County (containing the city) met to consider irregularities among the local officials; it turned in, up to its adjournment on May 11, 167 indictments. Resulting prosecutions were handled by the Attorney-General, who brought action to oust County Prosecutor W. W. Graves, Jr., and prosecuted other officials. In January also, a Federal grand jury started the investigation of persons suspected of gaining hidden income from illicit gambling establishments and thus evading the Federal income tax. There followed in April the downfall of Pendergast, whose political power evaporated as soon as he had been indicted on the Federal charge. City Manager McElroy and Director of Police Otto P. Higgins resigned. Bryce B. Smith, who as Mayor had occupied a relatively inconspicuous position, named his own secretary, E. C. Zachman to act as City Manager; later Governor Stark, appointing a commission created by the Legislature, put under its direction the city's police (July 8).

Officers. Missouri's chief officers, serving in 1939, were: Governor, Lloyd C. Stark (Dem.); Lieutenant-Governor, Frank G. Harris; Secretary of State, Dwight H. Brown; Auditor, Forrest Smith; Treasurer, R. W. Winn; Attorney-General, Roy McKittrick; Superintendent of Public Schools, Lloyd W. King.

MISSOURI, UNIVERSITY OF. A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1939-40 was 5573, of whom 4142 were men and 1431 were women. The total enrollment for the 1939 summer session was 3313. There were 456 faculty members. The endowment amounted to \$2,469,179, while the total income from all sources was \$4,578,471. The libraries contain approximately 430,000 volumes. In 1939 new buildings were completed at a cost of \$450,000. A gift of \$80,000 was received from the Rockefeller Foundation in 1939 to aid in the erection of a laboratory for Genetics Research. President, Frederick A. Middlebush, Ph.D., LL.D.

MODERN ART, MUSEUM OF. See ART MUSEUMS; ART EXHIBITIONS.

MODERN LANGUAGE ASSOCIATION OF AMERICA, THE. An organization founded in 1883, incorporated in 1900, and devoted to advancement of research in modern languages and literatures. It issues a quarterly *PMLA* and Supplement of about 1500 pages yearly, including an annual bibliography of American work in its field. Its four book Series and Joint Publications approximate 50 volumes. The membership exceeds 5200, the annual dues are \$5, and 425 libraries subscribe to its publications. During the

Christmas holidays it holds an annual three-day convention at which nearly 200 papers are read. In 1939 this meeting was held in New Orleans, La.; in 1940, at Harvard University. The permanent invested funds of the Association total slightly over \$100,000.

During 1939 the Association established a permanent commission on Trends in Education affecting the modern languages; the chairman was Dean Henry Grattan Doyle of George Washington University, Washington, D. C.

The Association's joint publication, *A History of American Magazines*, by Prof. Frank Luther Mott, was awarded a Pulitzer Prize (q.v.).

The President in 1939 was Prof. H. Carrington Lancaster of Johns Hopkins University. Percy W. Long is secretary, Lyman R. Bradley, Treasurer, and LeRoy Elwood Kimball, Managing Trustee. Executive officers are at New York University, 100 Washington Square, New York City.

MOLDAVIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See UKRAINIAN SOVIET SOCIALIST REPUBLIC.

MOLLUSKS. See ZOOLOGY.

MOLUCCA ISLANDS. See NETHERLANDS INDIES.

MOLYBDENUM. The United States is the principal producer of this metal which is mined and sold to primary consumers in the form of molybdenum sulphide concentrates. Its most important use is in alloy steels, in which it is introduced in fractional quantities, averaging between 0.2 and 0.4 per cent. One producer, Climax Molybdenum Co., Colorado, furnishes about 75 per cent of the world's output and 85 per cent of the domestic production. Total United States production is over 90 per cent of the world output. Exports from the United States range annually from 50 per cent to 75 per cent of domestic production.

The importance of the metal in steel manufacture gives it a strategic position in time of war. This was recognized by the United States in December 1939, when the State Department laid a "moral embargo" on exports of molybdenum to nations engaging in "unprovoked bombing and machine gunning of civilian populations from the air."

H. C. PARMELEE.

MONACO, mōn'a-kō. A Mediterranean principality surrounded on its land sides by the French department of Alpes-Maritimes. Area, 370 acres; population (Jan. 1, 1938 census), 23,956 (1761 Monagasques, 8540 French, 9724 Italians, 1902 English, and 2029 others). Towns: Monaco, capital, 1938 inhabitants; La Condamine, 11,339; Monte Carlo, 10,681. There is no cultivation as all of the available land has been built over. A yearly average of over 2,000,000 visitors and the gambling concession at Monte Carlo are the main sources of revenue. There is a small sheltered harbor, 47 acres in area, with a depth of 90 ft. at the entrance and 24 ft. at the quay. Budget (1938): Revenue, 39,023,187 francs; expenditure, 38,438,886 francs (franc averaged \$0.288 for 1938). The government is administered, under the authority of the reigning Prince, by a secretary of state who is aided by a council of government. Legislative power is exercised by the Prince and a national council of 12 elected members. Ruler, Prince Louis II (succeeded on June 26, 1922). On Apr. 29, 1939, Prince Louis II was raised to

the rank of a general commanding a division in the French Army by Premier Edouard Daladier.

MONETARY UNITS OF FOREIGN COUNTRIES. See CURRENCIES, VALUE OF FOREIGN.

MONEY, UNITED STATES STOCK OF. The table on page 499 from the 1939 annual report of the Secretary of the U.S. Treasury shows the distribution of the stock of money in the United States on June 30, 1939, with comparisons for May 31, 1939, June 30, 1938, Oct. 31, 1920, Mar. 31, 1917, June 30, 1914, and Jan. 1, 1879.

MONGOLIA. An extensive, vaguely defined region of east-central Asia, bordered by the Soviet Union and Tannu Tuva (q.v.) on the north Manchoukuo on the east, China proper on the south, and Sinkiang (Chinese Turkestan) on the west. It is divided by an irregular east-west line through the Gobi desert into Outer Mongolia, on the north, and Inner Mongolia, on the south.

Inner Mongolia. Geographically Inner Mongolia includes the three Chinese provinces of Suiyuan, Ningsia and Chahar, and Jehol and part of Hsingan Province in Manchoukuo. Politically the term is now generally used to include only Suiyuan, Ningsia and Chahar. According to 1937 estimates of the Chinese Ministry of Interior, their combined area is 339,068 square miles and the population 7,142,793, all Chinese except for about 1,500,000 Mongols.

Japanese troops during 1937-38 occupied the eastern sector of Inner Mongolia to a point west of Paotowchen, terminus of a railway from Peiping, and in 1938 an autonomous Mongol regime headed by Prince Teh and known as the Meng-chiang Federated Committee was organized under Japanese auspices with its capital at Kweiwha in Suiyuan. Most of Ningsia Province and part of Suiyuan apparently remained under Chinese control in 1939 (see CHINA under *History*).

Agriculture, carried on almost exclusively by Chinese, and stock raising are the principal occupations. Rye, potatoes, buckwheat and wheat are the chief crops. Trade is mainly with the Japanese-controlled areas in North China. The Japanese in 1938 and 1939 brought the controlled areas of Inner Mongolia within their newly organized North China currency and banking system. They elaborated a programme for the joint economic development of North China and Inner Mongolia that called for the completion of 1659 kilometers of railways and the annual production of 2,300,000 metric tons of iron and steel, 13,900,000 metric tons of coal, and 500,000 metric tons of wool in Inner Mongolia by the end of 1941.

Caskets containing the remains of Genghis Khan and his two wives were removed by Chinese and pro-Chinese Mongols from the famous conqueror's tomb at Etshinhuro, Inner Mongolia, in June, 1939, and taken to the interior of China to prevent their capture by the Japanese. With the caskets went many valuable relics of the Mongol emperor. It was reported that they were stored in a secret hiding place.

Outer Mongolia. The same Chinese estimate cited above placed the area of Outer Mongolia at 625,946 square miles and the population at 2,077,669. A British estimate gives the population as 540,000, a Japanese estimate as 840,000. Ninety per cent of the inhabitants are Mongols, chiefly nomads, and the rest Russians and Chinese. The capital, Ulan Bator Khoto (Urga), has about 70,000 population; Altanblak, 20,000.

Outer Mongolia is a soviet republic, the inde-

pendence of which is guaranteed by the Soviet Union under a mutual assistance pact signed Mar. 12, 1936. However the Soviet Union in 1924 recognized the suzerainty of the Chinese Republic over the region. The political and economic system have been reorganized on the soviet model, and Outer Mongolia appears destined for incorporation in the U.S.S.R. unless it is conquered by the Japanese. The ownership of lands, forests, mineral resources and factories has been collectivized. The Mongol nobility and numerous Lamaist priests and monks were deprived of their privileges and of the right to vote, which is granted all male and female workers over 18 years of age. Foreign and domestic trade is a monopoly of the People's Central Co-operative; foreign trade is carried on exclusively with or through the Soviet Union. Soviet instructors are said to have trained and equipped with modern arms a Mongol army of 250,000 men. The government is in the hands of the Mongolian People's Revolutionary Party. The only political party permitted, it had about 12,000 members in 1939 and was controlled by the Comintern. Supreme authority rests in an elective assembly (Great Huruldan), which meets at least once annually and while in recess delegates executive powers to a Little Huruldan of 30 members, which in turn appoints a Premier and executive committee.

Since the revolution of 1924 broke the feudal power of the nobility and priesthood, there has been a marked spread of education and expansion of economic activity. In 1938 there were 70 elementary schools, six high schools, and many traveling schools, as well as vocational, medical, and veterinary schools. Stock-raising, game hunting, agriculture, manufacturing, and mining, in the order named, are the chief occupations. Livestock estimates for 1934 were 1,638,200 horses, 2,068,000 cattle, 12,984,800 sheep, 3,884,000 goats, and 531,900 camels. Meat, milk products, hides and skins, wool, furs, wheat, rye, millet, and coal are the main products. Extensive mineral resources remain undeveloped. State factories, all erected since 1924, produce machinery, washed wool, wool textiles, felt, leather, sheepskin coats, shoes, and electric power.

The first railways in Outer Mongolia—connecting Ulan Bator Khoto with the Nalaiha coal mine 22 miles distant and linking Kiakhta with the Trans-Siberian Railroad at Ulan Ude—were reported to have been completed in 1939. The capital is connected with Ulan Ude by truck road and airline. Steamers ply the Selenga and Orkhon Rivers. However caravans still handle the bulk of internal transport. There is a state banking and monetary system, the unit of currency being the tukrik containing 17 grams of pure silver.

For the extensive fighting between Soviet-Mongolian and Japanese-Manchoukuoan forces along the disputed Mongolian-Manchoukuoan frontier during 1939, see MANCHOUKUO under *History*.

MONTANA. Area and Population. Area, 146,997 square miles; included (1930) water, 866 square miles. Population: Apr. 1, 1930 (census), 537,606; July 1, 1937 (Federal estimate), 539,000; 1920 (census), 548,889. Helena, the capital, had (1930) 11,803 inhabitants.

Agriculture. Montana harvested, in 1939, 6,425,000 acres of principal crops. Wheat, on 3,664,000 acres, produced 56,608,000 bu. (estimated value on the farm, \$33,965,000); tame hay, 1,290,000 acres, 1,900,000 tons (\$9,500,000); sugar

beets, 75,000 acres, 891,000 tons (estimated value of previous year's crop, 1938, \$4,511,000); oats, 291,000 acres, 8,002,000 bu. (\$2,161,000); barley, 212,000 acres, 5,088,000 bu. (\$1,832,000); potatoes, 17,000 acres, 1,530,000 bu. (\$1,377,000); corn, 136,000 acres, 1,768,000 bu. (\$1,061,000).

Manufacturing. In 1937 the manufacturing establishments in Montana numbered 515 (in 1935, 478); they employed 11,268 wage-earners (in 1935, 8725), who received \$15,757,784 (in 1935, \$92,862,516); these establishments manufactured \$176,278,814 in goods (\$122,430,385 in 1935), to which their manufacturing processes contributed \$42,237,592 (in 1935, \$29,567,869). The important output of the works near Anaconda, for smelting and refining copper was not separately stated in the U. S. Census of Manufactures for 1937, which carried an output of \$114,173,304, the major part of the manufactured output of 1937, as produced by "other industries." Among the statistically covered industries were 16 petroleum refineries, whose product of 1937 attained \$10,892,921; 5 beet-sugar factories of which the output was \$9,389,256; and a total of \$9,992,709 in lumber and timber products from 73 establishments.

Mineral Production. The yearly production of native minerals in Montana was computed, for 1937, as having a total value of \$82,086,815. All of this sum was made up by gold, silver, copper, lead, and zinc, except for some \$23,000,000. Of this latter sum, petroleum, natural gas, and coal were the chief components. The production of petroleum fell off to some 4,907,000 barrels for 1938, from 5,805,000 barrels (value, \$7,300,000) for 1937. The 24,675 million cu. ft. of natural gas produced in 1937 were reported as having a value of \$6,667,000 at the points where the gas was consumed and of \$924,000 at the wells where the gas originated. The withdrawal of natural gas from wells in 1938, commonly limited to demand from consumers, declined to 20,463 million cu. ft. The mining of coal diminished moderately, to a total of some 2,804,000 net tons for 1938, from 2,965,193 (value, \$4,423,000) for 1937.

Mines' production of recoverable gold, silver, copper, lead, and zinc in Montana aggregated approximately \$40,800,700 for 1939, as against \$28,096,746 for 1938. The increase made up only part of the decline from the total for 1937. The production of copper, accounting for four-ninths of the combined gain over 1938, rose to some 197,110,000 lb. (1939), from 154,426,000 (1938); by value, to \$20,499,440, from \$15,133,748. That of zinc jumped to 69,700,000 lb. (1939), from 17,688,000 (1938); by value, to \$3,694,100, from \$849,024. The output of gold mounted to 255,600 ounces (1939), from 203,313 (1938); by value, to \$8,946,000, from \$7,115,955. The yield of silver kept pace, going to 8,898,450 oz. for 1939, from 6,403,962 for 1938; by value to \$6,040,160, from \$4,139,935. The output of lead nearly doubled in value, \$1,621,000 for 1939 as against \$858,084 for 1938.

Education. Montana's inhabitants of school age (from 6 years to 21) were reported for 1938 as 160,109. Enrollments of pupils in the academic year 1937-38 (the latest covered in statistics issued) totaled 110,403; of these, 78,178 were in the elementary group; 31,980, in high schools; 245, in kindergartens. The year's expenditures for public-school education amounted to \$12,517,712, exclusive of payments out of new issues of bonds. Of this total the State government contributed \$2,537,939.

Legislation. The Legislature's regular biennial session convened in January. It made an effort to outbid other Rocky Mountain States seeking the patronage of persons establishing residence in order to sue for divorce. An act was passed, permitting persons to enter suit after a residence of only 30 days, as against 42 days required in Nevada, Idaho, and Wyoming. Governor Ayers vetoed the bill on the ground that Montana should not "have the stigma of commercializing the domestic troubles of sister States." By a close vote the lower house sustained his veto.

The State's income tax was made to apply to Federal salaries.

Political and Other Events. The Fort Peck Dam, barring the Missouri River, received, early in November, the last of the billion and a quarter yards of earth forming its basic mass. The finishing of its surface remained to be done, and shafts for a hydroelectric station had yet to be made. The building of the dam started in 1934 and was conducted by the Army Engineers. The reservoir above the dam, accumulating water since the end of June, 1937, formed in November, 1939, a lake 24 miles long, holding an estimated 50 billion gallons of water and expected to attain its full length of 180 miles in about five years more. The expected cost of the dam was \$114,000,000. It was eventually to aid navigation of the Missouri River farther down stream, by evening the flow and thus reducing extremes of high and of low water.

Difficulty within the organization of the State University of Montana took on during the year a public aspect. Disagreement between President Simmons of the University and several members of its faculty was investigated both by a legislative committee and by a committee of the State's Board of Education. The latter charged five professors with not having co-operated with Simmons and called on them to resign. One left, to teach at the University of Oregon.

Officers. Montana's chief officers, serving in 1939, were: Governor, Roy E. Ayers (Dem.); Lieutenant-Governor, Hugh R. Adair; Attorney-General, Harrison J. Freebourn; Secretary of State, Sam W. Mitchell; Treasurer, Ray N. Shannon; Auditor, John J. Holmes; Superintendent of Public Instruction, Ruth Reardon.

MONTANA STATE UNIVERSITY. A State institution for higher education of men and women at Missoula, Mont., established in 1895. The enrollment for the autumn of 1939 was 2018; in the summer session of 1939, it was 841. The staff of the University totaled 136 including a faculty of 91. The income for current expenditures for the year amounted to \$475,338. There were about 262,695 volumes in the library. A Chemistry-Pharmacy Building was completed at a cost of \$300,000, and an addition to the Natural Science Building, at a cost of \$51,274. President, George Finlay Simmons. See MONTANA.

MOONEY, TOM. See CALIFORNIA.

MOORE, HUGH KELSEA. An American chemical engineer, died in Dunedin, Fla., Dec. 18, 1939. Born in Andover, Mass., Jan. 3, 1872, he studied at the Massachusetts Institute of Technology from 1893-96. His first employment was obtained with the Electro-Chemical Co. at Rumford Falls, Me., in 1897. Until 1903 he was with the Moore

Electro-Chemical Co. and the American Electro-Chemical Co., when he joined the Burgess Sulphite Fibre Co., later Brown Co. He retired in 1934 as chief chemist and chemical engineer.

One of the country's outstanding chemical engineers, Moore invented and patented the un-submerged diaphragm cell (1897), the stationary furnace for recovery of soda content from black liquor (1913-15), a new method of making calcium arsenate (1925-27), a new acid resisting hydraulic cement (1926-27), a new process of converting sodium sulphate into caustic soda and other chemicals (1923-34), and a new metal filter cloth and a method of making it (1934). In 1929 he designed, built, and operated a 10-effect multiple effect evaporator after investigations in evaporation and separation.

During the World War he was a member of the Chemical Engineering Committee of the Council of National Defense and also of the Division of Chemistry of the National Research Council. His interest in politics led to his membership in the New Hampshire State legislature (1923-24), and in 1930 he was a Republican candidate in the primaries for Governor.

Dr. Moore received the honorary degree, Sc.D., from the University of Maine (1924), the gold medal of the American Institute of Chemical Engineers "for the best contribution to applied science since 1913" (1920), and the Perkin medal of the American Chemical Society in 1925. During 1925-26 he was president of the American Institute of Chemical Engineers. He was a prolific writer on scientific and sociological subjects and his works included *Analysis of the Explosion Process of Recovering Soda Salts from Black Liquor* (1919), *Accident Prevention in the Mill* (1919), *Fundamentals of Electrolytic Diaphragm Cells* (1920), *The Use and Value of Physical and Chemical Constants* (1920), *Scientific Facts about Pure and Impure Milk* (1921), *The Production of Hydrochloric Acid by Direct Union of Hydrogen and Chlorine* (1922), and *Fundamental Principles of Multiple Effect Evaporative Separation* (1923).

MORAL REARMAMENT. A movement carried on by Dr. Frank N. D. Buchman, previously known as the founder of the religious activity called the Oxford Group. Dr. Buchman brought Moral Rearmament before the American public in 1939 by a series of great public meetings that began in May and ended in August.

The purpose of this campaign, expressed by Dr. Buchman as quoted in the *New York Times* of March 10, was to create a "new moral climate" and to carry on a "battle for peace," in the spirit of the Oxford Group. Will H. Hays, speaking at one of the meetings in the course of the campaign, characterized the movement as based on "absolute honesty, unselfishness, love, and purity."

The meetings were of a sort rather to bring about a common state of mind than to advocate a specific course of conduct or a particular plan of moral discipline. The campaign went on for a season closely preceding the apprehended outbreak of war between the German and the British and French Governments. It thus appealed to the feelings of persons strongly impressed with the imminence of a relapse into warfare among leading nations.

A meeting at Madison Square Garden, New York City, May 14, reportedly attended by 12,000, heard messages from Secretary of State Cordell Hull and from Governor Lehman of New York.

The Marquess of Salisbury and several other British speakers of note addressed it by transatlantic telephone. On June 4 a meeting at Constitution Hall in the city of Washington heard from the lips of Senator Truman of Missouri a message from President Roosevelt, declaring that the "underlying strength of the world must consist in the moral fiber of her citizens" and that "a program of moral rearmament cannot fail therefore to lessen the danger of armed conflict." Messages from General Pershing and from a group of members of the House of Commons were also read. In July followed meetings in Hollywood, Del Monte, and San Francisco, Cal.

MOROCCO. A region of northwestern Africa, divided politically into (1) the French Zone (area, 162,162 sq. miles; population, estimated at 6,430,000 on Dec. 31, 1937), comprising about 85 per cent of the total area and population; (2) the Spanish Zone (area, 13,125 sq. miles; population, estimated at 750,000 on Dec. 31, 1937, including about 44,300 Europeans and 12,900 Jews); and (3) Tangier (q.v.). The 1936 census returns of the French Zone showed 5,875,000 Moslems, 206,500 Europeans and other foreigners, and 161,300 Jews. Populations of the chief cities of the French Zone in 1936 were: Casablanca, 259,000; Marrakech, 191,000; Fez, 144,000; Rabat (capital), 84,000; Meknes, 75,000; Oudjda, 35,000. Estimated populations of the principal towns in the Spanish Zone in 1936 were: Melilla, 64,328; Tetuan (capital), 49,535; Ceuta, 38,945; Alcazar, 30,762; Larache, 29,477. French and Spanish are used as the official and business languages in the French and Spanish Zones, respectively, but the natives speak mainly Moorish-Arabic and the various Berber dialects. Unless otherwise specified, the following statistics refer to the French Zone only.

Production. Agriculture and stock raising are the main occupations. Yields of the principal crops in 1938 were (in metric tons): Wheat, 630,600; barley, 1,085,700; rye, 1100; oats, 47,500; corn, 217,400; olive oil, 8000. The wine yield in 1938 was 778,000 hectoliters (hectoliter equals 26.42 U.S. gal.). The wool clip was about 20,300 metric tons; meat production, about 80,400 metric tons. Output of the chief minerals in 1938 (metal content, in case of ores) was in metric tons: Coal, 123,000; natural phosphates, 1,447,000; manganese ore, 39,000; iron ore, 140,000; lead ore, 17,100; antimony ore, 262; molybdenum ore, 99; zinc ore, 2500; silver, 6.5; gold, 233 kilograms. Yield of sea fisheries, 1938, 30,300 metric tons, valued at 33,300,000 francs. Industries include flour mills, breweries, cement factories, soap works, sardine and tuna canning plants, Moorish handicraft.

The Spanish Zone raises much the same crops as the French Zone, but in limited quantities. Iron ore (782,000 metric tons in 1937), lead and some antimony are exported. Stock raising and tunny fishing are other occupations.

Foreign Trade. Imports in 1938 were 2,126,835,000 francs (1,765,624,000 in 1937); exports, 1,502,262,000 francs (1,143,930,000). Imports from France in 1938 were 733,000,000 francs; exports to France, 676,000,000. For U.S. trade, see IMPORTS AND EXPORTS. Imports into the Spanish

Zone in 1938 were equivalent to about 3,300,000 old U.S. gold dollars; exports, \$1,000,000.

Finance. Budget estimates for 1939 placed receipts at 1,185,054,000 francs (1,102,240,000 in 1938); expenditures, 1,184,958,000 francs (1,102,168,000).

Transportation. In 1938 French Morocco had about 1148 miles of railway line, which carried approximately 420,000,000 ton-kilometers of freight; 4501 miles of roads; and air lines connecting Casablanca with Toulouse (France) and Dakar (French West Africa). In the same year 3352 vessels of 5,640,397 tons entered French Zone ports. In the Spanish Zone there are 72 miles of railway and about 1383 miles of roads.

Government. The Sultan of Morocco, who resides in the French Zone, usually at Rabat, exercises nominal executive authority in both the French and Spanish Zones. But in the French Zone his acts are subject to the approval of the French Resident-General. In the Spanish Zone the Sultan delegates his authority to a Khalifa, named by him from a list of two candidates submitted by the Spanish Government. Actual authority is exercised by the Spanish High Commissioner residing at Tetuan. Sultan in 1939, Sidi Mohammed, proclaimed Nov. 18, 1927. Resident-General and commander-in-chief of the French Zone, Gen. Albert Nogués, appointed Sept. 16, 1936. Spanish High Commissioner, Gen. Carlos Asensio, who succeeded Col. Juan Beigbeder y Atenza on Aug. 16, 1939. Khalifa of Spanish Morocco, Sidi Muley Hassan Ben el Mehedi.

History. With the outbreak of war between France and Germany in September, 1939, General Nogués directed the mobilization of large numbers of native troops in Morocco, Algeria, and Tunisia for service in France and for the defense of the French North African colonies against possible attacks from Italian Libya and Spanish Morocco. Military forces in Spanish Morocco had been greatly strengthened by the return of the Spanish Foreign Legion and Moorish troops that had been engaged in the Spanish civil war. But General Franco's neutrality in the European war temporarily ended danger from the west.

The French authorities in Morocco had been confronted in previous years with a growing nationalist movement, abetted by German and Italian propaganda against French rule. For reasons described elsewhere (see ALGERIA and TUNISIA under *History*), the native Moslem leaders rallied to the French cause in 1939. It remained to be seen, however, whether the French could retain control of tribes in the High Atlas and other interior regions, some of which were conquered as late as 1934. During the World War the French were obliged to withdraw from the mountainous interior to the principal cities and the coastal districts.

MOSQUERA NARVAEZ, AURELIO. President of Ecuador, died in Quito, Nov. 17, 1939. Born in 1884, he was educated at the Central University of Quito and entered the practice of medicine. He became widely known in his profession and for 25 years was a professor at the University. One-time Senator in the National Congress, he

subsequently became president of the Liberal Party, and on Dec. 2, 1938 he was elected president of Ecuador by the Constituent Assembly. Two weeks later he dissolved Congress due to its restoration of the rank of general to Luis Larrea Alba, which Mosquera believed to be unconstitutional. Forced to capitulate, he accepted a proposal for an election to be held on Jan. 15, 1939 to elect a new Congress, and that he himself would remain in office only until the new Congress convened on Feb. 1, 1939. However, the new Congress re-elected him president. See ECUADOR under *History*.

Dr. Mosquera Narvaez was an advocate of economic co-operation with the United States.

MOTION PICTURES, United States. The year 1939, celebrated as the fiftieth anniversary of the screen, did not prove an auspicious period in its development. It started with the film industry taking a timid and confused attitude toward production which was only partially relieved by the favorable reception accorded escapist drama and such spectacles as the super-Westerns. It ended on a profound note of pessimism bordering on panic, due to the virtual drying up of foreign markets following the outbreak of European hostilities. The year was marked by the opening of *Gone With the Wind*, the longest and most expensive film ever released; by the great success of historical-action pictures; by the increasing importance of the director in film-making, and by a number of first-rate minor budget offerings.

In the search for escapist material it was inevitable that the Western, or horse opera, formula would be exploited. When this was done by John Ford and Dudley Nichols, director and writer (of film version) respectively of *The Informer*, the result was a piece of fine artistry. Their *Stagecoach* was one of the best films of 1939, even though it fell behind such companion super-Western films as *Jesse James*, *Dodge City*, *Destry Rides Again*, or *Union Pacific* in impressive grosses. It reaffirmed many fundamental principles of the silent cinema in the rhythm of its action, while it demonstrated anew that stars are not needed to make a fine film. Aside from Thomas Mitchell's splendid portrayal of a bibulous doctor, who became a hero in a running skirmish with hostile Indians, the production was definitely a director's film.

While the glorified horse operas composed one pole of escapist screen drama, comedies constituted the other. The most notable of these were marked by excellent dialogue, delicacy of direction, and expert playing. *Ninotchka*, for example, proved a good-natured travesty of the U.S.S.R., signaling the famous Ernst Lubitsch "touch" in its staging, demonstrating a great gift for comedy on the part of Greta Garbo, and making capital of comic incident peculiarly suited to screen treatment. Leo McCarey's *Love Affair*, co-starring Charles Boyer and Irene Dunne and Garson Kanin's *Bachelor Mother*, starring Ginger Rogers, worked the same magic with even less plot material, while Gregory La Cava's *Fifth Avenue Girl* was an amiable entertainment in the vein of *My Man Godfrey*.

Translations of novels bulked large in the presentations of 1939. *Gone With the Wind*, with its four hours of running time and its \$4,000,000 cost, set precedents in film-making and started out to break all sorts of box-office records. A faithful adaptation of Margaret Mitchell's best-seller, it was distinguished by fine acting on the part of Clark Gable, Vivien Leigh, and Olivia de Havilland.

land and some impressive Civil War pageantry, although its inordinate size seemed scarcely justified by its dramatic quality. *Goodbye Mr. Chips*, inspired by James Hilton's novel about an English school-master, had more power than its original. Made in England by Metro-Goldwyn-Mayer, like *The Citadel* of the year before, it was brilliantly portrayed by Robert Donat as the gradually aging pedagogue and by Greer Garson as his wife, and was admirably staged by Sam Wood. Best of the other films derived from novels was *Wuthering Heights*, which proved an absorbing and moving treatment of the Emily Brontë classic, acted with restraint and skill by Merle Oberon, Laurence Olivier, and the promising Geraldine Fitzgerald.

What are known as films of social significance were few and far between, although a few noteworthy productions found their way to the screen with something to say. Frank Capra, as producer-director, made a challenging dramatic affirmation of democratic ideals in *Mr. Smith Goes to Washington*, with James Stewart giving a splendid portrayal of a crusading young senator. Although the action was confined in large part to the Senate chamber, Mr. Capra succeeded in achieving fluency and imaginative effects in his direction. *Confessions of a Nazi Spy* was a striking semi-documentary account of Nazi subversive activity in this country. Incidentally it was adjudged the best English-language film of the year by the National Board of Review. In *Juarez*, Maximilian's ill-fated Mexican adventure and the rise of Mexican democracy were given contemporary over-tones in a handsome and thoughtful film, staged by William Dieterle.

The theater continued to supply Hollywood with a variety of entertainments, several of which became resounding successes in the new medium. *Dark Victory*, thanks to an adroit adaptation by Casey Robinson and fine playing by Bette Davis and Miss Fitzgerald, became a far better film than it had proved a play. *The Old Maid*, with Miss Davis again in the leading role, was an extremely popular offering, and Clare Boothe's bitter indictment of her sex, *The Women*, found its way to the screen in a star-studded production, with Joan Crawford, Norma Shearer, and Rosalind Russell vying for chief honors. *On Borrowed Time*, *Idiot's Delight*, and *Golden Boy* were among the other stage plays which were given photoplay contours.

Juvenile stars were responsible for more than one noteworthy production. Mickey Rooney rose to top ranking as a screen actor in the estimation of fans due principally to his portrayals in the Andy Hardy series. In addition he appeared with Judy Garland in an adaptation of the stage musical, *Babes in Arms*, which became one of the big money-makers of 1939. Miss Garland also played the chief role in a lavish but not very imaginative production of *The Wizard of Oz*. Deanna Durbin, meanwhile, moved triumphantly from small girl parts to adolescent roles in *Three Smart Girls Grow Up* and *First Love*.

Aside from those musical films already cited there was little activity in this field of screen production. *The Great Waltz*, which was the most pretentious of the song and dance presentations, turned out to be ponderous and far from popular. At the same time Technicolor, for which there had been great hopes, was not adopted on any large scale, although it was employed in *Gone With the Wind*. It appeared to best advantage in the Max and Dave Fleisher full-length animated cartoon,

Gulliver's Travels, which lacked the imaginative genius of Walt Disney's *Snow White and the Seven Dwarfs*, but demonstrated without any question that there was an established place for its peculiar type of screen entertainment.

One of the most encouraging trends of the year was the increasing excellence of small-budget films. While many Class B offerings continued to be slipshod re-makes or carbon copies, several were made with such integrity and taste that they compared favorably with photoplays which cost ten times as much to produce. *Five Came Back*, *The Great Man Votes*, and *U Boat 29* might be especially noted. Documentary films were not much in evidence, although *Crisis* dealing with the rape of Czecho-Slovakia, Joris Ivens's *The 400 Million*, and *The City*, celebrating problems of urban living, were fine examples of their idiom. Meanwhile the documentary technique influenced regular film-making profoundly, not only with *Confessions of a Nazi Spy*, but also with such a straight historical reconstruction as *Stanley and Livingstone*.

The director became increasingly important in motion-picture production during 1939. Often assuming the title and function of associate producer as well, he served notice that individual creative control paid dividends in quality and receipts. The first line directors, such as Frank Capra, John Ford, Ernst Lubitsch, Leo McCarey, Gregory La Cava, Michael Curtiz, Edmund Goulding, George Stevens, Sam Wood, Victor Fleming, and Garson Kanin, invariably turned out films which were commercially as well as artistically successful.

From an economic standpoint the European war was the greatest problem of the year for the industry. With the loss of something like 30 per cent of revenue which foreign markets had supplied, it became evident that curtailment in expenditures and a concentration on the domestic market were in order. It was estimated, however, that weekly attendance for 1939 remained at 85,000,000 and that \$165,000,000 had been spent on productions, which showed no diminution from preceding years. Under unfinished business must be put the Government's threatened anti-trust suit litigation and the Neely anti-block booking measure.

France. The Gallic cinema continued to out-rank all other foreign film-making centers in the quality of the offerings sent to this country. The productions represented a wide variety in theme and treatment. Marcel Pagnol's *Harvest* was a simple and moving screen pastoral, relating how the love of a man and woman for each other and for the Provençal soil reclaimed a deserted village. *Port of Shadows*, selected by the National Board of Review as the best foreign-language film of the year, proved a brilliantly staged and acted atmospheric melodrama. Under the brilliant Julien Duvivier's direction, *The End of a Day* took its place among the finest films ever made about the world of the theater. *Rasputin*, with Harry Baur; *Boys School*, and *That They May Live* were other interesting French exhibits.

Germany. Stereotyped photoplays of the romantic and comic variety continued to emerge from the Nazi-controlled industry. With the exception of a few fine performances, there was nothing to distinguish the German offerings exported to the United States.

Great Britain. For the most part English films were disappointing, particularly when compared with the notable offerings of 1938. *Jamaica Inn*, which had Alfred Hitchcock for director and

Charles Laughton for star, gave almost no hint of these two fine craftsmen's talents. In the same way, *The Mill on the Floss*, in spite of Geraldine Fitzgerald's artful acting, proved a second-rate offering. Herbert Wilcox's *Nurse Edith Cavell*, starring Anna Neagle, proved a stark historical recreation, but it was a Hollywood project.

U.S.S.R. The crowning achievement of the Soviet cinema for 1939 was Sergei Eisenstein's *Alexander Nevsky*, an account of the first stirrings of nationalism in Russia at the end of the feudal period, masterfully staged by the great director of *Potemkin*. Other Soviet films which deserve mention were *Lenin in 1918*, acted with great skill by the late Boris V. Shchukin, and *Shors*, a further chapter in the Soviet celebration of the 1917 revolution.

Awards. The New York Film Critics selected *Wuthering Heights* as the best English-language film of the year; *Harvest* as the best foreign production. John Ford's direction of *Stagecoach* was cited as the best staging of 1939; James Stewart's portrayal in *Mr. Smith Goes to Washington* as the best male acting; Vivien Leigh's characterization of Scarlett O'Hara in *Gone With the Wind* as the best feminine playing. It was the fourth year that awards were given.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The registration for the autumn session of 1939 was 1094 in residence, including 57 graduate students, 220 seniors, 225 juniors, 279 sophomores, 308 freshmen, and 5 unclassified students. The faculty numbered 135. The endowment funds amounted to \$5,264,291, and the income for the preceding year, exclusive of gifts, was \$1,209,951. The total amount of gifts and bequests during the year 1938-39 was \$324,729. There are 160,000 volumes in the library. A new dormitory, the gift of Mrs. Emily Abbey Gill of Springfield, was opened in September. President, Roswell Gray Ham, Ph.D., LL.D.

MOZAMBIQUE. mō'zam-bēk' (**PORTUGUESE EAST AFRICA**). A colony in East Africa, consisting of two separate administrative units: (1) The Province of Mozambique (245,773 sq. mi.), comprising seven districts, and (2) the two districts of Manica and Sofala (51,881 sq. mi.), administered by the Mozambique Company under a royal charter expiring in 1941. Total area, 297,654 square miles; total population (1938 estimate), 4,280,000. Lourenço Marques (capital of the Province) had 47,390 inhabitants (1936); Beira (capital of Manica and Sofala), 24,502.

Production and Trade. The chief products are sugar (84,000 short tons, 1938); groundnuts (37,600 metric tons, 1938); maize, cotton, copra, sisal and minerals. In 1938, in old U.S. gold dollars, imports were valued at \$9,900,000 (\$11,400,000 in 1937); exports at \$8,000,000 (\$9,200,000 in 1937).

Communications. In 1937, 2878 vessels aggregating 12,261,041 tons cleared the ports. The

area administered by the government had 1408 miles of state railways (1937), and 17,869 miles of roads (1938).

Government. The budget for 1938 was balanced at 581,839,435 escudos. On Dec. 31, 1937, the public debt amounted to 21,973,003 escudos (escudo averaged \$0.0448 for 1937). The Province of Mozambique (the seven districts, Cape Delgado, Inhambane, Lourenço Marques, Mozambique, Nyasa, Quelimane, and Tete) is administered by a governor-general who is represented in each of the seven districts by a governor. Governor-General, Col. José Pereira Cabral. Governor of Manica and Sofala, Rear Admiral Luis Magalhães Correia. Gen. Antonio Carmona, President of Portugal, arrived at Lourenço Marques, the capital of Mozambique, July 17, 1939, on an inspection of the province. He received tumultuous receptions at the capital and at various other stops throughout his tour. See PORTUGAL under History.

MUNDELEIN, mūn'dē-lin, GEORGE WILLIAM, CARDINAL. An American Roman Catholic prelate, Archbishop of Chicago, died in Mundelein, Ill., Oct. 2, 1939. Born in New York City, July 2, 1872, he was educated in the parochial schools and at Manhattan College (A.B., 1889). Offered an appointment to Annapolis, he refused, and entered St. Vincent's Seminary in Beatty, Pa. An honor student, he was sent to the Urban College of Propaganda in Rome (S.T.D., 1908) where he studied until 1895 when he was ordained in Rome by Bishop McDonnell of Brooklyn, N. Y.

Assigned to the diocese of Brooklyn as Bishop McDonnell's secretary, he was also pastor of the Lithuanian Church. Two years later (1897) he was appointed chancellor of the diocese, and in 1903 was given the special honor of appointment as censor of the Liturgical Academy, Rome, the only American ever so honored. Named a domestic prelate with the title of Right Reverend Monsignor in 1906, in the following year he was made a member of the Ancient Academy of the Arcadia, and on Sept. 21, 1909, was consecrated titular Bishop of Loryma and auxiliary Bishop of Brooklyn. His gifts as an administrator were developed while in Brooklyn where he was pastor of All Saints Church, which he built, a founder of Cathedral College, and an organizer and incorporator of *The Tablet*, the official organ of the diocese.

On Nov. 30, 1915, Bishop Mundelein was appointed Archbishop of the archdiocese of Chicago, and on Mar. 24, 1924, was named the first American Cardinal of the West. Under his administration, the archdiocese expanded and prospered. His fame as an administrator increased and he became known as a builder of churches, schools, convents, hospitals—including Quigley Preparatory Seminary, Misericordia Hospital, and the Lewis Memorial Maternity Hospital. No less famous were his charities. He established a series of homes for working girls, built up the Associated Catholic Charities of Chicago, founded the Mission of the Holy Ghost for the unemployed, and founded the Catholic Big Brother Movement and the Catholic Youth Organization in his archdiocese. Under his patronage, the 28th International Eucharistic Congress was held in Chicago in 1926.

Perhaps the work nearest to the Cardinal's heart was the establishment of the Seminary of St. Mary of the Lake, which he founded at Area, Ill. With the approach of the diamond jubilee of the diocese, he announced plans for the establish-

ment of the Seminary and in October, 1921 it was opened. In 1924, upon his elevation to the Cardinalate, the citizens of Chicago presented him with a check for a million dollars for the Seminary, and in the following year the town was renamed Mundelein in his honor. At the celebration of his silver jubilee in the episcopacy in 1934 it was announced that the Seminary was practically completed, and in 1935 he announced the establishment of a graduate house of studies in Rome.

Not only an outstanding figure in his Church, he was an outstanding American as well. A personal friend of President Franklin D. Roosevelt, he was a frequent supporter of the Administration's work and an advocate of its foreign policy.

MUNICIPAL GOVERNMENT. New York City's second election under proportional representation (PR) gave a city council of 14 Democrats; 2 Republicans; 2 Fusionists; 2 American Laborites; and 1 Independent. Vote counting was completed on the tenth day after the 1939 election and on the 28th day in 1937. Representation is by the boroughs composing the city. In Yonkers, where the first election under the new manager-PR plan was held on November 7, the council of five will consist of two candidates put up by the City Manager League, two Democrats and one Republican.

Proposals to elect councilmen by the PR plan were defeated in New Rochelle and White Plains, N. Y., by large majorities, and in Schenectady, N. Y., by a decisive majority.

A charter for Westchester County, N. Y., centralizing administrative departments under a single executive head and abolishing many features of county government in effect since 1703, was to go into operation on Jan. 1, 1940.

Trenton, N. J., voted 12,600 to 10,900 to give up the council-manager plan after four years' trial and return to the commission plan that had been in use from 1911 to 1935. Trenton was the first of a large number of New Jersey cities to adopt the commission plan, most of which continue to operate under it. Atlantic City, N. J., voted by about 12,000 to 7,000 to adopt the State Civil Service Act.

At Providence, R. I., a vote of 19,411 to 14,082 was cast on November 7 in favor of asking the General Assembly to pass an act amending the city charter "substantially" as proposed by a charter revision commission, created by the legislature earlier in the year. The most significant feature of the proposed new charter is the substitution of a single council composed of two members from each ward for the present two-chamber council. Of four types of city government—commission, city manager, weak mayor and strong mayor—the latter was adopted by the charter commission. Providence is one of the few American cities still having a two-chamber council.

A summary of action of the city manager plan, prior to the election on November 7, as reported in the *National Municipal Review*, follows:—**Adoptions:** Holton, Me.; Barre (town), Castleton, and Ludlow, Vt.; Killingly, Conn.; Abingdon, Va.; Columbia and Johnson, Tenn.; Davison, Mich.; Lake Forest, Ill. (limited powers); Greendale, Wis. (Federal model community); Abilene, Kan.; Fort Collins, Col. **Rejections:** Calais and Gardner, Me.; Waterbury, Conn., with proportional representation (14,276 to 10,513); Sheffield, Ala.; Caney and Tippecanoe City, Ohio; Sioux City, Iowa; Duluth, Minn.; Scotts-

bluff, Neb.; Grand Forks, N. D.; Poplar Bluffs, Mo.; Los Gatos, Calif. **Voted to Retain:** Hardwick and Middlebury, Vt.; Miami Beach, Fla.; Ashtabula, Ohio (3247 to 2110); Wilmette, Ill.; Port Arthur, Texas. **Plan Reinstated:** Knoxville, Tenn., after abolishment in 1937, in both cases by state legislation.

On November 7 the adoption of the city manager plan was defeated at Zanesville, Ohio (6794 to 3394) and at Allegan, Mich. Amendments that would have weakened the plan were defeated at Miami, Fla.

M. N. BAKER.

MUNICIPAL LEAGUE, NATIONAL. An organization which acts as a central clearing house for current information on improvements in local and State government, founded in 1894 and incorporated in 1923. Its aim is to promote honest, efficient, economical, and responsive local government. Among its committees are those on county government, citizen organization for municipal activity, model State constitution, proportional representation, model City Charter, model fiscal programme, and personnel. The national federation of citizens' councils is a section of the league.

The 45th annual meeting of the league was held in Indianapolis, Ind., Nov. 15-17, 1939. Co-operating in this conference were the Proportional Representation League and the National Association of Civic Secretaries. The officers elected for 1939-40 were: President, Clarence A. Dykstra, Madison, Wis.; vice-presidents, Marquerite M. Wells, Washington, D. C., and Henry L. Shattuck, Boston, Mass.; treasurer, Carl H. Pforzheimer; and secretary and editor of the *National Municipal Review*, Howard P. Jones. Headquarters are at 299 Broadway, New York City.

MUNICIPAL OWNERSHIP. Chief events in the march of public ownership of municipal utilities were in the urban transportation, electric light and power, and water-works fields. New York and Chicago prosecuted rapid transit subway construction. New York virtually completed negotiations for the purchase of the properties of the Interborough (I. R. T.) and the Brooklyn-Manhattan (B. M. T.) systems, including subways, elevated and surface railway, and bus lines. It had long been a partner in subways through having provided capital for construction of early lines. It had also built and was operating and extending the Independent Subway System. When the three systems are unified and operated by the city it will be much the largest municipally owned transportation system in the world.

The Tennessee Valley Authority (TVA)

(q.v.), according to information supplied for the *NEW INTERNATIONAL YEAR BOOK*, was selling electric current to 68 municipalities in November: 46 in Tennessee, 11 in Alabama, 10 in Mississippi, and 1 in North Carolina. Contracts had been made with 6 other cities, 1 of which was in Kentucky. Rural co-operatives, some of which serve small communities, numbered 29. The four largest cities served by TVA are Memphis, Nashville, Chattanooga, and Knoxville. The latter bought the distribution system from the Tennessee Public Service Co. on Sept. 2, 1938, for \$5,329,000. The price included distribution lines in four counties outside the city. For the year ending Aug. 31, 1939, the Knoxville plant made a profit, according to the books of the Knoxville Electric Power & Water Board, of \$258,000, after deducting bond interest, depreciation, and taxes, despite a 40 per cent reduction in rates. All the employees of the company were retained except the manager, whose place was taken by an associate of the firm of consulting engineers who had designed a plant for construction by the city. At Memphis, the city paid the Memphis Power & Light Co., a subsidiary of the Electric Bond & Share Co., about \$12,000,000 for the electric plant and some \$5,000,000 for the gas plant.

The Bonneville Administration, a Federal project beginning service in the Northwest, had contracts in November to supply current to Cascade Locks and Forest Grove, Ore., and public utility districts in three counties in Washington. The voters of San Francisco, at a special election in May, defeated a \$55,000,000 bond issue to buy the private electric distribution system. This is the fourth defeat of the kind. For years the city has generated hydroelectric power as a by-product of its Hetch Hetchy water-supply system and sold the power to the Pacific Gas & Electric Corporation. The annual return has recently been over \$2,000,000.

A summary of ownership of the water works of the United States showed that 13,293 works were publicly and 3424 privately owned, supplying populations (1930 census) of 66,800,000 and 14,300,000 respectively. ("Inventory of Water Supply Facilities," *Engineering News-Record*, Sept. 28, 1939.) A contract between the city of Miami and the Florida Light and Power for the purchase of the Miami Water Co.'s distribution system was made on November 24, the price to be \$5,250,000. A condition of the contract was that the sale be approved at a city election on Jan. 20, 1940. The city already owned the water-supply system, including a large filtration and softening plant. The price to be paid by Newport, R. I., for the works of the Newport Water Corporation, taken over by the city in June, 1936, was fixed during 1939 as a result of appraisal proceedings. See *WATER WORKS AND WATER PURIFICATION*.

MUSIC. *General News.* Federal support of music in the United States escaped the fate which had befallen the Federal Theater Project as a re-

sult of the waxing economy sentiment in Congress, but suffered considerable modification as a result of the reclassification measures concerning the Works Projects Administration voted in July. The reclassification, which began September 1, interrupted much of the WPA musical activity early in the fall, but by the end of the year it was announced that sufficient community support had been obtained for continuance of the various art projects at 90 per cent of their former level.

Nikolai Sokoloff resigned as National Director of the Federal Music Project on May 18. His successor was Earl V. Moore, of the University of Michigan, who, under the new arrangement, was named special consultant for the WPA music programs. The general title of Federal Music Project was discontinued and the various local projects were designated by the names of their communities.

An International Musicological Congress, probably the first of its kind to take place in the United States, was held in New York September 11 to 18 under the auspices of the American Musicological Society and the general direction of its president, Dr. Carleton Sprague Smith. Concerts were offered of American chamber music, early and recent, of American folk-music, Latin-American music, medieval music, and of unpublished works of Handel.

A conference on Inter-American musical relations was held in Washington at the Library of Congress October 18 and 19 under the auspices of the State Department's Division of Cultural Relations. A representative group of musicians and educators discussed ways of making the music of either American continent better known in the other.

The seventy-fifth birthday of Richard Strauss, June 11, was widely observed in German-speaking Europe in the spring and early summer, especially in the opera houses. Adolph Hitler went to Vienna for an anniversary performance of *Friedenstag*, and the German Reich Propaganda Ministry established an annual prize of 15,000 marks in Strauss's honor for composers whose works possessed "creative and directive value for the future."

The outbreak of war brought public musical activities to a virtual standstill both in England and France during September. There was a gradual resumption of musical life in the two capitals during the next two months. Both opera houses of Paris had been reopened by the end of November. In London, the noted pianist, Myra Hess, inaugurated on October 10 a series of noonday recitals and chamber music programs at the National Gallery, with a uniform admission price of one shilling. This was regarded as a particularly valuable public and artistic service. Owing to air-raid precaution blackouts, most London events were held in the afternoon, and evening performances began at unusually early hours. Activities in Germany, even in Rhineland cities, were reported to be more or less normal.

In March, Randall Thompson was appointed director of the Curtis Institute of Music in Philadelphia, succeeding Josef Hofmann, who had resigned in September, 1938.

Artists. The American Guild of Musical Artists made a forward step in accomplishing its aim of organizing the relations between artists and managers and producing organizations with the formal announcement, in December, of an agreement between the Guild and the two principal national groups of managements, the Columbia Concerts Corporation and the N.B.C. Artists Service.

This reduced commissions and in other ways modified existing arrangements in favor of the artist. Meanwhile the Guild, in return, undertook to aid managers in disciplining temperamental artists and giving them a greater sense of responsibility in business transactions.

Igor Stravinsky began his longest visit to the United States in September, having accepted the Charles Eliot Norton Professorship of Poetry at Harvard University for the academic year of 1939-40. This chair is awarded annually to a prominent figure in one of the various fields of fine arts. In addition to his lectures in Cambridge, he appeared as guest conductor with the Boston Symphony and other orchestras.

Ignace Jan Paderewski, whose seventy-ninth birthday was November 6, made his twentieth concert tour of the United States, and gave the first of more than 20 scheduled recitals in the National Broadcasting Company's largest New York studio (February 26). After a fortnight's postponement, caused by a cold and an infection which threatened one of his hands, he gave his first program on the road in Detroit (March 15), and carried out his schedule until May 25, when he was to appear in New York at Madison Square Garden. But, already in the hall, he suffered a heart attack, and the audience was dismissed. Having canceled the remaining four dates of the tour, he sailed May 30. Owing to his health, he withdrew from his engagement in the Lucerne Festival in August. During the fall, however, he took part in Polish relief activities and, in January, 1940, was made president of the Polish National Council in Paris.

Marian Anderson, internationally known Negro contralto, became the center of a controversy when her manager, S. Hurok, found that he could not obtain the use of Constitution Hall in Washington for a recital sponsored by Howard University owing to a rule of the owners of the hall, the Daughters of the American Revolution, which did not permit its use by Negroes. Though this policy was in line with regulations in other public places in Washington, calling for separate meeting places for whites and Negroes, it brought forth protests from many prominent persons, including Mrs. Franklin D. Roosevelt, who resigned her D.A.R. membership. A high school auditorium was also unavailable, and, instead of an indoor recital, Miss Anderson gave a free concert on Easter Sunday (April 9) at the Lincoln Memorial in Potomac Park before a huge audience estimated at 75,000, including many government officials.

Another Negro artist, Dorothy Maynor, a young soprano from Norfolk, Va., became a prominent figure in the concert world after she had sung in August at a picnic given by Sergei Koussevitzky for the members of the Boston Symphony Orchestra during the Berkshire Symphonic Festival. In her formal recital debut, in New York on November 19, the unusual qualities of her voice were generally acknowledged, although some critics saw a need for further study.

Mischa Elman, violinist, donated his services for the benefit of German refugees in a three months' concert tour which netted \$41,000 for this cause. Fritz Kreisler, the eminent Austrian violinist, became a French citizen early in April.

Leopold Stokowski, conductor of the Philadelphia Orchestra, made a summer European concert tour which was halted by the onset of the war. A nineteen year old Italian pianist, Arturo Benedetti Michelangeli, won the first prize in an annual competition in Geneva, and won what was described as

sensational acclaim in autumn recitals in Switzerland and Italy.

Chamber Music. As in 1938, what constituted a virtual chamber music festival took place in the neighborhood of San Francisco, where the Coolidge String Quartet gave nine weekly concerts in July and August as a major musical feature of the Exposition. Mrs. Elizabeth Sprague Coolidge also presented the Roth Quartet in a summer series at Leland Stanford University, while Mills College in Oakland sponsored concerts by the Budapest Quartet with Marcel Maas, Belgian pianist.

There was no formal festival in Washington at the Library of Congress, but several concerts were offered in the winter, spring, and fall by musicians playing the valuable old instruments in the Gertrude Clarke Whittall Collection. In New York the New Friends of Music devoted the latter part of their third season to quartets by Haydn and suites, sonatas, and solo cantatas of Bach. The fourth season of this organization, which plays an important part in the city's chamber music activities, opened October 29 with a repertoire of trios and quintets by Mozart, Beethoven, and Brahms.

The scope of an article such as this does not permit an account of the extensive activities in this field in the regular course of concert events in the United States, or of activities in Europe. In an article in *The Christian Science Monitor* Alfredo Casella commented on a notable recent increase in this musical field in Italy, stating that in that country there are about 100 officially subsidized chamber music societies.

Choral Music and Societies. In connection with the opening of the New York World's Fair, two choruses from Europe made short American spring tours: the Finlandia Chorus, composed of 71 selected Finnish singers under the noted veteran conductor, Heikki Klemetti, and the Royal Norwegian University Chorus under Olav Kjelland's direction. The Yale Glee Club made a summer tour of Europe extending as far as Finland, but the University Glee Club of New York, which had planned to participate in an international song festival in Copenhagen, had to give up the trip.

In New York the Oratorio Society, under Albert Stoessel, remained faithful to its policy of presenting Bach's *Mass in B minor* in the winter and Handel's *Messiah* at Christmastide. In its March concert the Schola Cantorum of New York, under Hugh Ross, prefaced Mozart's *Requiem* with the first performance of two Brazilian works by Burle Marx, *In Memoriam* and *Ave Maria*.

The Dessooff Choirs of New York, under Paul Boepple, introduced to America on April 28 a *Hymnus Symphonius* by Ernst Levy, a Swiss composer who, as founder of the Choeur Philharmonique, had played an important part in a revival of interest in choral music in Paris during the preceding few years.

In Boston Malipiero's *San Francesco d'Assisi* was sung for what was thought to be the first time in America by the Harvard and Radcliffe Glee Clubs in a March concert conducted by Nadia Boulanger. Boston's senior choral organization, the Handel and Haydn Society, revived Berlioz's *The Damnation of Faust* under Thompson Stone's direction March 28. As usual, American choral societies made an almost universal choice of the *Messiah* for their Christmas concerts, although the Mendelssohn Club of Philadelphia chose Bach's *Christmas Oratorio* in its stead.

An important radio choral feature was the Bach cantata series broadcast from Station WOR in

New York under Alfred Wallenstein's direction; this entered its second season in the fall.

Among new French choral works heard during the year were Albert Wolff's *Requiem Mass*, performed in the spring in a Pasdeloup concert under his direction; Jacques de la Presle's *L'Apocalypse de Saint-Sébastien*, presented by the State Radio, and Arthur Honegger's *Jeanne au Bûcher*, with text by Paul Claudel, introduced to Paris with Ida Rubinstein in the title role.

American Festivals. Long-discussed plans to hold a music festival of unprecedented scope in connection with the New York World's Fair were carried forward during the fall of 1938 under the leadership of Olin Downes, music critic of *The New York Times*, who had been appointed director of music by the Fair administration. As announced in December, it was to last six months, beginning with a spring Wagner series by the Metropolitan Opera Association. Opera companies and ballets from Europe, many of the principal American symphony orchestras and well known singers and instrumentalists were to take part.

The Philharmonic-Symphony, which had been named the Fair's official orchestra, devoted the first fortnight of May to national programs under the auspices of foreign official World's Fair commissions. These included two Brazilian concerts under Burle Marx, a Norwegian concert (shared with the Norwegian Royal University Chorus) under Olav Kielland, a Rumanian program under Georges Enesco, a Polish program under Artur Rodzinski, and a Swiss program under Ernest Schelling and Rudolph Ganz. There was no special American program, but works by Samuel Barber and Walter Damrosch preceded Beethoven's Ninth Symphony in the program of May 7 under Mr. Damrosch's leadership. This series was held both in the Hall of Music and in Carnegie Hall. Mr. Enesco conducted the Philadelphia Orchestra in a second Rumanian program at the Metropolitan Opera House May 14.

The Metropolitan Opera's Wagner cycle was held, as announced, between May 2 and 23, including *Lohengrin*, *Die Meistersinger*, *Parsifal*, and the *Ring*, and two performances of *Tristan und Isolde*. The casts included the company's principal German-singing members headed by Kirsten Flagstad and Lauritz Melchior. Choral programs were presented in the Hall of Music by the Finlandia Chorus and the Schubert Choir of Brantford, Ont., and Jan Kiepura, Grace Moore, and Marian Anderson gave recitals. The Takarazuka Theater's troupe from Tokio gave a week's program of Japanese dances and music hall sketches.

Despite the musical interest of the national orchestral programs, which included several works new to the United States, the concerts in the Hall of Music did not pay their way, and, on May 24, the Fair authorities decided to close the formal festival program and substitute entertainment of a more popular sort at lower prices. Mr. Downes submitted his resignation and his department was discontinued.

Two concerts featuring British music by the Philharmonic-Symphony under Sir Adrian Boult, sponsored by the British Council, were held in Carnegie Hall instead of the Hall of Music on June 9 and 10. Three works in these programs, Arnold Bax's *Symphony No. 7*, a piano concerto by Arthur Bliss, with Solomon as the soloist, and Vaughan Williams's *Five Variants on 'Dives and Lazarus'*, had been composed especially for these concerts. The Finnish World's Fair Commission

sponsored a Sibelius program by the NBC Symphony Orchestra under Georg Schneevoigt on September 29. Two early but recently rediscovered tone-poems, *Lemminkäinen in Tuonela* and *Lemminkäinen and the Maids of Sari* were played for the first time in America.

Ambitious preliminary plans had also, if less specifically, been outlined for the Golden Gate Exposition, but for the first few months the music was mainly limited to twice daily concerts by the Goldman Band. The Coolidge Quartet and other chamber music groups gave concerts in the summer. In September, the San Francisco Symphony Orchestra played under José Iturbi, Albert Coates, and Leopold Stokowski, and a concert by Lily Pons with her husband, André Kostelanetz, conducting, drew the largest crowd for any Exposition event for which admission was charged.

The Eastman School of Music held its ninth annual American Music Festival in Rochester, N. Y. (April 24 to 28) under the general direction of Howard Hanson. The programs included first performances of a symphony by Owen Reed, Wynn York's *Night Clouds*, and works for small orchestra by Frank Hruby and Richard Donovan. Ballets were presented with music by Dr. Hanson, Kent Kennan, and Walter Piston. An American music program of festival proportions was held in Baltimore (May 16 to 23) in connection with the twenty-first biennial convention of the National Federation of Music Clubs, with John Warren Erb conducting a massed chorus of 1000. Winners in the Federation's biennial Young Artists' Contest, whose finals were held during the convention, were Martha Lipton, New York, contralto; Samuel Sorin, Detroit, pianist, and Bernard Kundell, New York, and Marian Head, Upper Darby, Pa., who divided the violin prize.

Cincinnati's thirty-third biennial May Festival was held May 2 to 6 with the Cincinnati Symphony Orchestra under Eugene Goossens, a festival chorus of 370, a children's chorus, and 13 soloists, including Mme. Flagstad, taking part. The major choral works performed in the course of the six programs were Haydn's *Creation*, Handel's *Alexander's Feast*, somewhat abridged; part of the oratorio *Watchman, What of the Night?* by James G. Heller of Cincinnati, Mahler's eighth symphony, or *Symphony of a Thousand*, and Stravinsky's *Symphony of Psalms*. Hermann Hans Wetzler's *Magnificat*, new to America, was sung by the children's chorus under Alfred Hartzel. Saint-Saens's *Samson and Delilah* and acts from *Parsifal* and *Sadko* were sung in concert form.

The Philadelphia Orchestra, under its regular conductor, Eugene Ormandy, the festival director, Earl V. Moore, and Saul Caston again took part in the forty-sixth annual festival in Ann Arbor, Mich., May 10 to 13. Georges Enesco appeared as conductor and violinist and Harl McDonald conducted his *Choral Symphony*. Zoltan Kodaly's *Psalmus Hungaricus* was the other principal choral work in the series, which closed with Verdi's *Otello* in concert form. The thirty-second North Shore Festival at Evanston, Ill., with Frederick Stock and Hans Lange conducting the Chicago Symphony Orchestra, was held in a large tent in the Northwestern University Stadium—an arrangement which was found to be acoustically unsatisfactory. The principal works presented were Bach's *St. Matthew Passion*, Wolf-Ferrari's *The New Life* and Beethoven's ninth symphony.

A new conductor, Ifor Jones, made his debut with the Bach Choir of Bethlehem, Pa., in its

thirty-second Bach Festival (May 19 and 20), making a very favorable impression. Four cantatas, the *Magnificat* and the motet *Come, Jesu, Come* were sung on the first day and the *Mass in B minor*, as usual, on the second. Other Bach festivals were held at Winter Park, Fla., March 2-3; Baldwin-Wallace College, Berea, Ohio, June 9-10, and Carmel, Calif., June 17-23. Ralph Kirkpatrick directed two festival series in April and October at Williamsburg, Va., presenting music of the type heard in the town's heyday as Virginia's colonial capital.

The sixth annual Berkshire Symphonic Festival, which was the second to be held in the Music Shed at Tanglewood, Lenox, Mass., again consisted of six concerts during the first fortnight of August by the Boston Symphony Orchestra under Sergei Koussevitzky's direction. Apart from quasi-novelties such as Walter Piston's *Concerto for Orchestra* and Prokofiev's *Peter and the Wolf*, the programs were mainly conservative.

Albert Stoessel continued as director of the festival at Worcester, Mass., held during the first week of October with Parry's *At a Solemn Music*, Carl McDonald's *Songs of Conquest*, Brahms's *Song of the Fates* and Horatio Parker's *Hora Novissima* as the principal choral works. The closing evening was again devoted to opera in English, *Pagliacci* and *Gianni Schicchi*.

During the same week, the American Society of Composers, Authors, and Publishers held a festival series of eight free concerts in New York. This included American music of many kinds: operetta and musical comedy, jazz and swing, Negro music, band music, popular songs of the last fifty years, a program for children, and two programs of symphonic music.

In Canada, the Société des Concerts Symphoniques of Montreal sponsored a fourth annual festival at St. Laurent College in the spring. Eugene Ormandy and Charles O'Connell conducted programs including Bach's *Mass in B minor* and *Magnificat*, Beethoven's ninth symphony, and Mozart's *Requiem*.

Foreign Festivals. The London Music Festival, held from April 23 to May 28 with a schedule planned under the direction of Owen Mase, marked a first attempt to co-ordinate the activities of London's principal musical organizations during the capital's social season; to focus attention on the city's musical resources and avoid conflicts of dates. One of the principal features was a series of seven Beethoven programs played by the British Broadcasting Corporation's orchestra under Arturo Toscanini.

The festival amounted to considerably more than an improved arrangement of events which would have taken place anyway; among 27 concerts of a normal character, 17 were specially organized for this series. The program also included three of the operas at Covent Garden, three of those at Sadler's Wells, and nine of those at Glyndebourne. Other special features included a band concert with fireworks, a program of "Ayres and Ale," choral concerts, eight "musical visits" and a trip to Oxford to hear Handel's *Israel in Egypt*.

This was preceded by a "Festival of Music for the People" held early in April under the direction of Alan Bush with a repertoire including an extensive pageant in the Albert Hall, Schönberg's cantata *Peace on Earth*, Benjamin Britten's *Land of Heroes*, part of Mr. Bush's concerto for piano, orchestra and barytone solo, and John Ireland's cantata *These Things Shall Be*.

Members of Arnold Dolmetsch's family, with assisting artists, held their annual festival at Haslemere during the latter part of July, again presenting early music performed on instruments of its period.

Reichsführer Hitler attended the opening performance of the Wagner Festival held at Bayreuth July 23 to August 24. *Der Fliegende Holländer* and *Tristan und Isolde* were performed five times each, *Parsifal* six times, and the *Ring* cycle twice. An Italian conductor, Victor de Sabata, directed *Tristan* with Germaine Lubin, of Paris; as *Isolde*. Otherwise, the casts were mainly German. Other conductors were Heinz Tietjen, who also acted as stage director, Karl Elmendorff, and Franz von Hösslin.

The annual festival at Salzburg extended through August with a repertoire including Strauss's *Der Rosenkavalier*, Verdi's *Falstaff*, Mozart's *Don Giovanni*, *Le Nozze di Figaro*, and *Die Entführung aus dem Serail*, Rossini's *"Il Barbiere di Siviglia"*, and Weber's *Der Freischütz*, with Karl Böhm, Hans Knappertsbusch, Clemens Krauss, and Tullio Serafin among the conductors. Casts included German and Italian artists. Molière's *Der Bürger als Edelmann* (*Le Bourgeois Gentilhomme*) was presented with Strauss's music.

The International Society for Contemporary Music held its annual festival April 14 to 21 in Poland. Three programs were held in Cracow, the others in Warsaw.

Florence's fifth "Musical May" Festival, the principal annual Italian event of this kind, extended from April 27 to June 6. The operatic novelty was Vito Frazzi's *Il Re Lear*, produced April 29 under Vittorio Gui. Earlier Italian opera was represented by *Il Trovatore*, Rossini's *William Tell*, Cimarosa's *Le Astuzie Femminili*, edited by Respighi, and Vecchi's *L'Amfitrione*, with Gui and Gino Marinuzzi among the conductors. Foreign opera was represented by Ravel's *L'Enfant et les Sortilèges* and Wagner's *Der Fliegende Holländer*, the latter sung by German artists under Karl Elmendorff. Bernardino Molinari and a Roman chorus performed Beethoven's *Symphony No. 9*. Goffredo Petrassi's *Psalm No. 9*, Lorenzo Perosi's *Resurrezione*, and Salvucci's *Alceste*. Victor de Sabata conducted Verdi's *Manzoni Requiem*. Wilhelm Furtwängler conducted the Berlin Philharmonic Orchestra and Chorus in Bach's *St. Matthew Passion*. Two dramas, Grazzini's *La Strega* and Tasso's *Aminta*, the latter with Gluck's music, also received outdoor performances.

Arturo Toscanini again had an important part in the second international festival in August at Lucerne, Switzerland, conducting four symphony concerts with an orchestra of the best Swiss instrumentalists, and two performances of Verdi's *Requiem*. The other orchestral conductors were Sir Adrian Boult, Fritz Busch, and Ernest Ansermet. Adolf Busch served as concertmaster of the orchestra; Bronislaw Huberman, Vladimir Horowitz, Pablo Casals, and Sergei Rachmaninoff appeared as soloists. Other concerts were given by the Strasbourg Cathedral Choir under Abbé Alphonse Hoch's direction, with Joseph Bonnet at the organ; the Adolf Busch Quartet and the Sistine Chapel Choir under Lorenzo Perosi. Mr. Toscanini added one concert to his schedule to replace the originally planned recital by Paderewski; he also took Bruno Walter's place for the concert of August 21.

Despite the German occupation in March, a festival devoted largely to Czech music was held at

Prague under Vaclav Talich's direction early in May, with a repertoire including Smetana's *Libuse* which, owing to its patriotic nature, was banned by the German authorities soon afterwards, and his cycle of tone-poems, *My Country*; Dvorak's *Rusalka*, and Joseph Suk's *Epilogue* for chorus and orchestra.

Opera in America. The Metropolitan Opera House in New York is not owned by the Metropolitan Opera Association, but by the stockholders of the Metropolitan Opera and Real Estate Co., who are the holders of the parterre boxes. According to an arrangement dating from 1893, they lease the opera house rent free to the operating company, and pay annual assessments of \$4500 each for taxes and upkeep. They do not, of course, pay admission prices in addition to the assessment for the use of their boxes, which are their own property.

During the 1938-39 season many of the stockholders, especially those represented by estates, which now held over half the stock, declined to pay the assessments. The Real Estate Co. in July, announced that this left it no longer able to meet taxes and other expenses, and that it was likely that an increasing number of stockholders would wish to end the existing arrangement, liquidate the company, and sell the house after the expiration of the Metropolitan Opera Association's present lease on May 31, 1940.

The proposal of the Metropolitan Opera Association was to take an option on the property, including the nearby warehouse, for the remainder of the term of its lease and to buy it for \$1,970,000, taking over a first mortgage of \$470,000. \$470,000 was to be paid in cash, and the rest in bonds. (This proposal was ratified in January, 1940.)

Like its predecessor, the regular 1938-39 season, which opened with Verdi's *Otello* November 21, was sixteen weeks long. The company revisited Baltimore, Boston, Cleveland, and Rochester between March 13 and April 3, and gave four post-season performances in New York before giving its first performances in New Orleans and Dallas in Easter Week.

Counting the nine performances of the May Wagner series in connection with the World's Fair, the season's grand total of performances, including sixteen opera concerts, was 140 at the Metropolitan and 178 in all, as compared with 139 and 171 in 1937-38. The company increased its Philadelphia performances from eight to ten and also, before the tour, appeared twice in Hartford and once in Newark.

Of the 37 operas performed, nine were by Wagner, who was represented 41 times in the home season, not counting the May series. Verdi was second in order of representation with seven operas and 25 performances, and Puccini a distant third. There were no novelties. Gluck's *Orfeo ed Euridice*, out of the regular repertoire since 1914, had a distinguished new production (November 26) with Kerstin Thorborg as Orpheus. Four works out of the repertoire from nine to fourteen years were revived with renovated scenery and new casts: Verdi's *Falstaff* (December 16), Charpentier's *Louise* (January 28), Massenet's *Thais* (February 10), and Moussorgsky's *Boris Godunoff* (March 7). Lawrence Tibbett, Grace Moore, Helen Jepson, and Ezio Pinza sang the respective title roles. *Boris*, as before, was given in Italian and in Rimsky-Korsakoff's edition of the score, but the hitherto omitted first Polish scene was added.

Verdi's *Simon Boccanegra*, Beethoven's *Fidelio*

and Puccini's *Tosca* with Mr. Tibbett, Kirsten Flagstad, and Maria Caniglia in the respective roles, returned after absences of two or three seasons, and *Mignon* and *Lakmé* after a single season's interim.

Ninety-one singers, three less than in 1937-38, appeared with the company. Three of these sang only in the Sunday concerts. The list of debutants included four Italian sopranos: Maria Caniglia, who, singing Desdemona on the opening night and four other roles, made a moderately favorable impression; Mafalda Favero, who won warm praise in two appearances as Mimi in *La Bohème*; Lina Aimaro, a coloratura with an agile but rather hard voice, and Marisa Morel, formerly of the Salzburg Opera Guild. The four American newcomers were Risé Stevens, a New York mezzo-soprano who showed promise in *Mignon*, *Rosenkavalier* and in Wagner roles; Douglas Beattie, a Californian basso, and the two winners of the 1937-38 radio auditions, John Carter, tenor, and Leonard Warren, barytone.

There were four new foreign tenors, the Italian Gallino Masini and the Swedish Jussi Bjoerling, both well received in short engagements, and Alessio de Paolis and Erich Witte, who proved useful additions for minor Italian and German roles. The Wagnerian wing was reinforced by two experienced German barytones, Herbert Janssen and Hans Hermann Nissen, and by Herbert Alsen, a young German basso.

The 1939-40 season, the 55th in this house and the fifth under Edward Johnson's general management, began its 16 week course November 26 with *Simon Boccanegra*. Wagner's *Der Fliegende Holländer* was revived (December 14), with Mr. Schorr again as the Dutchman and Mme. Flagstad as Senta. Montemezzi's *L'Amore dei Tre Re* was revived (December 27), with Helen Jepson as Fiora; Ponchielli's *La Gioconda* was reinstated (December 30), with Zinka Milanov singing the title role for the first time. The four Americans among the six singers who made Metropolitan debuts before the end of the year were Eyvind La-holm, Wagnerian tenor; Harriet Henders and Annamary Dickey, sopranos, and Mack Harrell, barytone. The other newcomers were Hilde Reggiani, Italian soprano, and Walter Olitzki, barytone, first heard as Beckmesser in *Die Meistersinger* (December 2). Artur Bodanzky's (q.v.) death on November 23 left the 27 year old Erich Leinsdorf in charge of the entire German repertoire. The other regular conductors in an unchanged list were Ettore Panizza, Gennaro Papi, and Wilfred Pelletier. Frank St. Leger was added to the assistant conductors' staff.

As a postlude to its 1938 fall season, the Chicago City Opera presented special performances of *La Bohème* and *Manon* in January with Grace Moore in both title roles. After the death of the general manager, Paul Longone, in the summer, his duties were taken over by the company's president, Jason F. Whitney, for the seven weeks' fall season, which began with a revival of *Boris Godunoff* (October 28), with Ezio Pinza as Boris. Henry G. Weber was appointed musical director. The repertoire of 28 operas, unusually extensive for a relatively short season, consisted mainly of Italian and French works, but four Wagner operas had five performances between November 24 and December 2 with Mme. Flagstad in leading roles and Edwin McArthur conducting. Moniuszko's *Halka* was sung in Polish under Jerzy Bojanowski (December 10), with Jan Kiepura and George Czap-

licki in the cast, and Smetana's *The Bartered Bride* was sung in English.

The 12 singers making their first appearances with the company were Mobley Lushanya, an American Indian, Virginia Haskins, Lucy Monroe, and Renee Trier, sopranos; Karin Branzell and Enid Szantho, contraltos; Kurt Baum, Ernest McChesney, Jan Kiepora, and Manuel Baroumis, tenors, and Robert Campbell Kelso and Frank Chapman, barytones. Carl Alwin, Viennese conductor, made his American debut on November 2. The other conductors, besides Mr. Weber, were Louis Hasselmanns, Leo Kopp, and Angelo Canarutto.

Post-season performances of *La Bohème* were held on December 18 and 31, with Mr. Kiepora and his wife, Marta Eggerth, in leading roles on the latter date. A campaign for \$200,000 to meet existing deficits and future expenses followed the regular season. Another seven weeks' season was announced for 1940.

The San Francisco Opera Association lost six Italian artists, who had not been permitted to leave Italy, as well as Deszo Ernster, Hungarian barytone, who was replaced by Alexander Kipnis. Others engaged to replace missing European artists were Dusolina Giannini, Bidu Sayao, and Jarmila Novotna, sopranos, and Marjorie Lawrence, also of the Metropolitan, who sang with the company for the first time. The list of debutants also included two Californian singers, Alice Avakian, soprano, and George Stinson, tenor.

The home season, of 18 performances, ran from October 13 to November 4, with a repertoire of 13 operas and one ballet. Kirsten Flagstad and Lauritz Melchior sang in the three German operas presented, *Die Walküre*, *Tristan und Isolde*, and *Fidelio*. French opera was represented by Massenet's *Manon*; the other choices were from the familiar Italian list. The conductors were Gaetano Merola, general manager of the company; Genaro Papi, Edwin McArthur, and Erich Leinsdorf. Five performances, beginning November 6, were held in Los Angeles. The season's deficit was kept within the guaranteed margin of \$25,000.

The first season of the American Lyric Theater, which, it was hoped, would contribute materially toward widening opportunities for American singers, conductors, dancers, and scenic designers and providing a repertoire for lyric drama on a basis more popular than that of the existing major opera companies, was launched May 18 at the Martin Beck Theater in New York. The repertoire included *The Devil and Daniel Webster*, with text by Stephen Vincent Benét and music by Douglas Moore; *Susanna, Don't You Cry*, with text by Sarah Newmeyer and music by Clarence Loomis based on Stephen Foster tunes, and five ballets presented by the Ballet Caravan.

The Benét-Moore work was regarded as a step in the right direction, and some of the ballets, especially *Billy the Kid*, with music by Aaron Copland, won praise, but *Susanna* was coolly received, and the season closed after 12 performances.

The intermittent course of popular-priced opera at the New York Hippodrome closed in May, and the theater was demolished. The San Carlo Opera Co. came to the Center Theater in September before beginning its annual transcontinental tour. Two operas written for radio had first performances, Gian-Carlo Menotti's *The Old Maid and the Thief*, April 22, by the National Broadcasting Company and Vittorio Giannini's *Blennerhassett*, November 2, by the Columbia Broadcasting System.

The Metropolitan gave its Philadelphian patrons their first opportunity in thirty-four years to hear Wagner's complete *Ring* in its series at the Academy of Music. The Philadelphia Opera Co., organized with a policy of presenting singers living in Philadelphia or its neighborhood in the casts, made its debut with *La Bohème* (January 19), followed by Puccini's Triptych of three operas, in English (March 30). The second season began with *Faust* and *The Marriage of Figaro*, the latter in a new English translation made by the company's conductor, Sylvan Levin. The Philadelphia La Scala Opera Company closed its 1938-39 season ahead of time after the première of Camille de Senez's *Horus* (January 5). Reorganized, it began a 1939-40 season of seven performances with *Butterfly* and *La Traviata*.

The St. Louis Opera Co., conducted by Laszlo Halasz, gave *Die Walküre*, *Otello*, and *Faust* in April and *Aida*, *La Bohème*, Menotti's *Amelia Goes to the Ball*, *Pagliacci*, and *Siegfried* in the fall with several Metropolitan singers in the casts.

Cynthia Parker, by a young Texan composer, Julia Smith, was first performed at the North Texas Teachers' College, Denton, Tex., February 17, with Leonora Corona in the title role. Zoltan Kodaly's *The Spinner* had its first American performance (April 29) in Cleveland by Western Reserve University's music division.

South America's principal opera season at the Teatro Colon in Buenos Aires extended from May 21 to October 21. Two works received world premières, *Las Virgenes del Sol* by the Argentine composer Alfredo Schiuma, and *Bizancio* with an Italian libretto by Gustavo Macchi and music by Ettore Panizza, the latter a native of the Argentine capital. Johann Strauss's *Der Zigeunerbaron* had its first performances by this company with Emanuel List as Zsupan. Revivals included Rossini's *La Cenerentola*, Verdi's *Macbeth*, Richard Strauss's *Elektra*, with Rose Pauly in the title role, and Gluck's *Orfeo ed Euridice* with Risé Stevens as Orpheus. The conductors were Mr. Panizza, Ferruccio Calusio, Albert Wolff, and Erich Kleiber.

Opera in Europe. London's spring international opera season in Covent Garden, again seven weeks long, began May 1 with Sir Thomas Beecham as musical director. A projected special feature, canceled on account of the German occupation of Czecho-Slovakia, was a visit by the Prague National Opera. Nevertheless the season opened with a Czech work, Smetana's *Bartered Bride*, sung in German with Hilde Konetzni and Richard Tauber in leading roles. The remainder of the repertoire was shared by works of Wagner—the *Ring* cycle, *Parsifal*, *Tannhäuser*, and *Tristan und Isolde*, and an Italian list including *Turandot*, *Tosca*, *Il Trovatore*, *La Traviata*, *Aida*, *Otello*, and *Don Giovanni*.

The veteran Felix Weingartner made his London debut as an opera conductor in an uncut *Tannhäuser* May 4. Constant Lambert conducted *Turandot*, and Vittorio Gui directed most of the Italian operas. Basil Cameron and Wynn Reeves each took over a performance from Sir Thomas. Among the singers in an international list were Germaine Lubin, Mafalda Favero, Gina Cigna, Eva Turner, Maria Caniglia, Elisabeth Rethberg, and Hilde and Anny Konetzni, sopranos, Kerstin Thorborg, Ebe Stignani, and Gertrude Wettergren, contraltos; Lauritz Melchior, Richard Tauber, Torsten Ralf, Arthur Carron, Jussi Björling, and Beniamino Gigli, tenors; Fritz Krenn, Herbert Janssen,

Ludwig Hofmann, Ludwig Weber, Mario Basiola, Armando Borgioli, Emil Treskow, and Ezio Pinza, barytones and bassos.

The sixth season at Glyndebourne, Sussex, ran from June 1 to July 15 with Fritz Busch and Alberto Erede as conductors and Carl Ebert as regisseur. The repertoire included Mozart's *Marriage of Figaro*, *Don Giovanni* and *Così fan tutte* and two non-Mozart works introduced in 1938, Donizetti's *Don Pasquale* and Verdi's *Macbeth*.

Considerable catholicity marked the year's repertoire of London's English opera company at Sadler's Wells, where new productions included those of Rimsky-Korsakoff's *Snow Maiden* early in the winter, Beethoven's *Fidelio* (February 22), Strauss's *Der Rosenkavalier* (March 8), and Ethel Smyth's *The Wreckers* (April 19). Reopening September 30 after the beginning of the war, with one performance a week, the company gradually increased its schedule and gave Verdi's *Otello* (December 12) as the season's first new production, with Joan Cross, John Wright, and Redvers Illewellyn at the principals.

A new plan of operation of the two national opera houses of Paris, the Opéra and the Opéra-Comique, went into effect August 1. Both theaters, formerly subsidized private institutions, were now to be entirely supported by the Government. Jacques Rouché, formerly director of both houses, was named Administrator-General and chairman of the board; Philippe Gaubert becoming artistic director at the Opéra and Henri Busser at the Opéra-Comique. The resources of the two theaters, in repertoire, properties, and personnel, were to be held in common. More state aid was promised for new productions and promising but not yet generally accepted works. Among the new productions at the Opéra were Henri Sauget's *La Chartreuse de Parme*, with Germaine Lubin in a leading role (March 16), Maurice Thirlet's *La Nuit Vénétienne* in April, and Ravel's *L'Enfant et les Sortilèges*, already heard at the Opéra-Comique, in May.

A new work by Wolf-Ferrari, *La Dama Boba*, with a libretto by Mario Ghisalbetti based upon a Lope de Vega comedy, was produced in the Teatro della Scala in Milan February 1, under Umberto Berrettoni, with Mafalda Favero in a leading role. The opera was praised for skill and refinement, but was found lacking in color and vital dramatic interest. Pizzetti's first opera, *Fedra*, was revived March 1 under Franco Capuana, in commemoration of the first anniversary of Gabriele d'Annunzio's death. G. F. Ghedini's *Maria d'Alessandria*, first performed at Bergamo in 1937, was introduced to La Scala in April. The 1939-40 season began December 7 with a revival of Rossini's *William Tell* under Gino Marinuzzi.

The first 1938-39 new production at the Royal Opera in Rome was Adriano Lualdi's *La Figlia del Re*. Giuseppe Mulè's *La Zolfara* was first produced under Tullio Serafin (February 25), with the other two works of this composer's *Sicilian Triptych*. The new season began December 9 with Verdi's *Falstaff*. The first novelty was Lodovico Rocca's *Monte Ivnor*, with a libretto by Cesare Meano. Guido M. Gatti, writing in *Musical America*, regarded the choruses as the best feature of the music. The San Carlo Opera in Naples staged *Il Malatto Immaginario*, based upon Molière, by a young Neapolitan, Jacopi Napoli, in March.

In Berlin, Werner Egk's *Peer Gynt* had its first performance at the Staatsoper in December, 1938. A revival of Mozart's *Die Zauberflöte* under the

talented 30-year-old conductor, Herbert von Karajan, received much praise in January. The original score was used without cuts and the full dialogue restored. In February the Staatsoper produced an officially commissioned work, Rudolf Wagner-Regen's *Die Bürger von Calais*, with text by Caspar Neher. The score, described as unemotional, consisted of eighteen set numbers in classic forms. Marta Fuchs, Ludwig Hofmann, and Tiana Lemnitz sang leading roles, with Karajan conducting. Clemens Krauss conducted the Berlin premières of Strauss's *Friedenstag* and *Daphne* in the spring, and the season's last novelty was Wolf-Ferrari's *La Dama Boba*.

Berlin was also provided with opera by the nationally supported Deutsches Opernhaus and the Volksoper. In Munich, Carl Orff's *Der Mond*, accepted in 1937, was produced February 5 under Krauss. Official influence was thought to be responsible for some changes and cuts. An American work, Florence Wickham's *Rosalind*, had its German première in Dresden in the winter season. Three Italian operas had first German productions in three other cities, Malipiero's *Giulio Cesare* and *Antonio e Cleopatra* being staged in March in Gera and Bremen, while Mulè's *Dafni* was presented in Düsseldorf. The first world première at the Vienna Staatsoper since the German annexation was that of Rudolf Wille's *Königsballade* on February 2. By this time this theater had been placed on a firm financial footing by the state.

Despite the German occupation, the Czech Opera in Prague continued its activities. To replace its smaller house, the old Ständetheater, it leased the Variety Theater in Karlin in the fall. Zurich's Opera, which gave *Friedenstag* for the first time outside of Germany in March, closed its season with the usual festival series, including Strauss's *Salome*, with the composer conducting, and *Rosenkavalier*, a Swiss work, Othmar Schoeck's *Penthesilea*, and a Wagner series with Kirsten Flagstad, Karin Branzell, Germaine Lubin, Max Lorenz, and Joel Berglund among the principals.

Harald André succeeded Jon Forsell in the spring as general director of the Royal Opera in Stockholm. The first fall novelty was Erich Korngold's *Kathrin*, which had originally been scheduled for a production in Vienna but was banned there on political grounds.

Orchestras in America. The principal American orchestra organized primarily for broadcasting, the N.B.C. Symphony Orchestra, continued under the general direction of Arturo Toscanini, who completed his second season, of 16 concerts, on February 25. Guest conductors for the season's remaining Saturday night broadcasts from New York were Hans Wilhelm Steinberg, Bruno Walter, Hans Lange, and Alberto Erede.

A Sunday series of shorter programs was held from May through September. Six of Mr. Toscanini's eight concerts in the fall, were devoted to Beethoven's music. The only novelty was *Night* by the 83-year-old American composer, Templeton Strong. Desiré Defauw, of Brussels, making his American debut, conducted the remaining December concerts.

Except for three composers directing their own works and for Nadia Boulanger, who shared a special concert with Mr. Barbirolli, Georges Enesco was the Philharmonic-Symphony Orchestra's only 1939 guest conductor, from January 26 to February 5. His *Suite Villageoise* had its first performance (February 2), when two Rumanian works, Mihalovici's *Capriccio Roumain* and part

of Sabin Dragoi's *Suite Rustique*, were heard for the first time in this country. Two works by pupils of Mlle. Boulanger, Jean Françaix's piano concerto, with the composer as soloist, and an overture by Antoni Szalowski, had their American premières (February 11).

Two works chosen in the Philharmonic-Symphony Society's 1938 competition, David Van Vactor's first symphony, in D, which had won the principal prize, and Robert L. Sanders's *Little Symphony in G* were introduced under their composers' direction on January 19 and February 26. Arthur Bliss conducted the first American performance of music from his ballet *Checkmate* (November 16). Mr. Barbirolli conducted the world premières of Eugene Bonner's *White Nights* (April 2), Otto Cesana's *Three Moods* (April 22), Jaromir Weinberger's variations and fugue on *Under the Spreading Chestnut Tree* (October 12) in the first concert of the 98th season, and Mario Castelnuovo-Tedesco's second piano concerto, played by the composer (November 2). His overture to *Twelfth Night* was introduced to America in this concert. Fritz Kreisler gave the first performance of his revised version of Tchaikovsky's violin concerto, December 7. Rudolph Ganz took over the young people's concerts after Ernest Schelling's death in December.

Among special programmatic features were Rossini's *Petite Messe Solennelle*, performed with the Westminster Choir, April 5, 6, 9, and Act II of Wagner's *Tristan und Isolde*, performed in full for the first time in New York, April 13, 14, 16. During the fortnight beginning November 20, the Philharmonic-Symphony made its first extensive tour in 10 years, going as far west as Chicago and into Canada.

The training orchestra of the National Orchestral Association of New York, under Leon Barzin, included several new or unfamiliar works in its programs. The orchestra of the New Friends of Music, organized in 1938 under Fritz Stiedry's direction, gave seven Haydn symphonies hitherto unknown to New York in a Bach-Haydn series opening February 26. The Haydn works had been discovered and edited by Alfred Einstein.

The guest conductors who shared the Boston Symphony's season were Mr. Enesco, whose January programs included the American première of Dino Lipatti's *Chef cu lautari*; Ernest Bloch in his own music in March, and Igor Stravinsky early in December. David Stanley Smith conducted the world première of his fourth symphony April 14, and Howard Hanson's third symphony had its first concert performance under its composer, November 3. Roy Harris's third symphony, regarded as one of the year's most noteworthy American contributions, was introduced by Dr. Koussevitzky (February 24). Other novelties included Jakobus Langendoen's *Improvisations* (January 20), Harl McDonald's *San Juan Capistrano* (October 30), and Nicolai Lopatnikoff's second symphony (December 22), all world premières, and Jacques Ibert's *Chamber Concertino* for saxophone, with Sigurd Rascher as soloist (October 13). William Schuman's *American Festival Overture* was first performed in one of Dr. Koussevitzky's pre-season American programs in October. A few concerts were led by the orchestra's concertmaster and assistant conductor, Richard Burgin.

Eugene Ormandy conducted most of the Philadelphia Orchestra's regular concerts. Leopold Stokowski took charge for three weeks in March and April and two in November, when he rearranged

the seating of the orchestra, placing the strings at the rear and the wind instruments at the front. Some critics regarded the advantages of the new seating as non-proven. The other conductors were Saul Caston, Vladimir Golschmann, and Mlle. Boulanger. Paul Hindemith conducted his suite, *Nobilissima Visione*, from his ballet, *St. Francis* (April 14-15). Alexander Gretchaninoff's fifth symphony was first played in a youth concert under Mr. Stokowski (April 5). The year's last concerts (December 29-30) brought the American premières of Alexander Tansman's viola concerto, with Samuel Lifschey as soloist, and Eugen Zador's ballet suite, *The Machine Man*. Three programs of music by Sergei Rachmaninoff were presented in New York in November and December, with the composer as pianist and conductor.

Novelties played by the National Symphony of Washington included Paul Nordoff's second piano concerto, with the composer as soloist (February 12), Haydn's recently discovered 46th symphony, in B, and Karol Rathaus's *Uriel Acosta*, both new to America (October 29).

A Beethoven cycle was a feature of the Pittsburgh Symphony Orchestra's winter concerts. In October, the orchestra was awarded a \$50,000 grant from the Buhl Foundation to be used for free concerts in the city's high schools.

On October 12, Frederick Stock began his 35th season as the Chicago Symphony Orchestra's conductor. Hans Lange, associate conductor, directed several programs. Ernst Krenek appeared as pianist and conductor in his own works on January 26-27, and Percy Grainger appeared in a similar capacity December 12. Works played for the first time were Felix Borowski's third symphony (March 9), Frederick Jacobi's violin concerto (March 14) with Albert Spalding as soloist, and Edwin S. Stringham's *Nocturne No. 2* (March 30). Works played for the first time in America were Bela Bartok's second piano concerto, with Storm Bull as soloist (March 2), Michael Brusselmans's *Suite after the Caprices of Paganini* (October 12), and Victor Babin's concerto for two pianos (November 23) with the composer and his wife, Vitya Vronsky, as soloists.

New works introduced by the Rochester, N. Y. Philharmonic Orchestra under José Iturbi included Carmine Coppola's *Danse Pagane*, Paul White's *Lake Spray*, and an Argentine composition, Floro Ugarte's second suite, *De mi tierra*.

The principal new work introduced by the Cleveland Orchestra was William Walton's violin concerto, written for Jascha Heifetz, who was the soloist in the first performances (December 7-9). Rudolph Ringwall, associate conductor, had charge of several concerts in the regular series, as well as of the popular Sunday and children's concerts and broadcast programs. In Cincinnati, Mr. Goossens introduced to America Manuel Rosenthal's symphonic suite, *Joan of Arc*, and Benjamin Britten's *Variations on a Theme* by Frank Bridge. Carlos Chavez, of Mexico City, conducted a pair of St. Louis Symphony concerts in March.

The Los Angeles Philharmonic, going on a cash-and-carry basis in the fall, with the extent of the season depending on the size of the guaranty fund, scheduled nine pairs of concerts, fewer than in 1938-39, for the new season. To replace Otto Klemperer, away on a leave of absence for recovery from an operation, the 1939-40 concerts were assigned to guest conductors, beginning with Bruno Walter for the first two pairs. Novelties presented in the winter and spring included Ger-

ald Strang's *Intermezzo* (February 9), Joseph Achron's third violin concerto, with the composer as soloist (March 31), and Ernst Toch's suite, *Idle Stroller* (April 21).

The San Francisco Symphony Orchestra's regular series in the War Memorial Opera House was again supplemented by a municipally sponsored series in the Exposition Auditorium. Werner Janssen resigned from the conductorship of the municipally supported Baltimore Symphony Orchestra after the 1938-39 season, and was succeeded by Howard Barlow, of the Columbia Broadcasting System.

The 21st season of New York's Stadium Concerts was 10 weeks long, instead of the usual eight, with 14 conductors directing the Philharmonic-Symphony Orchestra. The 10th Philadelphia summer series in Robin Hood Dell, again eight weeks long, had an attendance better by over 50 per cent than that of the 1938 season. The Chicago Symphony Orchestra gave 24 concerts under Boult, Golschmann, and Rodzinski in six weeks at Ravinia, Ill. and the National Symphony gave semi-weekly concerts at the Water Gate in Washington. California's annual series at the Hollywood Bowl extended from July 7 to September 1 with Monteux, Albert Coates, Rodzinski, and Otto Klemperer as the conductors. Opera and ballet were also presented in all or nearly all of these series, except at Ravinia. Chicago also had an ambitious summer season of free programs of orchestra, band, and other music sponsored by the Chicago Park District and Chicago Federation of Musicians. The soloist attracting the largest audiences in several of these outdoor series was the Metropolitan Opera soprano, Lily Pons, with her husband, André Kostelanetz, conducting.

Orchestras Elsewhere. In Canada, Sir Ernest MacMillan continued at the head of the Toronto Symphony Orchestra, with Hans Kindler, and Georges Enesco, as guests. Reginald Stewart again directed the weekly summer Promenade Concerts. Montreal had two orchestras, Les Concerts Symphoniques, and the Montreal Symphony under Douglas Clarke. Carlos Chavez conducted the National Symphony Orchestra of Mexico City in a 12 weeks' summer season, with Monteux and Klemperer as guest leaders. Massimo Freccia, a Florentine conductor who had taken part in two New York Stadium seasons, began his first season with the Havana Philharmonic in the fall. Albert Wolff and Erich Kleiber were among the conductors of the regular symphony concerts in the Teatro Colon in Buenos Aires.

No foreign orchestras visited London in the winter or spring, but the city was well supplied by its three principal regular organizations, the BBC Symphony under Sir Adrian Boult, the London Philharmonic under Sir Thomas Beecham, and the London Symphony Orchestra under various leaders, including Stanley Chappell, Charles Hambourg, and Felix Weingartner, who, like Bruno Walter, appeared with more than one orchestra.

Among the principal works introduced to England were Jean Françaix's *Le Jugement du Feu* (Courtald-Sargent series, in February), Sir Hamilton Harty's *The Children of Lir* (BBC, March 1); Ernest Bloch's violin concerto (LPO, March 9, with Joseph Szigeti as soloist), Francis Poulenc's piano concerto (LPO, in March), Weingartner's *Sinfonietta* for violin, viola, and cello (LPO, February 23), and Jaromir Weinberger's *Under the Spreading Chestnut Tree* (LPO, December 9). John Ireland's concerto for strings,

Marcel Delannoy's violin concerto and two songs with orchestra by Benjamin Britten were introduced by Sir Henry Wood to London in the curtailed August Promenade Concerts.

The first of the Paris orchestras to resume activities after the war's opening weeks was the Conservatoire, which began its season in November under Charles Münch. The places of players on military services were filled from the suspended Paris Philharmonic. The Colonne and Lamoureux Orchestras, which had both lost men on account of mobilization, combined for concerts at the Châtelet under Paul Paray. After his release from military service, Albert Wolff resumed his concerts with the Pasdeloup Orchestra.

The Berlin Philharmonic Orchestra, canceling its projected trips to England and France, limited its winter and spring tours to the expanded Reich and neighboring countries. Wilhelm Furtwängler continued as its regular conductor. Other German leaders who shared its schedule were Eugen Jochum, Hans Knappertsbusch, Karl Schuricht, Karl Böhm; foreign guests included Hidemaro Konoye, Victor de Sabata, Paul Paray, and Willem Mengelberg. The Berlin State Opera Orchestra revived its Sunday concerts with Karl Elmen-dorff, Robert Heger, and Johannes Schuler leading the spring series. The Vienna Philharmonic Orchestra, which had lost 10 players owing to Aryanizing laws after the 1938 Anschluss, gained about 20 musicians for the 1938-39 season, and thus could continue to fill its regular duties at the Staatsoper and make tours without enlisting outside aid. Furtwängler, Oswald Kabasta, and Mengelberg were among the winter's guest conductors.

According to Alfredo Casella, writing in *The Christian Science Monitor*, the Italian orchestras of the first rank were the symphony orchestras of the Accademia di Santa Cecilia in Rome under Bernardino Molinari, of Florence under Stabile, of Naples and of Bologna, and the radio orchestras of Rome and Turin. The Santa Cecilia Orchestra, which presented summer concerts in addition to its regular season, gave a piano concerto by Goffredo Petrassi, with Walter Gieseking as soloist, as one of its first autumn novelties. The usual spring series, after the opera season, was held at La Scala in Milan, and Venice had a spring series of seven concerts.

Prague began its fall season with two orchestras, the Czech Philharmonic under Vaclav Talich, Rafael Kubelik, and Karel Sejna, and the German Art Orchestra under Hermann Abendroth. Several new Dutch works were introduced by the Amsterdam Concertgebouw and other orchestras of Holland. Roger Vuataz's second Suite on Swiss Folk Themes was the first new work to be presented during the 1939-40 season by the Orchestra de la Suisse Romande of Geneva under Ernest Ansermet.

The Palestine Symphony Orchestra's third season was shared by Eugen Szenkar, Issay Dobrow-en, Malcolm Sargent and Hermann Scherchen, and closed with a Beethoven and Bach festival. Mr. Sargent and Georg Szell both conducted Australian orchestras during the winter season in that continent.

Bibliography. The following is a partial list of important books upon musical subjects published during 1939:

BIOGRAPHY. Emily Anderson, tr. and ed., *The Letters of Mozart and his Family*, London and New York; Sydney Homer, *My Wife and I*, New York; Hubert Langley, "*Doctor Arne*," London and New York; W. H.

Reed, Elgar, London; Hendrik Willem van Loon and Grace Castagnetta, *The Last of the Troubadours: Carl Michael Bellman*, New York; Laura Benet, *Enchanting Jenny Lind*, New York; H. E. NAISMITH, JAMES A. An American teacher of physical education and inventor of the game of basketball, died in Lawrence, Kans., Nov. 28, 1939. Born in Almonte, Ont., Nov. 6, 1861, he was educated at McGill University (A.B., 1887), at the Y.M.C.A. College, Springfield, Mass. (1891; M.P.E., 1910), and at the University of Colorado (M.D., 1898). Upon graduation, he became director of physical education at McGill and also studied

for the ministry at Presbyterian College, Montreal. With the belief that he could do more good in Y.M.C.A. work, he entered their college in Springfield in 1890 and, in addition, acted as director of physical education there. Subsequently he was physical director at the Y.M.C.A. in Denver, Colorado (1895-98), and at the University of Kansas thereafter. He was retired as professor emeritus in 1937.

In 1891, while at the Y.M.C.A. College, Naismith devised a game which was called basketball and on December 21 of that year the new game was first played. For a description of the game, see *NEW INTERNATIONAL ENCYCLOPÆDIA*, VOL. II, p. 745. In 1891 he issued *Basket Ball Rules*. In 1936 Dr. Naismith attended the Olympic Games held in Berlin to witness the Olympic debut of his game. At the time of his death the game had more than 18,000,000 players.

During the World War, Dr. Naismith served in France with the Y.M.C.A. for a year and a half. He was honorary president of the Basketball Coaches Association and honorary chairman and honorary life member of the Basketball Rules Committee. He was the author of the section on athletics in *The Modern High School* (1911), and of *The Basis of Clean Living* (1918).

NARCOTICS, BUREAU OF. See NARCOTICS CONTROL.

NARCOTICS CONTROL. International.

The principal progress in the control of narcotics has been made through the League of Nations. The League's Permanent Central Opium Board met in April. A summary of the decade's statistics of morphine and its principal derivatives shows that the manufacture of all those drugs liable to dangerous abuse—morphine (unconverted), diacetylmorphine, and cocaine—fell in the early years; and during the last few years of the decade it has been more or less stable. On the other hand, the manufacture of less dangerous drugs—codeine and ethylmorphine—has shown a tendency to rise. Thus it may be claimed that the efforts of Governments, the Board, and other international bodies have not only reduced the legitimate manufacture to medical and scientific requirements, but, within that manufacture, have also been successful in restricting those substances which present the greatest danger. The most striking fact is a heavy increase in stocks of morphine and codeine—probably due to the fear of war. One other point deserves special mention. For some time, the Board has been gravely concerned at the situation in Macao. At its request, the Prime Minister of Portugal instituted an inquiry.

On May 10, Turkey ratified the 1936 convention for the suppression of illicit traffic in drugs, being the tenth ratification it brought the convention into force.

The Advisory Committee on Traffic in Opium and Other Dangerous Drugs held its 24th session at Geneva from May 15 to June 12. Victor Hoo Chi-tsai of China reported that the Japanese were transporting opium in warships and army trucks, resulting in a large increase of opium imports into Japanese controlled areas of China. He said that Japan expects to obtain 300,000,000 Chinese dollars profit from narcotics sales in conquered China.

The Advisory Committee learned that the

Health Committee having considered the report of the Permanent Committee of the Office International D'Hygiene Publique noted that desomorphine is liable to produce addiction and informed the Council of the League of Nations of this fact and recommended that the provision of the Geneva Opium Convention of 1925 shall be applied to desomorphine. The Advisory Committee decided therefor that desomorphine came automatically within the scheme of Article 11 of the convention of 1931.

Stuart Fuller, who represents the United States on the Committee declared Washington was greatly concerned by the extent of shipments of raw Iranian opium and smoking opium from Macao, Portuguese colony on the Chinese coast, because much of the opium smuggled into the United States is Iranian and is known to come from China.

The Advisory Committee discussed whether an addict is a criminal or an invalid, that is, whether he should be treated by nurses or by police-medical control. Opposing the resolution, proposed jointly by the Swiss and Polish representatives, calling on the various governments to study this subject, Harry J. Anslinger, U.S. Narcotics Commissioner, declared that the adoption of such a resolution would throw the problem back to where it was twenty years ago. Mr. Anslinger added that the experience of the United States showed that the Harrison Narcotics Law—for police control—had contributed to the reduction of addiction and that no ambulatory method could succeed in doing more than increase the number of addicts. He pointed out that addicts will not come forward voluntarily because addiction was regarded as a vice. Only about 10 per cent of addicts could be brought under the control of dispensaries and these would promptly become peddlers for the other 90 per cent, thus serving to spread the habit. Mr. Anslinger cited three cases in which doctors had treated addicts with morphine; in each case the doctors prescribed, in the course of a year, more morphine than all the other medical men in their respective areas and an increase in crime.

Colonel C. H. L. Sharman of Canada supported Mr. Anslinger's argument, but Dr. Witold Chodzko of Poland argued that conditions in Europe differed from those in the United States.

United States. The 1939 report of Harry J. Anslinger, Commissioner of Narcotics, showed increased vigilance in halting prospective supplies of narcotic drugs before their entry into the United States. Seizures made by the Bureau of Customs, in some cases in conjunction with the Coast Guard, at ports and borders aggregated 902 seizures and 26,675 oz. in the year ended June 30, 1939, as compared with 638 seizures and 5278 oz. in the 1938 period. Seizures from internal traffic dropped from 4354 oz. in 1938 to 3907 oz. in 1939.

The largest raw opium seizure of the year was made at New York City with Coast Guard aid, in January, when 123 lb. of gum were taken in five five-gallon olive-oil tins just after the contraband was unloaded from the Italian steamship *Ida*. The Bureau also co-operated with the French and British governments in seizing and imprisoning Isaac Leifer for attempting to smuggle into the United States heroin concealed in the bindings of Hebrew prayer books.

Destruction of marihuana crops in co-operation with other State and Federal agencies aggregated

approximately 7436 tons and an area of 6506 acres. Bulk marihuana seizures at ports and borders reached 2291 oz. in 1939. Total seizures for 1939 were 17,074 oz. of bulk marihuana and 17,825 cigarettes, as compared with 19,673 oz. and 17,894 cigarettes in 1938.

Arrests for narcotic drug law violations showed little change, with 3295 during 1939 as against 3013 in 1938. There continues to be a scarcity of crude and smoking opium, as well as morphine, while heroin continues to be the principal drug of addiction. Most of the heroin seized is highly adulterated.

The Division of Mental Hygiene of the Public Health Service (q.v.) continued study of the treatment of addicts on its two narcotic farms (Fort Worth, Tex., and Lexington, Ky.), and of the results of the new United States narcotic drug regulations. Studies of new opium derivatives, supposed to have the analgesic properties of morphine, without its addiction liability, so far show that they have no advantages over morphine.

NATIONAL LABOR RELATIONS BOARD (NLRB). The past fiscal year of the National Labor Relations Board was characterized by a steady growth of collective bargaining contracts and an increasing resort to Board procedure rather than to organizational strikes.

The increase of written trade agreements tells the story of the accomplishments of the Board and its positive effect in reducing industrial strife. This development, experienced in all industries, was particularly noticeable in the mass production industries. Before 1937 there were almost no agreements in the iron and steel industry, but by 1938 the number had increased to 500, covering three-fourths of the industry. By contrast, less than 100 rubber workers were covered by agreement in 1932 while now there are more than 40,000; more than 80 per cent of this coverage was effected since the Supreme Court decisions of April, 1937, validating the National Labor Relations Act.

In considering the effect of Board activities

upon strikes during fiscal 1939, it is necessary to note that the Act does not intend to give the Board jurisdiction over all strikes, but only those strikes called for organizational purposes. In these cases workers increased their use of Board facilities rather than the strike technique. During 1936 the number of strikes exceeded the number of Board cases by 33 per cent. In 1937, the figures were reversed; Board cases exceeded strikes by 121 per cent. The trend continued in 1938, when the number of cases became 276 per cent greater than the number of strikes. For 1939, the ratio increased and Board cases exceeded organizational strikes by 319 per cent.

The activities of the Board for the fourth fiscal year, ended June 30, 1939, are best understood by examining separately the data which pertain to the Board's two distinct functions, those of preventing unfair labor practices, and of aiding in the free choice of employee representatives. During the year, the Board disposed of 6569 cases involving over a million workers. Of the entire number, 4230 cases involved charges of unfair labor practices, while 2339 were representation cases.

In the 4230 unfair labor practice cases the Board closed over 90 per cent before the first step in the Board's formal procedure, a complaint, was issued. These cases were disposed of by settlement between the parties, by dismissal of the charges filed by the labor organization after an agent of the Board had made full investigation, or by union withdrawal of the charges after it had ascertained the true situation, or had been properly advised by the Board's agent.

During the fiscal year, the Board disposed of 2339 representation cases involving 584,853 workers. It certified a collective bargaining agency for 44,622 workers in 112 cases without an election. It held 746 secret ballot elections. Four hundred and eighty-one of these, or 64 per cent, were held with the consent of all parties involved. The remaining 265 elections were conducted pursuant to Board order. Of the 207,597 workers eligible to participate in these elections, 181,090 cast their ballots. The fact that nearly 88 per cent of the eligible voters cast their ballots has been welcomed as an indication of the workers' keen interest in unions of their own choosing, and as an approval by them of the democratic device of the secret ballot.

Scrupulous as it has been in the administration of the Act's objectives of encouraging and protecting the processes of genuine collective bargaining, the Board has been harrassed by the schism in the ranks of organized labor. Today not only must the Board determine whether one of two particular competing unions represents a majority of the workers in any plant, but it must also reconcile the conflicting claims as to whether the unit most appropriate to effectuate the purposes of the Act will be a craft unit or the larger industrial unit. The protection of the primary objective of the Act—the right of employees to bargain with the employer—is often rendered difficult by a determination of secondary problems produced by rivalry between the American Federation of Labor and Congress of Industrial Organizations.

During the fiscal year, the Board decided 116 representation cases in which the two unions were competing. In only 43 cases the two groups disagreed as to the appropriate bargaining unit. In 16 of the 43 cases the American Federation of

Labor's contention was upheld; the Congress of Industrial Organization in 19 cases; in 7 cases the contentions of each were upheld; and in one case no decision was necessary. It is to be expected that the union whose contentions were rejected would criticize the decision. The changing desires of the unions themselves, however, show that Congress acted wisely in leaving for the Board the determination of the proper bargaining unit. For example, the American Federation of Labor, self-characterized as traditionally craft-conscious, during the last fiscal year requested of the Board some form of industrial unit in approximately 113 cases, and a craft form in only 68 cases.

The formal orders of the Board constitute about 15 per cent of its work. It is, however, within this area that court litigation falls. A total of 43 decisions were rendered during the fiscal year by the various Circuit Courts of Appeals and by the Supreme Court of the United States; they concerned principally the enforcement or review of Board orders in unfair labor cases. In addition, the year was marked by a great increase in the settlement of cases through the entry of decrees in the Circuit Courts of Appeals with the consent of the parties. One hundred and forty-seven such decrees were entered as compared with the 11 entered in the preceding year.

The Board was involved in 12 cases before the United States Supreme Court during the fiscal year. Six of these were cases in which application was made for a writ to review a lower court decision favorable to the Board. In five of the six, the Supreme Court declined to review the decision, leaving in force the Circuit Court of Appeals' favorable decision. In the six cases in which an opinion was rendered, the Board was fully sustained in two, its order modified in two others, and set aside in the remaining two.

Out of the 38 decisions rendered by the Circuit Courts of Appeals, the Board's orders were enforced in full in 12 cases, modified in 17 instances, and set aside in the remaining 9. Of the latter 9 cases, in one the Circuit Court of Appeals was subsequently reversed and in another its decision was modified by the Supreme Court.

In the past year a number of issues of great importance to the administration of the Act were ruled on by the Supreme Court. The Board's jurisdiction over a public utility which operates entirely within one State was upheld by the Supreme Court in *Consolidated Edison Co. v. National Labor Relations Board*. The court pointed out that the effect of a labor dispute among the company's employees, disrupting service of electrical energy to railroad, telephone, and radio companies, would be nothing less than "a catastrophe" to interstate commerce.

In *Fansteel Metallurgical Corporation v. N.L.R.B.*, the Supreme Court, after upholding an order of the Board based upon violations of the Act respecting the company's intimidatory conduct and promotion of a company-dominated union, held that the Board exceeded its discretion in remedying the situation by ordering the reinstatement of persons who had engaged in a sit-down strike.

In the *Ford Motor Co.* case, the Supreme Court ruled that the Circuit Court of Appeals may properly exercise its discretion in sending a case back to the Board for further proceedings before a final order is entered by the Board.

The Supreme Court held that there is no breach of the statutory duty to bargain collectively with the representatives of the company's em-

ployees in the absence of a request for such bargaining, in *N.L.R.B. v. Columbian Enameling and Stamping Co.*

In substance, the Supreme Court held in three cases involving Board decisions that the supporting evidence should be "substantial evidence" such as "a reasonable mind might accept as adequate to support a conclusion," or which "affords a substantial basis of fact from which the fact in issue" might be "reasonably inferred." (*Consolidated Edison, Columbian Enameling, and Sands Mfg. Co.*)

In general, the cases decided by the Circuit Courts of Appeals, in addition to principles already established by prior decisions, have sustained the Board's position in holding that affiliated corporations may be parties in a case charging unfair labor practices committed by any one of them. They have also upheld the Board's contentions that in order to make the disestablishment of a company-dominated union complete, the Board may require the company to cease giving effect to any contract which has been entered into with such organization; that the employer is required to send individual notifications to employees setting aside individual contracts that have been signed under pressure by the employer; and that closed-shop contracts with minority unions may be invalidated. As to Board decisions requiring the companies to take affirmative action, the courts have enforced orders requiring the payment of back pay to the personal representative of a deceased employee; and those necessitating reinstatement of employees even though the employer removes his plant to a new location, or finds it necessary to dismiss those currently employed to make room for the men reinstated by the Board's order. See UNITED STATES under *Legislative Investigations*; COURTS, FEDERAL; SUPREME COURT; LABOR CONDITIONS.

J. WARREN MADDEN.

NATIONAL PARK SERVICE. Conservation of the country's national parks, national monuments, and allied recreational areas for the use and enjoyment of present as well as future generations is the major objective of the National Park Service, established as a bureau of the U.S. Department of the Interior by Act of Congress dated Aug. 25, 1916. From that date to the present time the number of areas under the Service's jurisdiction has increased from 37 to 155, constituting a vast Federal Park System of approximately 20,800,000 acres. These areas are classified as follows: 25 national parks (9,536,374.73 acres); 4 national historical parks (7,642.27 acres); 80 national monuments (9,519,998.78 acres); 11 national military parks (20,977.31 acres); 7 national battlefield sites (2,147.60 acres); 4 national historic sites (223.59 acres); 1 national recreational area (1,699,573 acres); 8 national memorials (317.11 acres); 11 national cemeteries (355.03 acres); 3 national parkways (30,749.50 acres); and the system of national capital parks in and adjacent to the District of Columbia (6,008.66 acres).

During the last travel season (Oct. 1, 1938–Sept. 30, 1939) these areas, preserved and maintained for the benefit and enjoyment of all, attracted 15,454,367 visitors.

The following units were added to the Federal Park System during 1939: Homestead National Monument, Nebr., Badlands National Monument, S. Dak., Santa Rosa Island National Monument,

Fla., Tuzigoot National Monument, Ariz., Federal Hall Memorial National Historic Site, New York, N. Y., Old Philadelphia Custom House National Historic Site, Pa., and two national parkways now being constructed by the National Park Service—the Blue Ridge National Parkway, which, when completed, will connect Shenandoah and Great Smoky Mountains National Parks, and the Natchez Trace National Parkway which will connect historic Natchez, Miss. and Nashville, Tenn.

Further expansion of the Federal Park System resulted from addition of lands to existing national parks and monuments, notable among which was the enlargement of Carlsbad Caverns National Park, N. Mex., from 10,080 to 49,568 acres and Glacier Bay National Monument, Alaska, from 1,134,720 to 2,299,520 acres. Important, though small, was the addition to Colonial National Historical Park, Va., of a 100-acre plot of land at Cape Henry on which stands a cross marking the site of the first landing of English colonists on American soil on Apr. 26, 1607.

Legislation enacted during 1939 changed the status of three of the historical units under the jurisdiction of the National Park Service: Areas formerly known as the Abraham Lincoln National Park, Ky., and the Chalmette Monument and Grounds National Battlefield Site, La., were classified as national historical parks, and Fort McHenry National Park, Md., was designated as the Fort McHenry National Monument and Historic Shrine.

Under President Roosevelt's Government Reorganization Plan the Branch of Buildings Management was transferred to the Federal Works Agency. Other outstanding National Park Service developments during 1939 included the acquisition of lands along the historic Chesapeake and Ohio Canal and restoration of a 22-mile section connecting Georgetown, D. C., with Seneca, Md.; continuation of a Park, Parkway, and Recreational-Area Study carried on by the Service in co-operation with various States under authority of the Act of Congress of June 23, 1936; initiation of construction, under Service supervision, of a memorial to Thomas Jefferson in West Potomac Park, Washington, D. C.; acquisition of lands in connection with the Jefferson National Expansion Memorial Project, St. Louis, Mo.; completion of a hotel at McKinley Park Station, Alaska; and erection of a Regional Headquarters Building in Santa Fe, N. Mex.

ARNO B. CAMMERER.

NATIONAL PLANNING. See **PLANNING.**
NATIONAL RESOURCES PLANNING BOARD. Under President Roosevelt's Reorganization Plan, effective July 1, 1939, the functions of the National Resources Committee were consolidated with the functions of the Federal Employment Stabilization Office under the name of the National Resources Planning Board in the Executive Office of the President. The functions of the Board are:

1. To collect, prepare, and make available to the President such plans, data, and information as may be helpful to a planned development and use of national resources, and related subjects referred to it by the President, and to recommend to the President and the Congress long-time plans and programs for the wise use and fullest development of such resources.
2. To advise the President from time to time of the trend of employment and business activity, and of the existence or approach of periods of business depression and unemployment in the United States or in any substantial portion thereof; and to recom-

mend measures leading to the improvement and stabilization of economic conditions.

3. To collect information concerning advance construction plans and estimates by all Federal agencies, the States, municipalities, and other public and private agencies, and to list for the President and the Congress all proposed public works in the order of their relative importance with respect to (a) the greatest good to the greatest number of people, (b) the emergency necessities of the Nation, and (c) the social, economic, and cultural advancement of the people of the United States.
4. To receive and record all proposed Federal projects involving the acquisition of land (including transfer of land jurisdiction) and land-research projects, and, in an advisory capacity, to provide the agencies concerned with such information or data as may be pertinent to the projects.
5. To consult and co-operate with agencies of the Federal Government, with the States and municipalities or agencies thereof, and with any public or private planning or research agencies or institutions, in carrying out any of its duties and functions, and to act as a clearing house and means of co-ordination for planning activities, linking together various levels and fields of planning.

These responsibilities and functions do not differ radically from those entrusted to the Board's immediate predecessor, the National Resources Committee.

The National Resources Planning Board is contributing to the planning movement by active encouragement of planning activities. A technical committee has considered ways of stimulating planning in local communities. The creation of State planning boards has been encouraged with such success that they are now operating in 45 of the 48 States. A number of regional planning agencies have been established with the Board's assistance, such as the Pacific Northwest, New England, Northern Great Lakes, and Northern Great Plains regional planning commissions or agencies. The Board maintains regional planning offices or "centers" of its own in nine regions covering the entire country. Only where it cannot discover or secure the creation of necessary planning activities, or where those activities need to be tied together, does it develop its own machinery for long-range planning of our national resources.

The Board has also made large contributions in the field of research towards filling in planning gaps. Its industrial research includes studies on national income, consumption habits, the structure of our industrial economy, patterns of resource use, housing, etc. Its Advisory Committee on Science has made long-range surveys of population, technological trends, and the Nation's research resources, both public and private. An extensive study of urban problems has been completed by its Committee on Urbanism. Nationwide studies of land and water problems have been made. At the request of the President, a basic survey has been made of our energy resources with a view to establishing a national policy for their conservation and use and of the relief problem.

Through its technical committees the National Resources Planning Board acts as a clearing-house and a correlator for overlapping planning activities. All of these activities of the Board head up in its advisory function. It reports its findings to the President and the Congress and makes recommendations as to long-range programs for the conservation and full development of our natural and social heritage. It makes suggestions to the President and to administrative establishments as to policy proposals and the planning of national policy. It assists the Presi-

dent, as requested, in developing public policies that are co-ordinated both among the various agencies administering them and with other broad programs of the Administration.

CHARLES W. ELIOT 2ND.

NATIONAL YOUTH ADMINISTRATION (NYA). The National Youth Administration was established through Executive Order on June 26, 1935, within the Works Progress Administration; but on July 1, 1939 the first Reorganization Plan placed it under the Federal Security Agency. Since its inception, the National Youth Administration has been allocated approximately \$335,000,000 and has employed on the average over 500,000 young men and women a year. During the current year, operating on a budget of \$100,000,000, it will employ as many as 785,000 young people—500,000 students and 285,000 out-of-school youth. See EDUCATION.

The National Youth Administration's Student Work Program is providing jobs to financially-handicapped students from 16 to 24 years of age. The students are selected by the school and college authorities on the basis of need and scholarship. They are then assigned to such jobs as the repair of classroom furniture, library and laboratory assistance, research work, and improvement of campuses or school grounds. For this work the students receive a regular monthly wage based on the prevailing hourly rate for the type of job they perform. The wage for secondary school students—of whom there were 302,400 in November, 1939—varies between a minimum of three dollars and a maximum of six dollars a month. The wage for the 118,000 college students runs from ten dollars up to twenty dollars a month. And the wage for the 2900 graduate students varies from twenty dollars to thirty dollars. All told, the Student Work Program was employing 423,300 students in November, 1939.

The Out-of-School Work Program furnishes employment to unemployed youth who are outside the school system and who are certified as in need. About 90 per cent of these youth who become NYA workers have either had no work experience or merely the experience obtained from jobs calling for little or no skill. NYA work projects are therefore planned by local officials and sponsors with two major aims in mind: First, the filling of community needs; and, second, the provision to youth of an opportunity to acquire good work habits and certain skills that are basic to a general occupational field.

During December, 1939, there were 285,000 out-of-school youth working on NYA projects. The young men were constructing small school houses, school bus shelters, and ski jumps. They were improving public parks and laying out public playgrounds. Over 10 thousand young men and women were assisting in the field of recreational leadership. Another seven thousand were engaged in public health and hospital work. More than 26 thousand boys were employed in work shops turning out such useful articles as furniture and recreational equipment. And about 18 thousand girls were working on sewing projects making clothing for distribution to needy families and public institutions.

In a somewhat special category are the young men and women employed at the 600 NYA resident centers, of whom there were 28,000 in December. Housed in or near such institutions as agricultural and mechanical schools, teachers' col-

leges and hospitals, these youth are participating in a well-integrated program of study and work. Half the day is spent in the classroom, the other half day is spent putting this newly-acquired knowledge into practice. The young people attend these centers for periods of from three to six months.

Finally, under the NYA Guidance and Placement Program, thousands of youth are being provided with the information necessary to insure an intelligent selection of a job. This information is conveyed through occupational and industrial studies, job-information classes, and radio broadcasts. In addition, NYA placement counselors, working in co-operation with State Employment Services in 149 cities, have registered 620,000 young people and have found jobs in private employment for 260,000.

NATURALIZATION. See IMMIGRATION AND EMIGRATION.

NAURU, nā'ōō-rōō. An atoll in the Pacific (166°E longitude and 26 miles south of the equator), mandated (1920) to Great Britain, Australia, and New Zealand by the League of Nations. Area, 8.43 square miles; population (Apr. 1, 1937), 3097, including 194 Europeans. The principal industry is the mining of phosphate (855,000 metric tons exported in 1938). In 1938 general imports were valued at \$400,000 in old U.S. gold dollars; exports (including a small amount of copra) at \$1,000,000. There is a wireless station on the island. In 1937, 107 vessels (514,960 gross tons) entered and cleared. Revenue (1937) amounted to £53,343 (Australian pounds); expenditure, £29,312.

By special agreement among Great Britain, New Zealand, and Australia, the latter exercises sole administrative authority over the island. Administrator, Lt. Col. F. R. Chalmers (appointed October, 1938).

NAVAL ACTIONS. See EUROPEAN WAR.

NAVAL PROGRESS. Continuation of armed conflicts in various parts of the world and recurring crises brought ever-increasing expenditures for naval armaments, not only by the great naval powers but by the smaller ones as well. When the European War commenced in the late summer, further marked increases in programs occurred and building was accelerated. The lesser powers concentrated their efforts largely on submarines and high-speed torpedo-motorboats, and to some extent on destroyers. The imminence of a general war, and finally the war itself also prompted such countries to increase their own facilities for building and repairing men-of-war. Formerly they had relied on the large nations for their naval construction, but Turkey, Rumania, Yugoslavia, Brazil, and other countries made real progress in developing shipyards, drydocks, and attendant heavy industries.

The large powers gave precedence in building yards to naval construction, increased the number of ways, and opened additional yards. No particular type was emphasized—battleships, aircraft carriers, cruisers, destroyers, submarines, torpedo-motorboats, and auxiliaries and small craft were all being pushed to completion. The increases incident to outbreak of war, however, were more marked in the types susceptible of the most rapid construction. Germany, for instance, had speeded up production of submarines to two or three per

week; while Great Britain was turning out minor war vessels such as the *Blackswan* (1250 tons—8 ft. draft—19 knots—eight 4-inch AA guns) for escort duty at a great rate. America, Italy, and other neutrals, in the world of rapidly changing conditions and alliances, were as active as the belligerents in building up their navies. It was to be noted that although some 35 capital ships were under construction the insistent demand for cruisers and smaller craft was being met without slowing down the work on the heavy vessels.

The aircraft carrier, like the battleship, had survived a period of doubt and unpopularity and was very much in favor again despite the fact

that the type had been but little tested in war. Italy alone of the great powers, with her peculiar geographical position, found no use for such vessels, considering them a costly and vulnerable type. The considerable expansion in naval air forces was generally in carrier-borne and shore-based aircraft. The increase in numbers carried in other ships was slight. Despite the difficulty of operating aircraft in the open sea, however, provision was made in nearly all new construction of battleships and cruisers for a certain number. The U.S. Navy, having much greater sea areas to cover than other powers, continued to provide for more catapult units on her vessels than was

| Total—Data are too incomplete to give totals. | | | | | | | | |

* As Japan releases no data officially the information may be incomplete, particularly as to "building and appropriated for."

* Data available as to the U.S.S.R. is known to be incomplete, but figures given are considered to be reliable minimums.

generally found on similar foreign ships. An extreme case was the *Brooklyn* cruiser-class with accommodations for eight, although only four were normally carried in peace. Five Russian destroyers could operate a small seaplane each, and one Italian submarine was fitted to carry one, but those were isolated instances.

The years of effort, commencing in 1922, to bring about limitation of naval armaments had served for a time as some check on construction of men-of-war, but when Japan denounced the treaties to which she was a party and they terminated in December 1936, little restraint by treaty remained. The last vestige of such restraint was removed in 1939 when the escape clauses of the London treaty were invoked and all obligations thereunder were suspended. The new war brought opportunity to test the ships that had been built against such a contingency.

For a description of the naval operations (including the "Allied Blockade," "Submarine Warfare," "Shipping Losses," "Naval Actions and Losses," "Sinking of *Graf Spee*") of the European countries at war, which commenced early in September, 1939, see the section entitled *The War at Sea* (p. 242) of the article on EUROPEAN WAR.

Naval Strength of Great Powers. Exact figures of naval strength of important powers were guarded closely as the year drew to a close. The table on page 522 gives reliable information as of July 1, 1939.

Argentina. The naval program noted in 1926 anticipated an expenditure of 75,000,000 gold pesos to be apportioned over ten years. It is invariable that programs planned over such a long period undergo many alterations in the course of their execution. This one was no exception but with the entrance of the cruiser *La Argentina* into service, the program was finished except for three submarines that were not ordered until late in 1938. Five destroyers, in addition to the seven of the *Corrientes* class recently completed, were projected. Four 1000-ton escort vessels were being built at Rio Santiago for seagoing training at the Naval School; only the *Murature* was nearing completion. The Navy Department accelerated her training courses at the Naval Academy, and adopted a new plan of recruiting, evidently with a view of increasing the personnel of 500 officers and 11,000 men.

Brazil. Six minelayers were building at the government yard at Islas das Cobras, Rio; at least two, the *Cananea* and *Carloca* were launched. These vessels of 550 tons were designed for 14 knots, to carry 50 mines and two 4-inch guns. Despite the demands of the British armament program on the shipbuilding program steady progress was made on the six destroyers being built in England. Several, including the *Juruena* and the *Javaray*, were launched. As these vessels were prototypes of the British *Hero* class, it seemed probable that on completion they might be incorporated into the British Navy for war service instead of being delivered to Brazil. Meantime arrangements were being made to build three larger destroyers in Brazil, using machinery and fabricated parts from the United States.

Chile. The naval budget for 1939 was nearly 300 million pesos, about 8 per cent over the preceding year. The Department of Defense continued to make inquiries and to conduct negotiations regarding replacements for the old cruisers *Blanco Encalada* and *General O'Higgins* as well as for some smaller vessels. A naval mission was sent to

Europe to further the project, but no contracts were announced. Two defense units were being built at Valdivia (South Chile) to replace the *Leucoton* and *Aguila* that had previously been lost at sea.

Colombia. An American naval mission was secured to assist in the training and rehabilitation of the fleet the primary units of which were two destroyers built in Lisbon of English design and materials and under supervision of English technicians. Interest was stimulated, and education facilitated by visits from American men-of-war including a division of heavy cruisers.

Denmark. The Navy budget was increased 4½ million kroner over the preceding year and further funds were made available for accumulating strategic war materials. The authorities emphasized anew that the preservation of Danish neutrality was the primary function of the navy. The five-year building program was pushed and in February two 700-ton destroyers (in lieu of smaller ones originally planned) were begun in Copenhagen. The submarine *Havkalen*, 400 tons, was placed in service and a fourth of the same class was soon to follow. The minelayer *Lindormen*, 150 mines, was nearing completion.

Naval aviation, directly under the Commander-in-Chief of Maritime Defense, was composed of bases at Avnoe, Ringsted, and Copenhagen, an aviation school, one squadron of patrol planes, one of fighters, and one of torpedo planes.

Egypt. The scheme for naval and military reorganization and rearmament announced in 1938 made scant progress, probably because of lack of funds. The general plan was changed somewhat, so that the principal units would be mostly minelayers and minesweepers. An English officer was to act as naval adviser and the personnel was to be trained in part in England.

Finland. The navy consisted of two 4000-ton coast defense ships carrying 10-inch guns, completed in 1933; 5 small modern submarines; 4 gunboats; several minelayers, minesweepers, icebreakers, etc. The naval authorities announced a long-range building plan to include 3 armored ships, 6 destroyers, 9 submarines, 9 motor torpedo boats, and several minelayers and minesweepers, but the country became engaged in war with Russia before effective steps were taken to commence this construction.

France. The labor troubles that had retarded French naval construction for several years were settled and strenuous efforts were made to recover lost ground. The interest in anti-submarine measures may be judged from the fact that 27 patrol gunboats, 25 submarine-chasers, and 30 motor torpedo-boats were under construction when war was declared. The total of such ships in commission at the time was but 36. On her own account France had 75 submarines built and 27 building or projected.

A short while prior to the war and apparently in preparation therefor and allegedly in conformity with an understanding with the British, the naval forces were reorganized with a strong striking force at Brest, consisting of the 2 new battleships, 3 new light cruisers, 8 of the largest and best destroyers, and 20 submarines. At L'Orient were 2 old battleships, a light cruiser, a minelayer, and numerous minesweepers and torpedo craft. The great portion of France's splendid cruisers and destroyers were at Toulon where they were supported by 3 old battleships.

On June 15, 1939, the 2000-ton submarine *Phé-*

mir was lost when it dived in deep water and did not emerge from Cam-Ranh Bay, 225 miles northeast of Saigon, French Indo-China. The loss of the 5000-ton minelayer *Latour d'Auvergne* by fire and explosion off Casa Blanca on September 12 revived the seaman's superstition that it is bad luck to change the name of a ship.

A large program for improvement of naval bases was being carried out. The world's largest dry dock, 1198 feet by 118 with 55 feet over the sill, was a part of the construction work at Brest. Toulon, Dakar, and Agadir received attention, but the greatest efforts were at Oran and Mers-el Kebir. Those two places on the same bay in Algeria, separated by only four miles, were part of the same project. The accomplishments of the year included arrival of a 35,000-ton floating drydock, completion of a 2000-yard section of breakwater, filling large underground fuel reservoirs, installation of anti-aircraft batteries, creation of a seaplane base at Arzeu, 20 miles away, and much other important work.

Germany. As war approached, Germany threw a cloud of secrecy about her building activities, but evidence already indicated plans for extensive expansion of submarine construction to augment the force of 50 built and 21 building in July. The claim of the Ministry of Propaganda in December that the output in December had reached one per day was gross exaggeration. Even the more reliable reports of two to three per week caused informed persons to question the ability of Germany to produce skilled crews to operate that number. An indication of one phase of naval warfare to be expected from Germany might have been taken from the fact that her submarines could lay mines, that she had twelve minelayers built, and that there were persistent reports of aircraft-minelayers. As the war developed, great damage to shipping in British coastal waters resulted from mines, planted by submarines and aircraft. They were usually laid at night, and were of a new type that rested on the bottom instead of floating and were thus undisturbed by conventional sweeping methods. The popular term "magnetic mine" was a misnomer, but with some basis of fact. A delicate firing mechanism was actuated by the fluctuations of an electric current (within the mine) caused by passage of the metal hull of a ship over the mine.

The German surface Navy, though small, evinced no intention of being held in port by its powerful adversaries. The *Graf Spee* operated in the South Atlantic until sunk in December. The *Deutschland* was repeatedly reported as being out; and she sunk the auxiliary cruiser *Rawalpindi* off Iceland. Cruisers and destroyers roamed the Baltic and the Scandinavian coast despite the hazards. The general policy of the German Navy appeared to be to make occasional raids on the high seas, to harass commerce in the North Sea, to drive off enemy ships entering the German bight, and to safeguard communications with Scandinavia.

Great Britain. With memories of the successes of submarines in the last war, and the ultimate effects of blockade on the German economic structure still fresh in mind, the British built and planned for early and effective operations against the one, and for early and intense application of the other. In addition to the ships built and building listed in the foregoing table, Great Britain commenced the war with no fewer than 250 minor war vessels and she had 60 others building. These

included minesweepers, patrol gunboats or escort vessels, trawlers, motor torpedo-boats, net-layers, etc. Parliament and the people supported the Admiralty in its efforts to prepare for the coming war. The naval estimates issued in March called for \$750,000,000, more than \$110,000,000 in excess of the amount the year before. The estimates were later increased by supplementary ones. The new construction program adopted called for 2 battle-ships, a carrier, 4 large cruisers (6-inch guns), 16 destroyers, 20 escort vessels, 10 minesweepers, a fast minelayer, and a number of minor vessels. An interesting provision was that for converting the *Cairo* and *Calcutta* and possibly other ships of the same class into antiaircraft ships. Thirteen of those cruisers were completed about the end of the last war. In 1935 or 1936 two were reconstructed and rearmed with 10 4-inch A.A. guns, and numerous machine guns. For a time, the idea found little favor, and the project for further conversions was suspended.

When Great Britain commenced her rearmament program four years before, informed circles were aware that one of the greatest obstacles was the difficulty in obtaining guns, mounts, and fire-control apparatus. Within that time the productive capacity of the country increased five times over that of 1935 for guns, and nine times for control gear.

On June 1, 1939, the new submarine *Thetis* was lost while undergoing acceptance trials in Liverpool Bay, England. After diving the submarine failed to surface at the time intended. Four men were saved by means of the Davis escape apparatus, the other 99 men on board perished. Rescue work was made difficult by the swift tides.

In May, nearly two years after the government's announcement that the change would be made, the Admiralty assumed full administrative control of the Fleet Air Arm, thus ending the dual control that was formerly shared with the Air Ministry. But that transfer did not end all problems. The former naval officers that were returned to that service were insufficient in number to man the naval planes and air stations. For a time some officers of the Royal Air Force were loaned to the Navy to make up the deficiency. But the former service was also occupied with the colossal task of expanding to meet the needs of the day and was soon anxious to reclaim its personnel serving afloat. The Navy thus found itself losing the R.A.F. personnel before it had trained the officers and men required to replace them.

Greece. The new naval shipyard at Scaramanga was formally opened on June 14 and it was planned to lay the keels of two destroyers there near the end of the year. As ways could be made available for building four additional men-of-war at the same time, it was announced that foreign assistance for building or repairing Greek naval vessels would soon be unnecessary. A request was made, however, on the British government for loan of officers to act as instructors and technical advisers.

Italy. In the year 1925, Italy commenced construction of her fine cruiser force. By 1933 7 splendid 10,000-ton, 8-inch cruisers were in commission; and 6 light cruisers joined the fleet in the same period. During the next four years 6 additional 6-inch cruisers were completed. For a time the government considered its needs in that respect were met, but keeping pace with the rest of the world it recently took steps for additional building. Two 8000-ton light cruisers and 12 3500-ton scouts were provided for. The latter seemed

to be Italy's reply to the French *Magador* class of super-destroyers (2800 tons normal displacement 8 5.5-inch semi-automatic guns, 10 torpedo tubes, 38 knots). These small cruisers were reported as being designed for about the same armament and speed as the *Magador's*; and, as with virtually all Italian light vessels, they were to carry mines.

The steady growth in submarines continued, keeping Italy ahead of any other power in the number of vessels of that type. The latest ones built were of about a thousand tons, and several nearing completion were of 1500 tons whereas those of a few years before had generally been from 600 to 800 tons. The surface speed of the newer craft had also been stepped up to 18 knots instead of 14 knots in the smaller craft.

The promise of the Minister of Marine to the Senate that eight battleships would be in service by 1941 seemed likely of fulfilment. Modernization of the four originally commissioned 1913-16 had been finished; the four new ones of 35,000-ton each with nine 15-inch guns were progressing rapidly. The *Littorio* and the *Vittorio Veneto* were about ready to join the fleet as the year drew to a close; the *Impero* laid down in May 1938 was launched only 18 months later, and the *Roma* was 4 months behind.

Japan. The policy of secrecy which the Japanese government had maintained as to its ship-building programs since the end of the Washington and London treaties remained unchanged. As building progressed, however, and as new ships were launched and passed into service, additional information reached the public. Informed sources were convinced that there were no startling innovations, nor alarming numbers. There were repeated press reports of two super-*Deutschlands* of 15,000 tons carrying 12-inch guns and having a speed of 32 knots. Such a vessel could have but little use except to protect or to make war on commerce. Reports also pointed to a six-year building program commencing in 1939-40 that called for 1200 million yen for new construction, 300 million for naval air equipment, and 188 million for extension of shore establishments. The minelaying submarine *I-62* collided with another submarine and was lost with 75 of the 81 members of its personnel.

The Sino-Japanese war resulted in the navy producing craft for landing operations that could be carried in a mother-ship and launched through flap doors over a flat stern. One type was 56 feet long, 3 foot draft, 8 knots, capacity 90 men, propeller of the worm type in a tunnel. A smaller one of 45-foot length, capacity 40 men could make 8 knots, and was equipped with a machine gun. A third type was an armored 50-foot boat, speed 10-12 knots, with two machine guns, a small rapid fire gun, with light armor protection for guns and crew.

Netherlands. Keels of two 8300-ton cruisers of the *Java* class were laid, the first of these was scheduled for trials in September 1941 and the second a few weeks later. A contract was placed in England for twenty coastal motorboats to be used part in home waters, part in the East Indies. They were to have four instead of the usual two torpedo tubes and were to carry two small A.A. guns. The Dutch *Naval Annual* for 1939 listed ships in commission as 3 cruisers, 1 flotilla leader, 8 destroyers, 15 torpedo boats, 23 submarines, 17 minelayers, 16 minesweepers, and various small craft. Under construction, in addition to the vessels previously mentioned, it listed 1 flotilla lead-

er, 4 destroyers, 8 submarines, and 3 gunboats. The naval authorities were also examining a project for construction of three 30,000-ton battleships for defense of the Dutch Indies. They were to be heavily armed and to make 23 knots. No final steps for financing or letting contracts were made before the end of the year.

The 1939 naval aviation budget of approximately \$4,000,000 was separate from military aviation and provided planes primarily for use in the Indies. A mission was sent to the United States to arrange for purchase of naval planes of American manufacture which had already proved more satisfactory for the service required than those built in the home country or elsewhere in Europe.

The first naval casualty of the war was the minesweeper *Willem Van Ewijk* which was destroyed by a mine, probably one of her own upon which she had drifted.

Norway. Orders were placed for two destroyers, heavier than their predecessors, 1300 tons. Two Laval turbines were to develop 30,000 shaft h.p. and produce 34 knots. Armament; two 21-inch double torpedo-tubes, four 4.7-inch double-purpose guns in twin mounts, two 1.6-inch A.A. guns, and two 50-cal. machine guns. Eight motor torpedo-boats, 40 knots speed, were ordered in England. Four of these were to be equipped with Italian motors (in payment for a shipment of fish and oil). All were to carry two 18-inch torpedo-tubes, and one rapid fire 0.8-inch gun. Many hundreds of officers of the Merchant Marine were given special courses on defensive measures against submarines and aircraft.

Poland. At the beginning of the year the Navy had about 325 officers and 3000 men to man its fleet of 15,000 tons built and building. The backbone of this fleet consisted of four destroyers, five submarines, and one minelayer. Early in the year two additional submarines were ordered. In the brief war with Germany the naval units were ineffective. One destroyer was sunk, and the minelayer badly damaged. The remaining three destroyers escaped to England and joined the British patrol forces. Two submarines escaped to England, one to Sweden, and the other three had an unknown fate.

Portugal. The ordinary naval budget for 1939 was \$7,750,000 (some \$80,000 less than for 1938). An extraordinary budget added \$1,400,000 to that amount for new construction and munitions (\$900,000) and for expansion of naval aviation (\$500,000). The fleet as organized in 1939 consisted of a division of five destroyers, a division of three torpedo-boats, a squadron of three submarines, seven sloops, seven gunboats, and thirteen other vessels. The construction program decreed in 1938 called for three 1400-ton destroyers, three 900-ton submarines, twelve motor torpedo-boats, a tanker, a survey vessel, two squadrons of seaplane scouts, one squadron of torpedo-bombers, and one squadron of observation planes; construction to commence in 1939 on three submarines, two patrol motorboats, one tanker, and one survey vessel.

Rumania. The budget of 1109 million lei was 181 million more than that of 1938. Progress was made on the new naval base at Taschau. War-time reserves of oil and gasoline were increased. The destroyers *Regele Ferdinand* and *Regina Maria* built in 1929 were modernized at Malta. The minelayer *Admiral Murgescu* was launched in Galatz. This was the first man-of-war built in the country. A sister-ship was on the way. Supervising technicians were French. These ships of 1068

tons carried two 4-inch double-purpose guns. The two 2100 h.p. Krupp motors were expected to give them 16 knots.

Siam. In proportion to its size and power this country had carried out the largest of all naval rearmament plans, having within four years increased its number of naval units from 15 to 50 and brought its personnel up to 400 officers and 5000 men. Further increases were indicated when two 4000-ton cruisers were ordered built in Trieste. Reports that these were to be 10,000-ton, 8-inch-gun ships appeared to be unfounded. More reliable information indicated that they would be of the Italian *Regolo* class with eight 5.3-inch guns and would have a speed of forty knots.

Spain. The personnel of the Spanish Fleet suffered great losses during the Civil War. More than 50 per cent of the officers died fighting or were massacred in the ports which initially remained in the hands of the Republicans. The ranks of petty officers and non-rated men were also depleted, although less in proportion. Despite the enrollment of officers and sailors of the merchant marine and men from other professions, many gaps remained to be filled.

The fleet, including ships formerly interned in neutral ports, consisted of: the battleship *Jaime I*, 14,000 tons, 12-inch guns (seriously damaged and of little use for war when repaired); cruiser *Canarias*, 10,000 tons, 8-inch guns, built 1935; cruiser *Navarra*, 4900 tons, 6-inch guns, built 1923; cruisers *Libertad*, *Almirante Cervera*, and *Miguel Cervantes*, 7500 tons, 6-inch guns, built 1925 to 1931; 10 destroyers *Lepanto* class, 1500 tons, 4.7-inch guns, built 1928-36; two destroyers *Alsedo* class, 1050 tons, 4-inch guns, built 1922; 12 submarines 550 to 1050 tons, built since 1918; various other minor craft and auxiliaries.

Rehabilitation or development of naval and naval air bases at El Ferrol, Las Palmas, Cadiz, and Majorca made little progress; but, nonetheless, the potentialities of those strategic points for operating bases of submarines, raiders, and naval aircraft caused the great naval powers to watch closely the happenings there.

Turkey. From the naval viewpoint the mutual assistance pact between Turkey, Britain, and France signed in London in October was of importance chiefly because of the apparent assurance that Turkey would observe its pledges under the Montreux Convention and keep the Straits open in a Balkan war, thus enabling British and French warcraft to cut Soviet-German oil transport across the Black Sea. The government was reported to have contracted for a naval base at Gweljuk in the Sea of Marmora at a cost of \$11,500,000. The 1000-ton submarines *Batinay* and *Saldiras* built in Germany were delivered by Krupp. Two similar vessels were under construction in Istanbul according to plans furnished by Krupp. All were designed for 20 knots surface speed.

Sweden. The budget 1939-40 gave 69,000,000 crowns to the Navy, 2,000,000 of which was for modernizing the *Svenge* class pre-war battleships, and 23,500,000 for new construction. The two cruisers building were allotted 14,000,000 of the estimated ultimate cost of 37,000,000 each. In July the government decided to add four additional submarines to the building program. The navy yards continued the activity on the five-year program inaugurated in 1937. The minesweepers *Arkolma* and *Lanscht* were delivered, the destroyer *Malmoe* held trials and the *Karlskrona* was not far behind; four torpedo-boats and at least one small

submarine were expected to be ready for commissioning early in 1940.

Union of Soviet Socialist Republics (Russia). Until 1929 leaders in Russia held that she needed no great high-seas fleet because it would do them no good in their restricted waters, but gradually the policy changed. In 1936 Admiral Orlov expressed the need for a large fleet embodying latest technical developments. Two years later, Molotov, President of the Soviet Cabinet declared that Russia needed a large fleet in accordance with their grand mission. Although precise information as to many units of the Russian Fleet was unobtainable there was ample evidence of the change in policy. It was known that a number of new ships had been built, and that others were under construction. There was less certainty, however, as to the effectiveness of the naval organization. Recovery from the purge of virtually all senior officers was slow, and the most striking need of the Navy was competent officers and men. Perhaps the most striking evidence of concentration on naval development was to be found in the plans for expansion of the personnel. Compulsory service was extended from four to five years, efforts were made to select the best men for sea service and special privileges and inducements were given to those demonstrating proficiency. All grades, however, remained under the political domination of Moscow, and the Captain of a ship was not its senior officer, he was merely coequal with the political Commissar on board. Even Admirals had to have their orders countersigned by a political officer.

In addition to replacing worn-out ships, expanding the size of the Navy, and building up the personnel, attention was given to improvement of base facilities. In that connection it was interesting to note that Nogaev, on the coast of the Sea of Okhotsk was one of the places being developed.

United States. The Navy continued to develop on the principle that its vital function would be to bring the enemy to American terms as quickly as possible, while keeping him at a safe distance from our shores. New construction, both for the orderly replacement of over-age vessels and aircraft, and for the orderly augmentation of existing strength, was continued with the view of bringing the naval strength up to that authorized by the Vinson-Trammell Act of 1934, and the Naval Expansion Act of 1938. The public and Congressmen, however, became increasingly concerned over the defenses of the country, and many questioned whether a navy of that strength would be adequate. The President announced that he would ask the next session of Congress to authorize further expansion of the fleet and to furnish the necessary funds therefor. Mr. Vinson, Chairman of the House Naval Affairs Committee, stated that he would introduce a naval authorization bill to provide for 95 ships, in addition to those already building, to include 3 aircraft carriers, 8 cruisers, 52 destroyers and 32 submarines and 6000 aircraft; estimated cost \$1,300,000,000. He estimated that by 1944 the under-age strength of the Navy would then be 15 battleships, 11 carriers, 173 destroyers, and 88 submarines. A critical situation that he did not discuss was the matter of auxiliary vessels to serve that fleet. Most of the existing auxiliaries were already old, and with difficulty met the existing fleet requirements. There were, however, nearly 80,000 tons of auxiliaries of half a dozen types under construction.

Naval aviation continued to be of ever-increasing importance in naval operations and great effort was exerted toward provision of adequate facilities for efficient operation of aircraft. The need for expanded facilities (aircraft tenders and naval air stations) was recognized and improvement in existing plants and procurement and development of new ones made rapid progress.

To take care of the operations of the Navy and the new construction during the fiscal year 1939, \$633,000,000 was paid out, aside from \$40,000,000 of emergency funds that were allotted to the Navy. The appropriations for the fiscal year 1940 amounted to \$773,000,000. One of the items eliminated from the Department's recommendations was funds for a naval air base at Wake. Funds were provided, however, for work at the Pacific Islands of Midway, Johnston, and Palmyra. The largest single item was \$254,000,000 for new construction. Over \$80,000,000 was allotted to naval aviation. Provision was made for 5000 additional men in the Navy.

During the year the heavy cruiser *Wichita* and the light cruiser *St. Louis* were the only two large ships to join the fleet, but the carrier *Wasp* held successful trials at sea in December. A number of destroyers and submarines were completed and delivery of aircraft proceeded at a satisfactory rate.

On May 23, 1939, the new submarine *Squalus* (q.v.) while making a dive was disabled in 240 feet of water but was promptly located and 33 of her crew of 59 were rescued. The submarine was raised after nearly four months salvage operations.

When war broke out in Europe the President set in motion machinery to maintain American neutrality and to keep informed of belligerent activities within three hundred miles of any United States territory. Patrol planes, cruisers, and destroyers were primarily used for that duty. A state of limited national emergency was proclaimed. Numerous out-of-commission ships were placed in service, enlisted personnel was being rapidly increased to 145,000 men, a number of retired and reserve officers were called to active duty, training programs were accelerated; and other steps were taken in order that the Navy might carry out its assigned duties in connection with enforcement of neutrality.

Yugoslavia. The government continued its policy of building up a small modern torpedo flotilla, the latest units of which were *Beograd* built in France, and *Zagreb* and *Ljubljana* built in Split. A 2400-ton flotilla leader was nearing completion. In the disturbed state of Europe, consideration was given to building 10 additional vessels, at least two of which were to be built in home yards.

NAVIGATION. See SHIPPING; NAVAL PROGRESS.

NAVY, U.S. DEPARTMENT OF THE. Secretary of the Navy Claude A. Swanson (q.v.) died in July, 1939, and Assistant Secretary Charles Edison of New Jersey was subsequently authorized by Congress to serve as Acting Secretary until his appointment as Secretary on Dec. 30, 1939. Chief of Naval Operations was Adm. William D. Leahy of Wisconsin. See NAVAL PROGRESS. For expenditures, see the table under PUBLIC FINANCE.

NAZARENE, CHURCH OF THE. See RELIGIOUS ORGANIZATIONS.

NAZISM. See ARGENTINA, BELGIUM, BRAZIL, BULGARIA, CZECHO-SLOVAKIA, DENMARK, ESTONIA, GERMANY, HUNGARY, LATVIA, NETHERLANDS, THE; RUMANIA, SOUTH AFRICA, UNION OF; YUGOSLAVIA; also FASCISM.

NEBRASKA. Area and Population. Area, 77,520 square miles; included (1930) water, 712 square miles. Population: Apr. 1, 1930 (census), 1,377,963; July 1, 1937 (Federal estimate), 1,364,000; 1920 (census), 1,296,372. Omaha had (1930) 214,006 inhabitants; Lincoln, the capital, 75,933.

Agriculture. Nebraska harvested, in 1939, 17,645,000 acres of principal crops. This was less by about 11 per cent than the average for the decade 1928-37. Corn, on 6,836,000 acres, gave 82,032,000 bu. (estimated value on the farm, \$43,477,000); wheat, on 3,199,000 acres, 36,376,000 bu. (\$24,736,000); tame hay, on 909,000 acres, 1,118,000 tons (\$6,261,000); oats, 1,419,000 acres, 20,576,000 bu. (\$6,173,000); barley, 1,127,000 acres, 14,651,000 bu. (\$5,567,000); potatoes, 81,000 acres, 7,695,000 bu. (\$5,079,000); grain sorghums, 541,000 acres, 5,410,000 bu. (\$2,705,000); rye, 446,000 acres, 3,568,000 bu. (\$1,356,000). Sugar beets, on 70,000 acres, yielded 789,000 tons.

Manufacturing. In 1937, 1071 manufacturing establishments in Nebraska (in 1935, 1140) employed 19,590 wage-earners (in 1935, 17,855), who received in wages \$22,126,285 (in 1935, \$18,128,527); the output of manufactured products attained \$282,502,287 (in 1935, \$247,727,078), the part contributed by the processes of manufacture being \$67,425,143 (in 1935, \$58,394,983).

Manufactures mainly consisted of the processing of grain and of animal products. Meat-packing, grain-milling, and the making of butter accounted for the greater part of the industrial output. The dressing of poultry and the preparation of grease and tallow were minor sources of production in the same general field. Meat-packing establishments numbered 17 in 1937, and employed 5012 wage-earners; their product totaled \$112,708,382. Factories' output of butter totaled \$23,291,846; flour and other products of the grain mills amounted to \$25,524,101. Omaha, where most of the manufacturing centred, produced, in 1937, \$201,874,459 in manufactured goods.

Education. For the academic year 1938-39 Nebraska's inhabitants of school age (from 5 to 21) were reckoned as 376,909. Enrollments of pupils in the public schools numbered, for that year, 282,102; this comprised 197,622 in the elementary group and 84,480 in high schools. The year's expenditures for public-school education totaled \$20,319,467. Salaries of the 13,791 teachers for the year averaged, according to groups, from \$1128.07 to \$497.22.

Legislation. The unicameral Legislature convened in regular biennial session in January. It continued to draw attention as an innovation in State government, but its failure to dispose of problems more rapidly than the former Legislature of the ordinary bicameral type was noted against it. It passed two acts restricting the authority of the State's public power districts in some respects. The new acts were regarded as hindering negotiations for the power districts' purchase of the properties of the Iowa-Nebraska Light and Power Company, which feared that the State-fostered electric enterprise would lack authority to fix its rates and find it impossible to

finance the intended purchase. The Legislature eased some features of the laws affecting delinquent taxpayers and made a change in the administration of the tax on alcoholic beverages.

Political and Other Events. Plans to add the property of the Iowa-Nebraska Light and Power Company, a privately owned producer and distributor of electricity, to the works of the State's three public power districts were defeated in January, after long-continued negotiations. The company withdrew from these negotiations, declaring on January 23 that the districts would not, as had been expected, be able to finance the proposed purchase. It appeared that a measure introduced in the State Legislature, taking from the power districts the authority to fix rates for their product, had disposed investment bankers to doubt the merit of the districts' undertakings to repay debts incurred.

Later The Loup River Public Power District made, October 2, a contract with the Nebraska Power Company, which undertook to purchase electric current from the District, under terms that would bring the company about the immediate whole output of the three districts (already mutually bound by a selling agreement) and 40 per cent of their possible ultimate output.

The Missouri River's bed was changed by the Army Engineers at a point near Rulo, in the southeastern corner of the State, to do away with the only remaining unnavigable water between Kansas City and Omaha. The new bed ran about three-fourths of a mile from the old.

Investigation of the failure of the First Mortgage Acceptance Corporation of Omaha was followed by the resignation of the Director of the State Securities Bureau.

Officers. Nebraska's chief officers, serving in 1939, were: Governor, R. L. Cochran (Dem.); Lieutenant-Governor, William E. Johnson; Secretary of State, Harry R. Swanson; Auditor, Ray C. Johnson; Treasurer, John Havekost; Attorney-General, W. R. Johnson; Superintendent of Public Instruction, Charles W. Taylor.

NEBRASKA, UNIVERSITY OF. A State institution of higher education in Lincoln, Neb., founded in 1869. The net enrollment for the autumn of 1939 was 6771. There were 2231 students enrolled in the summer session of 1939. The faculty numbered 382 full-time members. The permanent endowment fund amounted to \$961,121. The library contained 341,000 volumes. Chancellor, Chauncey Samuel Boucher, Ph.D.

NEC. National Emergency Council. See GOVERNMENT REPORTS, OFFICE OF.

NECROLOGY. The following list contains the names of notable persons who died in 1939. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without text.

ABBOTT, GRACE, died June 19, 1939.

ABERDEEN AND TEMAIR, ISHBEI MARIA, MARCHIONESS OF. British social worker; died at Aberdeen, Apr. 18, 1939. See N. I. ENCY., VOL. I, p. 32. Her memoirs, *The Musings of a Scottish Granny*, appeared in 1936.

ADAMS, JOHN T. An American lawyer and politician; died in Dubuque, Ia., Oct. 28, 1939. See N. I. SUPP., VOL. I, p. 7. During 1931-36 he was a member of the advisory committee of the Inland Waterways Corporation.

ALBERT, DUKE OF WURTEMBERG. German general, died at Stuttgart, Oct. 29, 1939. See N. I. ENCY., VOL. I, p. 63. During the World War he was commander of Germany's Fourth Army.

ALBERTI, MARIO. Italian economist; born, 1889; died in Como, Italy, Jan. 19, 1939; president of the Italian War Debts Bureau (1925); member, Italian delegation for Debt Settlement with the United States (1925); chairman, League of Nations Committee of Control of the

Guaranteeing States for the Austrian Loan; member of the League of Nations Financial Committee.

ALEXANDER, HARTLEY BURR. American educator, died at Claremont, Calif., July 27, 1939. See N. I. ENCY., VOL. I, p. 379 and N. I. SUPP., VOL. I, p. 65. After 1927 he was professor of philosophy at Scripps College, Claremont. His latest work was *God and Man's Destiny* (1936).

ALEXANDER, WALLACE M. American sugar manufacturer, died in Honolulu, Nov. 21, 1939. See N. I. SUPP., VOL. I, p. 66.

ALLEN OF HURTWOOD, BARON, REGINALD CLIFFORD ALLEN. British Socialist; born at Newport, Mon., England, May 9, 1889; died at Montana-Vermala, Switzerland, Mar. 3, 1939. After the World War he was treasurer and chairman of the Independent Labour Party and of the *New Leader* (1922-26), and was a member of the Labour and Socialist International (1924-26). During 1925-30 he was a director of the *Daily Herald*.

ALSCHULER, SAMUEL. American jurist; died in Chicago, Nov. 9, 1939; born there, Nov. 20, 1859. Appointed by President Wilson a judge of the U.S. Circuit Court of Appeals on Aug. 16, 1915, he served until May 15, 1936 when he resigned. He served as arbitrator between packers and their employees by order of the U.S. Secretary of Labor in 1918 and as a member of the U.S. Coal Commission in 1922 by appointment of President Harding.

ANDREWS, CHARLTON. American author, died at Boothbay Harbor, Me., Aug. 13, 1939. See N. I. SUPP., VOL. I, p. 81. After 1928 he returned to the faculty of Stuyvesant High School, New York City.

ANGELL, FRANK. American psychologist; died in Palo Alto, Nov. 2, 1939; born in South Scituate, R. I., 1857. Associated with Stanford University from 1893 as professor of psychology, he was retired as emeritus in 1923. Because of his interest in sports, Angell Field at the University was named in his honor. During the World War he was a member of the Belgian Relief Commission.

ANSLEY, CLARKE FISHER, died Feb. 14, 1939.

ANTHONY, ALFRED WILLIAMS. American theologian; died in Waltham, Mass., Jan. 20, 1939. See N. I. SUPP., VOL. I, p. 86. After 1929 he was a member of the advisory committee of the Union of Congregational and Christian Churches, retiring in 1933.

ANTIGA Y ESCOBAR, JUAN. Cuban physician and politician; Secretary of Labor in cabinet of Carlos Mendieta (1934); minister to Switzerland (1937-39), and permanent Cuban delegate to the League of Nations; died in Havana, Feb. 9, 1939; born in Mayajigua, Cuba, May 23, 1871.

ARROS, ENRIQUE FERNANDEZ. Spanish musician; died in San Sebastian, Spain in June, 1939. See N. I. ENCY., VOL. II, p. 20 and N. I. SUPP., VOL. I, p. 93. He conducted his ballet "En Triana" at its première at the Paris Opéra in 1929 and in the same year made his last American visit.

ARNOLD, EDMUND GEORGE. British trade unionist; died in Leeds, July 13, 1939; born in Barnstaple, June 28, 1865. He was president of the Federation of Master Printers and Allied Trades of Great Britain and Ireland (1916-18), Lord Mayor of Leeds (1916-17), and pro-chancellor of the University of Leeds (1921-26).

AROSEMENA, JUAN, died Dec. 15, 1939.

ARPS, GEORGE F. American psychologist; died in Columbus, O., Sept. 16, 1939; born at Cary, Ill., Jan. 23, 1874. Associated with Ohio State University as professor of psychology and head of the department, from 1912, he was also dean of the College of Education (1920-37), and dean of the Graduate School thereafter.

BACKHOUSE, SIR ROGER R.C. British admiral, died in London, July 15, 1939; born Nov. 24, 1878. Entering the Navy in 1891, he saw service during the World War, was promoted to admiral in 1934, became commander of the Home Fleet in 1935, and after 1938 was First Sea Lord and Chief of the Naval Staff. He retired on May 17, 1939.

BAHADUR, SIR ADITYA NARAYAN SINGH. Maharajah of Benares; born, Nov. 17, 1874; succeeded to the gadi 1931; died in Benares, Apr. 5, 1939.

BAKER, THOMAS STOCKHAM, died Apr. 7, 1939.

BALFOUR, HENRY. British anthropologist; curator of Pitt Rivers Museum at Oxford (1891-1939); born, 1863; died in London, Feb. 9, 1939. President, Anthropological Institute of Great Britain and Ireland (1903-04) and the Royal Geographical Society; wrote chiefly on ethnological and archaeological subjects.

BARGER, GEORGE. Scottish chemist; died at Basle, Jan. 5, 1939. See N. I. SUPP., VOL. I, p. 168. He was appointed Regius professor of Chemistry at Glasgow University in 1938, and received the Hanbury medal of the Pharmaceutical Society in 1934, the Longstaff medal of the Chemical Society in 1936, and the medal of the Royal Society in 1938.

BARTH, CARL G. American mechanical engineer; died in Philadelphia, Oct. 28, 1939; born in Christiania (Oslo), Norway, Feb. 28, 1860. Associated with Frederick W. Taylor, the father of scientific management after

1901, he developed and introduced the Taylor system of scientific management until his retirement in 1923. During 1911-16 he lectured at Harvard University and during 1914-16 at the University of Chicago.

BATES, ERNEST SUTHERLAND, died Dec. 4, 1939.

BEATY, AMOS L. American lawyer; president of the Texas Co., (1920-27), the American Petroleum Institute (1931-32); and chairman of the Petroleum Code Authority of the National Recovery Administration (1934); born in Red River Co., Tex., Sept. 1, 1870; died in New York, Apr. 29, 1939.

BEGGS, GEORGE ERLE. American civil engineer, died in Princeton, N. J., Nov. 23, 1939; born in Ashland, Ill., Apr. 22, 1883. An authority on bridge building, he was associated with Princeton University from 1914 and was professor of civil engineering after 1930, and head of the department after 1937. He wrote *Live Load Stresses in Railway Bridges* (1916), and in October, 1939 was elected chairman of the Engineering Foundation.

BENSON, SIR FRANK. British actor-manager, died in London, Dec. 31, 1939. See N. I. SUPP., Vol. 1, p. 195. During 1920-29 he appeared in *Hamlet*, *The Merchant of Venice*, *The School for Scandal*, etc., and his last role was as Dr. Calus in *The Merry Wives of Windsor* (1933). He published *My Memoirs* (1930).

BERNSTORFF, COUNT JOHANN HEINRICH VON. German diplomat, died in Geneva, Oct. 6, 1939. See N. I. ENCY., Vol. III, p. 190, and N. I. SUPP., Vol. 1, p. 201. A member of the German Diet until 1928 and president of the German League of Nations Union until 1933, he thereafter lived in self-imposed exile in Switzerland. He wrote *My Three Years in America* (1920) and *Memoirs of Count Bernstorff* (1936).

BETHELL, HENRY ARTHUR. British officer; died Oct. 7, 1939; born in Bath, Dec. 14, 1861. He served in the Royal Field Artillery from 1860 to 1911 and again during the World War as a brigadier general. He was noted for his contributions to artillery science for which he received the Lefroy Medal. He wrote *Modern Guns and Gunnery* (1906) and *Modern Artillery in the Field* (1910).

BIGELOW, WILLARD DELL. American chemist; died in Washington, Mar. 6, 1939. See N. I. ENCY., Vol. III, p. 276. He became chief chemist for the National Cancer's Association in 1913 and after 1918 was director of their research laboratories.

BIRCH, SIR (JAMES FREDERICK) NOEL. British soldier; died in London, Feb. 3, 1939; born, Dec. 29, 1865. He entered the army in 1885 and served throughout the World War as artillery adviser to the commander-in-chief in France (1916-19). Thereafter he was master-general of the Ordnance and member of the Army Council (1923-27). Promoted to general in 1926, he retired in the following year.

BITTNER, JULIUS. Austrian composer; died in Vienna, Jan. 9, 1939. See N. I. SUPP., Vol. 1, p. 211.

BLED SOE, SAMUEL T. American lawyer; counsel for the Atchison, Topeka & Santa Fe Railway from 1908 and president and chairman of the executive committee, 1933-39; born, Clinton Co., Ky., May 12, 1868; died, Chicago, Mar. 8, 1939.

BODANZKY, ARTUR, died Nov. 23, 1939.

BOLLES, ALBERT S. American lawyer, educator, and author; died in Williamstown, Mass., May 8, 1939. See N. I. ENCY., Vol. III, p. 481. His latest work was *Putnam's Handy Law Book for the Layman* (1921; 1925).

BOLTON, CHESTER C. American Republican Congressman from Ohio; died in Cleveland, Oct. 29, 1939; born there, Sept. 5, 1882. He served in Congress from 1929 to 1936 when he was defeated, but in November, 1939 he was re-elected.

BONYTHON, SIR (JOHN) LANGDON. Australian newspaper publisher; died in October, 1939; born in London, Oct. 15, 1848. Associated with the *Adelaide Advertiser* from 1864, he was the editor and sole proprietor from 1894 to 1924. He was noted for his many liberal contributions to Adelaide University.

BÓRQUEZ SOLAR, ANTONIO. See SPANISH-AMERICAN LITERATURES, Chile, Necrology.

BRABOURNE, BARON, MICHAEL HERBERT RUDOLPH KNATCHEBULL. British administrator; Governor of Bombay, 1933-37; Governor of Bengal, 1937-39; died in Calcutta, Feb. 23, 1939; born in Kent, May 8, 1895.

BRADLEY, DAN FREEMAN. American Congregational clergyman (ordained in 1885); died in Cleveland, O., Nov. 11, 1939; born in Bangkok, Siam, Mar. 17, 1857. He was acting president of Yankton College (1889-92), pastor of the First Congregational Church, Grand Rapids, Mich., (1892-1902), president of Grinnell College (1902-05), and thereafter pastor of Pilgrim Congregational Church in Cleveland until his retirement in 1937.

BRADY, ALICE. American actress; died in New York, Oct. 28, 1939. See N. I. SUPP., Vol. 1, p. 241. In 1931 she had one of the leading roles in Eugene O'Neill's trilogy, *Mourning Becomes Electra*. Her last New York appearance was in *Mademoiselle* (1932). She returned to motion pictures in 1933, and her performance of Mrs. O'Leary in *Old Chicago* (1938) won her a Motion Picture

Academy Award. Her last film was *Young Mr. Lincoln* (1939).

BRAWLEY, BENJAMIN. American Negro clergyman and educator, died in Washington, Feb. 1, 1939. See N. I. SUPP., Vol. 1, p. 243. In 1931 he became professor of English at Howard University.

BREWER, GEORGE EMERSON, died Dec. 24, 1939.

BRISTOL, REAR ADMIRAL MARK LAMBERT, U.S.N., RET., died May 13, 1939.

BRITT, JAMES J. American lawyer; died in Asheville, N. C., Dec. 26, 1939; born in Johnson City, Tenn., Mar. 4, 1861. He was a Republican Congressman from North Carolina during 1915-19 and was chief counsel for the Bureau of Industrial Alcohol and the Bureau of Prohibition of the Treasury Department during 1922-32.

BRODIE, EDWARD E. American publisher and diplomat; born in Fort Stevens, Ore., Mar. 12, 1876; died in Salem, Ore., June 27, 1939. Editor and publisher of the *Oregon City Morning Enterprise* (1908-35) he was Envoy Extraordinary and Minister Plenipotentiary to Siam (1921-25) and to Finland (1930-33).

BROWN, (MATTHEW) HEYWOOD (CAMPBELL), died Dec. 18, 1939.

BROWN, SIR EDWARD. British poultry expert, first president of the World Poultry Science Association (1912-27); founder of World's Poultry Congresses and National Poultry Council, Inc.; author of *Poultry Breeding and Production* (2 vol., 1929) and *Memoirs at Eventide* (1934); died at Theale, Berks., Aug. 7, 1939; born at Newcastle, Sept. 8, 1851.

BROWN, JAMES. Scottish Labor M.P.; born in Ayr, Dec. 16, 1862; died there, Mar. 21, 1939. He represented South Ayrshire during 1918-31 and after 1935; was secretary of the Scottish Miners' National Union (1917-21), and was Lord High Commissioner to the Church of Scotland in 1924, 1930, and 1931, the first commoner to hold this position in 300 years.

BROWN, WALLACE E. American Methodist Episcopal bishop; died in Portland, Ore., Nov. 18, 1939; born in Chittanooga, N. Y., Oct. 30, 1868. Ordained in 1894, he was elected Bishop on May 25, 1924 and served in China, Helena, Mont., Chattanooga, Tenn. On June 9, 1939 he was transferred to the diocese of Oregon, Washington, Idaho, and Alaska.

BROWN, WILLIAM HENRY. American botanist; died in Baltimore, Nov. 9, 1939; born in Richmond, Va., Oct. 6, 1884. After 1911 he held a variety of positions in the Philippines, including that of professor of botany and head of the department at the University of Philippines (1919-24) and director of the Bureau of Science, Manila (1924-33). In February, 1938 he became a lecturer in botany at Johns Hopkins University. An authority on tropical trees he was the author of *A Textbook of General Botany* (1925) and *The Plant Kingdom* (1935).

BROWNE, SIR GEORGE WASHINGTON. Scottish architect, architect of the Edinburgh Public Library (1887-90) and the Scottish National Memorial to King Edward (1912-22); died in Edinburgh, June 15, 1939; born in Glasgow, Sept. 21, 1853.

BROWNRIIG, SIR DOUGLASS. British naval officer; born July 25, 1867; died in Cannes, France, Feb. 14, 1939. During the World War he served as chief censor at the Admiralty, retiring with the rank of rear-admiral in 1919. He published *Indiscretions of the Naval Censor* (1919).

BRUCE, CHARLES GRANVILLE. British soldier and explorer, died in London, July 12, 1939; born Apr. 7, 1866. He retired from the Army in 1920 after service in the East and devoted himself thereafter to scaling Mt. Everest. He led two attempts, one in 1922 and one in 1924, neither of which were successful, but which set records for the distance covered. He received the Gill Memorial Prize of the Royal Geographical Society (1915), the Founders' Medal, and a gold medal of the Société de Géographie Française, and wrote *The Assault on Mount Everest*, 1922 (1923), and *Himalayan Wanderer* (1934).

BRUCHESI, PAUL. Canadian Roman Catholic Archbishop of Montreal; died in Montreal, Sept. 20, 1939. See N. I. ENCY., Vol. IV, p. 54. He retired from active duties in 1919.

BULL, GEORGE D., S.J. American Roman Catholic clergyman; born in New York in 1890; died there, May 27, 1939. He entered the Society of Jesus in 1908, was ordained in 1922, taught philosophy at Woodstock College (1929-32) and was professor and head of the department of philosophy at Fordham University from 1933. He was recognized as an authority on scholastic philosophy.

BURNETT, CHARLES. American soldier; died in Washington, Nov. 27, 1939; born in Knoxville, Tenn., Oct. 28, 1877. He entered the army in 1901 and saw service as military attaché in Tokio in 1923, as adviser to the American delegation at the London Naval Conference in 1930, and in 1937 was appointed chief of the Bureau of Insular Affairs of the War Department, with the rank of brigadier-general. In July, 1938 he was made executive officer in the office of the Chief of Cavalry with the rank of colonel.

BURNHAM, JOHN BIRD. American conservationist; died in Willsboro, N. Y., Sept. 24, 1939; born in New

Castle, Del., Mar. 16, 1869. He served as chief game protector and department commissioner, State Forest Fish and Game Commission of New York (1905-11), as president of the American Game Protective Association (1911-28), as chairman of the advisory commission to U.S. Department of Agriculture on migratory bird law (1913-31), and chairman of the U.S. Forest Service Committee on game in national forests (1913-31). His book *The Rim of Mystery* (1929) tells of an expedition to Siberia in 1921 for a rare specimen of mountain sheep.

BURR, GEORGE E. American artist, known for his etchings of Southwestern desert scenes; died in Phoenix, Ariz., Nov. 17, 1939; born in Monroe Falls, O., Apr. 15, 1859. His work is in the Luxembourg, Paris and in the Metropolitan Museum of Art, New York.

BURT, EDWARD A. (NGUS). American botanist; born in Athens, Pa., Apr. 9, 1859; died in Saratoga Springs, N. Y., Apr. 27, 1939. One of the leading botanists in the United States, Dr. Burt was professor of natural history at Middlebury College (1895-1913), librarian and mycologist, Missouri Botanic Garden and professor of botany at Washington University, St. Louis, (1913-25) when he retired. He wrote the text for *Farlow's Illustrations of the Larger Fungi* (1929) and his herbarium is preserved in the Farlow Herbarium and Library at Harvard University.

BUSCH, BECERRA, GERMAN, died Aug. 23, 1939.

BUTLER, PIERCE, died Nov. 16, 1939.

BUTTENWIESER, MOSES. American Biblical scholar; died at Palo Alto, Calif., Mar. 12, 1939. See N. I. ENCY., VOL. I, p. 279. He retired as professor of Biblical Exegesis at Hebrew Union College, Cincinnati in 1934, and in 1937 published *The Psalms*.

CADOT, RICHARD CLARKE, died May 8, 1939.

CALINESCU, ARMAND, assassinated Sept. 21, 1939.

CAPFON, JAMES. Canadian educator; died in Kingston, Ont., Sept. 19, 1939. See N. I. ENCY., VOL. IV, p. 508 and N. I. SUPP., VOL. I, p. 302.

CARPENTER, GEORGE HERBERT. British entomologist, professor of zoology at Royal College of Science, Dublin (1904-22) and Keeper of the Manchester Museum, University of Manchester, 1923-34; died Jan. 22, 1939; born in London, 1865. He edited the *Irish Naturalist* (1892-1922) and was the author of several books on insects, the latest being *The Biology of Insects* (1928).

CARROLL, BRYL F. American politician, governor of Iowa during 1909-11 and 1911-13; died in Louisville, Ky., Dec. 16, 1939; born in Davis Co., Ia., Mar. 15, 1860.

CARTER, HOWARD, died Mar. 2, 1939.

CASLER, HERMAN. American inventor of the Biograph, forerunner of the modern motion-picture projector, first shown to the public in New York, Oct. 12, 1896; died in Canastota, N. Y., July 20, 1939; born in Sandwich, Ill., in 1867.

CASTILLO, EDUARDO. See SPANISH-AMERICAN LITERATURES, Chile, Necrology.

CEDILLO, GEN. SATURNINO. Mexican politician, ruler of the State of San Luis Potosi, and at various times Mexican minister of agriculture. In May, 1938 he led an unsuccessful revolt against the Mexican Government, and on Jan. 11, 1939 was killed near Mathuala, San Luis Potosi in a clash with Federal troops.

CESPEDES Y QUESADA, CARLOS MANUEL DE, died Mar. 28, 1939.

CHANDLER, COL. CHARLES DE FOREST, U.S.A., RET., died May 17, 1939.

CHAPMAN, FRANCIS. American lawyer; dean of Temple University Law School from 1906; author of *Principles of the Law of Evidence* (1930); born in Burlington, N. J., Aug. 19, 1869; died in Philadelphia, May 2, 1939.

He served in various cabinets, as minister of mercantile marine (1931-32; 1936); minister of colonies (1932) minister of marine (1934; Apr., 1938-Sept. 1939).

CHEN LU, assassinated Feb. 19-20, 1939.

CHESHIRE, FREDERIC JOHN. British physicist; died in Reading, Mar. 24, 1939; born in Leeds, June 8, 1860. He lectured on physics at Birkbeck College for 25 years and was formerly director of the optical engineering department of the Imperial College, South Kensington. He was president of the Optical Society (1916-20) and of the Royal Microscopical Society (1922-24).

CHILTON, WILLIAM E. American lawyer and ex-Senator, died in Charleston, W. Va., Nov. 7, 1939. See N. I. ENCY., VOL. V, p. 202.

CHLAPOWSKI, COUNT ALFRED. Polish diplomat, ambassador to France (1924-36); born at Poznan, Poland, Oct. 5, 1874; reported executed by the Germans, November, 1939.

CIANO OF CORTELLAZZO, COUNT CONSTANZO. Italian naval officer and politician; born at Leghorn in 1876; died at Ponte Moriano, Tuscany, June 27, 1939. During the World War he served as Admiral of the Fleet. Elected a

deputy in 1921 he served as minister of posts in 1924, and of communications during 1924-34. Thereafter he was president of the Chamber, and in 1938, upon its reorganization as the Chamber of Fasces, he was named president.

CLERGUE, FRANCIS. Canadian-American industrialist; died in Montreal, Jan. 19, 1939. See N. I. ENCY., VOL. V, p. 447. He founded and was first president of the Algoma Steel Corporation which constructed the first Bessemer steel plant in Canada.

COLBY, JAMES FAIRBANKS. American lawyer, died in Hanover, N. H., Oct. 21, 1939; born in St. Johnsbury, Vt., Nov. 18, 1850. He was associated with Yale University during 1879-85, and thereafter was Parker professor of law and political science at Dartmouth College. He was retired as professor emeritus in 1916.

COLCORD, ROSWELL K. American politician; died in Carson City, Nev., Oct. 30, 1939; born in Searsport, Me., Apr. 25, 1939. He was governor of Nevada during 1890-94 and superintendent of the mint at Carson City from 1898 to 1911.

COLE, GEORGE WATSON. American librarian and bibliographer, died at San Marino, Calif., Oct. 10, 1939. See N. I. ENCY., VOL. V, p. 571. He became librarian of the Henry E. Huntington Library and Art Gallery at San Marino in 1915 and was retired as librarian emeritus in 1924. The author of many works on bibliography, including *A Survey of the Bibliography of English Literature, 1475-1640* (1930) and *Index to Bibliographical Papers* (1933), he gave, in 1937, his bibliographical collection to Yale University Library.

COLEMAN, ARTHUR PHILEMON. Canadian geologist; died in Toronto, Feb. 26, 1939. See N. I. ENCY., VOL. V, p. 572 and N. I. SUPP., VOL. I, p. 375. He was geologist for the Ontario Department of Mines from 1931 to 1934, and was awarded the Victoria Medal of the Royal Geographical Society in 1933 and the Penrose Medal of the Geological Society of America in 1936.

COLLIER, BARRON, died Mar. 13, 1939.

COMISKEY, J. LOUIS. American sportsman, owner and president of the Chicago White Sox Baseball Club of the American League; died in Eagle River, Wis., July 18, 1939; born in Dubuque, Ia., Aug. 12, 1885.

COOK, SIR HERBERT FREDERICK. British financier; chairman until 1931 of Cook, Son & Co., Ltd.; died in Richmond, May 4, 1939; born, Nov. 18, 1868. Interested in art, he was a trustee of the National Portrait Gallery (1916-30) and of the National Gallery (1923-30), and was one of the founders of the National Art Collections Fund.

COOKE, GEORGE ALBERT. British clergyman; died at Cheltenham, Sept. 9, 1939. See N. I. ENCY., VOL. VI, p. 30. Rector of Bettiscombe, Bridport, Dorset, he was Oriel professor of the Interpretation of Holy Scripture at Oxford (1908-14) and Regius Professor of Hebrew, Oxford and Canon of Christ Church (1914-36). He published a *Prayer-Book Psalter Revised* in 1939.

CORCORAN, FRANCIS VINCENT, C.M. American Roman Catholic clergyman and educator; born in Pittsburgh, Pa., May 6, 1879; died in Los Angeles, Jan. 28, 1939. He entered the Congregation of the Missions, and was ordained July 27, 1902, and was subsequently professor of theology (1907-30) and vice-president (1926-30) of Kenrick Seminary, St. Louis, Mo.; president, De Paul University, Chicago, (1930-35), and superior of Los Angeles College from 1936.

CORTIGIAN, EDWARD P., died Jan. 17, 1939.

COWLES, HENRY CHANDLER. American botanist, died in Chicago, Sept. 12, 1939. See N. I. ENCY., VOL. VI, p. 200. After 1915 he became professor of botany at the University of Chicago and was retired as emeritus in 1934, having served as chairman of the Department (1925-34). An outstanding botanist he was president of the Ecological Society of America (1918) and of the Botanical Society of America (1922), and editor of the *Botanical Gazette* (1925-34).

CRAMP, WILLIAM. British electrical engineer, professor of electrical engineering at the University, Edgbaston, Birmingham after 1919; died in Birmingham, Apr. 20, 1939; born in 1876. He invented the Cramp Single Phase Motor.

CRANE, CHARLES RICHARD. American manufacturer and diplomat; died in Palm Springs, Calif., Feb. 14, 1939. See N. I. SUPP., VOL. I, p. 406.

CRAVENS, (WILLIAM) BEN. American Congressman; born in Fort Smith, Ark., Jan. 17, 1874; died in Washington, Jan. 13, 1939; Dem. member of the 60th to 63d (1907-15) and the 73d to 75th (1933-39) Congresses, he advocated flood control and agricultural legislation.

CRAWFORD, JAMES PYLE WICKERSHAM. American Spanish scholar, professor of Spanish at the University of Pennsylvania from 1914; editor of *Hispanic Review* from 1933, and author of *Spanish Drama before Lope de Vega* (1923; rev., 1937); died in West Philadelphia, Pa., Sept. 22, 1939; born in Lancaster, Pa., Feb. 19, 1882.

CRISTEA, MIRON, died Mar. 6, 1939.

CRITZ, HUGH. American educator; born in Starkville, Miss., Dec. 21, 1876; died in Clarksdale, Miss., Jan. 28,

1939. He joined the faculty of Mississippi Agricultural and Mechanical College (subsequently Mississippi State College) in 1906, and served as its president during 1930-34.

CROMMELIN, ANDREW CLAUDE DE LA CHEROIS. British astronomer, died in London, Sept. 20, 1939; born in Cusendun, Ireland, Feb. 6, 1865. Assistant at the Royal Observatory at Greenwich from 1891 to 1927, he was president of the Royal Astronomical Society (1929-30) and of the British Astronomical Association (1904-06).

CRONAU, RUDOLF. American author, died at Tarrytown, N. Y., Oct. 27, 1939. See N. I. SUPP., VOL. 1, p. 408.

CROSBLEY, REAR ADMIRAL WALTER SELWYN, U.S.N., RET., died Jan. 6, 1939.

CRUIKSHANK, ERNEST ALEXANDER. Canadian soldier and historian, died in Ottawa, June 23, 1939. See N. I. ENCY., VOL. VI, p. 313. Appointed a brigadier-general in the permanent militia in 1915 he saw service during the World War and from 1919 to June 1, 1921 he was director of the Historical Section of the General Staff, when he retired. After 1919 he was chairman of the Historical Sites and Monuments Board. Among his later writings were a *History of the Great War* (1920), and in 1935 he received the Tyrrell gold medal of the Royal Society of Canada.

CUBITT, GEN. SIR THOMAS ASTLEY. British soldier and administrator, born in Norwich, Eng., Apr. 9, 1871; died in Amersham Common, Bucks., May 19, 1939. Entering the Army in 1891 he saw service in West Africa and during the World War, and from 1931 to 1936 was Governor and Commander-in-Chief of Bermuda.

CUMBERBATCH, ELKIN PERCY. British electro-therapist; born in Queen Charlton, June 20, 1880; died in London, Mar. 24, 1939. He served St. Bartholomew's Hospital, London as demonstrator in physiology at the Medical School (1911-13), as chief assistant to the X-ray department (1911-12), and after 1912 as medical officer in charge of the Electrical Department. Also, he was examiner in Medical Electrolgy at Cambridge University (1921-23; 1927-37), and wrote *Essentials of Medical Electricity* (7th ed.).

CUSHING, HARVEY WILLIAMS, died Oct. 7, 1939.

CUSTANCE, WILFRID NEVILLE. British naval officer, died at sea, December, 1939; born, June 25, 1884. He entered the navy in 1900, saw service in the World War, was promoted to rear-admiral in 1936 and in 1938 was given command of the Australian Squadron of the British navy.

CUSICK, PETER, S.J. American Roman Catholic clergyman; born in Scranton, Pa. 1876; died in New York Feb. 7, 1939. He entered the Society of Jesus, was ordained in 1895, and from 1923 to 1929 was president of Canisius College, Buffalo, N. Y. During 1931-38 he was director of the shrine of the North American Martyrs at Auriesville, N. Y.

CUTHBERT, VERY REV. FATHER, O.S.F.C. English Franciscan; born in Brighton in 1866; died in Assisi, Italy, in March, 1939. He entered the Order of Capuchin Franciscans in 1881, was ordained in 1889, and during 1911-30 was principal of the Franciscan House of Studies (Grosseteste House) at Oxford University, when he was appointed president of the Capuchin Franciscan College at Assisi.

DALY, J(OHN) BURRWOOD. American Congressman (Dem.) member of the 74th and 75th Congresses (1935-39); member of the House Appropriations Committee; born in Philadelphia, 1872; died there, Mar. 12, 1939.

D'AMBRA, LUCIO. Italian novelist and playwright; died in Rome, Dec. 31, 1939; born in 1880. His play, *L'Incendio Doloso* ("The False Alarm") was produced in New York City on Nov. 15, 1931.

DARANYI, KOLOMAN. Hungarian politician; died in Budapest, Nov. 1, 1939; born there, Mar. 22, 1886. Entering the cabinet in 1928, on Oct. 10, 1936 he succeeded Gombos as Premier. In an attempt to follow a middle road between the pro-Nazis and the Liberals, political necessity drove him into the German camp. On May 13, 1938 he resigned, the opposition claiming that he had acceded to Fascist demands and was unable to maintain peace and order. Subsequently he was elected president of the House of Representatives. See HUNGARY under *History*.

DAVIDSON, ISRAEL. American Hebrew authority; born in Yanova, Russia, May 27, 1870; died in Great Neck, L. I., June 27, 1939. After 1915 he became professor of medieval Hebrew literature at the Jewish Theological Seminary of America, and in 1926 he was visiting professor at the Hebrew University in Jerusalem. He published *Thesaurus of Medieval Hebrew Poetry* (4 vol., 1933).

DAVIES, J(OHN) VIPOND, died Oct. 4, 1939.

DE LA BARRA, FRANCISCO LEON. Mexican politician; died in Biarritz, France, Sept. 23, 1939; born in Querétaro, 1863. He was ambassador to the United States (1908-11), and in 1911 after the overthrow of Diaz was provisional president for about six months. In 1913 he was elected governor of the State of Mexico, but in the

following year went into exile in Paris, where he subsequently was professor of international law at the Sorbonne.

DELL, ETHEL M. (MRS. GERALD SAVAGE). English novelist, author of some 25 books, the latest being *Serpent in the Garden* (1938); died at Hertford, Sept. 17, 1939.

DETERDING, SIR HENRI, died Feb. 4, 1939.

DE VRIES, MARION. American lawyer; died in Lodi, Calif., Sept. 11, 1939. See N. I. ENCY., VOL. VI, p. 746. He resigned from the U.S. Court of Customs Appeals in 1922, having been presiding judge during 1921-22. Thereafter he practised law.

DMOWSKI, ROMAN. Polish politician; died in Warsaw, Jan. 2, 1939; born in 1864. Elected to the Russian Duma in 1903, he became the leader of the Poles, having previously founded the Polish National Democratic Party (1893). After the World War he headed the Paris committee of Poland recognized as the temporary government, and was a Polish delegate to the Paris Peace Conference and was a signer of the Versailles Treaty (1919). Elected to the Polish Diet in 1919, he served until 1922 when he became minister of foreign affairs (1923). His influence waned thereafter and in 1924 he retired from active politics. He founded in 1926 the Great Camp of Poland in opposition to Pilsudski.

DOHERTY, HENRY LATHAM, died Dec. 26, 1939.

DOLAN, FRANCIS JAMES, S.J. American educator; died in Worcester, Mass., Sept. 6, 1939; born in Jamaica Plain, Mass., July 14, 1893. He entered the Society of Jesus in 1912, was ordained in 1926, and in 1933 was appointed president of Holy Cross College.

DOLCI, ANGELO MARIA, CARDINAL. Italian Roman Catholic prelate; died at Civitella d'Agliano, Sept. 14, 1939; born there, July 12, 1867. Ordained in 1890, he was named Bishop of Gubbio in 1900. Appointed Archbishop of Amalfi in 1911 he served as Apostolic delegate to Constantinople (1914) as Nuncio to Belgium (1922) and to Rumania (1923-33). Elevated to Cardinal in 1933, he became a member of the Curia engaged in the Vatican's administrative affairs.

DOMINGO Y SAN JUAN, MARCELINO. Spanish politician; born in Tarragona; died in Toulouse, France, Mar. 2, 1939. A former leader of the Radical-Republican-Socialist party, he was in exile when King Alfonso abdicated in 1931. Returning to Spain he was elected to the Cortes as a Radical Socialist and subsequently he became minister of public instruction, and minister of agriculture. He visited the United States in 1936 to obtain support for the Spanish Loyalist Government. He wrote many political tracts and pamphlets as well as several plays.

DONNELLY, CHARLES. American railroad official, president of the Northern Pacific Railway from Dec. 1, 1920; died in St. Paul, Minn., Sept. 4, 1939; born in Wisconsin Rapids, Wis., Nov. 9, 1869.

DOUGLAS, SIR (HENRY) PERCY. British naval officer, died in Dover, England, Nov. 4, 1939; born, Nov. 1, 1876. He entered the Navy in 1890, served in the surveying service (1897-1924), and was hydrographer of the Navy (1924-32). Promoted to rear admiral in 1927, he was placed on the retired list in 1929, and was promoted to vice admiral, retired, in 1931, and knighted in 1933. Thereafter, he was acting conservator of the Mersey (1933) and chairman of Dover Harbour Board (1934). Admiral Douglas invented the Douglas Protractor and was co-inventor of the Douglas-Appleyard Arcless Sextant.

DUNN, HERBERT OMAR. American naval officer; born in Westerly, R. I., May 29, 1857; died in Baltimore, Md., Feb. 13, 1939. He was promoted through the grades to rear admiral (1915) and was retired in 1921. During the World War he commanded the 5th Division of the Atlantic fleet and the Azores detachment, U.S. Atlantic fleet. Admiral Dunn was the inventor of the Dunn anchor.

DUVEEN OF MILBANK, BARON, JOSEPH DUVEEN, died May 25, 1939.

DYSON, SIR FRANK WATSON, died May 25, 1939.

EARLE, REAR ADMIRAL RALPH, U.S.N., RET., died Feb. 13, 1939.

EASTMAN, CHARLES A. (OHIYESA). American physician died in Detroit, Mich., Jan. 8, 1939. See N. I. ENCY., VOL. VII, p. 422. In 1933 he received the first Indian Achievement Medal awarded by the Indian Council Fire of Chicago.

EGBERT, SENECA. American hygienist; died in Wayne, Pa., Dec. 6, 1939; born in Petroleum Center, Pa., Feb. 17, 1863. He was associated with the Medico-Chirurgical College at Temple University from 1893 to 1916, when he became professor of hygiene at the University of Pennsylvania Medical School. He was retired as emeritus in 1932. He wrote *Manual of Hygiene and Sanitation* (1898; 8th ed., 1926); *Personal Hygiene for Nurses* (1930).

ELLIS, (HENRY) HAVELOCK, died July 8, 1939.

ENNA, AUGUST. Danish composer, died in Copenhagen, Aug. 3, 1939. See N. I. ENCY., VOL. VII, p. 787.

FRANCE, JOSEPH IRWIN. American physician and senator; born in Cameron, Mo., Oct. 11, 1873; died in Port Deposit, Md., Jan. 26, 1939. Dr. France was elected Republican Senator from Maryland in 1917 and opposed American membership in the League of Nations and ad-

vocated recognition of Soviet Russia. He was defeated for re-election in 1923.

FRANCIS, JOSEPH M. American Protestant Episcopal Bishop; born in Eaglesmead, Pa., Apr. 6, 1862; died in Indianapolis, Ind., Feb. 13, 1939. Ordained in 1886, he did parish work until about 1888 when he went to Japan as a missionary. He returned in 1897 and two years later was consecrated Bishop of Indiana. He was vice chairman of the House of Bishops in 1934.

FRANK, TENNY. American classical scholar; born in Clay Center, Kans., May 19, 1876; died at Oxford, England, Apr. 3, 1939. Appointed professor of Latin at Johns Hopkins University in 1918, Dr. Frank was the first to hold the Eastman visiting professorship at Oxford University (1938-39). An authority on Roman history, he had written extensively on this subject, and was editor of *The American Journal of Philology* and associate editor of *The Classical Quarterly* and *The Classical Review*. During 1928-29 he was president of the American Philological Association.

FRANKLIN, FABIAN. American editor; born in Eger, Hungary, Jan. 18, 1853; died in New York, Jan. 9, 1939. After teaching mathematics at Johns Hopkins from 1879 to 1895, he became editor of the *Baltimore News* and in 1909, associate editor of the *New York Evening Post*, which position he held until 1917. From 1919 to 1922 he was co-editor of *The Review* (later changed to *The Independent and The Review*) and during 1922-24 was a contributing editor of *The Independent*. His last-published book was *Nuggets from the Wickersham Report* (1931).

FRANKLIN, P(HILIP) A(LBRIGHT) S(MALL), died Aug. 14, 1939.

FREAR, JAMES A. American lawyer; born in Hudson, Wis., Oct. 24, 1861; died in Washington, May 28, 1939. Republican Congressman from Wisconsin from 1913 to 1933, he held membership on the Ways and Means Committee and Indian Affairs and during the World War was chairman of the House Committee to Investigate War Contracts. He was House leader of the insurgent Republicans, opposed American entrance into the World War, the draft, and high surtaxes, but favored the payment of the soldiers' bonus.

FREE, EDWARD ELWAY. American scientist; died in New York, Nov. 24, 1939; born in Daguer Mines, Pa., May 3, 1883. Associated with the Department of Agriculture during 1906-12, thereafter he became head of the E. E. Free Laboratories, New York, as a consulting chemist and physicist. He edited *Scientific American* (1924-25) and was owner and editor of *The Week's Science*. His researches dealt particularly with fertilizers, acoustics, and ultra-violet rays.

FREUD, SIGMUND, died Sept. 22, 1939.

FRIEDLANDER, ALFRED. American medical educator; born in Cincinnati, O., July 5, 1871; died there, May 28, 1939. Associated with the University of Cincinnati from 1910, he was professor of medicine after 1919 and dean of the College of Medicine from 1934. He saw service in the World War and wrote *Hypotension* (1927).

FRIESEKE, FREDERICK CARL. American painter; died at Mesnil-sur-Blangy, Normandy, France, Aug. 28, 1939. See N. I. ENCY., VOL. IX, p. 290 and N. I. SUPP., VOL. I, p. 605. In March, 1938, a show of his work was held in New York City.

FRIITSCH, GEN. BARON WERNER VON, died Sept. 22, 1939.

FULDA, LUDWIG. German Jewish playwright; died in Berlin, Mar. 30, 1939. See N. I. ENCY., VOL. IX, p. 338 and N. I. SUPP., VOL. I, p. 606. He received the French Legion of Honor in 1933, and after 1936 was dropped from the Prussian Academy of Arts. One of his latest works was *Die Karriere* (1932).

FULTON, JOHN ALLAN. American mining engineer; died in San Francisco, Oct. 9, 1939; born in Reno, Nev., Sept. 24, 1878. He was director of the Mackay School of Mines of the University of Nevada after 1924 and director of the Nevada State Bureau of Mines after 1929. He was an unsuccessful Republican nominee for governor in 1938.

FUTRALL, JOHN CLINTON. American educator; died in Fayetteville, Ark., Sept. 12, 1939; born in Jackson, Tenn., Mar. 9, 1873. Associated with the University of Arkansas from 1894 as professor of Latin, he served as its president after 1914.

GALES, WESTON S. American musician; died in Portsmouth, N. H., Oct. 21, 1939; born in Elizabeth, N. J., Nov. 5, 1877. In 1914 he founded the Detroit Symphony Orchestra and was its conductor until 1917.

GAMBOA, FEDERICO. Mexican diplomat; died in Mexico City, Aug. 15, 1939, where he was born Dec. 22, 1864. In the diplomatic service from 1888 to 1913, he was ambassador to Spain in 1910, and during 1913-14 he was secretary of foreign affairs in the cabinet of President Huerta. In 1934 he published *Mi diario, mucho de mi vida y algo de la de los otros*. See SPANISH-AMERICAN LITERATURES, Mexico, Necrology.

GARDNER, ERNEST ARTHUR. British archaeologist; died at Maldenhead, November, 1939; born in London, 1862. Interested in archaeology from 1884, he served as director of the British School of Archaeology at Athens (1887-95)

and as Yates professor of archaeology at University College, London from 1886 to 1929. He worked mostly in Greece and one of his latest works was *The Art of Greece* (1925).

GARDNER, HENRY BRAYTON. American economist; died in Providence, R. I., Apr. 22, 1939. See N. I. ENCY., VOL. IX, p. 468. Founder of the economics department at Brown University, he was appointed first Eastman Professor of Political Economy there in 1919 and was retired as emeritus in 1928. He aided in the organization of the Brown Bureau of Business Research in 1922.

GARTH, THOMAS RUSSELL. American psychologist; died in Denver, Colo., Apr. 20, 1939; born in Paducah, Ky., Dec. 24, 1872. Associated with the University of Denver from 1922, he was a member of the Rockefeller Hookworm Investigation (1912), of the University Race Commission (1920), and during 1936-37 was a specialist with the U.S. Indian Bureau. He wrote *Race Psychology* (1931) and *Educational Psychology* (1937).

GASTER, MOSES. British Jewish scholar; died while motoring from Oxford to Reading, Mar. 5, 1939. See N. I. ENCY., VOL. IX, p. 503. He retired as chief rabbi of the Sephardic communities in England in 1919, but continued his activities in Jewish organizations. He was a prolific writer on educational, philological, and historical subjects.

GATES, MILO HUDSON, died Nov. 27, 1939.

GAY, FREDERICK PARKER. American pathologist; professor of pathology (1910-21) and of bacteriology (1921-23) at the University of California, and professor of bacteriology at College of Physicians and Surgeons, Columbia University thereafter. His researches were primarily in the action of sulfanilamide in streptococcus infection, typhoid fever, leprosy, and sleeping sickness. Born in Boston, Mass., July 22, 1874; died in New Hartford, Conn., July 14, 1939.

GEBBIE, SIR FREDERICK. British irrigation engineer; born in Buenos Aires, Aug. 7, 1871; died in Buckland, Surrey, Mar. 20, 1939. An engineer from 1893, he was chairman of the Nile Projects Commission, 1920; Inspector-General of Irrigation in India in 1921, and consulting engineer to the Government of India from 1923 to 1925 when he retired. He was knighted in 1925.

GHIAZI I, died Apr. 4, 1939.

GHERARDI, WALTER R. American rear admiral; died in Bohemian Grove, Calif., July 24, 1939; born in Honolulu, H. I., Aug. 9, 1875. Entering the U.S. Navy in 1894, after service during the World War he was promoted to rear admiral in 1930, and was commander of the First Naval District and Navy Yard, Boston (1935-38) and thereafter president of the General Court-Martial, Twelfth Naval District, San Francisco.

SPENCER, LORILLARD. American aeronautical manufacturer; died in Newport, R. I., June 9, 1939; born in New York City, July 4, 1883. Interested in aviation from 1921, he served as president of the Witternann Aircraft Corporation (1923-28), of the Fokker Aircraft Corporation of America (1927-28), of Aviation Consolidated, Inc., and of similar organizations. He was decorated for bravery during the World War.

SPICER, CLARENCE W. American mechanical engineer; died in Miami, Fla., Nov. 21, 1939; born in West Hallowick, Ill., Nov. 30, 1875. The inventor of the Spicer universal joint in 1902 he organized a company for its manufacture and was associated with it until his death. In 1938 he was president of the Society of Automobile Engineers.

SPINGARN, JOEL E(LIAS), died July 26, 1939.

STEARNS, FRANK W. American merchant; born in Bos-

ton, Nov. 8, 1856; died there Mar. 6, 1939. He was chairman of the board of directors of R. H. Stearns Co., Boston, but it was his friendship with Calvin Coolidge, to whom he was an unofficial adviser, that made him well known.

STEINER, FREDERICK. American ex-Senator; born in Jefferson, Ore., Oct. 13, 1883; died in Washington, Feb. 3, 1939. He served in the Senate as a Republican member from Oregon from 1927 until Jan. 31, 1938, when he resigned because of ill health, and was a member of the appropriations, banking and currency, and rules committees. In 1936 he delivered the "keynote" address at the Republican National Convention.

STENGEL, ALFRED. American physician; died in Philadelphia, Apr. 10, 1939; born in Pittsburgh, Nov. 3, 1868. Associated with the University of Pennsylvania (M.D., 1889) from 1893, he was retired as professor emeritus in 1937 and then appointed vice-president in charge of medical affairs of the University. A specialist in internal medicine, he wrote *A Text-Book of Pathology* (1898; 8th ed., 1924).

STEFANI, FRANZ VON. German Nazi leader; born in Bielefeld, June 12, 1876; died in Berlin, Apr. 26, 1939. After service in the World War he aided in the suppression of the Spartacists and led in the storming of the Social Democrat newspaper *Vorwarts* (Jan. 11, 1919) and as a result was tried for murder but the case was dropped. He took part in the Kapp putsch (1920) and in 1922 joined the Voelkische Wehrverband as managing director. He was district leader of the Stahlhelm (1924-33), founded its woman's organization, and after the merger of the Stahlhelm and the Steel Helmet organization he was appointed supreme commander of the storm troop reserves. He was elected to the Reichstag in 1930.

STERLING, FORD. American motion picture comedian, one of the original Keystone Cops (1912-15); died in Hollywood, Calif., Oct. 13, 1939; born in La Crosse, Wis., in 1884.

STEVENSON, (JOSEPH) ROSS, died Aug. 13, 1939.

STEWART, ALEXANDER M. American contractor, chairman of the board of James Stewart & Co., builders of numerous important buildings in the United States and abroad and including Madison Square Garden, New York and the Department of Labor Building in Washington; died in New York, Dec. 22, 1939; born in Kingston, Ont., Canada, Oct. 2, 1857. His firm also rebuilt the Galveston waterfront after the storm of 1899 and constructed one of the first modern earthquake proof buildings in Japan, the bank for the Mitsui Gomei Kaisha.

STEWART, DOUGLAS ROY. British colonial administrator; born in 1886; died at Basseterre, St. Kitts, Feb. 1, 1939. From 1905 to 1926 he held various positions in the Fiji Civil Service, and thereafter he was colonial secretary at Barbados (1926-31) and administrator of St. Christopher-Nevis. Also, he served as administrator for Barbados (1927, 1929-30), and Leeward Islands Colony (1935-37).

STEWART, SAMUEL V. American lawyer and public official; died in Helena, Mont., Sept. 15, 1939; born in Monroe Co., Ohio, Aug. 2, 1872. He was governor of Montana during 1913-21 and associate justice of the Supreme Court of Montana from 1933 to 1939.

STOCKARD, CHARLES RUPPERT, died Apr. 7, 1939.

STOCKTON, SIR EDWIN. British cotton manufacturer; died at Chelford, Cheshire, Dec. 4, 1939; born in Manchester, Mar. 18, 1873. He served on the Cotton Control Board (1916-19), was a member of Parliament (1922-23), and was a director of many business organizations.

STODDART, ARCHIBALD PELLE. British naval officer; died in Broome, Cornwall, Dec. 19, 1939; born Sept. 5, 1860. He was second in command of the victorious British naval squadron at the battle of the Falkland Islands, Dec. 8, 1914. He retired in 1918 and was promoted to admiral in 1920.

STOKES, FREDERICK A. American publisher; died in New York, Nov. 15, 1939. See N. I. ENCY., VOL. XXI, p. 548.

STONE, WITMER. American naturalist; born in Philadelphia, Sept. 22, 1866; died there, May 23, 1939. He became associated with the Academy of Natural Sciences in Philadelphia in 1891 and during 1925-28 was director of the Museum, retiring as emeritus in 1929. One of the country's foremost ornithologists, he edited *The Auk* (1912-36) and wrote extensively on birds. In 1931 he received the Otto Hermann Medal of the Hungarian Ornithological Society.

STUART-JONES, SIR HENRY. British educator; died at Tenby, Wales, June 29, 1939. See N. I. ENCY., VOL. XXI, p. 608 and N. I. SUPP., VOL. 2, p. 1513. He retired as vice-chancellor of the University of Wales in 1931. In 1936 he completed his revision of Liddell and Scott's *Greek Lexicon* parts i-ix, begun in 1925.

STURKHAHN, CARL F. American insurance executive, chairman of the board of the Northeastern Insurance Co.; died in Beverly Hills, Calif., Dec. 12, 1939; born in Hanover, Germany, Jan. 25, 1871.

SUGIMURA, YOTARO. Japanese diplomat; born in 1884;

died in Tokyo, Mar. 24, 1939. He served in the Japanese office of the League of Nations from 1923, and in 1934 was appointed ambassador to Italy, and served as ambassador to France during 1937-38. He was an expert in the national Japanese sport of judo.

SULLIVAN, MARY (MRS. CORNELIUS J.). American art patron and a founder (1929) of the Museum of Modern Art, New York City; died in Astoria, L. I., N. Y., Dec. 5, 1939; born in Indianapolis in 1879.

SUMMERBELL, MARTYN. American clergyman; died at Lakemont, N. Y., Sept. 12, 1939; born in Naples, N. Y., Dec. 20, 1847. Ordained a minister of the Christian Church in 1867, he held various pastorates and from 1898 to 1935 was president of Palmer Institute (Starkey Seminary) at Lakemont.

SUPER, CHARLES WILLIAM. American educator, died at Athens, O., Oct. 9, 1939; born in Pottsville, Pa., Sept. 12, 1842. Professor of Greek at Ohio University (1879-1907), he was president of the University during 1883-96 and 1899-1901.

SWANSON, CLAUDE A., died July 7, 1939.

TAFT, GEORGE W. American Baptist theologian; born in Salem, Mich., July 17, 1865; died in Deland, Fla., Jan. 21, 1939. Ordained in 1889, he did missionary work in Japan during 1889-97, and in 1916 was appointed dean and professor of church history and homiletics at Northern Baptist Theological Seminary, Chicago. Elected president in 1918, he was retired as emeritus in 1936. He served on many church committees and was the editor of the Japanese edition of Uhlhorn's *Conflicts of Heathenism with Christianity*.

TAYLOR, J. WILL. American Congressman, Republican member of the House of Representatives from Tennessee from 1919 to 1939; died in La Follette, Tenn., Nov. 14, 1939; born in Union Co., Tenn., Aug. 28, 1880. An advocate of the payment of the soldiers' bonus and usually an opponent of New Deal legislation, he supported the TVA power program and voted for the repeal of the arms embargo. He was ranking member of the House immigration committee.

TAYLOR, RICHARD V. American politician; died in Mobile, Ala., Dec. 22, 1939; born in New Bern, N. C., Aug. 11, 1859. He was a member of the city administration, commission form of government of Mobile (1921-26; 1931-37; 1937-43) and served as the city's mayor during 1921-26 and 1933-37. By appointment of President Coolidge he was a member of the Interstate Commerce Commission (1926-30).

TCHENG LOH. See CHEN LU.

TELESZKY, JOHN. Hungarian financier; born in Nady Varad, Transylvania in 1868; died in Budapest, June 13, 1939. During the World War he was minister of finance (1912-17) and thereafter a member of the Upper House. In recent years he was president of the First Hungarian Insurance Co. and similar organizations. He was the author of a Pension Law and wrote on economic subjects.

TEMPERLEY, HAROLD WILLIAM VAZEILLE. British historian; died in Cambridge, July 11, 1939; born Apr. 20, 1879. He saw service in the Near East during the World War and after, and edited *The History of the Peace Conference* (6 vol., 1920-24) and with G. P. Gooch, *British Documents on the Origin of the War* vol. i-xi, 1925-38). After 1931 he was professor of modern history at Cambridge, and in 1938 he became master of Peterhouse at that University. From 1933 he was president of the International Historical Congress, and after 1935 he became president of the New Commonwealth Institute for Research and editor of the *New Commonwealth Quarterly*. He wrote *The Foreign Policy of Canning* (1925) and with L. M. Penson, *Foundations of British Foreign Policy* (1938) and *A Century of Diplomatic Blue Books* (1938).

TEMPLETON, FAY, died Oct. 3, 1939.

TERÁN, JUAN BAUTISTA. See SPANISH-AMERICAN LITERATURES, Argentina, Necrology.

THOMSON, SIR BASIL. British detective; formerly in the colonial service and governor of Dartmoor prison and Wormwood Scrubs, in 1913 he became assistant commissioner of the London Metropolitan Police (Scotland Yard), serving until 1919 when he was appointed Director of Intelligence. He retired in 1921 and devoted himself to writing, his latest work being *The Story of Scotland Yard* (1935); born Apr. 21, 1861; died in London, Mar. 26, 1939.

THORPE, ROSE HARTWICK (MRS. E. CARSON). American poet, died in San Diego, Calif., July 19, 1939. See N. I. ENCY., VOL. 22, p. 237.

TODD, DAVID. American astronomer, died in Madison Heights, Va., June 1, 1939. See N. I. ENCY., VOL. XXII, p. 320. In 1920 he was retired as professor emeritus under a grant from the Carnegie Foundation. His *Astronomy To-day* was published in 1924, and in the following year, with the co-operation of the U.S. Army Air Service, he obtained the first photograph of the solar corona made from an airplane.

TOLLER, ERNST, died May 22, 1939.

TORRE, LISANDRO DE LA. Argentine politician, committed suicide in Buenos Aires, Jan. 4, 1939. Born in

1869, he founded the Progressive Democratic Party and served in the Senate until 1935. In 1916, and again in 1931, he was an unsuccessful candidate for the Presidency.

TOWER, SIR REGINALD. British diplomatist; born Sept. 1, 1860; died near Canterbury, Eng., Jan. 21, 1939. In the diplomatic service from 1885 he served in various embassies throughout the world until 1906 when he was named envoy extraordinary and minister plenipotentiary in Mexico. Thereafter he held the same position in the Argentine Republic (1910-19), was minister plenipotentiary to Paraguay (1911-19), and was temporary administrator of the Free City of Danzig and High Commissioner of the League of Nations at Danzig (1919-20).

TOWNSEND, JULIUS C. American naval officer; died in Brooklyn, N. Y., Dec. 28, 1939; born in Athens, Mo., Feb. 22, 1881. Entering the navy in 1904 he was advanced through the grades to rear admiral in 1936, and at his death was commandant of the Fourth Naval District, Philadelphia.

TRENT, WILLIAM PETERFIELD. American literary critic, died in Hopewell Junction, N. Y., Dec. 7, 1939. See N. I. ENCY., VOL. XXII, p. 455. After 1900 he was professor of English literature at Columbia University, and in 1929 he was retired as emeritus. In 1931 he was co-editor of the Columbia University edition of *Complete Writings of John Milton*.

TRINKLE, E(LBERT) LEE. American lawyer, governor of Virginia from 1922 to 1926; died in Richmond, Va., Nov. 25, 1939; born in Wytheville, Va., Mar. 12, 1876.

TROTTER, WILFRED. British surgeon, professor of surgery at the University College Hospital Medical School after 1935 and honorary surgeon to the King (1928-32); died in Blackmoor, Hamp., Nov. 25, 1939; born in 1872.

TUBELIS, JUOZAS. Lithuanian politician; died at Kaunas, Lithuania, Sept. 30, 1939; born in 1882. After service in the Lithuanian war of independence, he served in various cabinets and in 1930 was named prime minister. Forced out of office in 1938 he continued as minister of agriculture, and at his death was governor of the Bank of Lithuania. Through his efforts were established Lietūkis, the Union of Lithuanian Agricultural Co-operative Societies; Pienocentras, the Central Union of Dairy-farming Co-operative Societies; and the Maistas Joint-stock Company, through all of which passes the bulk of Lithuania's exports of foodstuffs and dairy products. Tubelis headed the National Party and was a contributor to *Lietuvos Aidai*.

TUCKER, BENJAMIN R. American philosophical anarchist, died at Pont Ste. Devote, Monaco, June 22, 1939. See N. I. ENCY., VOL. XXII, p. 533. He gave up the editorship of *Liberty* in 1908 when he left the United States to live abroad.

TURNER, ARTHUR LOGAN. Scottish surgeon, consulting surgeon in the ear and throat departments of the Royal Infirmary of Edinburgh and of the Deaconess Hospital, Edinburgh; died in Edinburgh, June 6, 1939; born there, May 6, 1865. Active in medical societies in Great Britain he was joint editor of the *Journal of Laryngology and Otolaryngology* (1921-29), and edited *Diseases of the Nose, Throat, and Ear* (1924, 1928, 1932), University of Edinburgh *Journal* (1928-37), *Joseph, Baron Lister, A Centenary Volume, 1827-1927*, and *A History of the University of Edinburgh* (1933).

TURNER, CLARENCE W. American congressman (Dem.); born near Clydeton, Tenn., in 1867; died in Washington, Mar. 24, 1939. He filled an unexpired term in Congress in 1922 and then was elected county judge, in which post he remained until he was elected to the 73d Congress in 1933. He was a member of the military affairs committee.

VAILLANT, CHARLES. French radiologist; died in Paris, Dec. 4, 1939; born in 1872. Attached to the X-ray department of the Lariboisiere Laboratory in Paris from 1895, he worked constantly until a victim of his own X-ray research. In 1923 he received the Legion of Honor, the Carnegie Hero Medal, and the Gold Medal of the City of Paris.

VALDEMAR. Danish prince, son of Christian IX; born at Bernstorff, Oct. 27, 1858; died in Copenhagen, Jan. 14, 1939. After his retirement from the Royal Danish Navy as admiral, he took over the management of the East Asia Ocean Steamship Line. Before the World War he was known as "uncle of Kings."

VANCE, JAMES I. American Presbyterian clergyman; died in Blowing Rock, N. C., Nov. 24, 1939; born in Arcadia, Tenn., Sept. 25, 1862. Ordained in 1886, he became pastor of the First Church of Nashville, Tenn., in 1910, serving until 1936, when he was retired as pastor emeritus. During 1918-19 he was moderator of the General Assembly of the Presbyterian Church in the United States, Southern. A prolific writer, his latest work was *Thus Pray Ye* (1935).

He lectured at the Massachusetts Institute of Technology until 1923, and in 1931 was vice-president of the International Congress for Studies Regarding Population Problems which met at Rome.

WOODSON, UREY, American public official; Federal Alien Property Custodian (1933-July 24, 1939); publisher of Kentucky newspapers (1881-1929); died in Owensboro, Ky., Aug. 7, 1939; born in Madisonville, Ky., Aug. 16, 1859.

WOODWARD, WILLIAM, American artist, professor of drawing and painting at Tulane University from 1884 to 1921 when he was retired as emeritus, and founder of the School of Architecture there; died in New Orleans, La., Nov. 17, 1939; born in Seekonk, Mass., May 1, 1859.

WOOLLARD, HERBERT HENRY, Australian anatomist; born in Warracknabeal, Victoria, Aug. 4, 1889; died in London, Jan. 18, 1939. At his death he was professor of anatomy at the University of London (at St. Bartholomew's Hospital Medical School 1929-36, and at University College after 1936). He received the Symington Prize for Anatomical Research in 1926, was acting editor of the *Journal of Anatomy*, and had written extensively in this field of medical science.

WORTHINGTON, SIR PERCY S., British architect, senior member of the firm of Thomas Worthington & Sons, Manchester, where he was architect for many of the University's buildings; in 1930 he received the Royal gold medal of the Royal Institute of British Architects; died at Moberley, Cheshire, July 15, 1939; born Jan. 31, 1864.

WRIGHT, J(OSHUA) BUTLER, American diplomat, died in Havana, Cuba, Dec. 4, 1939. See N. I. SUPP., Vol. 2, p. 1796. He was transferred from Hungary to Uruguay

in 1930, to Czecho-Slovakia in 1934, and to Cuba in July, 1937.

WRIGHT, WILLARD HUNTINGTON, died Apr. 11, 1939. WU PEI-FU, Chinese soldier; died in Peiping, Dec. 4, 1939; born in Peng-lai, Shantung, 1878. Regarded as the hope of China's idealists and the savior of the peace-loving middle class in 1922, in 1926 he was in control of five provinces with 60,000,000 inhabitants. In the following year he was defeated by Chiang Kai-shek and he retired to a monastery. Recently he had been entreated by the Japanese to join them in their war against China, but refused.

WYNNE, CYRIL, American diplomatist; died, a suicide, in Washington, Sept. 26, 1939; born in Oakland, Calif., Mar. 29, 1890. Associated with the U.S. Department of State for many years, in 1933 he was appointed chief of the division of research and publication. He taught constitutional law (1929-36) and legal history (1936-39) at Columbus University Law School in Washington. He saw service during the World War and attended the Peace Conference in Paris (1919).

YANGCO, THEODORE, Filipino politician; born in San Antonio, P. I., Nov. 9, 1861; died in Manila, Apr. 20, 1939. The owner and president of Theodore R. Yangco shipping firm, he was resident commissioner to the United States from the Philippines from 1917 to Mar. 3, 1920.

YEATS, WILLIAM BUTLER, died Jan. 28, 1939.

YEOMANS, GEORGE DALLAS, American lawyer; born in Little Valley, N. Y., May 9, 1867; died in New York, Mar. 28, 1939. Associated with the legal department of the Brooklyn Rapid Transit Co., from 1901, he became its general counsel in 1918, and on June 14, 1923 he was elected vice-president and general counsel for the company's successor, the Brooklyn-Manhattan Transit Corporation and its affiliations.

YOUNG, ARCHIBALD, British surgeon, Regius professor of surgery at Glasgow University from 1924, and expert on skin grafting; born Nov. 10, 1873; died in Glasgow, July 23, 1939.

YOUNG, C. WALTER, American economist; born in 1903; died in Silver Springs, Md., Feb. 6, 1939. During 1926-36 he was associated with the Institute of Current World Affairs in Manchuria and in 1932 acted as legal counsel to the Lytton Commission of the League of Nations to investigate the Manchurian situation. At his death he was associated with the Federal Tariff Commission.

ZELENY, CHARLES, American zoologist, professor of zoology at the University of Illinois after 1909 and head of the department during 1933-38; died in Urbana, Ill., Dec. 21, 1939; born in Hutchinson, Minn., Sept. 17, 1878. He was president of the American Society of Zoologists in 1933.

ZEMGALS, GUSTAV, President of Latvia, 1927-30; died in Riga, Jan. 7, 1939. See N. I. SUPP., Vol. 2, p. 1808.

ZIMMERMAN, ALFRED R., Dutch lawyer; born in Amsterdam in 1869; died in Velp, The Netherlands, July 2, 1939. He served as High Commissioner of the League of Nations for the Financial Reconstruction of Austria (1922-26) and as chairman of the Anglo-Mexican Special Claims Commission (1927-32).

ZIMMERMAN, ALICE, British educator; born in Nottingham, Sept. 22, 1855; died in London, Mar. 22, 1939. She taught in English high schools during 1886-94, and wrote *Methods of Education in the United States*, a report on the schools and colleges of the United States which she visited in 1893; *Woman's Suffrage in Many Lands*, and translated *Meditations of Marcus Aurelius*.

NEGRI SEMBILAN. See **FEDERATED MALAY STATES.**

NEGROES. The curve of Negro achievement and difficulties during 1939 closely paralleled that of other Americans. In the matter of jobs and economic opportunity generally the Negro bore the usual disabilities which color prejudice created; in other fields, notably those of music and the struggle for greater educational opportunity, a distinctly encouraging upswing was shown.

In the business upturn during the year fully 95 per cent of the jobs thus provided were given to white Americans. The result in many cities was an increase in the relative percentage of Negroes on relief rolls. Continuation of the vigorous campaign of the Congress of Industrial Organizations against the color bar offered the one bright spot in industry for the Negro. The American Federation of Labor continued its old policy of discrimination. The outstanding example of this during the year was in the yards of the Tampa Shipbuilding and Engineering Co. The drydock in this

plant was erected through a loan from the RFC and its contracts were exclusively for the federal government, the U.S. Maritime Commission having awarded the plant a contract to build eight ships at a total cost of seventeen million dollars. A successful strike, led by thirteen workers, twelve of this number being Negroes, focused attention of the American Federation of Labor on the plant and led them to organize it. But Negroes were excluded from the unions and a closed shop contract signed by the unions with the plant management resulted in the discharge of skilled, semi-skilled, and unskilled Negro workers.

The Negro American continued to play his usual role in music and the theater. Marian Anderson, great contralto—of whose voice Arturo Toscanini said, "A voice like yours is heard only once in a hundred years!"—continued to sing to packed audiences in every part of the country, including the deep South. The most dramatic event of the year in music circles was Miss Anderson's concert before 75,000 people from the Lincoln Memorial on Easter Sunday in the nation's capital. In June Miss Anderson was presented with the 24th Spingarn Medal at the Thirtieth Annual Conference of the National Association for the Advancement of Colored People at Richmond, Va., the presentation being made by Mrs. Franklin D. Roosevelt in the presence of a huge and distinguished audience.

In August a new and great Negro woman singer appeared on the horizon when Dorothy Maynor sang with the Boston Symphony Orchestra during the Berkshire Symphonic Festival. Sergei Koussevitsky called Miss Maynor "The American Kirsten Flagstad." In November Miss Maynor made her formal debut at Town Hall in New York City to an audience of distinguished music lovers and critics from all parts of the United States and received an ovation.

Two movements of a symphony by Clarence Cameron White, Negro violinist and composer, were played by the Reading Symphony Orchestra under the direction of Hans Kindler.

Richmond Barthe, distinguished Negro sculptor, was the first of his race to have a one-man show at a 57th Street gallery in New York City when an exhibition of his work was shown at the Arden Galleries. A symbolic piece by Augusta Savage, Negro sculptor, bearing the title, "Lift Ev'ry Voice and Sing," was placed in front of the Fine Arts Building of the New York World's Fair 1939, and two paintings by Sargeant Johnson, Negro painter, were exhibited at the San Francisco World's Fair.

In the theater *The Hot Mikado*, with the imitable Bill Robinson, played Broadway and later at the New York World's Fair. Ethel Waters, famed singer of "Blues," made her debut as a dramatic actress in *Mamba's Daughters*. Seldom has an actress within recent years been so lauded by critics and public. Paul Robeson returned to the United States shortly after the outbreak of the war to open in *John Henry*. A swing version of Shakespeare's *Midsummer Night's Dream*, starring Louis Armstrong, Benny Goodman, and Maxine Sullivan, opened in New York City at the Center Theater in Rockefeller Center.

In the field of education notable progress was made in the struggle of the Negro against inequalities in tax-supported institutions. The decision of the U.S. Supreme Court in the case of *Gaines v. University of Missouri* (305 U.S. 337), rendered Dec. 28, 1938, in which the Supreme

Court ordered Missouri either to supply a law school for Negroes equal to that of the University of Missouri Law School or to admit Gaines to the tax-supported University of Missouri School of Law, caused profound repercussions in the educational world, white and Negro, of all those states which maintain separate schools for the education of Negroes. The dictum of the Court made a complete reorientation of the educational systems of these states inevitable. In Maryland, William Murphy, Oberlin College graduate, was admitted to the law school of the University of Maryland, the third of his race to be admitted as a result of court decisions in that state. In Kentucky, Governor Chandler appointed a commission of distinguished Negro and white educators to make a study in that state of the effect of the Supreme Court decision. That commission in November issued its report in which it recommended that legislation and legal action be instituted to bring the practices in Kentucky into harmony with the United States Supreme Court decision in the Gaines case. Other states sought to devise plans either for volunteer scholarships for qualified Negroes to attend institutions of their choice outside the states or attempted to work out suitable plans for the establishment of separate graduate and professional schools for Negroes. In Atlanta a meeting was held in October of white educators who announced their determination to devise a plan for a series of "regional" graduate and professional schools for Negroes. There was doubt, however, that such a plan would be either economically possible or acceptable to the courts in view of the Supreme Court's decision that each state must meet its obligations within its own borders to supply equal accommodations to white and Negro students.

Judge W. Calvin Chesnut handed down a decision on Thanksgiving eve of far-reaching importance with respect to the differential in salaries paid Negro and white teachers in Anne Arundel County, Md. Suit had been brought by Walter Mills, a Negro principal, asking that he be paid the same salary paid to white principals with the same size of school and with the same background and educational experience. Judge Chesnut's decision in Mills' behalf ordered such equalization of salaries, the differential for Anne Arundel County being \$45,000 annually. It is estimated that the differential throughout the state of Maryland is in excess of \$600,000 a year and for the 19 southern states in which separate schools are maintained the discrimination against Negro teachers costs them between twenty- and twenty-five million dollars. The National Association for the Advancement of Colored People, which instituted these suits upon request of the plaintiffs, announced its determination to institute similar suits in every state where such differentials exist.

William H. Hastie, first Negro to be appointed a federal judge, resigned during the year to become Dean of the Howard University Law School at Washington. Another Negro jurist, Herman E. Moore of Chicago, was appointed by President Franklin D. Roosevelt to succeed Judge Hastie in the Virgin Islands. Also during the year the first Negro woman to become a judge was appointed in the person of Jane M. Bolin of New York City, who was appointed by Mayor F. H. LaGuardia as Judge of the Domestic Relations Court.

The year 1939 saw the Negro increasingly conscious of the importance of the ballot and a steady

growth in the recognition of the power of the Negro vote in the seventeen states (with a total electoral vote of 281) in which the Negro potentially held the balance of power. A steady growth in political independence of the Negro vote was largely responsible. Both of the major political parties began active campaigns to enlist the support of this vote in the 1940 presidential elections. That increased power and recognition manifested itself in many parts of the South where Negroes hitherto have been disfranchised. In various cities in Texas, Louisiana, Virginia, North Carolina, and Alabama the number of Negroes who qualified and registered increased remarkably and peacefully. In other states, however, efforts to register on the part of Negroes were met with threats of mob violence. In Greenville, S. C., a young Negro who led the movement to induce his people to qualify, register, and vote was threatened repeatedly, as were other Negroes, by the Ku Klux Klan. When these threats proved useless the young Negro was convicted on a charge of having "telephoned a white girl for a date." Appeal from that conviction was pending at the year's close. In Miami, Fla., the Ku Klux Klan also attempted to intimidate would-be Negro voters. The results were somewhat surprising in that the threats of violence resulted in trebling of the number of Negro voters. Intelligent white southerners became increasingly aware during the year of the harm done to them as well as to Negroes by the poll tax. In Tennessee a suit was instituted by the Southern Conference on Human Welfare to test the validity and constitutionality of such a tax while in San Antonio, Tex., the Mayor of that city, Maury Maverick, was arrested at the instigation of political enemies on a charge of having paid the poll tax of white members of the I.L.G.W.U. The trial, however, ended in prompt acquittal.

In the world of sports Negroes continued to play a notable role. Joe Louis kept the heavyweight championship, defeating Bob Pastor, Tony Galento, John Henry Lewis, and Jack Roper. Even more than his prowess as a boxer did Louis' sound common sense and clean living impress themselves upon the public. Henry Armstrong successfully defended his welterweight championship but lost the title of lightweight champion to Lou Ambers in New York City in August in a decision which was bitterly criticised by sportswriters and the public.

In college football Kenney Washington, Jackie Robinson, and Woodrow Wilson Strode, particularly the first two named, gained nation-wide prominence by the brilliance of their performances on the U.C.L.A. team, as did Negro stars on other college teams. The remarkable growth of sportsmanship was manifested when it appeared that U.C.L.A. might be the Coast team to play in the Rose Bowl at Pasadena, Calif., on New Year's day. As the University of Tennessee team was certain to be invited there was widespread discussion as to whether or not the Tennessee team would play against a team with three Negro stars. But when queried, both the coach and the team of the University of Tennessee expressed complete willingness to play U.C.L.A. But state legislators bitterly opposed such sportsmanship. Embarrassment was saved the legislators, however, when in the final game of the season the tie between U.S.C. and U.C.L.A. led to the former being chosen to play in the Bowl. An increasing number of southern colleges, among them Texas

Christian College and the Davis Elkins College teams, played northern schools which had Negro players, following the example of recent years of the University of North Carolina. The University of Florida and Auburn, however, refused to play Boston College unless its Negro star halfback, Lou Montgomery, was kept on the bench, which was done. Negroes continue to be barred from professional baseball and football.

NEJD. See *ARABIA* under *Saudi Arabia*.

NEOARSPHENAMINE. See **MEDICINE** AND **SURGERY**.

NEPAL, *ne-pôl'*. An independent kingdom in the Himalayas between Tibet and British India, under British influence. Area, about 54,000 square miles; estimated population (1938), 5,600,000. Capital, Katmandu (population, about 80,000). The chief imports are cotton goods and yarn, sugar, salt, spices, and metals. The principal exports are jute (4500 metric tons, 1938), rice and other grains, hides, oilseeds, ghee, cattle, and lumber. The yearly gross revenue is estimated at 15,000,000 rupees (British Indian rupee = 1.24 Nepalese rupees). The government is a military oligarchy. Reigning sovereign, Tribhubana Bir Bikram (succeeded, Dec. 11, 1911).

Lieut. Gen. Sir Joodha Shumsher Jang Bahadur, Prime Minister and Marshal of the Kingdom, announced (Sept. 13, 1939) that Nepal would support Great Britain in the war with Germany.

NETHERLANDS, THE. A constitutional monarchy of northwestern Europe. Capital, Amsterdam. Seat of the government, The Hague ('s Gravenhage). Sovereign in 1939, Queen Wilhelmina, who succeeded to the throne on Nov. 23, 1890.

Area and Population. The area, including water belonging to municipal territories, is 13,515 square miles. The population on Jan. 1, 1939, was estimated at 8,722,000 (7,935,565 at the 1930 census). About 94 per cent of the people dwell in communities of 2000 or more. Living births in 1938 numbered 178,413 (20.6 per 1000); deaths, 74,044 (8.5 per 1000); marriages, 66,968 (7.7 per 1000). Estimated populations of the chief cities on Jan. 1, 1939, were: Amsterdam, 793,222; Rotterdam, 612,375; The Hague ('s Gravenhage), 494,773; Utrecht, 163,589; Haarlem, 137,507; Groningen, 120,010; Eindhoven, 111,188; Tilburg, 95,142; Nijmegen, 94,102; Enschede, 90,291; Arnhem, 88,996; Leiden, 77,009.

Colonial Empire. The colonial possessions of the Netherlands are situated in Asia, South America, and the Caribbean Sea; and are treated elsewhere in the **YEAR BOOK** under the headings of **NETHERLANDS INDIES**, **CURAÇAO**, and **SURINAM**. The total area is 793,354 square miles; total population was estimated at 7,005,000 in 1938.

National Defense. Every male citizen is liable to military service. On Nov. 1, 1939, the army consisted of 500,000 active soldiers and 160,000 reservists, according to the Adjutant General's Office, Washington, D. C. The air force comprised 600 men and 330 aircraft. The navy (at the beginning of 1939) was composed of 1 coast defense ship, 4 cruisers, 3 armored gunboats, 3 escort vessels, 8 destroyers, 5 seagoing torpedo boats, 21 submarines, 1 submarine depot ship, 9 minelayers, and 16 minesweepers. See *History* below.

Education and Religion. There is practically no illiteracy. The school enrollment in 1937-38 was: Kindergartens, etc., 213,198; elementary,

1,240,772; secondary (including day and night commercial schools), 79,368; trades, crafts, domestic science, minor arts (1936-37), 134,788; agriculture (1935-36), 29,668; universities and colleges, 12,387. According to the 1930 census, there were 2,890,022 Roman Catholics, 2,732,333 members of the Dutch Reformed Church, 876,958 other Protestants, 111,917 Jews, 10,182 Jansenists, 169,575 belonging to other creeds, and 1,144,393 professing no religion.

Production. There were 2,298,000 acres of arable land in the May, 1938, census. Livestock at that time consisted of 2,763,000 cattle; 1,512,000 swine; 654,000 sheep; 312,000 horses; and 30,521,000 poultry. Yields of the chief cereals in 1939 (in metric tons) were: Wheat, 362,000; barley, 130,000; rye, 554,000; oats, 332,000. Butter production in 1938 was 222,444,000 lb.; cheese, 275,355,000 lb.; condensed milk, 345,020,000 lb.; powdered milk, 63,933,000 lb. The potato harvest in 1938 was 103,632,000 bu.; sugar beets, 1,520,000 metric tons; beet sugar (1938-39), 205,000 metric tons; flax, 42,935,000 lb.

Mineral production in 1938 (in metric tons, unless otherwise indicated) was: Coal, 13,488,000; lignite, 171,000; salt, 166,000; cement, 456,000; pig iron, 299,000 (year ending Mar. 31, 1938); zinc (smelter), 25,300; tin (smelter), 27,000; sulphuric acid, 525,000; superphosphates of lime, 570,000. The 1938 output of other products was: Margarine, 71,400 metric tons; beer, 36,244,000 gal. (U.S.); wool and mohair, 1300 metric tons; rayon, 9000 metric tons; wood pulp, 105,000 metric tons; electricity, 2,396,000,000 kilowatt-hours. Shipping launched in 1938 totaled 239,800 gross tons. Total number of registered unemployed on Jan. 1, 1939, was 431,181 (437,400 in 1938).

Foreign Trade. Imports in 1938 (exclusive of gold and silver coins and bullion) totaled 1,414,825,000 florins (1,550,123,000 in 1937); exports, 1,039,156,000 florins (1,148,110,000 in 1937). The chief 1938 exports in the order of their value were: Textiles; coal and coke; butter; tin; iron and steel; cheese. Holland's exports (with their value in florins) were consigned principally to the following countries in 1938: Great Britain, 223,987,000; Germany, 155,887,000; Belgium and Luxemburg, 105,719,000; Netherlands Indies, 99,792,000; France, 60,205,000; United States, 37,139,000. Imports (valued in florins) originated chiefly in the following: Germany, 300,898,000; Belgium and Luxemburg, 162,224,000; United States, 153,370,000; Great Britain, 115,145,000; Netherlands Indies, 101,720,000; France, 64,952,000. See **IMPORTS** AND **EXPORTS**.

Finance. Total budget expenditures for 1940 (including extraordinary items) were estimated at 1,015,000,000 florins; and receipts at 770,000,000. The 1939 budget estimated expenditures at 1,008,740,000 florins and receipts at 627,503,000. The total debt in current U.S. dollars was \$2,011,000,000 on Jan. 1, 1939. The florin (guilder) had an average exchange value of \$0.5505 in 1937, \$0.5501 in 1938, \$0.5334 in 1939.

Transportation. At the end of 1938 the Dutch railways, operated by two state-controlled private companies, had 2109 miles of line in operation. There were 16,031 miles of paved highways in 1939 (see **ROADS AND STREETS**). Inland waterways (aggregating about 5200 miles in length) transported two-thirds of the nation's freight. There were about 3,250,000 bicycles in use in 1938. The Royal Netherlands Airlines (K. L. M.) in 1938 carried 161,600 passengers, 1,190,913 lb. of mail;

2132 tons of merchandise and baggage. After the outbreak of the European war in September, 1939, services to London, Paris, and Berlin were discontinued; and the thrice-a-week flights to the Netherlands Indies were reduced to twice-a-week, with the European terminus at Naples, Italy. The Netherlands merchant marine on June 30, 1938, comprised 1482 vessels of 2,855,382 gross tons. The gross tonnage of vessels entering Netherlands ports during 1938 totaled 43,092,000.

Government. The hereditary monarchy rests upon a constitution of 1814, as revised from time to time. The legislative power rests in the sovereign and a parliament, the States-General. This consists of an upper chamber of 50 members, elected by the provincial states (elected representative bodies in the several provinces), for terms of six years; and of a lower chamber of 100 members, who are elected for terms of four years, by general adult suffrage under a system of proportional representation. The cabinet, though not specifically a constitutional institution, is in practise accountable to the parliament and falls without the latter's support. The Premier is chosen by the sovereign, normally out of a political group commanding the needful parliamentary majority, and he in turn proposes to the sovereign the other ministers. The Premier at the end of 1939 was Dirk Jan De Geer.

HISTORY

Peace-time Difficulties. The outbreak of a major war in Europe, at the outset of September, abruptly swept the Netherlands into a new situation, and out of a long-continued era of peace. Prior to the start of the war the Netherlands had to deal with new expenditure on behalf of the unemployed; additional provision for defense by land and sea; the decision whether to meet the cost of its additional undertakings by taxes or borrowing; a serious consequent change of ministry and parliamentary alignment; and more or less financial disturbance resulting from the fall of a great banking house.

Colijn's Resignation. The Premier at the beginning of 1939 was Dr. Hendrik Colijn, whose ministry depended for part of its support on the Catholic party. The government ordered, late in February, the construction of two 8300-ton cruisers, mainly as part of a plan for strengthening the naval defense of the Netherlands East Indies (q.v.).

Because of the apparent indications that Germany entertained hope of acquiring some of the Netherlands' rich East Indian possessions, there was an intensified demand early in the year for augmenting the naval forces in the Far East. The advocates of this policy began, in particular, to advocate the construction of three swift 26,000-ton battle cruisers. The unsatisfactory state of economic activity threw upon the government the task of caring for an increased number of unemployed persons. For this purpose new and costly schemes of public works were proposed. The more conservative group in the cabinet, including Colijn himself, sought to avoid governmental borrowing, on account of additional expense, by resort to retrenchment and additional taxation. Leaders in the Catholic party, on the other hand, judged that an increase in the public debt would be preferable. Some of the members of this party who were serving in the cabinet broke with Colijn. He himself assumed the duties of Minister of Finance late in May, after the resignation of the holder of this post, but difficulties increased, and Colijn was re-

lieved of his charge by the Queen at his request, July 8.

Dr. Dionysius Koolen, a Catholic member of the Council of State, tried to form a new cabinet. He failed in this task, and Dr. Colijn consented on July 22 to try again to form a ministry acceptable to the parliament. There resulted a so-called business cabinet formed largely outside of the parties of which the support was sought, and designed to serve as a stop-gap. The new Colijn Ministry was rejected by the Lower House, July 27. Dirk Jan De Geer thereafter formed a ministry that included members of three parties—the Catholic, the Social Democratic, and the Christian Historical. The coalition of the Catholics and the Social Democrats was judged anomalous; the arrival of the Social Democrats to a part in sponsoring a cabinet set a new precedent. De Geer's government took office on August 9, as the well recognized advocate of borrowing freely against extraordinary expense.

Mendelssohn Bank Crash. An economic accident of some severity, the suspension of Mendelssohn and Company, long-established and powerful banking firm of Amsterdam, occurred on August 11, just after the installation of De Geer's cabinet. The bank closed on the day after the death of its managing director, Fritz Mannheimer. It had recently been engaged in floating loans to the French Government. Its liabilities were later determined as 135,127,379 florins; the amount of its insolvency was 40,524,486 florins. Its relations with finance in the Netherlands were sufficiently extensive to disturb financial confidence for a time, but no spread of the difficulty occurred during the year. As the war broke out three weeks after the failure, no general liquidation of the Mendelssohn firm's assets could be effected during 1939.

Work was carried on steadily upon a dike, to extend 15 miles in Lake Yssel (the remainder of the Zuyder Zee), between the main shore and Urk Island, so as to inclose about 100,000 acres for drainage and later cultivation. Late in the year the dike was reported as almost finished.

Problems of Neutrality. The declaration of war between Germany and the allied British and French governments put the Netherlands in serious difficulties. The country's trade by sea had to face the obstacles created by Great Britain and Germany with the object of blockading each other's maritime commerce. Goods readily procurable in other times became hard to get. The hazards and hindrances of navigation grew from month to month. The need to maintain effectual neutrality toward either side in the war was imposed by the necessity of avoiding whatever would justify the other side in complaint against the Netherlands and in possible consequent interference with her. While the neighboring belligerents settled down to dormant war on land they carried on active warfare at sea and particularly on waters that lay not far off the Netherlands' coasts. Rotterdam, moreover was one of the normal points of arrival and departure for trade to and from Germany. Hence the Netherlands lost not only in commerce of their own but in shipping activity on Germany's account. Inactivity in the maritime trades helped cut down the country's livelihood, while the expense of keeping armed forces on foot against encroachment by land and air, the support of the unemployed and the scarcity of many sorts of goods all tended to raise public expenditure.

Emergency Measures. The government's chief specific steps for meeting the stress of the war began with an order of August 28 mobilizing

the army and navy to the number of 300,000; next came the proclamation of a state of emergency on September 1, two days in advance of the British and French declaration of war. The Netherlands announced its neutrality on the 3rd. An act giving the government control over imports was passed on September 9. Other measures, legislative or executive, raised the banks' rate of interest, in order to check the exportation of funds; restricted the exportation of goods; created monopolies for some sorts of exports and imports; started the control of production and distribution in some branches of domestic industry, and, by an act of October 12, subjected the importation of certain designated products to limitation by license.

A patrol of the air over the country's territory, by armed airplanes, was established early in the war, and anti-aircraft guns were posted so as to fire on belligerents' airplanes seeking to fly over the Netherlands. Both the patrols and the guns on the ground engaged, on a number of occasions, trespassing airplanes. Some of these were reported as German, others of unknown nationality. Roads were elaborately barricaded at the German border, in such wise as to admit of their being quickly closed, in case of a threat of invasion, but the routes between the Netherlands and adjoining countries were kept open, and commerce over them continued. A long-contemplated plan to flood low lands in strategic areas as a barrier to invasion was put in effect, to some extent, in September and after; dikes were opened at certain points, ostensibly to test the plan, or elsewhere, to saturate the ground in order that flooding might be effected later with less delay, if needed; such operations were noted particularly in the area of Amersfoort, near the southern end of the Zuyder Zee.

Friction with Germany. Relations with Germany were disturbed from time to time, chiefly by reported concentrations of German troops near the Dutch border in October and by the German government's dissatisfaction, in November, with the Netherlands' failure actively to oppose the British blockade against German exports sent to sea from the Netherlands' ports. Germany's planting of mines in the waters off the coast of England gave the Netherlands serious cause for complaint, since a very great part of this country's trade by sea passed through these waters. The sinking of the Dutch liner *Simon Bolivar*, of 8304 tons, on November 18 in the North Sea, among a number of vessels sunk by explosions about the same place and time, gave the impression that German mines had been placed in areas that the neutrals had been allowed to suppose free of such risk; but the German government denied having mined the area in question, and the subject dropped out of immediate controversy. Up to Dec. 31, 1939, the Netherlands lost eight ships of 39,419 gross tons through mine and submarine warfare.

The Venloo incident, a seizure of two British secret agents at the frontier, by a German party, November 9, added to the complication of relations with Germany. According to a Dutch communiqué of the following day the two men were attacked on getting out of an automobile at a point on the Dutch side of the frontier; the attack was reinforced by a German automobile, which entered from German territory and drew the captured men and their automobile into Germany. A Dutch intelligence officer, Lieutenant Klop, was killed in the affray. The two abducted men, Sigismund Byne Best and Capt. Richard Henry Stevens, were imprisoned in Germany. They had apparently been

lured to the frontier by communication through a small radio set, from German agents pretending to be members of an anti-Hitlerite group.

Other Events. For the joint effort of the Belgian King and Queen Wilhelmina of the Netherlands to induce the belligerents to negotiate peace, and other Belgian-Dutch collaboration as neutrals, see BELGIUM under *History*. The dreaded German move to overrun the Netherlands did not occur in November. Apprehension at the time caused considerable flight of liquid capital, compelling the government's exchange-stabilizing fund to pay out, in the second week of November, about 45,000,000 florins to support the foreign value of the country's money. For the divers unusual costs that the government had to meet in the later months of the year, it was able for a time to borrow from the banks. In December, however, it sought to float a public loan of 300,000,000 florins in bonds, to cover floating debt and the cost of the recent defensive measures. Premier De Geer announced, December 14, that the subscriptions to the issue, thus far received, had fallen short of the proposed total by about 140,000,000 florins and hinted the possible need of obligatory subscriptions to the government's issues.

NETHERLANDS INDIES. A group of large islands in the East Indies forming a colony of The Netherlands. Capital, Batavia, on the island of Java.

Area and Population. The area, population at the 1930 census, and population density of the various islands is shown in the accompanying table.

| Group of islands | Area, sq. miles, 1930 | Popu- lation, 1930 | Density per sq. mile |
|--|-----------------------------|--------------------------|----------------------------|
| Java and Madoera | 51,032 | 41,718,364 | 817 |
| Sumatra | 164,148 | 7,677,826 | 47 |
| Riouw-Lingga | 12,235 | 298,225 | 24 |
| Bangka | 4,611 | 205,363 | 45 |
| Biliton | 1,866 | 73,429 | 39 |
| Borneo: | | | |
| West district | 56,664 | 802,447 | 14 |
| South and east districts | 151,621 | 1,366,214 | 9 |
| Island of Celebes: | | | |
| Celebes | 38,786 | 3,093,251 | 80 |
| Manado | 34,200 | 1,138,655 | 33 |
| Molucca Islands and New Guinea | 191,682 | 893,400 | 5 |
| Timor Archipelago | 24,449 | 1,657,376 | 68 |
| Bali and Lombok | 3,973 | 1,802,683 | 454 |
| Total | 735,268 | 60,727,233 | 83 |

The estimated population on Dec. 31, 1937, was 67,400,000. Over 92 per cent of the population is rural. Living births among the natives of Java and Madoera in 1937 numbered 1,285,659; deaths, 852,486. The 1930 census populations of the chief cities, all of which were in Java except as noted, were: Batavia, including Meester Cornelis, 533,015; Soerabaja (Surabaya), 341,675; Semarang, 217,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649; Palembang, in Sumatra, 109,069.

Education and Religion. According to the 1930 census, there were 4,296,579 literate persons, of whom 400,877 were able to write Dutch. School attendance in 1936-37 was: Primary vernacular, 1,821,620; elementary (in Dutch language), 140,360; advanced elementary and secondary, 15,673; university, 1020.

The natives are predominantly Moslem, but

there are several million converted Christians and Animists and about a million Buddhists.

Defense. Defense forces (1938) included a colonial army of 1062 officers and 31,467 men; militia and reserves totaling 1477 officers and 29,098 men; three small native armies; a naval force of three light cruisers, 12 submarines, 8 destroyers, and numerous smaller vessels with a personnel of 2969 Europeans and 2469 natives; and an air force of over 100 planes (mostly seaplanes). All defense establishments were materially strengthened during 1938 and 1939.

Production. Agriculture and mining are the chief occupations. In 1937 natives cultivated 16,457,000 acres; European estate owners, 2,715,866 acres. Chief crops (in metric tons): Sugar (1938-39), 1,550,000; coffee (1938-39), 104,000; cacao (exports, 1937-38), 1600; rice (Java and Madoera, 1937-38), 5,941,600; corn (Java and Madoera, 1937-38), 1,983,700; tobacco (1937-38), 53,500; tea (1938), 80,912; cinchona (1938), 10,966; copra (net exports, 1938), 580,700; groundnuts (Java and Madoera, 1938-39), 282,400; palm oil (net exports, 1938), 220,800; palm kernels (1938), 21,300; crude rubber (exports, 1938), 303,000. Mineral production (1938) in metric tons: Coal, 1,457,000; crude petroleum, 7,398,000; tin, 28,768. Livestock (1937): 4,413,606 cattle, 3,197,354 buffaloes, 671,362 horses. There were 5904 factories and workshops in 1936, mostly engaged in processing agricultural and mineral products for export.

Foreign Trade. Merchandise imports in 1938 totaled 485,520,000 florins (498,480,000 in 1937); exports, 693,600,000 florins (988,440,000). The Netherlands supplied 22 per cent of all Netherlands Indies imports by value in 1938 (12 per cent in 1933); Japan, 15 per cent in 1938 (25 in 1933). European countries furnished about 50 per cent of all 1938 imports; Asiatic countries, 32 per cent. The Netherlands, Singapore, United States, United Kingdom, and Japan are the principal export markets, in order of importance. See IMPORTS AND EXPORTS.

Finance. Budget estimates for 1939 were: Receipts, 560,856,882 florins; expenditures, 621,025,072. For 1938, actual revenues were 508,131,000 florins (567,958,062 in 1937). The public debt increased from 1,360,087,000 florins on Dec. 31, 1937, to 1,368,127,000 on Dec. 31, 1938. The florin (guilder) averaged \$0.5501 in 1938.

Communications. At the beginning of 1938 state and private railways and tramways totaled 4630 miles. Railway receipts in 1938 were 53,523,000 florins. The Royal Netherlands Indies' Airways, operating inter-island services, carried 20,275 passengers, 211,646 lb. of freight, and 112,652 lb. of mail (1938). In addition the islands were served by the Royal Dutch Airline and Imperial Airways. A total of 11,121 steamers of 11,899,638 tons entered the ports in 1937. See ROADS AND STREETS.

Government. The Governor-General and his advisory council are appointed by the Queen of The Netherlands. The Volksraad (assembly of elected and appointed delegates) has limited legislative powers. Governor-General, Jhr. Dr. A. W. L. Tjarda van Starkenborgh Stachouwer.

History. In his annual message to the opening session of the Volksraad (June 15, 1939) the Governor-General stated that the industrialization of the islands with Dutch capital and native labor was making them more independent of world conditions. Despite large budget deficits, he urged

further expenditures for native colonization of the less developed islands. He estimated the deficit for 1939 at 36,000,000 florins and proposed tax increases to reduce the anticipated 1940 deficit to 30,000,000 florins. In January it was announced that preparations had been completed for the exploitation of important nickel deposits on Celebes Island near the coast of Bingkoka Bay.

With the outbreak of the European war, there was a marked dislocation of the islands' foreign trade and a general rise in prices. The government assumed emergency powers over shipping and took measures to control speculation and curb profiteering. Nominal price increases were allowed except on necessities of life, services, and rentals. A compulsory food raising law was passed and the establishment of new industries to supply goods formerly purchased abroad was encouraged.

See EXPLORATION.

NEUTRALITY. The outbreak of war in Europe at the outset of September put three and soon yet another of the chief armed nations into the position of belligerents, declared or de-facto; it impelled governments not participating in the conflict to measures for maintaining their neutrality; recollection of the European war of 1914-18 carried conviction that governments seeking to protect their people by holding to the neutral status would need skill and attention in maintaining the role.

Nations' problems of neutrality differed, in some main respects, with the circumstances of each one's case. The less populous countries of central and northern Europe had to deal particularly with the risk of the armed entry of one belligerent for the purpose of gaining strategic advantage over an adversary, and of the consequent entry of the adversary seeking to prevent such advantage. In southern Europe, Italy, closely associated with the German Reich, yet preferring not to take arms against Great Britain and France, offered less difficulty; moreover, Italy still had free access to the Mediterranean, little troubled by naval impediments to maritime commerce. In Latin America, on the other hand, the existence of powerful colonies of people connected by origin and sympathy with one or another belligerent coupled with the need to ship products and receive necessities in which Latin Americans had dealt with countries now at war, complicated the task.

The United States' problem differed to some degree from that of other neutrals. Its remoteness from the scene of war and its naval strength assured the safety of its territory; its foreign relations did not bind it particularly to any one nation; its external commerce counted less heavily in its economy than such commerce counted in the case of most neutrals. Yet because of the extent and diversity of the country's economic relations with other lands a widespread war must affect its interests in a multitude of ways. While no single foreign origin stamped the thought of any group strong enough to impress its will on the rest of the Nation, the consciousness of foreign antecedents bent the sentiments of a great part of the population one way and another. The loss of National wealth subsequently to 1929 and the social stresses that had grown apparent since that time prompted the feeling that the country would run internal risk if involved in the war. Thus among proper objects of the United States' neutrality the precluding of occasions for belligerents' acts harmful to National interests assumed a high importance. The problem of main-

taining neutrality, moreover, derived some of its difficulty from the existence of a Federal statute forbidding the sale of arms and munitions to a belligerent (Neutrality Act of 1937; see YEAR Book, 1937, p. 756, col. 2).

Action at Outbreak of the War. The German Reich began open hostilities against Poland on September 1. The British government, in rejoinder, declared war on the Reich on September 3; the French government announced a state of war on the same day. President Roosevelt proclaimed, September 5, the neutrality of the United States in the war of these nations. India, Australia, and New Zealand, which promptly followed the United Kingdom's lead, were included, and later, Canada.

The President's proclamation of the neutrality of the United States followed the model of similar proclamations issued on the occasions of earlier wars; it made the long-established prohibition as to raising troops or fitting out warships for a belligerent, restricting the action of belligerents' armed ships in territorial waters and warning citizens against unneutral acts; it did not put in force the provisions of the Neutrality Act of 1937. A separate proclamation imposed the restraints that this act required; citing the act and the existence of the state of war, this proclamation forbade, as the act required, the exportation to any belligerent therein, by any person in the United States' jurisdiction, of arms, ammunition, or implements of war; there followed a list of arms, ammunition, vessels, aircraft, parts of any of these, and chemicals, as to which the prohibition applied.

Conditions at the Time. When these proclamations were issued they, and particularly the second, bore closely on several matters of importance to the country. The British and French, foreseeing war as likely, had lately placed in the American market their orders for aircraft and other material in huge quantity. As yet, comparatively small shipments of the ordered goods had been made. Some factories at work on such orders, even though expecting the amendment of the Neutrality Act, had to suspend operation and throw people out of work. On the other hand the manufacture of steel made a quick and extended advance in the first weeks of the war, and expectation of higher exports of commodities sent the prices of foodstuffs and cotton sharply upward for a limited time, while an expectation of the return of private demand for credit and consequent collapse of the Federal financial advantage of money to borrow at 2 per cent or less, produced a brief but disturbing sinkage of the market for Federal and other public obligations. Among occurrences abroad the torpedoing and sinking of the British liner *Athenia*, with a loss of 28 out of some 300 Americans on board (September 3) put the temper of the American public to its first serious strain. A Canadian declaration of war on Germany (September 10) put an end to the possibility that Canada might receive exports forbidden to the other parts of the British empire. The military concurrence of Russia in the German invasion of Poland (September 17) brought into the war another actual, if not avowed, belligerent and raised the question whether to apply the Neutrality Act to Russia.

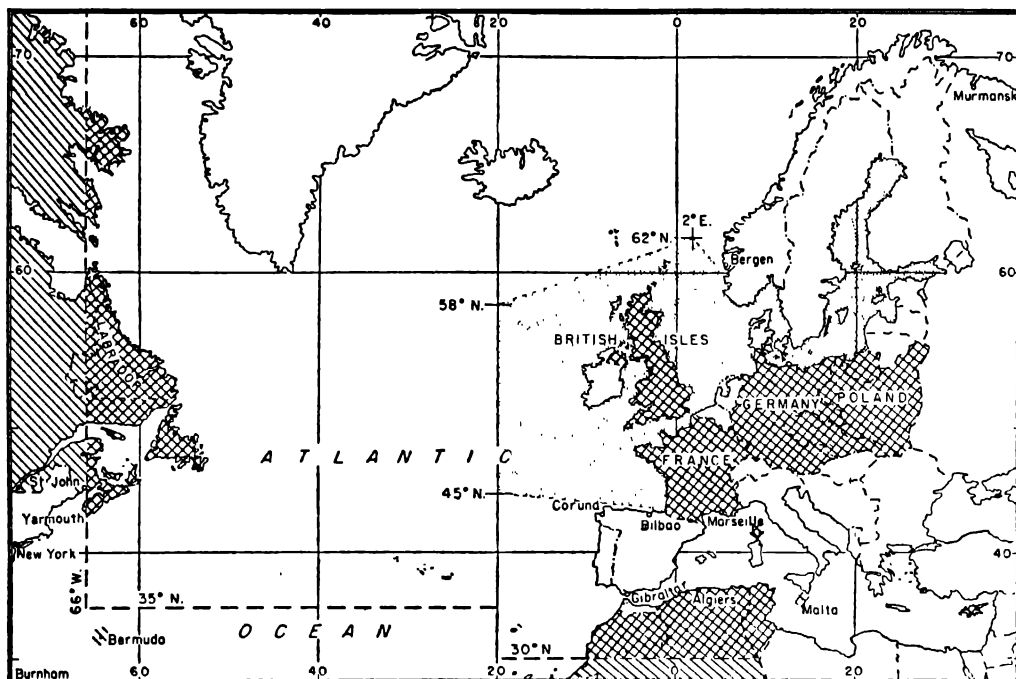

Neutrality versus Exports. The United States' exports for September came to \$283,000,000 or thereabout and thus exceeded those of August by about 16 per cent. This showed that the first

month of war had given the United States a substantially bigger market abroad than the last month of peace; and that, despite the termination of direct trade with Germany and the stoppage of shipments of arms to the British and French in virtue of the proclamations. A presumption arose that trade with Europe, so long as Germany was gripped by the British naval blockade, must mainly signify trade with the adversaries of Germany; that in particular, should Congress permit shipments of materials of war in any manner, the resulting trade would be with Germany's adversaries and, in its effect, an aid against Germany. The point had its significance at a moment when Congress was assembled in special session, summoned by the President for the specific purpose of removing the statutory barrier against the exportation of materials of war.

Amendment of the Neutrality Act. The President issued, September 13, a proclamation to convene a special session of Congress on September 21; he told the press that he expected to ask only the revision of the Neutrality Act. His message to Congress (September 21) dealt wholly with the revision of the system of statutory neutrality; it expressed the President's regret that he had signed the existing act, cited subsequent reference on his part to the need for altering it—an argument against the view of some critics that the proposal of revision had come only since the blockade of Germany; and condemned embargoes as historically likely to bring the nation maintaining them into war, rather than to safeguard it; the existing law was declared to "give a definite advantage to one belligerent as against another," since "a sea-power antagonist would be weakened through denial of its ancient right to buy anything anywhere." The President made no effort in his message to bring about the removal of the prohibition against the transportation of materials of war in American ships, nor of that against loans to belligerents.

Congress passed, November 3, the Neutrality Act of 1939, signed November 4. It provided about what the President had asked. The Senate voted the bill by 55 in favor; opposed, 24; the vote in the House was, respectively, 243 and 172. The text of the act appeared in the *New York Times*, Nov. 4, 1939, p. 6; and in *International Conciliation*, December, 1939 (No. 355), p. 609. Section 2 of the act prohibited American vessels' carrying passengers, articles, or materials to any belligerent State so proclaimed by the President, but made specific exception of most of the Western Hemisphere and of the Pacific and Indian oceans. Other nations' vessels were allowed to transport goods to belligerents only under detailed restrictions to the general effect that such goods should have passed out of the ownership and interest of any citizen of the United States and into that of "some foreign government, agency, institution, association, partnership, corporation, or national." The old law, with its prohibition of exports of war materials, was repealed. In effect, the act excluded the ships of the United States from transportation to belligerents and allowed the exportation of all goods to belligerents, by ships of any other flag than the American, once the goods had been paid for and no American interest in them remained—in current phrase, exportation under the cash-and-carry system. Foreign ports in the Americas, including St. John in eastern Canada, were left open to ships of the United States (see p. 554).

The repeal of the embargo was accomplished

RESTRICTIONS ON TRADE AND TRAVEL UNDER NEUTRALITY ACT

The Neutrality Act of 1939 and proclamations and regulations issued thereunder barred: (1) the transport of passengers or cargo by American vessels and aircraft to belligerent countries *cross-hatched* on the map, and (2) American vessels and American citizens traveling by any surface vessel or aircraft from waters, designated as "combat areas," *shaded with dots* on the map. American vessels (other than aircraft) were authorized to transport mail, passengers, and any article or materials *except* arms, ammunition, and implements of war to those areas of belligerent territory *shaded by single diagonal lines*.

only after protracted opposition in the Senate. Borah of Idaho had told the country, even in advance of the session, that lifting an embargo "now war is in progress" would "constitute intervention." Clark of Missouri, a Democrat and one of the fathers of the embargo, persistently attacked its removal as a "warlike" act. Another formidable opponent, Vandenberg of Michigan, represented the views of the partisan minority—most of the Senate's Republicans—marked by distrust of legislation tending to free the President from restrictions, particularly as to foreign policy in time of war abroad. But many veteran Republicans outside of Congress supported the bill and six Republican Senators voted for it.

Effects of the New Neutrality. The proclamation of September 5 with regard to the limitation of American rights to export to belligerents was put out of effect by the act of November 4. Instead, there went into effect a new prohibition keeping the merchantmen under the United States flag from sailing to and from the ports in the European area of war. The immediate effect of the removal of this shipping from the zone of warfare was to quiet the rise of irritation from German action against vessels under the American flag, action that had started and that threatened to continue. A German ship of war had captured the freighter *City of Flint*, carrying a cargo to England. Finding the *Flint* a bearer of contraband, the captors conveyed her to the Russian Arctic port of Murmansk. This happening, told in the dailies of October 24, came at a mo-

ment when it was bound to help sentiment for keeping American vessels out of the area of war; it thus helped the passage of the act and at the same time stimulated anti-German sentiment in the United States. The ship, still in the hands of a prize crew, tried later to travel down the Norwegian coast and reach German waters but was driven into Haugesund port for shelter from British ships and was restored to her American master by the Norwegian authorities, November 4.

The removal of the merchant flag of the United States from the chief routes of trade with northwestern Europe was soon followed by an extension of the British and French blockade of German commerce; German exports of goods had until then continued to go out in the ships of neutral neighbors, Holland and Belgium; but now Great Britain November 21, and France, November 22, asserting their right of reprisal against German breach of convention, in sinking vessels without warning and in strewing unmoored mines, prohibited the carrying of German merchandise in general in neutral ships. The Neutrality Act of 1939 made it possible for these two belligerents to proceed thus without running afoul of American vessels.

Proclamations of November 4. Closely connected with the new act and with the events that followed it were three proclamations issued, November 4, by the President. One of these revoked its direct predecessor of September 5, particularly as to exports of materials of war, and substituted

an announcement of neutrality under the terms of the new act; the second forbade to belligerents' submarine vessels the entry into the United States' ports or territorial waters (except those of the Panama Canal Zone) unless such vessels were compelled by force majeure and should enter with the superstructure emerged and flying the proper colors; the third decreed a combat area consisting of the waters within a line from the southern end of the French Biscay shore, westward to the neighborhood of the 20th meridian, thence north to the latitude of, approximately, the northern coast of Scotland, and thence easterly to include the Shetlands and terminate in Norway, at Bergen, and prohibited the entrance of ships under the American flag into this area; in the Mediterranean, the coasts under French sovereignty were forbidden. The effect of the proclamation of the combat area was to shut off from the merchantmen of the United States not only Great Britain, France, and Germany, but also Belgium, Holland, Denmark, southern Norway, and all the Baltic ports, Sweden's included. It remained possible in theory to send or bring under the American flag goods from or to any one of the belligerents or the inclosed neutrals, via some such port as Bergen, Genoa, or Barcelona, but this involved a transshipment. The British and French move to stop German exportation via such ports as Rotterdam and Antwerp, which followed, ran no risk of clashing with the merchantmen of the United States, once the combat area had been established.

Disturbance to Shipping. American vessels in the transatlantic trade had bad business almost from the outset of the war. Under the September proclamations they could make their intended voyages but could not count on the protection, generally speaking, of the U.S. naval forces; they were subject to belligerents' seizure in case they carried any of a long list of articles accounted to be contraband; and they might not carry materials of war which above all the belligerents wanted. There remained a high demand for such goods as cotton and cereals; the maritime employees' unions, however, maneuvered to win higher compensation on the strength of the increased peril of seafaring. The November proclamations changed the situation again, shutting off American craft from the greater part of the trade with Europe; the transportation of passengers had largely ceased of itself, after the initial homeward rush of Americans caught abroad by the war. The organization named the United States Lines tried, November 5, to escape the expected crisis in its business by asking the Government's permission to transfer eight of its vessels to registry in the Republic of Panama; but the Maritime Commission, at the reported direction of the President, refused the demand. The plan, as soon as known, drew public criticism from the political opposition as evasive of the new Neutrality Act and likely to involve the country in international difficulty. The transfer of 15 tankers to the Panamanian registry had been effected a month earlier, and the sale of some of the older fishing vessels of the Portland Trawling Company was later reported.

Neutrality Towards Russia. Russia, without going to war against England and France, participated with Germany in the seizure of Poland in September; Russia started, at the end of November, to invade Finland, a country that had gained popular favor in the United States by

making regular and punctual payments on its "war debt," to the latter Government, a debt totaling about \$8,000,000 in unpaid principal. The President issued, December 1, a statement condemning the Russian "resort to military force," but diplomatic relations with Russia were not interrupted. The Export-Import Bank—a Federal agency—in concert with the Reconstruction Finance Corporation, granted credit (December 10) to the Finnish government, for \$10,000,000 usable in buying "agricultural surpluses and other civilian supplies." Such goods did not directly meet the Finns' need of military material, but the credit was expected to sustain Finnish economic strength. Against Russia, the President issued, December 2, a statement that without mentioning Russia, included that country by implication in an informal embargo against the exportation of aeronautical material "to nations obviously guilty of . . . unprovoked bombing."

Inter-American Features of Neutrality. Canada was a belligerent; Mexico, a heavy exporter of petroleum to Germany up to the outbreak of war; and Latin-American countries were in some cases much dependent on commerce with European countries. The interest of the United States lay in preserving close economic relations with Canada, normally almost the leading purchaser of goods from the United States; in preventing a return of difficulties such as had attended relations with Mexico in the period of the earlier European war, and in supplying so far as possible the deficiencies that trade in other American republics suffered by the interruption to the normal economy of the European belligerents. In the case of Canada trade by land continued as usual; that by sea remained open to United States' vessels, under the new Neutrality Act, with Pacific ports and with the eastern port of St. John. Canada became a receiving point for airplanes manufactured in the United States. A regulation issued on their export prohibited their flying out and thus did away with their proceeding directly to any European belligerent destination; but in Canada's case they were easily conveyed over bordering water by scows or towed over the land boundary. In the case of Latin-American republics efforts to augment trade took the form of negotiations for new or more extensive commercial agreements and for the extension of credit with which such countries might increase their purchases of the United States' goods. The Brazilian government, allowed to put into use a feature of an agreement made with the United States in 1937, through Secretary Morgenthau and Minister of Finance De Souza Costa, bought gold from the United States, which received in return exchange on other countries; several purchases of about \$3,000,000 each were announced late in the year. Brazil was allowed to buy in October 14 U.S. merchant ships averaging 5000 tons. There started a preliminary move toward a commercial agreement with Uruguay, to do away with that country's thoroughgoing restraint upon increase of purchases from the United States. Nicaragua contracted, November 15, a loan of \$2,000,000 from the Export-Import Bank, for highways and "other public necessities."

Foreign ministers of American republics were brought together at Panama late in September. Their councils established a common "zone of safety" in all coastal waters but Canada's, and promoted agreement on policy toward belligerents' activities, on effort to exclude food and clothing

from lists of contraband, on a general scheme of conduct as to neutrality, and on a committee of experts to meet at Washington for the study of economic shock caused by the war. An Inter-American Financial and Economic Advisory Committee accordingly convened at Washington in November and discussed, among other things, a proposed "pan-American dollar" for use in foreign trade. Many of the moves connected with the effort to associate the United States and other republics of the Western Hemisphere in their neutrality led up to the matter of replacing the wreckage left in these republics' economic relations with the United States by the collapse of trade and credit in the early '30's; notably, report from Washington, October 30, spoke of a prospect that the Federal Government would enter and hasten the protracted dealings of the Foreign Bondholders' Protective Council over numerous American republics' insolvencies on debts to the investing public in the United States.

For Uruguay's neutrality in the case of the refugee German battleship *Admiral Graf Spee*, see URUGUAY. See CANADA and the various neutral countries under *History*; INTERNATIONAL LAW; PAN AMERICANISM.

NEVADA. Area and Population. Area, 110,690 square miles; included (1930) water, 869 square miles. Population: Apr. 1, 1930 (census), 91,058; July 1, 1937 (Federal estimate), 101,000; 1920 (census), 77,407. Reno had (1930) 18,529; Carson City, the capital, 1596.

Agriculture. Nevada harvested, in 1939, 369,600 acres of the principal crops. Hay was the predominant agricultural product. Tame hay, on 184,000 acres, made 338,000 tons (estimated farm value, \$2,028,000); wild hay, on 137,000 acres, 123,000 tons (\$689,000). On 20,000 acres, wheat gave 512,000 bu. (\$394,000); the yield of wheat to the acre, 25.6 bu., averaged higher in Nevada than in any other State of the Union in 1939.

Manufacturing. Establishments engaged in manufacturing in Nevada numbered 84 in 1937 (in 1935, 83); they employed 1012 wage-earners (in 1935, 1224), who received \$1,625,121 (in 1935, \$1,694,282); the yearly output of manufactured goods amounted to \$20,568,365 (for 1935, \$15,302,632). The Federal Census of Manufactures for 1937 did not give the full particulars by industries, save for one-seventh of the manufactured total, and in special, no data on metallurgical works were offered.

Mineral Production. Gold, silver, copper, lead, and zinc mined in Nevada rose in aggregate value to \$29,321,857 for 1929, from \$23,529,064 for 1938. Gold had exceeded copper as to value of output for 1938; but copper resumed the lead over gold in the figures for 1939. The production of gold mounted to 339,000 oz. for 1939, from 296,434 for 1938; by value it was \$11,865,000 and \$10,375,190 for the respective years. The production of copper augmented more sharply, to some 130,830,000 lb. for 1939, from 92,338,000 for 1938; by value, to \$13,606,320, from \$9,049,124 for 1938. The production of silver remained at much the same rate; it totaled 4,066,000 oz. for 1939 and 4,355,471 for 1938; by value, \$2,759,951 (1939) and \$2,815,658 (1938). Lead and zinc, together, were produced to the value of somewhat over \$1,000,000 in either year.

Education. Enrollments of pupils in Nevada's public schools in the academic year 1938-39 totaled 19,973; this comprised 14,520 in the elementary and kindergarten groups and 5453 in high schools.

Expenditures for public-school education totaled \$3,108,647. Salaries of the 900 public-school teachers for the year averaged \$1431 in elementary teaching and \$1863 in high schools.

Political and Other Events. The *City of San Francisco*, a streamlined train of the Southern Pacific system, running eastward through Nevada was wrecked on the night of October 3, 20 miles west of Carlin. The accident caused the death of 24 persons and the injury of about 60 others. The alleged gamblers W. J. Graham and J. G. McKay (see YEAR BOOK, 1938) were sent to Federal prison for terms of 9 years after conviction in New York on account of former activities in Reno. The discovery of emeralds, the first said to have been found occurring in the United States, was made at a mine near Rye Patch.

Officers. Nevada's chief officers, serving in 1939, were: Governor, E. P. Carville (Dem.); Lieutenant Governor, Maurice J. Sullivan; Secretary of State, Malcolm McEachin; Treasurer, Dan W. Franks; Comptroller, Henry C. Schmidt; Attorney-General, Gray Mashburn; Superintendent of Public Instruction, Mildred Bray.

NEVADA, UNIVERSITY OF. A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 1125 students for the autumn term of 1939, and 150 in the summer session. The faculty included 81 members. The productive funds amounted to \$364,738, and the income for the year to \$677,233.91. The library contained 61,537 bound volumes. President, L. W. Hartman, Ph.D. inducted, Dec. 15, 1939.

NEWARK. See NEW JERSEY.

NEW BRUNSWICK. An eastern maritime province of Canada. Area, 27,985 square miles; population (June 1, 1939, estimate) 451,000 compared with 408,219 (1931 census). During 1938 there were 11,418 births (25.7 per 1000); 4882 deaths (11.0 per 1000) and 3368 marriages (7.6 per 1000). Chief towns (with 1931 population figures in parentheses): Fredericton, the capital (8830); Saint John (47,514); Moncton (20,689); Campbellton (6505); Edmundston (6430). In 1937 there were 101,253 students enrolled in schools and colleges of all kinds, including 1918 students of university grade.

Production. The gross value of agricultural production for 1938 was estimated at \$27,473,000 (\$26,632,000 in 1937) of which field crops accounted for \$14,912,000 (\$14,149,000 in 1937). Other important items were: Dairy products, \$5,800,000; farm animals, \$3,385,000; poultry and eggs, \$1,297,000; fruits and vegetables, \$1,282,000; fur farming, \$650,000. Crop production (1939) in bushels was: Oats, 7,639,000; barley, 466,000; wheat, 163,000. Livestock (1939): 53,220 horses; 220,900 cattle (including 112,600 milch cows); 107,600 sheep; 87,200 swine. Fur pelts sold in 1937 totaled 57,988 valued at \$707,332. The output (1937) of the forests equaled 217,098 M cu. ft. valued at \$13,157,666. In 1938 the value of the fish catch was \$3,996,000.

Mineral production (1938) was valued at \$3,802,565 of which coal (342,238 tons) represented \$1,133,346; natural gas (577,492 M cu. ft.), \$284,698; gypsum (48,418 tons), \$159,203. In 1937, from the 805 manufacturing plants, employing 15,602 workers, the net value of products was \$28,770,727. At the port of Saint John, 2,622,880 tons of cargo (import and export) were handled in 1938.

Government. For the fiscal year ended Oct.

31, 1938, revenue totaled \$8,609,192; expenditures, \$7,840,393. Net public debt (1937) was \$66,433,682. Revenue for 1939 was estimated at \$9,080,145; expenditures at \$9,063,393. The government is vested in a lieutenant-governor, assisted by an executive council of 8 members who also are members of the legislative assembly of 48 members elected for a term of 5 years by the people. In the Dominion Parliament, New Brunswick is represented by 10 Senators and 10 members of the House of Commons. Lieutenant-Governor, Col. Murray MacLaren (appointed Feb. 5, 1935); Premier, A. A. Dysart. See CANADA.

NEW CALEDONIA. A colony in the Pacific belonging to France, consisting of the island of New Caledonia and the following dependencies: Isle of Pines, Wallis Archipelago, Futuna and Alofi, Loyalty Islands, and Huon Islands. Total area, 8548 square miles; total population (1938 estimate), 55,000; (1936 census), 53,245. Nouméa (capital), on the island of New Caledonia, had 17,055 inhabitants in 1936.

Production and Trade. Chief products (in metric tons) are chrome (24,000 in 1937); coffee (2000 exported in 1938-39 season); copra (3400 exported in 1938); nickel (6004 in 1938); and phosphates (2000 mined in 1936). In 1938 the estimated value of merchandise imports (in old U.S. gold dollars) was \$2,100,000 (1937, \$2,400,000); exports, \$2,100,000 (1937, \$2,400,000).

Communications. In 1937, 142 vessels (361,514 tons) cleared New Caledonian ports. There was (1938) a 20-mile long narrow-gauge railway from Nouméa to Paita, and from Nouméa to Voh there was a daily motor-road service.

Government. The local budget for 1937 was balanced at 30,000,000 francs (franc averaged \$0.0405 in 1937). The colony is administered by a governor assisted by a privy council, and an elective council-general of 15 members. Governor, L. Jore.

NEWFOUNDLAND, nü'fün(d)-län'd'. A large island at the entrance to the Gulf of St. Lawrence, forming, with Labrador (q.v.), a British dominion (temporarily administered by the Crown through a governor and commission). Capital, St. John's. Area of Newfoundland proper, 42,734 square miles; population, 289,000 (estimated, Jan. 1, 1938). Chief towns, with 1935 census population, were: St. John's, 54,886; Bonavista, 4022; Harbour Grace, 2215; Grand Falls, 4244; Corner Brook, 6374; Carbonear, 3367; Twillingate, 3203; Burin, 2277; Grand Bank, 2209.

Education and Religion. From 7 to 10 per cent of the adult population is illiterate. For school enrollment, see 1938 YEAR BOOK, page 528. Religious population (1935) was: Roman Catholics, 93,925; Church of England, 92,709; United Church, 76,134; Salvation Army, 18,054; Presbyterians, 1460; other denominations, 7306.

Production. Fishing, farming, lumbering, mining and manufacturing are the principal occupations. The production of dried salt codfish in 1938 was 129,475,808 lb.; catch of the seal fishery, 226,747 seals valued at \$490,664. There were about 188,000 acres under crops and 16,000,000 acres of forests. Livestock statistics for 1937-38 showed 25,000 cattle; 9000 swine; 15,000 goats; 90,000 sheep; 15,000 horses. In 1938 there were produced 1,680,000 short tons of iron ore valued at \$4,285,000; 202,000 short tons of lead-zinc-copper concentrates valued at \$3,786,000; and 245,000 short tons of newsprint valued at \$10,220,000.

Foreign Trade. For the fiscal year ended June

30, 1938, imports were valued at \$27,912,351 (\$23,924,886 in 1936-37) and exports at \$34,943,240 (\$28,058,073). Imports in 1938-39 aggregated \$24,461,000 of which the United Kingdom supplied \$5,878,000, the United States \$7,682,000 and Canada \$9,196,000. Exports were destined chiefly for the United Kingdom, the United States, and Canada, in order. Codfish, cod and seal oil, paper and wood pulp, canned lobster, iron pyrites, seal skins, and herring comprise the leading exports. See IMPORTS AND EXPORTS.

Finance. Actual receipts for the fiscal year ended June 30, 1939, were 11,221,242 Newfoundland dollars; expenditures, \$15,216,298; British grant-in-aid, \$3,995,056. Budget estimates (1939-40): Receipts, \$11,382,000; expenditures, \$17,117,000; British grant-in-aid, \$5,735,000. The Newfoundland dollar is approximately equivalent to one U.S. dollar.

Communications. Railways in 1938 had 838 miles of line (government line, 750 miles) and carried 183,216 passengers and 592,375 long tons of freight. Gross railway earnings (including steamer service and dockyards) was \$3,110,577 in the fiscal year ended June 30, 1939. There were 3692 miles of highway in 1939, of which 2000 miles were unimproved earth and non-surfaced (see ROADS AND STREETS). Cobb's Arm near Botwood and Hattie's Camp, about 30 miles east of Botwood, are important transatlantic air bases for seaplanes and landplanes, respectively. During 1937-38, a total of 1729 vessels of 1,945,039 net registered tons entered the ports of Newfoundland.

Government. Newfoundland temporarily relinquished its status as a dominion as a result of extreme financial difficulties in 1933. Government has since been administered by a Governor and a commission responsible to the British Secretary of State for Dominions. Governor in 1939, Vice Adm. Sir Humphrey Thomas Walwyn, who assumed office Jan. 21, 1936. Commissioners: J. H. Gorvin, assumed office, June, 1939 (Natural Resources), Sir Wilfred Wentworth Woods (Public Utilities), J. H. Penson (Finance), all Britishers; and J. A. Winter (Home Affairs), L. E. Emerson (Justice), and J. C. Puddester (Public Health), all Newfoundlanders.

History. Despite the substantial financial aid that Newfoundland continued to receive from the British Government in its struggle for economic rehabilitation, slow progress was made during the first part of 1939 and the outbreak of the European War in September proved a further economic setback to the island. The recession experienced in 1938 (see 1938 YEAR BOOK, p. 528) became worse in the early months of 1939 as a result of a late spring, severe weather that interrupted fishing operations, and low prices for exports. The government was obliged to continue its guarantee of export prices for fish (estimated to cost \$650,000 for the 1939 catch).

The government contributed an additional \$200,000 toward the establishment of a fresh-fish freezing industry on the south-west coast, and \$220,000 toward the purchase of nets, boats, and gear for fishermen supplying a new herring meal and oil factory on the west coast. A \$315,000 allotment was made toward a rehabilitation project in the Placentia Bay area, involving the construction of boats, depots and roads, and land improvements.

Returning from their visit to Canada and the United States, King George and Queen Elizabeth paid a short visit to Newfoundland on June 17. They landed at Holyrood, a tiny fishing village in

an arm of Conception Bay, and proceeded by automobile to St. John's, 30 miles away. The King broadcast a message to the island from the new radio station in the capital, laid a wreath on the near-by war memorial, and conferred knighthood upon J. C. Puddester, Commissioner of Public Health. The royal couple returned to their ship by way of the fishing village of Portugal Cove. They received an enthusiastic welcome in all of the places visited.

When war broke out on September 3, Newfoundland rallied to the support of the mother country with the same loyalty as in 1914. Some 2000 Newfoundlanders had enlisted for service in the British Army and Air Force by the end of November and hundreds of hardy fishermen volunteered for mine-sweeping and other patrol services in the North Sea. The Newfoundland Government also reduced the grant-in-aid received from the British Government to the sum, about £900,000, needed to cover government payments in sterling.

The war caused a marked rise in prices of basic articles of consumption, most of which are imported, thus increasing the poverty of many Newfoundlanders. This was partly offset by higher prices for fish, fish oils, and other export products. The government continued to subsidize exports and assumed control over foreign trade and exchange transactions to conserving purchasing power and to prevent the flight of capital. Higher taxation and higher tariffs duties on some imports also were announced. The Newfoundland Government in July consented to a comprehensive survey of the Labrador coastline by the Canadian Department of National Defense to determine suitable points for air bases and other defense projects.

NEW GUINEA, gin'i. The name of an island in the East Indies, and also of those territories in the Western Pacific (including part of the island of New Guinea) mandated to Australia by the League of Nations. Total area of the island of New Guinea, 308,000 square miles; population, about 1,000,000. See NETHERLANDS INDIES; NEW GUINEA, TERRITORY OF; PAPUA, TERRITORY OF.

NEW GUINEA, TERRITORY OF. The territory administered by Australia under mandate of the League of Nations, consisting of Northeast New Guinea (also called the Mainland), 69,700 square miles; Bismarck Archipelago (consisting of New Britain, New Ireland, Lavongai, Admiralty Islands), 19,200 square miles; Solomon Islands (consisting of Bougainville, Buka, and adjacent small islands), 4100 square miles. Total area, 93,000 square miles; population (June 30, 1938), 563,387 (6270 non-indigenous, and 557,117 enumerated native), exclusive of the unknown number of natives in areas of the territory not yet under government control. Rabaul (on New Britain), which had been the capital, was destroyed by volcanic eruptions (June 2, 1937). It was officially announced at Canberra (June 22, 1938) that Salamaua, a seaport on the mainland of N.E. New Guinea, would be the new capital; but a government committee appointed by the Australian Commonwealth recommended (October, 1939) the selection of Lae as the capital instead.

Production and Trade. The area under cultivation in 1937-38 totaled 245,184 acres, of which 239,869 acres were devoted to coconuts. Cacao (200 metric tons, 1937-38 season); copra (74,400 metric tons exported in 1938); kapok, coffee, tobacco, and fruits are produced. Gold

(236,113 fine oz. in 1938) and silver (3 metric tons, 1937) are the chief minerals, followed by copper, osmiridium, iron, sulphur, platinum, and brown coal. Imports, 1937-38, were valued at £A1,610,937 (£A1,311,623 in 1936-37); exports, £A2,980,360 (£A3,089,072). The Australian pound (£A) averaged \$3.9394 for 1937. Shipping entered and cleared during 1937-38 totaled 678,983 tons. Air service between Sydney, Australia, and New Guinea was put into operation on May 30, 1938.

Government. For 1937-38 (1936-37 figures in parentheses) revenue totaled £A506,397 (£A481,070); expenditure, £A508,612 (£A460,118); public debt £A31,514. The territory is under an administrator assisted by an executive council of 9 members, of whom 1 must not be an officer of the territory. The legislative council consists of the administrator, the 8 official members of the executive council and 7 non-official members, the latter nominated by the administrator and appointed by the governor-general of Australia. Administrator, Brig.-Gen. W. R. McNicoll (appointed Sept. 13, 1934). See AUSTRALIA under *History*; *EXPLORATION*.

NEW HAMPSHIRE, Area and Population. Area, 9341 square miles; included (1930) water, 310 square miles. Population: Census of Apr. 1, 1930, 465,293; Federal estimate for July 1, 1937, 510,000; census of 1920, 443,083. Manchester (1930) had 76,834 inhabitants; Concord, the capital, 25,228.

Agriculture. Land harvested in New Hampshire in 1939 totaled 427,300 acres, in principal crops. The most extensive crop, tame hay, taken from 388,000 acres, made 394,000 tons (approximate farm value, \$4,649,000); potatoes, 9300 acres, 1,395,000 bu. (\$1,465,000); apples for market totaled 890,000 bu. (\$801,000).

Manufacturing. Establishments engaged in manufacture in New Hampshire numbered in 1937, 794 (in 1935, 775); they employed 56,517 wage-earners, or about one-eighth of the population, for \$55,234,545 in wages (in 1935, 53,833 received \$47,812,060); the year's output of manufactured goods totaled \$249,631,724 (in 1935, \$207,090,501), to which sum the processes of manufacture contributed \$105,308,526 (in 1935, \$90,733,834). Boots and shoes exceeded one-fourth of all the manufactured output of 1937; textiles, chiefly woven woollens and cottons, formed about one-fifth. The boot-and-shoe industry employed 17,713 wage-earners, paid them \$16,101,729, and produced \$64,025,165 in goods. Cotton woven goods manufactured in 1937 amounted to \$25,087,085 (narrow fabrics included); the output of woolen weaves attained \$23,503,934; paper, to the value of \$16,368,013, was produced.

About half of the manufactures of 1937 came from the two counties of the Merrimack valley—Hillsborough and Merrimack counties. Hillsborough County, including the cities of Manchester and Nashua, produced manufactures totaling \$105,301,433.

Education. New Hampshire's inhabitants of school age (from 5 years to 16) were reckoned for the academic year 1937-38 at 89,630. For the year 1938-39 enrollments of pupils in all public schools numbered 75,850; this comprised 53,981 in elementary study, 20,795 in high schools, and 1074 in evening schools. The year's expenditure for public-school education amounted to \$8,547,642; this included the 2940 teachers' salaries, averaging, for men and for women respectively, \$1830.12 and

\$1353.40 in secondary schools and \$1443.56 and \$1089.97 in elementary teaching.

Legislation. The regular biennial session of the Legislature, which opened in January, worked an important change in the State's fiscal system. Creating a tax on sales of tobacco at the rate of 15 per cent of the price, it decreed that the revenue from the new impost should be applied to reducing or extinguishing the State's ad-valorem tax on property. By an unexplained slip the officers of the two legislative houses and, after them, Governor Murphy signed an early draft of the measure, lacking the provision as to the property-tax, but the error was promptly discovered and corrected. The Legislature also took necessary action on a State budget of about \$10,500,000 to cover the expenditure of the next two fiscal years. A bill to change the time and name of Fast Day, observed in New Hampshire for 258 years, failed of passage.

Political and Other Events. An element in the Federal Government's proposed system of works for restraining floods in the valley of the Connecticut River, the Surry Mountain Dam at Surry, N. H., was expected to be soon under construction; contracts for the work were sought by the Government from bidders in July.

A road, described as the first to link New Hampshire directly with Canada, was opened, September 24, with a ceremony attended by Governor Murphy and representatives of Canada. This road ran between Chartierville, near the border in southern Quebec, and Pittsburg, in the northern tip of New Hampshire. While travel up the headwaters of the Connecticut River and into Canada by automobile was common, the part of it that went through New Hampshire had taken a route reaching Canada only indirectly.

A study made for the State's Commission for the Promotion of the Wealth and Income of the People of New Hampshire brought forth, December 3, a report tending to show that the State's people suffered a net economic loss in 1936 of \$3,989,000, taking into consideration their share of Federal debt and tax-payments.

Officers. New Hampshire's chief officers, serving in 1939, were: Governor, Francis P. Murphy (Rep.); Secretary of State, Enoch D. Fuller; Treasurer, F. Gordon Kimball; Attorney-General, Thomas P. Cheney; Comptroller, Charles T. Patten; Commissioner of Education, James N. Pringle.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational State institution of higher learning at Durham, N. H., founded in 1866 in Hanover, N. H., and transferred to Durham in 1893. The 1939-40 enrollment was 2031, of whom 1385 were men and 646 women. The summer session had a registration of 518. The faculty and research and extension staff totaled 289. The endowment amounted to \$1,245,625, and the income for the year was \$1,722,836. The new Biological Institute of plant and animal sciences housed in the new class and laboratory building, Nesmith Hall, was first occupied this year. The library contained 103,000 volumes. President, Fred Engelhardt, A.M., Ph.D.

NEW HEBRIDES, hēb'ri-dēz. A British-French condominium comprising a group of islands in the South Pacific. Espiritu Santo, Malekula, Efate, Ambrym, Erromanga, Epi, Aoba, Pentecost, Maeovo, Gaua, and Vanua Lava are the main islands. Total area, 5700 square miles; population (1938 estimate), 43,205, in-

cluding 2205 non-natives. Vila, the capital, had about 1200 inhabitants; Malekula had 9000 natives.

The principal products are copra (11,800 metric tons, 1937); cacao (700 metric tons exported, 1937-38 season); coffee (2000 metric tons exported, 1938-39 season); and vanilla. In 1938, imports were valued at £111,867; exports, £120,211; condominium revenue, £27,614; condominium expenditure, £23,917 (£ averaged \$4.8894 for 1938). Executive power is vested in a British Resident Commissioner (who is under the British High Commissioner stationed at Suva, Fiji Islands) and a French Resident Commissioner (subordinate to the French High Commissioner stationed at Nouméa, New Caledonia).

NEW JERSEY. Area and Population. Area (1930, but revised to exclude 64 square miles of water yielded to Delaware in a revision of boundary), 8160 square miles; included water, 646 square miles. Population: Apr. 1, 1930 (census), 4,041,334; July 1, 1937 (Federal estimate), 4,343,000; 1920 (census), 3,155,900. Newark (1930) had 442,337 inhabitants; Jersey City, 316,715; Paterson, 138,513; Trenton, the capital, 123,356.

Agriculture. New Jersey harvested, in 1939, 724,000 acres of principal crops, mainly in hay and corn. Tame hay, gathered on 219,000 acres, made 299,000 tons (estimated farm value, \$5,232,000); corn, on 189,000 acres, 7,182,000 bu. (\$4,740,000); apples gathered for market attained 2,950,000 bu. (\$2,065,000); peaches, 1,435,000 bu. (\$1,435,000); potatoes, on 55,000 acres, 7,480,000 bu. (\$5,834,000); sweet potatoes, 15,000 acres, 2,325,000 bu. (\$1,976,000).

Manufacturing. The chief totals for New Jersey's manufacturing industry in 1937 (and for 1935 in parenthesis) were: establishments engaged in manufacture, 7064 (7425); their wage-earners, 436,745 (373,522); wages paid, \$523,504,132 (\$391,923,700); cost of materials, etc., \$1,890,538,525 (\$1,382,468,869); products' total value, \$3,253,246,218 (\$2,407,323,488); value contributed thereto by manufacture, \$1,362,707,693 (\$1,024,854,619).

The highly varied character of manufacture in New Jersey appears from the list of more than 200 industries separately classified in the report made on the State by the U.S. Census of Manufactures for 1937. The main industries or groups of industries in this list, on the basis of the value of products, were: the smelting and refining of copper, \$230,793,620; the refining of petroleum, \$216,284,099; the making of miscellaneous chemicals, \$177,138,819; and the production of electrical machinery and related goods, \$166,613,999. On the basis of wages paid, however, the leaders were: electrical machinery, etc., \$35,059,134; miscellaneous chemicals, \$23,788,827; shipbuilding, \$16,119,868; petroleum-refining, \$15,405,420; machinery, exclusive of lines separately listed, \$14,186,814; steel-works and rolling mills, \$12,552,532; production of rubber goods, \$12,299,783. Divers industries making garments produced about \$143,000,000 in aggregate value of goods.

Cities that reported more than \$100,000,000 each of goods manufactured in 1937 were: Newark, \$421,649,502; Jersey City, \$270,840,745; Perth Amboy, \$210,884,579; Bayonne, \$152,211,277; Camden, \$150,455,138; and Kearny, \$114,720,115. Passaic's total was \$97,398,228; Paterson's, \$94,055,391.

Mineral Production. The total yearly value of the native mineral products of New Jersey, as

published by the Bureau of Mines in 1939, to cover the year 1937, was \$31,467,931. From this total and from one of its items, clay products, was omitted a great component theretofore supplied by pottery and refractories. That component came to some \$13,500,000 for the year 1936. Those comparing current with earlier totals of the State's mineral production should take account of the change in the basis of reckoning.

The State's total for 1937 included the output of zinc, which made up more than two-fifths of the amount; of clay products (exclusive of pottery), making up one-fifth; and of cement, for which total yearly production was not stated for New Jersey individually. The mining of zinc decreased to 85,389 short tons of the recoverable metal, for 1938, from 100,408 tons (value, \$13,461,309) for 1937. Clay products, exclusive of pottery, attained, for 1937, \$6,395,790. The mining of iron ore decreased sharply in 1938, to a year's total of 139,890 gross tons; ore mined in 1937 had totaled 544,635 tons; in yearly value, the production of iron ore was \$760,929 for 1938 and \$2,474,087 for 1937.

Education. Enrollments of pupils in the public schools of New Jersey in the academic year 1938-39 numbered 749,405. This comprised 34,806 in kindergartens, 472,620 in elementary study, 50,468 in junior high schools, 35,627 in senior high schools, 45,546 in four-year high schools, 1243 in postgraduate courses, and 9095 in special classes. Enrollments in the aggregate fell somewhat below those for the year before, but by groups, enrollments exceeded those of the year before, except in the kindergarten and elementary groups. The year's expenditures for public-school education attained \$102,275,493, inclusive of \$16,630,930 for service of debt, but exclusive of \$9,713,004 for outlays. Over half of the current expenditure went to pay the 28,595 teachers, who averaged \$2057.55.

Legislation. The Legislature met on January 10 in regular annual session, under Republican control in both houses. Its foremost problem was to find the means of meeting a great part of the cost of poor-aid rendered by State and localities to a substantial part of the population. Governor Moore (Dem.) warned the session at its outset that the State still had to assist in more than 70,000 relief cases, urged the prolongation of the joint support for "work relief" in which New Jersey and the Federal Government had already embarked, and left it to the Legislators how to determine and meet the cost of what must be done. The Legislature enacted measures requiring municipalities to meet one-fourth of the cost of public aid in 1938; for the future it proposed the borrowing of \$21,000,000 in the next two years, retrievable from certain expected highway-fund surpluses and from the proceeds of anticipated taxes on pari-mutuel betting; in addition the temporary diversion of some other funds was to bring the available total to \$33,000,000; of this sum, \$15,000,000 or three-fourths of the expected charge on State and subdivisions together, was to be available in the new fiscal year. Efforts on the part of a strong group of the Republican majority were exerted for the creation of taxes on incomes or on retail sales as preferable to the incurring of debt. The efforts were defeated, largely by urban sentiment, cities apprehending that taxes would chiefly fall on them. The popular vote, November 8, ratified the Legislature's proposal to issue the \$21,000,000 of State bonds.

Other acts provided appropriations of \$39,281,-

490 for highways, inclusive of \$4,000,000 that might be used in connection with poor aid. The Governor's budget for the next fiscal year, totaling nearly \$40,000,000 with the inclusion of appropriation against a \$2,000,000 deficit of the year ending, was voted, less some minor cuts.

Political and Other Events. The State's efforts to increase its revenue and thus overcome deficits occasioned by the cost of poor-relief took several forms; the difficulty of the problem lay in the widespread aversion to creating either a sales tax or an income tax. Apart from the dislike of being taxed, shared by the populations of other States where either or both of these imposts had nevertheless become established, New Jersey had reasons of its own for avoiding them. Its policy of attracting industries by favorable treatment had kept it fairly immune to the emigration of industries, which had afflicted other States of the Northeast. The wages paid by its manufacturers in 1937 came to 92 per cent of the like total for 1927, a much better showing than in the corresponding figures for Massachusetts, New York, or Pennsylvania. New Jersey was bent, moreover, on attracting industrial immigration from other States, and letters from Governor Moore, according to the *San Francisco Chronicle*, were soliciting the incoming of industrial firms from as far as California.

The State's plan to allow horse races and to tax them thus formed an important part of the policy of authorities in an area having some claim to the advantages of a fiscal oasis and yet pressed for the means to give decent aid to its poor. Having been duly proposed by successive Legislatures a proposition to amend the State constitution, by repealing its prohibition of race-track gambling, was submitted to popular vote at a special election held on June 20. The change was opposed by a Republican group led by Lester H. Clee, former candidate for Governor, and by some religious groups. It had the support of Mayor Hague of Jersey City, the home of the chief block of the State's Democratic vote. Friends of the amendment hoped that the establishment of horse-racing, with betting, would bring the State, through taxes as much as \$5,000,000 a year, but the State Chamber of Commerce expressed doubt that the yearly receipts thereby would attain \$1,000,000. The amendment was adopted by the voters; 457,255 ballots were cast for it, 301,128 against. Racing did not start in 1939, for the Legislature failed to agree on a bill for the regulation of races and wagers and for their taxation.

In further effort to obviate the need of more taxes, Attorney-General Wilentz moved to effect the collection of taxes that the State claimed from the railroads; these had been in dispute since 1932, when the chief railroads having line in the State started protesting yearly the assessment of their properties as excessive. The sum in dispute rose gradually, to more than \$34,000,000 in 1939. The Legislature having made no headway with a move to settle the State's claims for \$14,263,000, Wilentz moved in October to enter judgments against some of the delinquent companies. Some of these were already bankrupt and able to call upon the Federal courts to shelter them from debt judgments; another, the Central Railroad of New Jersey, took refuge by petitioning, October 30, for a reorganization, in the Federal District Court at Newark. A Federal District Court order, December 26, required this road, then in reorganization, to pay 60 per cent, or a little over \$2,000,000,

of its tax of 1939. Another District Court order, November 2, enjoined the State from collecting more than 60 per cent, from any of the suing railroads, or the levies against them for 1934, 1935, and 1936.

Courts' Decisions. The U.S. Supreme Court refused to review the conviction of the two Ellis H. Parkers (Sr. and Jr.) in 1937 for the abduction of Paul H. Wendel, who had been taken and made to sign a purported confession of the kidnapping of the Lindbergh baby; the Parkers were thereupon sent to serve their time in the North-eastern Federal Penitentiary.

The case of the C.I.O. against Mayor Hague of Jersey City, over the city's forbidding the organization's agents to hold public meetings and to distribute circulars in the streets (see NEW JERSEY, in 1938 YEAR BOOK, pp. 531-32) was appealed by Hague; the Third U.S. Circuit Court affirmed the original decision; Hague took his appeal to the U.S. Supreme Court. Its decision (June 5) upheld the courts below. One effect of the decision was to overthrow the method that Jersey City had employed for years, to prevent by the use of the local police power the spread of possibly subversive movements.

The State's Court of Errors and Appeals held void (October 26) four temporary injunctions that Vice-Chancellor Berry had issued against strikers' picketing and other proceedings. The State Supreme Court held against the extreme application of the municipalities' power to license businesses, by declaring void the ordinances of Camden and Atlantic City, respectively imposing \$10,000 and \$5,000 as fees to be charged for licenses required of "self-service" markets of a new type that had lately begun to spread through the State. A much controverted State act of 1938, prohibiting the sale of merchandise at retail, for a price below its cost, was declared unconstitutional by the State Supreme Court's decision of September 16. The same Court held (February 1) that an act of 1925, to exempt from the State's taxes on inheritance the bequests to State educational institutions, was unconstitutional.

The Court of Errors and Appeals, in a suit brought by Camden, held, November 29, that an act of 1938, to apportion cities' shares of taxes paid by public utilities, was unconstitutional; the act had been designed to stop the local abuses of the power to tax such companies.

Jersey City and Hudson County. The Standard Oil Company of N. J. announced intention to put an end to some of its manufacturing operations at Bayonne, Union County, during 1940; this decision followed the company's receipt of an assessment at more than \$39,000,000 for pro-rata taxation, and the company's request for reassessment at less than one-third of the figure.

Municipal Affairs of Newark. Mayor Ellenstein and a group of other officials of the city of Newark were tried jointly in the Court of Common Pleas for conspiracy to defraud the city in purchases of land to be supplied to the Federal Government for the site of an aeronautical base for the Army; the land in question was in the Jersey Meadows, which form a wide marshy area, extending east of the city; filled and drained spots in the area had become the sites of manufacturing establishments, but much of the meadow land had no immediate utility and was held at a low market value. The case against the accused involved the alleged purchase on behalf of the city, of one tract (among others) at the price of

\$190,000, which had previously been purchasable for \$16,000. After proceeding for two months the case went to the jury; one of its members reported himself ill on the first night of the jury's confinement; he was deemed to be suffering from appendicitis and unable to proceed; a mistrial was declared, April 23. Charges were later made that outsiders had sought to tamper with the jury. Arrangements were made in September for the retrial of the case.

Newark, seeking to make a needed improvement in its revenues, assessed a number of great corporations having establishments there for taxes on huge sums representing the value of "intangible" personal property owned by the several corporations. The U.S. Supreme Court upheld (May 30) Newark's taxes on intangible property of the Newark Fire and two other insurance companies doing business in New York City; the Essex County Board of Taxation dismissed (February 2) assessments of \$36,000,000 against the American Can Company and \$17,000,000 against the Tidewater Oil Company; and the State Supreme Court held void (July 11) assessments against the Porto-Rican-American Tobacco Company (\$26,000,000), Duke Power Company, and Sun Oil Company. A number of airplane lines, regular users of the Newark airport, applied to the Civil Aeronautics Authority to transfer their operations to the new North Beach Airport in Queens Borough, New York City. The Newark Citizens Union presented September 21; a petition bearing 25,170 signatures and calling for a referendum on the proposal of changing the form of the municipal government to the city-manager type, from the existing government by city commission.

Other Localities. Camden, which had issued scrip from time to time between 1933 and 1936 and had recovered scrip to a total of \$8,000,000, ordered the burning of the scrip in January. At Hightstown, the garment-making machinery of New Jersey Homesteads, one of the earlier efforts of the Federal Administration to effect the resettlement of people in poor circumstances, was put up at auction; the decision to sell the industrial equipment of the colony followed unavailing efforts on the part of a co-operative association of colonists, garment-makers from near-by cities, to market their output of clothing.

Officers. New Jersey's chief officers, serving in 1939, were: Governor, A. Harry Moore (Dem.); Secretary of State, Thomas A. Mathis; Treasurer, William H. Albright; Comptroller, Frank J. Murray; Attorney-General, David T. Wilentz; Commissioner of Education, Charles H. Elliott.

NEW MEXICO. Area and Population. Area, 122,634 square miles; including (1930) water, 131 square miles. Population: Apr. 1, 1930 (census), 423,317; July 1, 1937 (Federal estimate), 422,000; 1920 (census), 360,350. Sante Fe, the capital, had 11,176 inhabitants in 1930.

Agriculture. New Mexico harvested, in 1939, 1,372,300 acres of principal crops. Cotton, on 93,000 acres, gave 97,000 bales (\$4,365,000, estimated farm value); tame hay, on 136,000 acres, 266,000 tons (\$2,500,000); grain sorghums, 253,000 acres, 2,150,000 bu. (\$2,362,000); wheat, 294,000 acres, 2,960,000 bu. (\$1,954,000); corn, 189,000 acres, 2,552,000 bu. (\$1,837,000); dry beans, 146,000 acres, 409,000 100-lb. bags (\$1,398,000).

Manufacturing. Comparatively little of the support of New Mexico's inhabitants came from

the manufacturing industries; these paid wages during 1937 in the ratio only of \$7 a year to the inhabitant; the amount that the process of manufacture contributed to the value of products slightly exceeded the ratio of \$21 to the inhabitant. Manufacturing establishments numbering 241 in 1937 (in 1935, 197) employed 3683 wage-earners (in 1935, 2827), who received \$2,991,782 (in 1935, \$2,232,568); they produced \$20,598,868 in value of output (in 1935, \$13,573,108), to which their manufacturing processes, apart from cost of material, etc., contributed \$9,113,851 (in 1935, \$5,761,062). The output of lumber and timber products attained \$4,945,151.

Mineral Production. The total value of native minerals produced in New Mexico in 1937 was \$72,855,745; petroleum supplied about one-half of this, natural gas one-tenth, copper about the same, and coal and zinc smaller but substantial portions. The yield of petroleum decreased to 35,759,000 barrels for 1938, from 38,854,000 barrels (value, \$36,600,000), for 1937. Natural gas to the quantity of 46,337 million cu. ft. produced in 1937 had a value of \$714,000 at its points of origin, or 1½ cents per M cu. ft., but this gas was delivered to consumers, and it was valued at \$7,699,000 at points of delivery. Reports on operations in 1938 listed smelters, steam boilers and sugar refineries in the chief centres as using a considerable part of the delivered gas. Extractors of gasoline treated natural gas to the quantity of 91,800 million cu. ft. in 1938. A moderate decline in its consumption by customers occurred in that year. The mines' output of coal, likewise decreased, to about 1,252,000 net tons (1938), from 1,714,955, in value \$4,973,000 (1937).

Soon after the outbreak of war in Europe (chief source of American imports of potash), the International Agricultural Corporation announced intention to expand its mine of potassium salts near Carlsbad, N. M., at an expense around \$2,500,000 and increase its potential production of potassium sulphate from the mine, by the summer of 1940 to the yearly rate of 70,000 tons and that of muriate of potassium to a quantity about equal to the sulphate. The mines of potash in this area had begun shipments in 1931; their production had developed greatly and had attained about 900,000 tons for 1938, averaging about one-fourth of potash (oxide of potassium). New Mexico, the chief producer of potash in the Union, furnished the greater part of the domestic output (value, \$9,175,599) of 1938.

For 1939 the value of mines' aggregate output of gold, silver, copper, lead, and zinc in New Mexico attained about \$15,719,238. This sum not only far exceeded the corresponding one for 1938, of \$9,473,819, but amply surpassed the figure for 1937, of \$14,038,790. Copper afforded the greater part of the value of the five metals; the mines' yearly yield of recoverable copper rose in quantity to 91,826,000 pounds (1939) from 40,878,000 (1938); by value, to \$9,549,904, from \$4,006,044. The yield of zinc increased to 63,436,000 pounds (1939), from 56,472,000 (1938); in value, to \$3,362,108, from \$2,710,656. The value of the production of gold fell to \$1,294,685 (1939), from \$1,506,750 (1938). The subordinate outputs of silver and of lead, respectively \$966,241 and \$646,300 in value for 1939, each somewhat exceeded the corresponding figure for 1938. The Pecos mine, in San Miguel County, closed, May 31, 1939, having exhausted its ore, after 12 years' operation and long leadership as a producer of

gold, silver, lead, and zinc. At Hurley the Nevada Consolidated Copper Company opened (May 2) a smelter to treat material from the neighboring concentrator of the Chino Copper enterprise.

Education. For the academic year 1937-38, the latest covered by the statistics that follow, enrollments of pupils in the public schools of New Mexico numbered 129,877 (in municipal schools, 65,228 and in rural schools, 64,649); the total of enrollments comprised 109,307 in elementary study and 20,570 in high schools. The year's expenditure for public-school education amounted to \$8,532,029. Teachers in public schools numbered 3709; those in the municipal positions, 1738 in all, were paid for the year at the average of \$1244; those in the rural schools, 1971, averaged \$842.

Legislation. The regular biennial session of the Legislature convened in January. It gave the State's ratification to the compact of New Mexico, Colorado, and Texas, apportioning among them the use of water from the Rio Grande River and terminating a longstanding suit maintained against New Mexico by Texas. In the field of taxation, an impost of 2 per cent of value was laid on goods bought outside and brought into the State. Firms in the business of making small personal loans were required to hold State licenses. A liquor bill was passed, containing a section to permit the sale of intoxicant drink on Sunday; Governor Miles vetoed this provision of the measure.

Political and Other Events. John E. Miles took office as Governor, January 2, succeeding Clyde E. Tingley. Old-age assistance was paid in New Mexico, in July, to 3908 persons, who received \$46,297 for that month, an average of \$11.85 for each recipient. A series of Federal prosecutions of persons accused of conspiring to take advantage of the WPA ran through the first half of the year. Alleged amity of some of the defendants with U.S. Senator Chavez gave the prosecutions a political aspect. About 80 indictments were originally issued; ten persons had been convicted by the end of March, but several obtained retrials and some of these were then acquitted.

The 50,000 agricultural Navajo Indians of New Mexico and Arizona voted, November 21, through their tribal elders, to accept Federal assistance offered them on account of drought which had spoiled their crops of 1939.

Officers. The chief officers of New Mexico, serving in 1939, were: Governor, John E. Miles (Dem.); Lieutenant-Governor, James Murray, Sr.; Secretary of State, Jessie M. Gonzales; Auditor, E. D. Trujillo; Treasurer, Rex French; Attorney-General, Filo Sedillo; Superintendent of Public Instruction, Mrs. Grace J. Corrigan.

NEW SOUTH WALES. An Australian State. Area, 309,432 square miles; population, exclusive of full-blooded aboriginals (Mar. 31, 1939, estimate), 2,742,859 compared with 2,600,847 (1933 census). During 1938 there were 47,319 births, 26,105 deaths, and 24,579 marriages. Sydney (the capital), including suburbs, had 1,288,720 inhabitants on Dec. 31, 1938. Other important cities (with 1933 census populations) are Newcastle and suburbs, 104,485; Broken Hill, 26,926; Goulburn, 14,849; Cessnock, 14,385; Lithgow, 13,444. The 3409 State schools had 370,222 pupils enrolled in the last quarter of 1937; the 750 private schools, 99,465; the University of Sydney, 3378 students; the Technical College, with branch schools, 26,188.

Production. Wheat, barley, oats, maize, rice, sugar cane, tobacco, bananas, oranges, grapes, and apples are the principal agricultural products. During 1938-39, 59,124,000 bu. of wheat were produced from a total of 4,568,000 acres. The principal dairy products for 1937-38 were butter, 120,882,732 lb.; cheese, 8,004,873 lb.; bacon and ham, 21,374,691 lb. Wool (greasy) production for 1939 was 437,700,000 lb. Livestock (1937): 51,563,181 sheep; 3,019,581 cattle; 528,625 horses; 356,765 swine.

Minerals produced during 1938 were valued at £10,703,864 of which coal accounted for £A5,603,842; silver and lead, £A3,520,465; gold £A789,958; tin £A286,768; copper £A87,905. (The famous Broken Hill Proprietary silver mine, which in 54 years produced 12,300,000 tons of ore, was closed on Mar. 4, 1939, owing to exhaustion of the metal.) The 9097 manufacturing establishments, with 224,861 employees, had a value of production for 1938 amounting to £A85,168,133 net (£ Australian averaged \$3.8955 in 1938).

Government. For the fiscal year ended June 30, 1939, revenue totaled £A58,848,000; expenditure, £A69,596,000; public debt, £A359,844,000. The executive power of the State rests in the hands of a governor (appointed by the King), aided by an executive council. Parliament consists of the legislative council of 60 members (elected jointly by both houses of parliament), and the legislative assembly of 90 members elected by universal adult suffrage. (At the State general election of Mar. 26, 1938, the standing of the political parties in the legislative assembly was: United Australia, 37; Country, 22; Labor, 28; Independent Labor, 1; Independent, 1.) Governor, Lord Wakehurst (assumed office April, 1937); Premier, Alexander Mair (succeeded B. S. B. Stevens, August, 1939). See AUSTRALIA under History.

NEWSPAPERS AND MAGAZINES. In 1939, there were 14,311 newspapers in the United States, an increase of 98 over 1938. Of these 2170 were dailies (a decrease of 46 from 1938); 1662 were evening, 477, morning, and 31 "all-day" papers; 577 had Sunday editions, 78 were in tabloid form, and 174 were published in foreign languages. There were 50 published thrice a week, 391 twice a week, 11,662 weekly (an increase of 146 over 1938), and 38 at less frequent intervals.

Magazines and other periodical publications not classed as newspapers, numbered 7124 (an increase of 278 over 1938), of these 1482 were published weekly and 3946 monthly. The grand total of all periodical publications, including magazines and newspapers, was 21,435, an increase of 376 over 1938.

Estimated circulation of English language newspapers, was 39,434,382, of which morning papers had 14,337,496, and evening papers 23,451,589. Twenty-three radio stations were owned or operated by newspapers in the United States.

During the year 51 dailies suspended publication through mergers or otherwise, 16 becoming weeklies, and six semi-weeklies. Suspensions since June, 1937, numbered 98, the largest for a comparable period in recent newspaper history.

Among the more notable newspaper casualties were the *Chattanooga News*, *Atlanta Georgian & American*, *Milwaukee News*, *Oklahoma City News*, *Toledo News-Bee*, *Buffalo Times*, *Spokane Press*, *Syracuse Journal*, *Minneapolis Journal* (merged with *The Star*), *Portland, Oregon, News Telegram*, *Chicago Herald and Examiner* (leaving Chicago with but one morning paper,

The Tribune), *Newark Star-Eagle*, *San Diego Sun* (leaving only 18 papers in the Scripps-Howard Chain). The *New Milwaukee Leader* became *The Post* in January. James M. Cox bought the *Atlanta Journal* in December. The Wilkes-Barre, Pa., papers were suspended six months during a six-month guild strike—October to April. Mrs. Eleanor Medill Patterson bought the *Washington Times* and *Herald* from W. R. Hearst and consolidated them. George Backer bought the *New York Post* in June from J. David Stern and cartoonist Rollin Kirby and columnist Heywood Broun left the *New York World-Telegram* and joined *The Post*.

During the year various newspapers in Minneapolis, San Francisco, Chicago, Philadelphia, Kansas City, Los Angeles, signed up with the American Newspaper Guild, bringing such contracts up to the total of 118.

In April John S. McCarrrens (Cleveland *Plain Dealer*) became President of the American Newspaper Publishers Association and Don J. Sterling (Portland, Oregon, *Journal*) President of the American Society of Newspaper Editors.

In June the Associated Press inaugurated color photo wire transmission service, and acquired the world's largest camera, costing \$1600.

A radio debate between Secretary of the Treasury Ickes and Newspaper owner Frank Gannett on the freedom of the press provoked wide comment.

In August national advertising was up 14.7 per cent over 1933 in the newspapers; 34.3 in the magazines; 127.6 in radio. Circulation of 231 leading newspapers was 3.24 per cent higher than in 1938, news space was up .85 per cent; advertising lineage 3.1 per cent.

Notable deaths in the newspaper world were those of Louis J. Heath, Geo. R. Holmes, Geo. Buchanan Fife, Barron Collier (q.v.), Ralph Pulitzer (q.v.), Floyd Gibbons, and Heywood Broun (q.v.). Heywood Broun was succeeded as President of the American Newspaper Guild by Kenneth L. Crawford of the *New York Post*.

In the magazine field, circulation of 119 general magazines was up 4 per cent at the beginning of the year over the year before, and advertising lineage was down 19 per cent. There were more motion picture, mystery, radio romance, and comic magazines—one count showing a net increase from 43 to 53 in a year.

A new Washington weekly on the lines of the *New Yorker* was launched. The magazine *Ken* suspended. E. P. Grierson bought *The American Boy*. Scribner's suspended and was merged with *The Commentator*. David Lawrence's *United States News* came out in magazine form at the end of the year.

See PULITZER PRIZES.

B. P. ADAMS.

NEW YORK. Area and Population. Area, 49,204 square miles, exclusive of State water in the Great Lakes, but including (1930) other water, 1550 square miles. Population: Apr. 1, 1930 (census), 12,588,066; July 1, 1937 (Federal estimate), 12,959,000; 1920 (census), 10,385,227. New York City had (1930), 6,930,446 inhabitants; Buffalo, 573,076; Rochester, 328,132; Syracuse, 209,326; Albany, the capital, 127,412.

Agriculture. New York harvested, in 1939, 6,592,500 acres of principal crops. Tame hay, using three-fifths of this acreage, covered 3,962,000 acres and gave 4,179,000 tons (estimated farm

value, \$49,312,000); potatoes, on 211,000 acres, bore 26,797,000 bu. (\$22,777,000); corn, on 699,000 acres, 24,465,000 bu. (\$16,881,000); oats, 782,000 acres, 25,806,000 bu. (\$10,580,000); apples for market totaled 14,500,000 bu. (\$8,700,000); wheat, on 273,000 acres, 6,382,000 bu. (\$5,169,000); dry beans, 140,000 acres, 1,134,000 100-lb. bags (\$3,920,000); barley, on 146,000 acres, 3,942,000 bu. (\$2,129,000); buckwheat, 134,000 acres, 2,077,000 bu. (\$1,350,000); peaches, 1,722,000 bu. (\$1,378,000); pears, 1,749,000 bu. (\$1,312,000); grapes, 75,600 tons (\$2,646,000).

Manufacturing. The U.S. Census of Manufactures' report published in 1939 indicated that New York State, while its manufacturing industries' performance in 1937 showed substantial gain over that of 1935, nevertheless lost ground to Pennsylvania and Illinois, both of which States outstripped it as to absolute gains in employed wage-earners, wages paid, value of products, and value contributed thereto by manufacture. New York's manufacturing establishments numbered 29,747 in 1937 (in 1935, 33,569) and employed 995,658 wage-earners (in 1935, 878,592), who received \$1,236,048,186 (in 1935, \$991,677,618); the manufactured products totaled \$7,314,446,524 (in 1935, \$5,963,850,154); to which sum the processes of manufacture contributed \$3,136,180,454 (in 1935, \$2,656,335,394).

The fabrication of garments of many sorts, inclusive of hats, footwear, and furs, and taken as a whole, accounted for about \$1,350,000,000 of the output of manufactures in 1937; this group of products outranked in value all classifications in the Census of Manufactures; but it there appeared among a considerable number of classifications: among them, boots and shoes (those of rubber excepted), \$125,819,448 in output; men's, youths' and boys' clothing, \$254,824,584; dresses, \$338,428,786; fur goods, \$133,506,159. Outside the garment trade, the printing and publishing of periodicals and newspapers produced \$369,297,040; that of books, \$207,434,059; bakeries, \$243,836,287; the making of chemicals, \$174,757,163; of electrical machinery, \$182,694,349; meat-packing, \$174,888,081; the making of prepared feeds, \$100,483,257; of miscellaneous machinery, \$106,450,875; grain mills, \$102,813,647.

Cities listed as respectively producing manufactures in excess of \$100,000,000 in 1937 were: New York City, \$3,962,292,660; Buffalo, \$623,102,794; Rochester, \$303,364,282; Niagara Falls, \$141,542,110; Syracuse, \$107,434,697.

Mineral Production. The yearly total of minerals produced from New York's own soil (not to include the output of industries treating minerals imported from elsewhere nor the important industry in the fabrication of pottery) attained \$77,665,974 for 1937. The chief products according to value were petroleum, natural gas, stone (chiefly for concrete, road-building, and railroad ballast), cement, sand and gravel, salt, clay products, and zinc. New York continued to produce somewhat less than one-fifth of the yearly yield of Pennsylvania-grade petroleum, commanding special prices on account of its particular uses; the State's output of this petroleum decreased to a total of 5,045,000 barrels for 1938, from 5,478,000 barrels, \$14,140,000 in value, for 1937; a sharp recession in the price discouraged activity in the oil fields in 1938, and this easily affected output as might be expected in a State deriving its production from 19,900 separate active wells averaging even in 1937, under much stimu-

lation, only four-fifths of a barrel a day. The marketed yield of natural gas, sharply on the increase, attained 21,325 million cu. ft. for 1937; in value, \$12,388,000. While a reliable computation of the yield for 1938 was not yet at hand, the completion of 31 new producing wells in Steuben and Allegany counties and further development in Oneida County were reported. The additional supply in Steuben and Allegany counties came from depths of 4000 feet or more penetrating the Oriskany sand, source of the important upgrowth of the output of natural gas subsequent to 1934.

Production of Portland cement diminished moderately; the mills' shipments fell to a yearly total of 5,720,922 barrels, for 1938, from 6,106,183 for 1937; in value, to \$7,893,270, from \$8,825,785. The production of salt fell off considerably, to 1,717,064 short tons (1938), from 2,084,867 (1937); in value, to \$5,467,077, from \$5,795,551. The value of clay products for 1937 was stated by the U.S. Bureau of Mines as \$5,435,096, but this total, published in 1939, omitted the formerly included element of pottery, providing a yearly production of some \$4,400,000.

Outside the total yearly production of native minerals, New York's industries treating minerals brought from elsewhere played an important part in creating goods. The production of coke in by-product ovens amounted to 3,948,833 net tons for 1938, and to 4,946,964 tons, in value \$29,853,516 for 1937. Makers of pig iron shipped from their furnaces 1,222,832 gross tons of pig iron (1938) as against 2,702,072 tons (1937); by value, \$25,450,764 (1938), and \$55,789,609 (1937). New York and New Jersey together made, in 1938, 1,347,802 gross tons of open-hearth steel ingots and castings; in 1937, 2,789,413 tons. New York's output of ferro alloys for 1937, 166,137 long tons, had a value of \$18,079,832.

Education. For the academic year 1937-38 (the latest covered as to the data that follow) New York's population of age up to 18 years was stated as 3,371,152. Enrollments of pupils in all public schools numbered 2,260,652; this comprised 1,553,399 in elementary study and 707,253 in high schools; it did not include 202,584 in evening, vocational, and Americanization classes. The year's expenditure for public-school education totaled \$354,109,166, exclusive of \$37,940,737 from proceeds of debt issue. Salaries of the 82,454 public-school teachers averaged \$2500.73.

Legislation. The Legislature, meeting in January, continued in regular annual session until May 20. Prevaillingly Republican in both houses, the session worked in harmony, on most points, but not on finances, with Governor Lehman, Democrat. The main budget, as adopted, approximated \$388,000,000, which did not include a supplemental budget carrying \$4,994,000, passed at the close of the session. The divers affected totals fell short by some \$25,000,000 of the total budget that Governor Lehman had presented. His budget had approximated \$415,000,000; this would have generated a deficit, as estimated for the fiscal year ahead, of \$61,000,000; Lehman, accordingly, had recommended new taxes sufficient to cover such an amount. The Republican legislators broke away from this plan early in the session. Assemblyman A. L. Moffat and other of the party's leaders drew a plan for reclassifying itemized appropriations by large groups, determining the total set by Lehman as items under each such group, and cutting totals in the case of three-

fourths of the groups. The plan as drawn reduced the Lehman budget by about \$31,000,000; various adjustments, mainly restorations in the supplemental budget, lessened the saving by about \$5,000,000. As to taxation, the Legislators' plan did away with Lehman's proposed taxation almost in whole; instead, it provided a special tax at one cent on each 10 cigarettes sold at retail, designed to yield \$22,000,000 a year, an additional 50 cents a gallon of excise on liquor, to produce \$9,333,000, and extension of the State's income tax to reach the salaries of Federal employees, to yield \$1,500,000.

As to the direction taken by Republican retrenchment, the Lehman totals most heavily cut were: for State aid to schools (about 30 per cent of the whole budget), by \$9,710,000; capital outlay for highways, by \$7,725,000; outlay for parkways, by \$2,384,000; work on county highways, by \$2,080,000; mental hygiene, by \$1,564,140.

Governor Lehman opposed the Republican budgetary plan; in this he had the support of many in the State. In particular, since the cuts in the totals allowed for the administrative departments and the public schools would compel heads to drop employees and reduce other employees' pay, teachers and civil-service employees felt themselves under attack. Attorney-General Bennett advised the Governor that the State's constitution prohibited the Legislature's altering the executive budget except by removing or reducing individual items or adding items each referring to a single object; and that therefore the proposed lump-sum appropriations were unconstitutional. The Governor and the Republican leaders finally agreed to leave the lump-sum reductions, aggregating about \$7,000,000, namely the total of the cuts in departmental appropriations, to be approved or invalidated by the Court of Appeals, without further delay to the passage of the altered budget. The Governor let the act cutting the contested appropriations become a law without his signature, declaring it unconstitutional in a special message to the Legislature. Other connected bills made into law included enactment of the three taxes previously mentioned, the suspension of automatic increases of salary for the State's employees under existing statute, and cuts in the Governor's proposed appropriations for State aid to schools and to highways, which appeared as lump sums in the executive budget and would therefore not figure in the court contest. A Legislative Auditor was created, to serve the Legislature as adviser in future work on budgets.

Other financial measures granted \$54,000,000, as Lehman had asked, for the State's various contributions to poor-aid; kept in force the 1-per cent emergency income tax, third and fourth cents of the tax on gasoline, and other imposts of temporary application that, taken together, yielded \$100,000,000 a year; required the Comptroller to audit payment in advance of disbursement of State money; revised, in accordance with the State Constitution of 1938, the laws governing the public finance of State and local government; and required domestic life-insurance companies to surrender to the State the unclaimed equities on policies.

Measures in which the State took noteworthy social initiative were: provision of \$1,000,000 a year in subsidy and of \$150,000,000 in immediate or early loans from the State, toward the promotion of housing enterprises in localities; creation of legislative commissions to study labor

relations, home relief, and crime; further legislation, in accordance with the new constitution, to promote and help finance the elimination of crossings of railroad and highway at the same grade; amendments to the State's system of unemployment compensation, including special rating and lower levy for the cost of such compensation in the cases of employers keeping their people steadily at work; committing to the localities the form of poor-aid known as home relief and authorizing them to provide work, under some limitations, for the relief of the needy; keeping up the existing temporary barrier, to the foreclosure of mortgages defaulted as to principal only, for another year. A bill making it a misdemeanor to interfere with a "person's right to work as a driver of a motor truck," regarded as a measure to check violence in truckdrivers' strikes, was passed but was vetoed by the Governor as likely to impair or to destroy fundamental rights of employees.

A change in the State government was initiated by the voting of a proposed constitutional amendment to lengthen the term of State Senators to four years, from two; as an amendment this proposal awaited second passage in 1941 before it could go to the voters for adoption. The appointment of commissioners in lunacy to determine the commitment of the insane was abolished and their task was entrusted to psychopathists chosen from State hospitals. Bills were enacted to safeguard the process of voting by means of the voting machine: boards of election or bipartisan committees appointed by them were required to recount the vote cast in every such machine, and peepholes made in the hood with sandpaper, as well as arrangements of mirrors to enable the voter's selection to be observed, were to be prevented by inspectors. The Governor vetoed a bill giving the courts full power of review over the decisions of the State Civil Service Commission.

Second passage completed the legislative preliminaries to sending to the voters, for their disposal at the general election, a proposed constitutional amendment to permit wagers under the pari-mutuel system at race tracks. A bill forbidding department stores' practice of using "loss leaders," goods offered at a loss in order to attract custom, was passed but vetoed. The State Racing Commission obtained the power to suspend or revoke racing licenses. In the educational field, school busses were authorized to give free transportation not only to children bound to or from public schools but also to those traveling between home and parochial schools. Teachers in the pay of New York City were forbidden to hold more than a single position, some specified exceptions being allowed.

New York City obtained authority to build a bridge between the Battery (in Manhattan) and Brooklyn; to demolish the old elevated-railway structure; to carry out a plan for unifying the ownership and direction of the municipal and private subways, bringing them all into municipal hands.

First Special Session. The decision of the State courts on the issue raised by the regular session's alteration of the appropriations asked in the Governor's budget supported the Governor and invalidated, in part the appropriations made by the Legislature (see above). The Court of Appeals, supporting a decision of the Appellate Division of the Supreme Court, held unanimously, June 21, that the Legislature had not the consti-

tutional power to reduce the departmental appropriations by groups, instead of items; it held valid, however, the reductions made in the sums appropriated for aid to public schools and to highways save for exceptions as to two items therein.

This judicial determination left the State without appropriations for running the departments. A special session was therefore summoned; it convened June 23; adjourned, July 11. The budget was re-enacted, with reductions bringing its total to \$388,500,000; while the cuts made in the Governor's budget were applied in much the same way as the original cuts, with regard to their general incidence, they were itemized as the interpretation of the State's constitution required. The divers appropriations made outside the budget were enacted over again, the judicial rulings being taken to mean that the original enactment of the budget having been invalidated, the regular session's subsequent passage of other appropriations did not satisfy the requirement that the budget act must be passed first.

Senate's Special Session. The State Senate convened, September 6, in special session and received from Governor Lehman charges that had been brought by a special grand jury, against Judge George W. Martin of the County Court of Kings County (Brooklyn). Acting in its judicial capacity the Senate proceeded to try the charges, with a view to the removal of the Judge, if warranted. The Senators, after hearing testimony and counsel's arguments for many weeks, voted (November 16) by 28 to 19 that Martin be not removed; 15 Republicans and 4 Democrats voted to remove Martin, while 18 Democrats and 10 Republicans voted not to remove him. The charges and evidence had largely to do with alleged faulty financial conduct.

Political and Other Events. Governor Lehman entered upon his fourth consecutive term, January 2. His new term was for four years, the tenure of the office having been lengthened from two years by constitutional change subsequent to his election in 1936. By proclamation he designated October 27 as Theodore Roosevelt Day, recommending it to New Yorkers' observance but not declaring it a holiday. Late in the year Lehman made up a commission of authorities to study the question of extending the State civil service so far as possible to cover the occupants of positions still exempt from its requirements. The number of such positions was estimated in the neighborhood of 15,000; Lehman's proposal looked to exempting present holders of positions, notably in the State's institutions, from examination, where their positions should be put under civil-service rules in other respects. See HOUSING; PRISONS.

Federal Control of the Milk Trade. The system of Federal regulation of the market for milk, previously established (see 1938 YEAR BOOK, p. 536) did not secure peace in its field in 1939. Dairy farmers started a strike in August, attacked State troopers guarding milk being trucked over the highway near Syracuse (August 21), and performed other acts of violence in efforts to stop the movement of milk from sources still sending it. The supply reaching New York City was reduced to 54 per cent of the normal. A new contract, proposed by Mayor La Guardia of New York City, was signed by distributors' and producers' representatives August 23 and approved by the Federal Department of Agriculture. The new contract, as interpreted, called for an increase in the price payable to producers, to \$2.15 a cwt., from

the previous \$1.65; but allowance was to be made for certain factors. There followed a rise of $\frac{3}{4}\%$ in the retail price of bottled milk by the quart, delivered, in New York City. The distributors' payments to the producers, for the initial month of September, were announced in the middle of October; they ran at the rate of \$2.08 $\frac{1}{2}$ a cwt. instead of the anticipated \$2.15. Mayor La Guardia denounced the price as "chiseling in the very lowest sense" and blamed the Department of Agriculture for not requiring payment at \$2.15. Late in October, 37 distributors, facing prospect of a producers' strike, agreed to make up the full demanded \$2.15 price; other distributors were threatened with the loss of their supply of milk. In November, distributors had to grant higher wages to their drivers and raised the price of milk by the quart another quarter-cent.

Civil and Criminal Justice. The State's Court of Appeals held (October 30) that the act of 1939 forbidding teachers in the public schools of New York City to hold more than one position was constitutionally sound, although depriving Jacob Hendon, the litigant, of his property in a teaching contract. Demetrius Gula and Joseph Sakola, tried in New York City, were found guilty, January 27, of the fatal kidnapping of Arthur Fried of White Plains; the verdict was the first applying a new law that made punishment by death mandatory when the jury had rendered a verdict of guilt, without recommending mercy, in a case where kidnapping resulting in the death of the victim was charged; the two defendants had been arrested by the Federal Bureau of Investigation; they had made separate confessions to the Federal officers but repudiated the confessions in court. An amendment enacted in 1939, to the Surrogate Act, was invoked (October 30) by Surrogate G. A. Wingate in Brooklyn, in impounding \$6000 paid in settlement for causing the accidental death of Isaac Weidman, a naturalized German Jew, although the German Government presented a power of attorney from the widow; the changed Act allowed the surrogate to impound when it appeared that the beneficiary of a trust would not get the benefit of what was due him. The investigation of auditors for the State workmen's-compensation fund, conducted by District Attorney Dewey of New York County, resulted in several auditors' pleas of guilty and the indictment of 19, on charges of taking bribes to let employers defraud the State by paying less than their proper premiums for insurance.

Labor Disputes. A State law making it a punishable offense to furnish unlicensed guards for employers in strikes went into effect; eleven men received suspended sentences to fine or imprisonment under it (June 13) in New York City's Court of Special Sessions. Strikes in the State during the year were for the most part of minor importance (see, however, reference to the milk trade, above). An association of employers made a new contract for three years with the Truck Drivers', Dockworkers' and Helpers' Union (affiliated with the A. F. of L.), August 3, providing moderate increases in some wages; the new agreement was expected to preserve the State from disturbances of internal transportation such as had occurred in Rhode Island and Massachusetts. The State Labor Relations Board, in a decision published October 12, allowed ballots that made specific provision, in an election on the question of a bargaining representative for the employees of the Hotel St. George, for votes re-

jecting both unions presented as candidates; the ruling declared the choice of a union a right but not an obligation. About 5000 members of the International Longshoremen's Association struck early in November and resumed work on the 18th without winning their main demands for \$1.05 an hour and 40 hours a week.

Local Events in the State. *Rochester* was made the testing-ground of the Federal Surplus Commodities Corporation system of distributing food stamps presentable for certain kinds of food supplied to the poor by the Government; reports of the success of the plan in that city led to its spread among other parts of the State. At the proposal of the State's joint legislative committee studying employment for the middle-aged, 36 industries in Rochester, employing together about 35,000 people, united on procedure, in hiring, designed to do away with discrimination against the older applicants. The Town of Cortlandt, in Westchester County, brought suit in the State courts, to attack the municipal charter given by the Legislature in 1938 to *Peekskill*, then a village within Cortlandt; to this end an injunction was sought against an intended election in November to choose the first officials of the intended city, which was to come into being in January, 1940. The Court of Appeals, November 21, found Peekskill's charter inoperative because of fault in the procedure for its adoption.

At *Niagara Falls* the Niagara Falls Bridge Commission made plans for the construction of a new bridge, by name the Rainbow Bridge, in the stead of the Falls View Bridge, swept off by ice in 1938; the span was to rest 29 feet higher than the old one, which the ice had reached. Near *Cold Spring*, on Long Island, the former country estate of the late Otto H. Kahn, including a mansion in the French chateau style, was bought by New York City's department of sanitation for \$100,000, renamed Sanita Lodge, and opened as a place of recreation for the department's employees and their families. The *Hutchinson River Parkway* in Westchester County imposed a toll of 10 cents, August 20, in reprisal to the charge of a like toll on the connecting Merritt Parkway, in Connecticut.

New York City's Affairs. See separate articles, NEW YORK CITY, and (for World's Fair) NEW YORK WORLD'S FAIR.

Officers. The chief officers of New York, serving in 1939, were: Governor, Herbert H. Lehman (Dem.); Lieutenant-Governor, Charles Poletti; Secretary of State, Michael F. Walsh; Comptroller, Morris S. Tremaine; Attorney-General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

NEW YORK, THE CITY COLLEGE OF THE CITY OF. A coeducational institution in New York City, founded in 1848. It is governed by the Board of Higher Education and supported by municipal taxation. The enrollment for the autumn of 1939 was 24,375. The total enrollment for the summer session of 1939 was 6299, and for the preparatory high school, 1214. The faculty numbered 925. The income for the year was \$4,413,344. The library contained 234,131 volumes and 63,342 pamphlets. Construction of an addition to the library was in progress. Acting President, Nelson P. Mead, Ph.D.

NEW YORK CITY. Occurrences in 1939 bearing on welfare and prospects of the city were chiefly the opening and first season of the NEW YORK WORLD'S FAIR (q.v.); the determination of

the main features of agreements for the city's acquisition of the privately owned subways; the prosecution of one of the district leaders of the powerful Democratic Tammany organization, James J. Hines; and the discord between the city government and the State Legislature over right of way in taxation and over the reduction of the State's aid to the schools.

King George and Queen Elizabeth of Great Britain visited the city, Saturday, June 10, on their way from Washington to Hyde Park. They spent several hours at the World's Fair and visited Columbia University. See also DISTRICT OF COLUMBIA.

The City and the Fair. New York City spent about \$20,000,000, mainly prior to 1939, toward starting the World's Fair. Much of this sum went to the cost of the city's exhibit, while heavy expenditure was made on the improvement of the sites and on the construction of two miles of subway line (cost about \$1,700,000) to the fair grounds from the (municipal) Independent Subway System's Queens Boulevard line. While the number of visitors drawn by the fair did not admit of close computation, they brought a great deal of additional business to the hotels and retail shops in the city and gave publicity to what it had to offer. The interruption of travel abroad, by reason of the outbreak of a European war in the beginning of September, heightened the fair's worth as advertising for the chief domestic bidder for visitors' trade and thus helped confirm the intention to reopen the exhibition in 1940. See NEW YORK WORLD'S FAIR.

City to Purchase Transit Properties. The municipality signed an agreement giving it the right to acquire the lines of the Brooklyn-Manhattan Transit system by payments to the total of \$175,000,000; executed on June 30, this agreement had next to receive the ratifications of sufficient majorities of each of the numerous groups holding one or another of the securities of the system. A similar agreement with the representatives of groups of holders of securities of the Interborough Rapid Transit and Manhattan Elevated Railway companies, signed August 31, provided for the municipality's acquiring these companies' lines for \$151,248,187. The city had previously (see YEAR BOOK, 1938, p. 537) acquired the Manhattan Elevated system's Sixth Avenue line; it completed in 1939 the demolition of this line, freeing Sixth Avenue from the incumbrance of the elevated structure and rendering it one of the axial routes of Manhattan Island for vehicular movement. The city administration's purpose to acquire and remove the elevated structure from other avenues was aided in September by proceedings in the Federal District Court advancing the intended foreclosure of the Manhattan system in the interest of bondholders; it was delayed, however, by moves on behalf of the employees who wished to keep their positions. Proceedings were started, in advance of acquisitions of the B.M.T. system, with a view to acquiring and removing the elevated line on Fulton Street in Brooklyn.

Prosecutions. A Tammany veteran, one of the elder members of the Democratic organization in New York County, James J. Hines, leader of the 11th Assembly district, was convicted, February 25, of conspiracy with operators of a lottery; Co. Dist. Atty. Thomas E. Dewey conducted the prosecution before Judge C. C. Nott, Jr., in the City's Court of General Sessions. The

case was a retrial; Judge Pecora had declared a mistrial in Dewey's original attempt to convict Hines in the previous September. The prosecution brought forward in the second trial, evidence to show that Hines had used his influence at divers times to protect lottery men from the police and that one of the city Magistrates, Hulon Capshaw, had dismissed cases against such men as a favor to Hines. The conviction, admitting of a heavy prison sentence, was appealed and still awaited final disposal late in the year. Hines, however, was sentenced, March 23, to serve an indeterminate sentence from four to eight years in State Prison. The effect of the case was greatly to encourage the supporters of political reform, to strengthen the fidelity of the police, and to augment the popular political following of Dewey.

Louis Buchalter, commonly called Lepke, alleged leader in an organization carrying on criminal practices on a great scale, was prosecuted by the Federal authorities, with other defendants, on charges of conspiracy to violate the Federal law as to traffic in narcotics. Buchalter was convicted on December 20.

Fritz Kuhn, leader of the German-American Bund, was convicted, November 29, by a jury in the Court of General Sessions, on a charge of grand larceny, and was sentenced to serve from 2½ to 5 years in State's Prison. For the previous investigation of Kuhn's alleged pro-Nazi activities, see under DIES COMMITTEE. The trend of the prosecution's case was to establish that Kuhn had used certain sums of the money of the Bund for purposes of his own, without accounting for it.

Municipal Finances. The State Legislature enacted in 1939 a tax that lessened the flow of a considerable part of the city's income: the State tax on cigarettes, at 2 cents for the standard package, added to the city's tax of 1 cent a package for poor-relief and to the Federal taxation, raised the cost of retailed cigarettes so high as to reduce sales and thus at once cut the city's income and disappoint the State authorities.

Aid to the Poor. The cost of all aid to the poor, from public funds, except for unemployment benefits (ranked as insurance), ran at the rate of \$21,180,231 a month for June; this was 2.3 per cent lower than for May; 6.8 lower than for May, 1938; the payroll of the WPA carried \$11,624,299 of the total, general poor-aid \$6,972,434, and old-age assistance \$1,284,219, which a little surpassed the cost of aid to dependent children. For July the cost of general poor-relief, somewhat lower than for June, was \$6,781,216. This item, of particular importance to the city as it had to be met in great part from municipal income, was affected unfavorably by the enforced reductions that occurred in the load of the WPA in accordance with the new Federal statutory mandates, but favorably by the improvement in many lines of business. This improvement set in early in 1938 and was stimulated by the outbreak of war in Europe, an anticipated cause of employment and of productive and mercantile activity.

Chief Structural Changes. A municipal airport was opened for service, at North Beach, October 16. It occupied land near the northeastern corner of the borough of Queens; the City had bought this land from the Curtiss-Wright interests in 1937; the surface thereafter had been improved by filling and five concrete hangars were constructed. The cost, stated as between \$40,000,000 and \$45,000,000 was born in part by the city

and in part by the WPA; the WPA performed the work. Commercial lines of aviation serving New York had previously made the Newark airport their place of landing; they sought to use North Beach as soon as it was completed; Newark, which stood to lose business by the change, opposed it in hearings before the CAA.

Queensbridge Houses, in the Borough of Queens, greatest in size of the housing developments built in the United States until that time, opened for occupants October 25. It was built by the New York City Housing Authority (as to which, see HOUSING) at a cost of \$13,936,686. Five of what would eventually be six blocks of apartments were virtually completed by the end of the year; all six were to contain 3149 domiciles, having quarters for 11,400 persons; rent was to run from \$4.55 by the week, for 2½ rooms, up to \$5.90 for 6½ rooms, inclusive of gas, electricity, heat, and hot water: the intended tenants were those getting not over \$1400 a year.

Important works in progress included the Belt Parkway, reported in September as three-eighths of the way to completion; it was to extend for 31 miles along the borders of Queens and Brooklyn and was expected to cost \$28,000,000, inclusive of a Federal allotment of \$24,000,000. The City Housing Authority announced in September plans for the construction of 18 apartment buildings in the area of Brooklyn bounded by Atlantic, Rochester, and Buffalo Avenues and Bergen Street. The City applied without success to the War Department and thereafter to the President for permission to build a bridge across the East River at its mouth, between Battery Park and Brooklyn, and having a pier on Governor's Island. The north tube of the Lincoln Tunnel (between Manhattan and Weehawken) was sealed with the intention that it should remain closed until increase in traffic should require its use. At Rockefeller Center in mid-town Manhattan, the last of the 14 buildings erected by John D. Rockefeller in the course of eight years at a cost of about \$100,000,000 was finished except for details preparatory to occupancy early in 1940. The group, erected in years of economic hardship, had given work to great numbers; it provided quarters for many enterprises of a cultural character. With regard to the municipality's planning of additional capital expenditure for new undertakings of public construction, Mayor La Guardia notified the City Planning Commission, September 14, that the yearly allowance for this purpose would be restricted to \$20,000,000 for the year 1940; this limit did not take in about \$15,000,000 already assigned for public-school buildings. The actual budget for the next year's outlay on such construction exceeded \$100,000,000, as it included allowance for going on with work already started.

The Midtown-Queens vehicular tunnel under the East River was holed through on November 8.

Elections. In addition to contributing a heavy vote toward the State's adoption of the constitutional amendment to permit betting under the pari-mutuel system in connection with horse races, the people of New York City elected a mainly Democratic City Council. Twenty-one members were chosen by the system of proportional representation. This involved recounts after successive eliminations of candidates and transfers of votes to second-choice candidates. Recounts were by boroughs; Brooklyn, to elect seven councilmen, needed 45 counts, to deal with 54 candidates of numerous designations. The final count for the boroughs as a

NEW YORK UNIVERSITY. A nonsectarian and privately governed institution for the higher education of men and women, chartered in 1831, occupying six principal centers of instruction in New York City and subsidiary centers elsewhere, the chief properties being: (1) A forty-five acre campus at University Heights accommodating the liberal arts college for men, the College of Engineering (including the Daniel Guggenheim School of Aeronautics), and a division of the Graduate School; also the Colonnade of the Hall of Fame for Great Americans; (2) at Washington Square on the historic site of the University more than a dozen large buildings on three sides of the park housing the Washington Square (co-educational liberal arts) College, the principal activities of the Graduate School, the professional schools of Commerce, Education, Law, and Public Service, and the Division of General (extension) Education, together with the offices of administration; (3) in the Bellevue Hospital region the buildings of the College of Medicine and the College of Dentistry; (4) in East 80th Street near the Metropolitan Museum, the graduate Institute of Fine Arts; (5) in West 40th Street at Sixth Avenue overlooking Bryant Park, the School of Architecture and Allied Arts; and (6) at Trinity Place in the Wall Street financial district, the Graduate School of Business Administration.

Recent developments include the provision of new buildings involving instruction and equipment costs in excess of \$1,400,000. Two of the buildings, a Sanitary Engineering Laboratory at University Heights and a Public Health Laboratory in conjunction with the Medical College in the Bellevue Hospital district were erected by the City of New York on land provided by the University for the purpose, and are jointly occupied by municipal and University collaborative services. New or remodelled faculty club houses at both University Heights and Washington Square have been provided. Property in Stuyvesant Place near Washington Square consisting of three contiguous three-story buildings has been leased and reconstructed for the teacher-training department of Industrial Arts. At Washington Square a ten-story structure has been acquired and rebuilt for the Law School. The graduate programme in Fine Arts was installed in the new Institute building near the Metropolitan Museum, an Institute of Public Law and Administration has been established, and through support of the Alfred P. Sloan Foundation an Educational Film Institute has been created.

The student enrollment for the year 1938-39 totaled 47,525, including 37,376 resident students studying for degrees. The summer school enrollment was 8642. The faculty numbered 2167, including 220 professors, 134 associate professors, 238 assistant professors, and 1575 of other ranks. The library collections totaled 571,293 volumes. The operating budget approximated \$8,500,000. Gifts in excess of \$500,000 were received. The value of grounds, buildings and equipment ex-

ceeded \$15,000,000. Chancellor, Harry Woodburn Chase, Ph.D., L.H.D., Litt.D., LL.D.

NEW YORK WORLD'S FAIR. Planned as an inspiring panorama of "The World of Tomorrow"—its science, industry, art, and thousandfold other activities—the New York World's Fair opened its first season on Apr. 30, 1939, the 150th anniversary of the inauguration of George Washington as President of the United States, with President Franklin D. Roosevelt as principal speaker. It closed six months later, and will reopen in 1940 from May 11 to October 27, with the additional theme "For Democracy and Freedom."

Dominating the Fair grounds are the 700 foot Trylon and 200 foot Perisphere, symbols of the Exposition, the latter housing "Democracy," a vision of the ideal city of the future. The grounds, 1216½ acres in area, are in Flushing Meadows, Borough of Queens, near the geographical center of greater New York. After the 1940 season the grounds will revert to the City of New York for use as a municipal park. Total paid attendance for the 1939 season was 25,817,265, and grand total attendance, including workers' permits, 32,786,621—a greater number than at any other exposition.

The Fair involved an expenditure of \$155,000,000, of which the City of New York spent \$20,000,000, the State of New York \$6,500,000, and the Federal Government more than \$3,500,000. Investments of private exhibitors are placed at \$5,000,000; foreign governments, \$25,000,000; and States, \$5,000,000. The balance of \$50,000,000 is the Fair's portion, with debentures of \$27,829,500 to meet pre-opening costs.

The Fair grounds were zoned into five principal divisions: Main exhibit area, Transportation, Court of States, Foreign Zone, and Amusement Area. Parking lots were also provided for 43,000 cars.

Twenty-two states and the territory of Puerto Rico were represented in the Court of States, eleven in their own pavilions, while the exhibits of others occupied buildings of unique architecture clustered about a long pool. In the 100-acre zone beyond the Lagoon of Nations, and centering on the United States Federal Building and the Court of Peace, 61 foreign government exhibits were assembled, of which 22 occupied their own pavilions. The building erected by Soviet Russia was being dismantled at the close of the year.

The Federal Building, an imposing structure with two massive towers flanking a colonnade of thirteen columns representing the thirteen original states, houses twelve basic sections devoted to the functions of government. One of the most important exhibits is the original of the Constitution of the United States. An original of the Magna Charta was also exhibited in the British Empire building.

Most popular of the free exhibits was the Lagoon of Nations Display each night, a spectacle of water, fire, sound, and pyrotechnics witnessed by more than 20,000,000 visitors. The interior of the Perisphere was viewed by 5,718,224, and the Swing Mardi Gras Casino, opened only during the last months, was host to 1,145,714.

Among industrial exhibits, General Motors had a total of 13,000,000 visitors, and its popular Futurama, designed by Norman Bel Geddes, drew 5,180,000 to the "America of 1960." Chrysler

Motors state that 7,005,018 visited their exhibit, and Ford Motors announced their total as 8,181,067; of whom 1,965,938 drove about the "Road of Tomorrow." Eight millions visited the Railroads Exhibit, and 1,500,000 of these saw "Railroads on Parade," to which the price of admission was 25 cents. Other attendance statistics included, Goodrich, 5,328,923; National Advisory Committees Building, 110,000; General Electric, 8,000,000—1,400,000 at the House of Magic, 2,700,000 in Steinmetz Hall; Westinghouse, 6,500,000; Firestone, 5,009,135; Masterpieces of Art, 425,000, and the House of Jewels, 1,750,000.

Extending in a broad arc beyond the New York State Amphitheater and along the eastern shore of Fountain Lake was the Amusement Area. Among the concessions, the parachute jump was notable. Its eleven vividly colored parachutes operated from the top of the 250-foot tower, enabling visitors to experience all the thrills of "bailing out" without the usual hazards. This jump was the most popular "ride" of the season with 551,960 people paying to take the 250-foot drop. The best paying concession in the Amusement Area was Billy Rose's Aquacade, which was staged in the New York State Amphitheater; attendance was 5,004,504, and opening on May 4, it played to four shows a day.

An idea of the magnitude of the Fair is gained from the fact that electrical consumption was equal to that of a city of 125,000, a total of 74,540,000 KWH during the 1939 season. Approximately 547,321,500 gallons of water were used at the Fair, not including water used by the Fair Corporation for fountains, displays, etc. A medical force of 73 at the opening of the Fair treated 43,879 cases during the 1939 season. There were 13 deaths and no births on the Fair grounds. The Fair's police force, 600 men at the opening, made 147 arrests throughout the season. There was only one case of pickpocketing.

LEO CASEY.

NEW ZEALAND. A self-governing British dominion in the South Pacific. Capital, Wellington.

Area and Population. Exclusive of a number of small islands under its jurisdiction, the area of New Zealand totals 103,722 square miles, of which North Island has 44,281 and South Island 58,092. The population, as estimated for June 30, 1939, was 1,626,486 (including 88,997 Maoris). By the census of 1936, the population was 1,573,810, of which North Island had 1,018,036 and South Island 554,455. By racial origin, 1,484,528 inhabitants were European, 82,326 Maoris (including 15,014 half-castes), and 2899 Chinese. About 60 per cent of the population dwell in communities of 1000 or more persons. The estimated populations of the chief cities on Apr. 1, 1939, were: Auckland, 221,500; Wellington, 157,900; Christchurch, 135,400; Dunedin, 82,800; Invercargill, 26,500; Wanganui, 26,100; Palmerston, North, 25,300; Hamilton, 20,800; Napier, 19,400; Timaru, 19,300; New Plymouth, 19,300; Hastings, 18,900; Gisborne, 16,300; Nelson, 14,000. Births in 1938 (excluding aborigines) numbered 27,249 (18.0 per 1000); deaths, 14,756 (9.7 per 1000); marriages, 15,672 (10.3 per 1000). Immigration in the year ended Mar. 31, 1938, amounted to 38,738 while emigration totaled 36,352.

National Defense. See *History* below; also

articles on EUROPEAN WAR and MILITARY PROGRESS.

Education and Religion. Illiterates form less than 2 per cent of the white population. In January, 1939, there were 2290 public elementary schools with 6363 teachers and 206,002 pupils; 307 private primary schools with 28,386 pupils; and 143 village schools for the Maoris (July, 1938) with 8743 Maori and 1025 other pupils. The University of New Zealand, with 5707 students in 1938, includes Auckland University College, Victoria University College, Canterbury University College and the University of Otago. Two agricultural colleges, at Lincoln and at Massey, had 488 students. Anglicans represented 40.28 per cent of the population in 1936; Presbyterians, 24.66; Methodists, 8.11; Roman Catholics, 13.09.

Production. Principal crops in 1938 were: Wheat, 6,043,000 bu.; oats, 2,641,000 bu.; barley, 1,086,000 bu.; potatoes, 4,716,000 bu. (1937). Wool production in the year ended June 30, 1939, was estimated at 305,000,000 lb. (296,800,000 in 1938). Animal products, 1937, were: Meat, 1,151,700,000 lb.; butter, 307,948,000 lb.; cheese, 204,546,000 lb. In 1939 there were 31,897,091 sheep, 4,564,948 cattle, 683,463 swine and 274,803 horses.

The chief minerals produced are coal (986,000 metric tons in 1937); silver (369,896 fine oz. in 1938); and gold (151,162 fine oz. exported in 1938). With 5924 factories employing 104,344 hands, the total output of manufacturers, in the year ended Mar. 31, 1938, was valued at £113,691,556.

Foreign Trade. Total imports in 1939 were valued at £NZ49,387,000 (£NZ55,422,000 in 1938); total exports at £NZ58,009,000 (£NZ58,376,000 in 1938). Leading exports were dairy products, frozen meats, and wool. Exports (valued in New Zealand pounds) were chiefly distributed as follows: United Kingdom, 48,899,000; Australia, 2,192,000; United States, 1,447,000; Canada, 1,117,000; France, 1,012,000; Germany, 886,000; Japan, 593,000; Belgium, 363,000. Of the imports (valued in New Zealand pounds), the United Kingdom supplied 26,541,000; Australia 7,157,000; United States 6,859,000; Canada, 4,855,000; Netherlands Indies 2,150,000; Japan, 1,208,000; Germany, 1,119,000. See IMPORTS AND EXPORTS.

Finance. The budget for the fiscal year ending Mar. 31, 1940, estimated revenue at £NZ38,020,043 and expenditures at £NZ38,003,043. (These figures do not include war expenditures, moneys for which are derived from additional taxes and loans and disbursed from a special War Expense Account which was set up after the outbreak of hostilities in Europe. See *History* below.) In the fiscal year ended Mar. 31, 1939, actual budget receipts totaled £NZ36,582,000; expenditures, £NZ35,773,000. The public debt on Mar. 31, 1939, was 303,970,272 pounds sterling, representing an increase of £13,768,930 in the course of one year. The average exchange value of the New Zealand £ was \$3.9235 in 1938 and \$3.5482 in 1939.

Transportation. The railroads are virtually all owned by the government. The total mileage was 3319 in March, 1939. In the year ended Mar. 31, 1939, the number of passengers carried was 23,265,768; freight hauled totaled 7,539,012 tons; gross revenue amounted to £NZ8,005,059. The aggregate length of highways in 1939 was 86,988 miles, of which 17,389 miles were unimproved earth and non-surfaced. (See *ROADS AND STREETS*.) The government owns the telegraph and telephone systems. In August, 1939, air lines covered 1887 miles of routes and the weekly mileage was 33,349. There

was a service to Australia and London. Ships in foreign trade, entering ports of New Zealand, numbered 660, totaling 3,084,705 net tons, in 1938.

Government. Executive power is exercised by the Governor-General, appointed by the Crown for five years on recommendation of the Dominion Government. Legislative power rests with the Governor-General and a Parliament of two chambers—the Legislative Council of 39 members appointed by the Governor-General for seven years, and the House of Representatives of 80 members, elected by general male and female suffrage for four years. Governor-General and Commander-in-Chief in 1939, Viscount Galway, who assumed office Apr. 12, 1935. Prime Minister, Minister of External Affairs, of Cook Islands, of Broadcasting, and Native Minister, Michael J. Savage, heading a Labor Cabinet appointed Dec. 5, 1935.

HISTORY

Strengthened by its electoral victory of 1938 on a platform calling for far-reaching socialization of the Dominion's economic system (see 1938 YEAR BOOK, p. 540), the Labor Government during 1939 carried additional reform legislation into effect. With the outbreak of the European War on September 3, the government declared war upon Germany and lent wholehearted economic and military aid to Great Britain. This war effort in some respects hampered the Labor Government's task of internal reorganization, but in other ways speeded the process of socialization.

Economic Legislation. At the beginning of January the government placed in operation the import licensing system decided upon in December, 1938. Permits were also required for the transfer of funds from the Dominion. The purpose was to ensure that sterling obtained through sale of New Zealand products should be utilized in what the government considered the most profitable manner. Sterling reserves of the Reserve Bank had declined rapidly in 1938 due to a decline in export values, excessive imports resulting from the government's high-wage and spending policies, and a flight of capital.

Under the licensing system, imports of luxury goods and of goods capable of domestic production were curtailed to make certain that the Reserve Bank's sterling assets would be sufficient to meet the service on overseas loans. Preferential treatment was accorded imports from Great Britain and then to imports from other Dominions. Imports from other countries were regulated in accordance with their purchases of New Zealand products.

The scheme proved of marked benefit to New Zealand manufacturers and led a number of foreign firms to establish factories in New Zealand. However the amount of sterling exchange in the Reserve Bank remained low and the new import quotas announced early in May for the second half of the year were more drastic than before. The restrictive effect upon imports from Great Britain caused vigorous protests in London. Meanwhile New Zealand importing interests had contested the government's authority to license imports in the courts. On May 22 the Supreme Court ruled that the government had exceeded its powers. Prime Minister Savage immediately called for an amendment of the law to make his trade control policy valid. The exchange shortage was somewhat relieved in July when the British Government advanced £4,000,000 in short-term credits to finance non-governmental imports of British goods into

New Zealand and gave the New Zealand Government a £5,000,000 arms credit.

Another important measure, the Social Security Act of 1938 (see 1938 YEAR BOOK for its provisions), went into effect on Apr. 1, 1939. However the medical profession delayed its full operation by its reluctance to enter into the contracts for payment of health and maternity benefits stipulated in the Act. To meet its mounting obligations, the government in May issued an internal loan of £NZ4,500,000, which was oversubscribed by £NZ204,000.

War Measures. During the European crisis of August leaders of both the government and the opposition pledged their full support of Great Britain in the event of war. When war came this pledge was carried into effect immediately. New Zealand's war effort was marked by an extension of economic controls. Parliament in September and October passed legislation empowering the government to control the amounts and destination of all export shipments; regulate sales and supplies of staple foodstuffs and other necessities; fix internal prices; regulate domestic factory production; increase taxation and import duties; and assume complete control over the Reserve Bank's resources and policies. The Reserve Bank's gold was revalued, with the profit accruing to the government, and the gold reserve margin of 25 per cent was abolished. A postal and telegraph censorship was imposed. An amendment to the Marketing Act authorized the government to acquire any specific commodities and dispose of them abroad or at home.

On October 29 the government announced that Great Britain had agreed to purchase all of the Dominion's exportable meat surplus at prices based on the 1938 average. On November 18 this agreement was extended to surplus butter and cheese. However war demands forced British steelmakers to postpone delivery of materials and supplies for the projected government steel plant, authorized by the New Zealand Parliament in 1938. Despite a rise in the Reserve Bank's sterling funds during November and December, the government announced more drastic import restrictions for 1940.

Military Contribution. New Zealand entered the war with her defenses in far better shape than in 1914. In preceding years, the Labor Government had co-operated with Australia and other units of the British Commonwealth in mutual defense preparations. Military measures were intensified early in 1939, especially after the Pacific Defense Conference was held in Wellington in April with British, Australian, and New Zealand representatives in attendance. Emphasis was placed upon the development of the New Zealand air force. Construction of a branch factory of the de Havilland Aircraft Co. was begun near Wellington in April. On May 23 Prime Minister Savage asked all men between 20 and 55 years of age to register in a special national reserve for home defense.

On July 20 the British Government advanced New Zealand a £5,000,000 credit to be used for government purchases, mainly of armaments and war materials. With this additional aid mechanization of the Dominion's coast defenses and field artillery was completed, the naval units were modernized and placed on a war footing, munitions and war supplies were accumulated, and a plan for training a minimum of 1300 pilots and other aircraft personnel for service at home or with the British forces was placed in operation. The first group of pilots trained under this plan was gradu-

ated on November 22. On December 17 New Zealand joined with Australia, Canada, and Great Britain in a much more ambitious Empire air training scheme (see CANADA under *History* for details), which called for the contribution of 10,000 pilots, observers, and gunners by New Zealand alone.

At the outbreak of the war the government offered Britain an infantry division for overseas service. By the end of the year nearly 25,000 men had enlisted for foreign service, exclusive of about 15,000 enlistments in the air force, and training of the first division was well advanced. Enlistments for home service reached 35,000 by the end of October. This response encouraged the government to continue the volunteer system, despite some agitation for conscription. The navy, consisting of two cruisers, two sloops, and other auxiliary vessels, was placed at the disposal of the British Admiralty at the onset of the war. One cruiser—the *Achilles*—took part in the defeat of the *Graf Spee*, German pocket battleship, on Dec. 13, 1939. The Dominion also undertook the construction of a military flying field on Kermadec Island as part of the Empire plan for development of air bases in the South Pacific. See EUROPEAN WAR; MILITARY PROGRESS.

The government estimated the cost of defense preparations during 1939–40 at £NZ29,750,000; for the remainder of the war the cost was estimated at £NZ20,000,000 to £NZ30,000,000 annually. To meet this cost the government raised death duties by one-third, income taxes by 15 per cent, and levied higher duties on beer, wines, spirits, and tobacco. In July it arranged in London to refund a £17,191,000 loan maturing on Jan. 1, 1940, through a £16,000,000 issue to be redeemed before Jan. 1, 1945.

Political Developments. The violent political controversy precipitated by the government's import control and other socialization measures continued throughout the year, despite opposition support of Prime Minister Savage's war policies. Early in December the Prime Minister issued an appeal for mutual tolerance, forbearance, and moderation. The National Farmers' Organization replied that it would co-operate with the government to win the war, but would not co-operate with anyone to change the economic system to a Socialist basis. Nation-wide demonstrations against the trade-control program continued, and some opposition element were accused of attempting to establish a Fascist movement.

The Prime Minister also had trouble within his own party. Left-wingers, charging his government with undue conservatism, demanded more direct progress toward socialism at a Labor party conference in June, but were voted down. In December the Savage Government used its wartime powers to forbid a strike of mine workers at Denniston. A subsequent attack upon the Prime Minister's alleged "autocratic control" of the country led to dismissal of James Lee, a left wing Laborite, as Under-Secretary of Finance on December 22. Peter Fraser, Minister of Education, Health, and Marine, was sent to London in October to represent New Zealand in the Empire Conference on the co-ordination of war efforts. He returned to Wellington December 25. He had been named Acting Prime Minister after Prime Minister Savage collapsed in the House of Representatives on August 1.

Other Events. The Governor-General and Lady Galway made a six-weeks' tour of Western Samoa and other Pacific Islands in July and Au-

gust. A Centennial Exhibition, commemorating the 100th anniversary of New Zealand's annexation by the British Crown, opened in Wellington in November, 1939.

See AUSTRALIA, CANADA, and GREAT BRITAIN under *History*.

NICARAGUA, nīk'ā-rā'gwā. The largest in area of the Central American republics. Capital, Managua.

Area and Population. Area, 49,500 square miles; estimated population in 1938, 1,000,000. Chief cities (1938 estimates): Managua, 115,000; León, 32,669; Granada, 21,172; Masaya, 15,000; Matagalpa, 5200. The people are mainly of Spanish, Indian or mixed blood, but there is a considerable infusion of West Indian Negroes on the east coast.

Defense. The American-trained National Guard had 241 officers and 2800 men in 1938, with a trained reserve of 4000. There were a few military airplanes and coast guard vessels. New armaments, including some tanks and anti-aircraft guns, were purchased in 1938.

Education and Religion. About 60 per cent of all adults are illiterate. The school enrollment in 1937 was 48,911. There are universities at Managua, León and Granada. Roman Catholicism is the predominant religion.

Production. Leading occupations: Agriculture, cattle raising, lumbering, manufacturing for local consumption, gold and silver mining. There were exported in 1938 14,261,000 kilos (kilo equals 2.2 lb.) of coffee, 1,950,000 stems of bananas, 14,985,000 bd. ft. of lumber, 1,357,000 kilos of cotton, 336,000 kilos of hides and skins, and 4,776,000 kilos of sugar. Cacao, beans, plantains, corn, and yucca are grown. There are a number of coffee cleaning and sugar grinding mills.

Foreign Trade. Imports in 1938 were valued at 5,119,579 U.S. dollars (\$5,620,871 in 1937); exports, \$5,884,154 (\$7,038,342 in 1937). Values of chief 1938 exports: Coffee, \$2,031,000; gold, \$1,551,000; bananas, \$777,000; lumber, \$377,000. The United States took 67.3 per cent of the 1938 exports (55.4 in 1937); Germany, 14.7 (21.4). Of the imports the United States supplied 59.7 per cent in 1938 (54.2 in 1937); Germany, 10 (15.2); Great Britain, 8.2 (8.5). See IMPORTS AND EXPORTS.

Finance. Budget estimates for the fiscal years ending July 31 balanced revenues and expenditures as follows: 1937–38, 6,340,000 cordobas; 1938–39, 13,279,000 cordobas; 1939–40, 20,281,000 cordobas.

The public debt on Jan. 31, 1939, totaled 8,177,766 cordobas (10,908,947 on Jan. 31, 1938). The controlled exchange rate of the cordoba was \$0.6757 in 1937, \$0.2193 in 1938; curb rate, about \$0.3401 in 1937, \$0.1832 for June 10–Dec. 31, 1938.

Transportation. Railway lines in 1939 extended about 386 miles and 25 miles were under construction. Net income of the government-owned Pacific Railway in 1937–38 was 625,682 cordobas. Roads extended 1670 miles. Nicaragua is on the Pan American Airways circuit and has connections with Honduras and Costa Rica by two Central American air services (TACA and EMAN). In 1938 all three systems carried 6055 passengers to and from Nicaraguan airports.

HISTORY

Political Developments. Although President Anastasio Somoza's four-year term of office was

not due to expire until Jan. 1, 1941, the Constituent Assembly that met Dec. 15, 1938 (see 1938 YEAR BOOK, p. 541-542) extended his term to May 1, 1947. This was done through the adoption on Mar. 22, 1939, of a new Constitution which abrogated the no-re-election provision of the 1913 Constitution and made the Presidential term eight years instead of four. The new fundamental law greatly extended the President's powers but liberalized the existing statutes concerning property, freedom of worship, marriage, protection of mothers and children, public education, labor legislation, and social security.

The inauguration of the President for his second term took place in Managua on March 30, with special Ambassadors from Mexico, Panama and the United States in attendance. The ceremony was denounced as a violation of the 1913 Constitution by Somoza's political opponents in exile in Mexico and neighboring Central American states.

Pacts with United States. Soon after his inauguration, Somoza left for a visit to Washington. He landed in New Orleans May 1, was greeted in Washington May 5 with an elaborate military display, and was lavishly feted during his stay in the American capital. On May 22 a five-point agreement was reached between the two governments through an exchange of letters signed by Presidents Somoza and Roosevelt. President Somoza then returned home via the west coast of the United States, receiving a triumphal welcome upon his arrival in Managua on June 29.

Under the agreements reached at Washington, the Export-Import Bank advanced Nicaragua a credit of \$2,000,000 for the construction of highways and other economic improvements. The loan was unanimously approved by the Nicaraguan Congress on August 7 and the loan contract was signed November 15. U.S. Government engineers were sent to Nicaragua to aid in the construction of the highway projects. Equipment and materials not available in Nicaragua were to be purchased in the United States. The Export-Import Bank also agreed to grant additional credits not to exceed \$500,000 at any one time and to be utilized prior to June 30, 1941, to facilitate payment of Nicaraguan commercial obligations to United States nationals and concerns and stabilize the exchange rate of the cordoba.

Another item provided for the survey of a canal and highway project to link the eastern and western regions of Nicaragua. President Somoza attempted to induce the United States to undertake the trans-Nicaraguan ship canal for which surveys were completed in 1931 by U.S. Army engineers (see 1931 YEAR BOOK, p. 146). But President Roosevelt agreed only to seek authority from Congress for a survey of a large canal and highway across Nicaragua. Congress authorized the project and the preliminary survey was completed by a U.S. Army commission in the middle of October.

Another outcome of the Washington accords was the establishment in Managua under a bill signed by President Somoza on November 11 of a military academy. Col. Charles L. Mullins, a U.S. Army officer chosen by President Roosevelt, was named director of the academy, with authority to engage instructors from the United States. The academy was to provide at least two years' training for cadets, who on graduation were to receive appointments as officers in the Nicaraguan

National Guard. Other United States government experts were sent to Nicaragua to survey prospects for developing products that would enter the United States market on a non-competitive basis.

Other developments in United States-Nicaraguan relations were the payment to Nicaragua by the U.S. Government on September 3 of \$72,000 in settlement of mutual claims pending between the two countries; the commencement of work on a \$500,000 U.S. legation at Managua on September 28; and the complete nationalization of the National Railways of Nicaragua, in which New York interests formerly owned 51 per cent of the stock. Members of a U.S. Congressional delegation, returning from an inspection of Panama Canal defenses, were feted in Managua on November 21. In a speech to the delegation, President Somoza said that if America became involved in war "Nicaragua will put 10,000 well-trained men at the service of the United States within 24 hours. There will be 40,000 within 60 days, besides our landing fields and other facilities."

German Activities. These developments were regarded as significant in view of German barter and propaganda activities in Nicaragua. Late in March the Reich purchased on a barter basis the entire Nicaraguan cotton crop and large quantities of other products for which other foreign markets could not be found. Nazi propaganda provoked a hostile reaction from Nicaraguan students and other groups. In July a young German who had broken his engagement to the daughter of a prominent Nicaraguan family on orders of Nazi officials was summarily expelled from the country by President Somoza. However a group of students who passed anti-Nazi resolutions on October 29 were held by the police for meeting without a permit and "violating Nicaragua's neutrality."

Central American Relations. After his return from the United States, President Somoza made a tour of the other Central American capitals to win support for his plan for a diplomatic union under which the five little republics would be represented by a single legation in each of the world's capitals. Suspicions were voiced in some of the other republics that Somoza aimed to make himself dictator of a Central American union. Nicaraguan political exiles in the neighboring republics carried on propaganda against him. His efforts toward Central American co-operation were also hampered by the unsettled boundary dispute with Honduras (q.v.).

Conferring with President Cortes Castro of Costa Rica in San José in the middle of August, President Somoza sought to win Costa Rica's signature to a treaty authorizing Nicaragua and the United States to proceed with canalization of the San Juan River, which is a vital part of the proposed trans-Nicaraguan canal. The negotiations were continued by the Nicaraguan Foreign Minister during a visit to San José late in October, but in November suspension of the negotiations provoked bitter criticism of Costa Rica in the Nicaraguan press.

Economic Conditions. The outbreak of the European war caused a speculative flurry in Nicaraguan business, marked by a rise in prices of staple foodstuffs and a weakening of the unofficial exchange rate of the cordoba. The government assumed emergency powers by the decree of September 9 to control imports and

exports of all merchandise and the sale of imported and domestic products. Maximum prices were fixed for most staples and rent increases prohibited. By October, however, business had returned to a normal basis and the stringent decrees and exchange regulations introduced in September were relaxed. The greatest mining boom in the republic's history served to offset in part the loss of the German export market. For its imports, Nicaragua turned more than ever to the United States.

NICKEL. Canada is the principal producer of this metal, accounting for about 90 per cent of world production. New Caledonia, the U.S.S.R., and Burma produce the remainder. The Dominion Bureau of Statistics estimates Canadian production in 1939 at 227,089,730 lb., the largest on record. In 1938 the output was 210,572,738 lb.

World consumption of nickel in 1939 was probably greater than in any previous year. Based on International Nickel Company's estimate for 10 months, the total consumption in 1939 was about 247,000,000 lb. The record was attributed to improved conditions in the heavy industries in the United States and Canada, and to war activity in Europe.

Frequently regarded as a "war" metal, and still listed as "strategic" by the U.S. Army, nickel has developed striking peace-time industrial uses in the past 25 years. The accompanying table gives an estimate of the forms in which nickel entered world industry in 1939.

FORMS IN WHICH NICKEL ENTERED WORLD INDUSTRY IN 1939

| | % |
|---|----|
| Steels..... | 60 |
| Constructional steels, stainless steels and other corrosion and heat resisting steels, and steel castings | |
| Nickel cast iron..... | 3 |
| Nickel-iron alloys..... | 1 |
| Nickel-copper alloys and nickel silvers..... | 10 |
| Nickel brass, bronze and aluminum alloy castings..... | 2 |
| Heat resistant and electrical resistance alloys..... | 3 |
| "Monel" malleable nickel, nickel clad, "Inconel"..... | 10 |
| Electrodeposition..... | 8 |
| Non-metallic materials for the chemical industry..... | 1 |
| Nickel salts, ceramic materials, storage battery, materials and catalysts | |
| Miscellaneous and unclassified..... | 2 |

Among the major industries using substantial quantities of nickel are: automobile, farm machinery, aviation, railroad, shipbuilding, mining, petroleum, chemical, pulp and paper, power, electrical, food, building, and household equipment. Pure nickel coins have been issued by 34 countries to an estimated weight of 45,000,000 lb. Copper-nickel alloy coins—75 per cent copper, 25 per cent nickel—issued by the United States and other countries since 1880, have an estimated nickel content of 40,000,000 pounds.

The U.S.S.R.'s invasion of Finland late in 1939 called attention to important nickel deposits near Petsamo in the latter country under development by the International Nickel Co. Production had been scheduled for 1940 at the rate of about one million pounds of nickel a month.

See NETHERLANDS INDIES.

H. C. PARMELEE.

NIGER. See FRENCH WEST AFRICA.

NIGERIA. *nī-jē'rī-ā*. A British West African dependency comprising the colony (1381 sq. mi.; pop., 368,495 in 1936) and the protectorate (includes British Cameroons, 34,081 sq. mi.; pop., 831,103) which is divided into southern and north-

ern provinces. Total area, 372,674 square miles; total population (Jan. 1, 1939 estimate), 20,582,947. Chief towns: Lagos (capital), 130,400 inhabitants; Ibadan, 386,907; Kano, 77,153; Ogbomosho, 86,744; Iwo, 57,817; Oshogbo, 49,568; Oyo, 48,714; Abeokuta, 53,319; Ilorin, 42,066; Iseyin, 36,805.

Production and Trade. The main products (with 1938 export figures) were palm oil (237,000 tons produced; 110,243 tons exported), palm kernels (312,048 tons), cocoa (97,100 tons), groundnuts (180,136 tons), cotton lint (5729 tons), hides and skins (5825 tons), tin ore (10,486 tons), gold (24,970 oz.), and coal. Other products include bananas, ginger, tobacco, rice, mahogany, columbite, wolfram, silver-lead ore, and ghee. Livestock in the whole territory (1938 estimate): 5,630,000 goats, 2,936,000 cattle, 2,188,000 sheep, 476,000 asses, 173,000 horses, 168,000 swine, and 2000 camels. In 1938, imports were valued at £8,632,292 (the chief items being cotton piece goods, tobacco, petroleum, salt, and kola nuts); exports (excluding re-exports of £239,600), £9,461,615 (export values are f.o.b. Nigerian ports and include export duties on palm oil, palm kernels, palm kernel oil, cocoa, bananas, and tin).

Communications. During 1938, the Nigerian railway, with 1900 route miles of single track, carried 7,356,766 passengers and 881,976 tons of freight. Roads, including 7420 miles of dry-season roads, totaled 20,117 miles in 1938. Lagos is linked with a weekly air-mail service from London by way of Kano and Khartoum. Shipping aggregating 2,272,412 net tons entered and 2,278,487 net tons cleared the ports during 1937.

Government. For 1938-39, estimated revenue was £5,698,539; estimated expenditure, £6,631,000. The public debt on Sept. 30, 1938, was £24,764,599 against which the accumulated sinking funds totaled £3,018,230; there is also a supplementary sinking fund amounting to £1,134,536. Nigeria, including the British Cameroons attached to the protectorate for administrative purposes, is under the control of a governor assisted by an executive council; and a legislative council (Order in Council of November, 1922, amended 1928) for the colony and the southern provinces of the protectorate with control over protectorate government expenditure in the southern provinces. The legislative council includes the governor as president, 30 official members, 3 elected members representing Lagos, 1 elected member representing Calabar, and 15 nominated unofficial members. Legislation for the northern provinces is in the governor's hands. Governor, Sir Bernard Bourdillon (term extended to June, 1940). Governor designate, Sir John Shuckburgh.

NITROPARAFFINS. See CHEMISTRY, INDUSTRIAL.

NLRB. National Labor Relations Board (q.v.).

NOBEL PRIZES. On Oct. 26, 1939, the Nobel Prize in physiological medicine for 1939 was awarded to Dr. Gerhard Domagk, director of the research institute of the I.G. Farbenindustrie laboratory at Elberfeld, Germany, for his discovery of prontosil, an anti-bacterial preparation used in treatment of various infectious diseases. Dr. Domagk was unable to accept the prize because of the German Government ban which went into effect after Carl von Ossietzky was awarded the Nobel Peace Prize for 1935. It was

expected that about two-thirds of the prize money—\$35,462—would go to the Caroline Institute for Scientific Research, which makes the awards, and the remainder be returned to the original fund. The 1938 prize in physiological medicine, held over from that year, was awarded to Dr. Corneille Heymans, professor of pharmacodynamics at the University of Ghent, for his detection of the importance of the sinus aorta mechanism in breathing.

On November 9, the Royal Scientific Academy awarded the 1939 Nobel Prize in physics to Dr. Ernest O. Lawrence, professor of physics at the University of California, for his invention and development of the cyclotron, an atom-shattering device. The 1939 Prize in chemistry was divided between Prof. Adolph Butenandt, chief of the Kaiser Wilhelm Institute's biochemical research, Danzig, Germany for his work on sexual hormones and Prof. Leopold Ruzicka of the Swiss Federal Institute of Technology at Zurich for his work on polymethylene and other compounds. The 1938 award in chemistry was awarded to Prof. Richard Kuhn of the Kaiser Wilhelm Institute, Berlin, for his research on paratinoids and vitamins. The award was refused by the German winners.

On November 10, the 1939 Prize for Literature was awarded to Frans Eemil Sillanpaa, Finnish novelist of native peasant life. His best known novel, *Nuorena Nukkuut*, was published in the United States in 1933 under the title *The Maid Silja*.

NON-FEDERATED MALAY STATES.

See UNFEDERATED MALAY STATES.

NORFOLK ISLAND. An Australian island in the Pacific (29° 3' 45" S. and 167° 58' 6" E.) between New Caledonia and New Zealand. Area, 13.3 square miles; population (June 30, 1937), 1085. Beans, passion fruit, cherry guavas, and fish are the chief products. In 1936-37, imports totaled £A34,037; exports, £11,879; revenue (including Commonwealth grant of £A4325), £A23,251; expenditure, £A23,251. The island is governed by an administrator under the control of the Territories Branch of the Australian Prime Minister's Department. An amending measure (Norfolk Island Act, 1935) provides for the introduction of an advisory council of eight elected members to advise the administrator on matters affecting the island.

NORTH AMERICA. Excluding Mexico and Central America, the continent has an area of about 6,679,100 square miles and a population estimated at 142,300,000 on Dec. 31, 1938. See separate articles on ALASKA, CANADA and its provinces, NEWFOUNDLAND, UNITED STATES and the 48 States; also ARCHAEOLOGY, EXPLORATION, ETC.

NORTH CAROLINA. Area and Population. Area, 52,426 square miles; included (1930) water, 3686 square miles. Population: Apr. 1, 1930 (census), 3,170,276; July 1, 1937 (Federal estimate), 3,492,000; 1920 (census), 2,559,123. Charlotte had (1930) 82,675 inhabitants; Raleigh, the capital, 37,379.

Agriculture. North Carolina harvested, in 1939, 6,654,800 acres of principal crops; this was about one-twentieth more than the average for the decade 1928-37. Corn and hay took more than half of the acreage of 1939, and cotton ranked third in extent, but for value tobacco, grown on a relatively restricted area, exceeded all three. Tobacco, on 815,800 acres, made 773,-

810,000 lb. (estimated value on the farm, \$121,-010,000); corn, on 2,466,000 acres, 48,087,000 bu. (\$33,661,000); cotton, on 746,000 acres, 455,000 bales (\$21,158,000); tame hay, 1,107,000 acres, 991,000 tons (\$13,973,000). Peanuts, on 255,000 acres, produced 290,700,000 lb. (\$10,174,000); potatoes, 82,000 acres, 8,200,000 bu. (\$5,576,000); sweet potatoes, 77,000 acres, 8,624,000 bu. (\$6,037,000); wheat, 425,000 acres, 5,100,000 bu. (\$4,692,000); oats, 253,000 acres, 5,692,000 bu. (\$2,618,000); peaches gathered for market, 1,395,000 bu. (\$1,814,000).

Manufacturing. Totals on the manufacturing activity of North Carolina during 1937, taken from the U.S. Census of Manufactures as published in 1939 (with figures for 1935 in parenthesis) follow: Establishments engaged in manufacturing numbered 2986 (2599) and employed 258,771 wage-earners (227,100), who received \$189,265,474 (\$148,922,367); they produced \$1,384,737,686 in value of output (\$1,103,910,930), to which sum their processes of manufacture contributed \$475,834,443 (\$368,892,621).

The greatest single classification, as to output of goods, was the manufacture of cigarettes; this industry had 10 establishments in 1939, employed 16,421 wage-earners, whose wages were \$14,536,210, and produced \$536,915,093 in output, to which sum its processes of manufacture contributed \$112,076,230. Some of the other industries surpassed it in employment and totals of wages; if taken as one group, the several textile industries predominated also in the creation of value by the processes of manufacture. Among the textile manufacturers, the weavers of cotton goods produced \$188,331,604; their wage-earners numbered 65,892 and received \$49,578,424, and the contribution of the manufacturing processes to the value of the output totaled \$83,052,589. Spinners of cotton yarn, employing 38,266 wage-earners, paid them \$22,642,982, and made goods to the value of \$101,680,175, presumably duplicated at least in part in the output of the weavers, but to which the spinners by their own manufacturing processes contributed \$40,974,730. Makers of hosiery paid wages of \$27,069,354 to 34,098, attained \$79,809,982 in output, and contributed thereto by manufacture \$41,107,988. Weavers of rayon employed 11,665, paid them \$9,289,747, produced \$45,291,728, and contributed thereto \$15,888,433. The making of furniture totaled \$48,412,936; of lumber and timber products, \$26,585,200.

Education. For the academic year 1937-38, the latest covered by the data that follow, North Carolina's inhabitants of school age (from 6 years to 21) were reported to number 1,110,555. Enrollments of pupils in the public schools totaled 881,874; this comprised 700,672 in elementary study and 181,202 in high schools. The year's current expenditure for public-school education amounted to \$29,151,402. It included salaries to 24,899 teachers and principals. Among these, the teachers received an average of \$850.

Legislation. A regular biennial session of the Legislature convened in January. It voted a budget carrying total appropriations for the next two years to the approximate amount of \$155,000,000. It preserved the previously temporary tax of 3 per cent on sales of goods and strengthened its application by passing a supplementary tax on goods bought outside and brought into the State for use. The rate of taxation on chain stores was increased. The Legislature dealt with recommended changes in the voting laws. Charges that

exports of all merchandise and the sale of imported and domestic products. Maximum prices were fixed for most staples and rent increases prohibited. By October, however, business had returned to a normal basis and the stringent decrees and exchange regulations introduced in September were relaxed. The greatest mining boom in the republic's history served to offset in part the loss of the German export market. For its imports, Nicaragua turned more than ever to the United States.

NICKEL. Canada is the principal producer of this metal, accounting for about 90 per cent of world production. New Caledonia, the U.S.S.R., and Burma produce the remainder. The Dominion Bureau of Statistics estimates Canadian production in 1939 at 227,089,730 lb., the largest on record. In 1938 the output was 210,572,738 lb.

World consumption of nickel in 1939 was probably greater than in any previous year. Based on International Nickel Company's estimate for 10 months, the total consumption in 1939 was about 247,000,000 lb. The record was attributed to improved conditions in the heavy industries in the United States and Canada, and to war activity in Europe.

Frequently regarded as a "war" metal, and still listed as "strategic" by the U.S. Army, nickel has developed striking peace-time industrial uses in the past 25 years. The accompanying table gives an estimate of the forms in which nickel entered world industry in 1939.

NOBEL PRIZES. On Oct. 26, 1939, the Nobel Prize in physiological medicine for 1939 was awarded to Dr. Gerhard Domagk, director of the research institute of the I.G. Farbenindustrie laboratory at Elberfeld, Germany, for his discovery of prontosil, an anti-bacterial preparation used in treatment of various infectious diseases. Dr. Domagk was unable to accept the prize because of the German Government ban which went into effect after Carl von Ossietzky was awarded the Nobel Peace Prize for 1935. It was

expected that about two-thirds of the prize money—\$35,462—would go to the Caroline Institute for Scientific Research, which makes the awards, and the remainder be returned to the original fund. The 1938 prize in physiological medicine, held over from that year, was awarded to Dr. Corneille Heymans, professor of pharmacodynamics at the University of Ghent, for his detection of the importance of the sinus aorta mechanism in breathing.

On November 9, the Royal Scientific Academy awarded the 1939 Nobel Prize in physics to Dr. Ernest O. Lawrence, professor of physics at the University of California, for his invention and development of the cyclotron, an atom-shattering device. The 1939 Prize in chemistry was divided between Prof. Adolph Butenandt, chief of the Kaiser Wilhelm Institute's biochemical research, Danzig, Germany for his work on sexual hormones and Prof. Leopold Ruzicka of the Swiss Federal Institute of Technology at Zurich for his work on polymethylene and other compounds. The 1938 award in chemistry was awarded to Prof. Richard Kuhn of the Kaiser Wilhelm Institute, Berlin, for his research on paratroids and vitamins. The award was refused by the German winners.

On November 10, the 1939 Prize for Literature was awarded to Frans Eemil Sillanpaa, Finnish novelist of native peasant life. His best known novel, *Nuorena Nukkunut*, was published in the United States in 1933 under the title *The Maid Silja*.

NON-FEDERATED MALAY STATES.

See UNFEDERATED MALAY STATES.

NORFOLK ISLAND. An Australian island in the Pacific (29° 3' 45" S. and 167° 58' 6" E.) between New Caledonia and New Zealand. Area, 13.3 square miles; population (June 30, 1937), 1085. Beans, passion fruit, cherry guavas, and fish are the chief products. In 1936-37, imports totaled £A34,037; exports, £11,879; revenue (including Commonwealth grant of £A4325), £A23,251; expenditure, £A23,251. The island is governed by an administrator under the control of the Territories Branch of the Australian Prime Minister's Department. An amending measure (Norfolk Island Act, 1935) provides for the introduction of an advisory council of eight elected members to advise the administrator on matters affecting the island.

NORTH AMERICA. Excluding Mexico and Central America, the continent has an area of about 6,679,100 square miles and a population estimated at 142,300,000 on Dec. 31, 1938. See separate articles on ALASKA, CANADA and its provinces, NEWFOUNDLAND, UNITED STATES and the 48 States; also ARCHAEOLOGY, EXPLORATION, ETC.

NORTH CAROLINA. Area and Population. Area, 52,426 square miles; included (1930) water, 3686 square miles. Population: Apr. 1, 1930 (census), 3,170,276; July 1, 1937 (Federal estimate), 3,492,000; 1920 (census), 2,559,123. Charlotte had (1930) 82,675 inhabitants; Raleigh, the capital, 37,379.

Agriculture. North Carolina harvested, in 1939, 6,654,800 acres of principal crops; this was about one-twentieth more than the average for the decade 1928-37. Corn and hay took more than half of the acreage of 1939, and cotton ranked third in extent, but for value tobacco, grown on a relatively restricted area, exceeded all three. Tobacco, on 815,800 acres, made 773,-

810,000 lb. (estimated value on the farm, \$121,-010,000); corn, on 2,466,000 acres, 48,087,000 bu. (\$33,661,000); cotton, on 746,000 acres, 455,000 bales (\$21,158,000); tame hay, 1,107,000 acres, 991,000 tons (\$13,973,000). Peanuts, on 255,000 acres, produced 290,700,000 lb. (\$10,174,000); potatoes, 82,000 acres, 8,200,000 bu. (\$5,576,000); sweet potatoes, 77,000 acres, 8,624,000 bu. (\$6,037,000); wheat, 425,000 acres, 5,100,000 bu. (\$4,692,000); oats, 253,000 acres, 5,692,000 bu. (\$2,618,000); peaches gathered for market, 1,395,000 bu. (\$1,814,000).

Manufacturing. Totals on the manufacturing activity of North Carolina during 1937, taken from the U.S. Census of Manufactures as published in 1939 (with figures for 1935 in parenthesis) follow: Establishments engaged in manufacturing numbered 2986 (2599) and employed 258,771 wage-earners (227,100), who received \$189,265,474 (\$148,922,367); they produced \$1,384,737,686 in value of output (\$1,103,910,930), to which sum their processes of manufacture contributed \$475,834,443 (\$368,892,621).

The greatest single classification, as to output of goods, was the manufacture of cigarettes; this industry had 10 establishments in 1939, employed 16,421 wage-earners, whose wages were \$14,536,210, and produced \$536,915,093 in output, to which sum its processes of manufacture contributed \$112,076,230. Some of the other industries surpassed it in employment and totals of wages; if taken as one group, the several textile industries predominated also in the creation of value by the processes of manufacture. Among the textile manufacturers, the weavers of cotton goods produced \$188,331,604; their wage-earners numbered 65,892 and received \$49,578,424, and the contribution of the manufacturing processes to the value of the output totaled \$83,052,589. Spinners of cotton yarn, employing 38,266 wage-earners, paid them \$22,642,982, and made goods to the value of \$101,680,175, presumably duplicated at least in part in the output of the weavers, but to which the spinners by their own manufacturing processes contributed \$40,974,730. Makers of hosiery paid wages of \$27,069,354 to 34,098, attained \$79,809,982 in output, and contributed thereto by manufacture \$41,107,988. Weavers of rayon employed 11,665, paid them \$9,289,747, produced \$45,291,728, and contributed thereto \$15,888,433. The making of furniture totaled \$48,412,936; of lumber and timber products, \$26,585,200.

Education. For the academic year 1937-38, the latest covered by the data that follow, North Carolina's inhabitants of school age (from 6 years to 21) were reported to number 1,110,555. Enrollments of pupils in the public schools totaled 881,874; this comprised 700,672 in elementary study and 181,202 in high schools. The year's current expenditure for public-school education amounted to \$29,151,402. It included salaries to 24,899 teachers and principals. Among these, the teachers received an average of \$850.

Legislation. A regular biennial session of the Legislature convened in January. It voted a budget carrying total appropriations for the next two years to the approximate amount of \$155,000,000. It preserved the previously temporary tax of 3 per cent on sales of goods and strengthened its application by passing a supplementary tax on goods bought outside and brought into the State for use. The rate of taxation on chain stores was increased. The Legislature dealt with recommended changes in the voting laws. Charges that

about 200 felons had been pardoned during the last five months of the administration of Governor Johnston caused the State Senate to call upon the Board of Pardons for information on all recommendations for executive clemency made in the previous two years. A bill to extend the provisions of the law of 1937 setting wages and hours for certain kinds of work in the State was killed, on its proponent's declaring that the measure had been over-amended and thus made weaker than the earlier act.

Political and Other Events. The monthly rate of the dispensations of public aid to the needy classes of the population of the State, in June 1939, was \$3,820,000; this included \$1,585,000 paid by the WPA, \$1,118,000 by other Federal work of construction, and somewhat less than \$500,000 each for old-age and other Social Security grants and for the people in the CCC; general poor-relief cost only \$38,000. The chief groups of recipients were 41,397 under the WPA and 32,580 getting old-age assistance. The whole monthly cost of public support for dependents (other than institutionalized) only slightly exceeded the rate of \$1 a month per inhabitant of the State. Cotton manufacture was fairly active for the year as a whole.

An allotment of \$200,000 was made by the WPA for the enterprise of seeking deposits of gold in North Carolina's soil; the State's Department of Conservation sought this allotment, hoping that there might result discoveries of gold and consequent investments of capital in mining enterprises. At Durham the North Carolina College for Negroes opened in September the first law school in the State for colored students. At New Bern was reported the finding of the lost plans of John Hawks, 18th-century architect, for the so-called Tryon Palace; this building, completed after 1767, served as the Royal Governor's residence; a movement was started with a view to its reconstruction from the original plans. Near Center Hill was found in March an inscribed stone, the second of the kind, purporting to throw light on the fate of Virginia Dare and Sir Walter Raleigh's Roanoke colony (see also YEAR BOOK, 1938, p. 544).

Officers. The chief officers of North Carolina, serving in 1939, were: Governor, Clyde R. Hoey (Dem.); Lieutenant-Governor, Wilkins P. Horton; Secretary of State, Thad Eure; Treasurer, Charles M. Johnson; Auditor, George Ross Pou; Attorney General, Harry McMullan; Superintendent of Public Instruction, Clyde A. Erwin.

NORTH CAROLINA, THE UNIVERSITY OF. A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1789. The enrollment in the autumn of 1939 was 3845, of whom 3338 were men and 507 women. In correspondence and extension courses 1385 were registered. In the summer session of 1939, 1818 students were registered. The resident faculty numbered 290. The endowment amounted to approximately \$2,000,000 and the budget for the year was \$1,872,700. The library contained about 390,000 volumes. Additional buildings erected: School of Medicine, five dormitories, dining hall, building for zoology, addition to Carolina Inn. President, Frank Porter Graham, M.A., LL.D., D.C.L., Litt.D., Dean of Administration at Chapel Hill, Robert Burton House, A.M., LL.D.

NORTH CAUCASUS TERRITORY. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

NORTH CENTRAL COLLEGE. A coeducational institution of higher learning at Naperville, Ill., founded in 1861. In the autumn of 1939 there was an enrollment of 582 students, of whom 321 were men and 261 women. There were 44 members on the faculty. The productive funds amounted to \$954,000, and the current income for the year was \$192,190. The library contained more than 24,000 volumes. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. Area and Population. Area, 70,837 square miles; included (1930) water, 654 square miles. Population: Apr. 1, 1930 (census), 680,845; July 1, 1937 (Federal estimate), 706,000; 1920 (census), 646,872. Bismarck, the capital, had (1930) 11,090 inhabitants.

Agriculture. North Dakota's farms harvested, in 1939, 15,966,400 acres in the principal crops; this was about 7 per cent below the average for the decade 1928-37. Wheat in 1939, on 7,885,000 acres, made 84,062,000 bu. (estimated value on the farm, \$56,322,000); barley, on 1,655,000 acres, 30,618,000 bu. (\$8,879,000); oats, on 1,502,000 acres, 35,297,000 bu. (\$7,765,000); corn, 1,030,000 acres, 16,995,000 bu. (\$6,968,000); tame hay, 1,044,000 acres, 1,094,000 tons (\$3,610,000); potatoes, 165,000 acres, 11,880,000 bu. (\$5,940,000); flaxseed, 411,000 acres, 2,055,000 bu. (\$3,185,000); rye, 836,000 acres, 7,106,000 bu. (\$2,061,000).

Manufacturing. Establishments active in manufacturing in North Dakota numbered 340 in 1937 (in 1935, 320) and employed 2854 wage-earners (in 1935, 2551), who received \$3,192,212 (in 1935, \$2,742,211); the output of manufactured goods attained \$45,836,712 (in 1935, \$41,333,019), to which the manufacturers' processes contributed \$10,265,999 (in 1935, \$8,975,659). Butter-making accounted for \$14,512,424 of 1937's output of manufactured goods; it occupied 418 wage-earners in 96 establishments. Flour-mills and other grain mills produced \$7,478,539; establishments dressing and packing poultry, \$1,611,488.

Legislation. The regular 60-day biennial session of the Legislature increased to 5 per cent the rate of the rebate allowed by the State on the payment of the tax on property when made in advance of the due-date. It re-enacted a law authorizing the deduction of a delinquent tax from a State salary payable to the delinquent.

Officers. North Dakota's chief officers, serving in 1939, were: Governor, John Moses (Dem.); Lieutenant-Governor, Jack Patterson; Secretary of State, James D. Gronna; Auditor, Berta E. Baker; Treasurer, John R. Omland; Attorney-General, Alvin C. Strutz; Superintendent of Public Instruction, Arthur E. Thompson.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education for men and women at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1939 was 1828. The 1939 summer session had an attendance of 401. The faculty numbered 140. The income, derived from State appropriations, land-grant funds, student fees, etc., amounted to approximately \$500,000. The library contained 108,104 catalogued volumes. President, John C. West, Ed.D.

NORTHEAST NEW GUINEA. See NEW GUINEA, TERRITORY OF.

NORTHERN RHODESIA. See RHODESIA, NORTHERN.

NORTHERN TERRITORY. An Australian Territory. Area, 523,620 square miles; population, 5737 (Mar. 31, 1939, estimate), compared

with 4850 (1933 census). Figures for population are exclusive of full-blood and half-caste aboriginals (16,887 on June 30, 1937). Darwin, the capital, had 1820 inhabitants on Dec. 31, 1938.

Production. Tropical and semi-tropical products are grown on a small scale, but agriculture has made little progress. Livestock (Dec. 31, 1937): 891,640 cattle; 31,662 horses; 26,856 sheep; 388 swine. Wool (greasy) production in 1939 totaled 35,000 lb. Mineral output for the year ended Dec. 31, 1938, was valued at £A214,724 of which gold represented £A109,168. (Australian £ averaged \$3.8955 in 1938.)

Government. The Territory is controlled by an administrator, with headquarters at Darwin, aided by a deputy administrator in Stuart (Alice Springs). In the Australian House of Representatives at Canberra, the Northern Territory is represented by an elected member who takes part in the debates but does not vote. Administrator, C. L. A. Abbott.

NORTH OSSETIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC. See RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC.

NORTHWESTERN UNIVERSITY. A coeducational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech, in Evanston; and schools of law, medicine, dentistry, commerce, journalism, and University College in Chicago. For the autumn term of 1939 there was an enrollment of 5976 full-time and 9430 part-time students. In the 1939 summer session 4260 students were enrolled. The faculty included 688 full-time and 787 part-time members. The endowment as of Aug. 31, 1939, was \$23,150,000; the total budget for the fiscal year 1938-39 was \$5,300,000. The total gifts to the University during the year ending Aug. 31, 1939, amounted to \$7,097,000. In the various libraries of the University there were approximately 612,000 bound volumes and 375,000 pamphlets. President, Franklyn Bliss Snyder, inducted Nov. 15, 1939.

NORTHWEST TERRITORIES. The vast area in northern Canada, east of the Yukon, provisionally divided, for administrative purposes, into the districts of Franklin (554,032 sq. mi.), Keewatin (228,160 sq. mi.) and Mackenzie (527,490 sq. mi.). Total area, 1,309,682 square miles; population (1939 estimate), 10,000 compared with 9723, including 4670 Eskimos and 4046 Indians, in 1931.

Production. The 285,962 pelts of fur-bearing animals taken during the year ended June 30, 1937, were valued at \$1,178,129. Mineral production (exclusive of radium and uranium) for 1938 was valued at \$568,618, of which silver (581,902 fine oz.) accounted for \$252,993; and gold (6800 fine oz.) for \$239,190. Mineral output in 1937 (aside from radium and uranium) was valued at \$117,978.

Government. The Northwest Territories are governed from Ottawa by a commissioner, a deputy commissioner, and a council of five members (all appointed by the Governor General in Council). Commissioner, Charles Camsell.

NORWAY. A constitutional monarchy of northern Europe. Capital, Oslo. Sovereign in 1939, King Haakon VII, who was elected by the Storting (parliament) Nov. 18, 1905.

Area and Population. With an area of 124,587 sq. mi. (land area, 119,148 sq. mi.), Norway

had a population estimated at 2,921,000 on Jan. 1, 1939 (2,814,194 at the 1930 census). The urban population is approximately 28 per cent. Living births in 1938 numbered 45,957 (15.8 per 1000); deaths, 29,013 (10.0 per 1000); marriages, 24,188 (8.3 per 1000). The 1930 census populations of the chief cities were: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,458; Stavanger, 46,780; Drammen, 25,493.
